— Professor Packard was a scholar of great and varied attainments. His characteristic modesty and his infirm health restrained him from frequent appearance before the public, and he devoted his best energies to his work in the classroom. During the last years of weakness and discouragement he remained, as ever, a model of a faithful and conscientious teacher. So far as we are aware, he never wrote a book; his only published volume being his careful and scholarly translation of Bonitz's lecture on the "Origin of the Homeric Poems," which appeared in 1880. In connection with Professor J. W. White, of Harvard College, and his colleague, Professor Seymour, of Yale, he was editor of a new College Series of Greek Authors, based upon recent German editions. Of the results of this editorial work one volume, the 'Antigone,' edited by Professor D'Ooge, is just published. Advance sheets of an edition of the first books of the 'Odyssey,' edited by Professor Packard himself, were recently printed, and it is to be hoped that at least some of this work may yet see the light. He was a frequent contributor to literary and learned periodicals, especially to the *New Englander* and the *American Journal of Philology*, besides writing many papers for the Transactions of the American Philological Association, and being always a willing and welcome contributor to the *Nation*. By his early death he leaves a sad gap in the ranks of American scholars, and a noble example to all. For the second time within twelve years Yale College is called to mourn the loss of an accomplished classical scholar taken away in the fulness of his powers. In 1872 Professor Hadley, by common consent the foremost Greek scholar of our country, was called from his life of active usefulness at the age of fifty-one. He, too, was a noble example of the power of an active mind and a resolute will over the weaknesses of the flesh: ἀσθενεῖ μὲν χρωτὶ βαίνων, ἀλλὰ μοιρίδιον ἦν. Now his former colleague, after a similar struggle of mind and will against bodily weakness, follows him at a still earlier age. Of both these men the university is, and well may be, proud, and both have left their mark indelibly on the scholarship of the country.

—Another loss which the *Nation* has incurred during the week, and which may be called irreparable, is that of Dr. Friedrich Kapp, whose death in Berlin was announced by cable on Monday. Doctor Kapp was among the earliest contributors to this paper, and its stanchest friends; and since his return to Germany he has, up to the present time, been its regular correspondent from the Prussian capital. We are constrained to defer till our next issue our tribute to this remarkable and most estimable man.

—Professor Henry E. Shepherd, in a recent letter to the Raleigh (N. C.) *Chronicle* on educational progress since 1861 in North Carolina, asserts that before that period there was scarcely, with the illustrious exception of the University of Virginia, an institution in the South which approached even remotely the standard of genuine excellence in any sphere of literature or science. This is particularly valuable testimony bearing upon the much debated subject of antebellum Southern culture, being the utterance of a North Carolinian and a prominent educator, whose life has been spent as a pupil and as a teacher in Southern schools. The whole letter is a frank, healthful criticism of defects in Southern educational work, which not only is encouraging as an evidence that the morbid fear of giving offence to others is disappearing from Southern life, but, owing to its source and temper, is likely to accomplish a deal of good. Professor Shepherd tells of the new spirit which is animating the University of North Carolina. The conspicuous defect in its organization, as in that of almost every Southern college, is the annexing the teaching of English literature, or history, or both, to some more favored department. What Professor Shepherd has to say of the Bingham School is true of a number of Southern academies, especially of those in Virginia which are preparatory to the University, and should make one cautious about accepting the statement of Professor Charles Forster Smith in the October *Atlantic*, that "there has been no great advance, if any, in college work in the South since the war; and in preparation for college there has been a positive decline in most of the States."

AN HEREDITARY LEGISLATOR.

Memoirs of an ex-Minister. An Autobiography by the Right Hon. the Earl of Malmesbury, G.C.B. 2 vols. London: Longmans. 1884.

THE hereditary legislator is not a popular personage in Great Britain at the present moment, and the esteem and confidence with which he is regarded are not likely to be enhanced by the publication of Lord Malmesbury's autobiography. The life therein depicted is common to the whole order of hereditary legislators, and it is difficult to conceive of any training less fitted to qualify those subjected to it for the right exercise of great political power. Amusement is its great end and aim. Its chief and almost exclusive business is to spin round and round in an interminable series of balls, dinners, concerts, and visits to country houses. The preservation and shooting of game is, perhaps, the function to which the hereditary legislator attaches the highest importance. Side by side with important political occurrences, Lord Malmesbury never fails to record the number of stags, pheasants, partridges, or other game which he puts to death as he passes from one aristocratic preserve to another; and upon one occasion, when he was Secretary of State for Foreign Affairs, he solemnly records that having gone to the seat of the Earl of Derby, on this great business of shooting game, he found so many "boxes" of papers awaiting him that he could not shoot for two whole days. All through this autobiography, indeed, the serious business of life and what most people regard as its amusements are placed upon a par. There is apparently nothing which can shake the devotion and punctuality with which the hereditary legislator fulfils all the engagements of a life of fashion. "Men may come and men may go, but these go on forever." Sir Robert Peel, we are told, "died this morning" (July 3, 1850); and then, immediately afterwards, as though it were a matter of equal moment to humanity at large, that Lord and Lady Malmesbury went the same evening to the French play to see Rachel, and found her countenance "diabolical and unfeminine."

The politics of the hereditary legislator, as described by Lord Malmesbury, are exactly like the politics which were talked at the table of Sir Leicester Deadlock. During a good part of the political life of Lord Malmesbury, the arrangement of "Boodle and *his* retinue, and Buffy and *his* retinue" lacked somewhat of its customary compactness. The conversion of Sir Robert Peel to the principles of Free Trade had resulted in the severing from the Tory party of a small knot of politicians, known as Peelites; and the story of the long, patient, and unsuccessful endeavor of both Boodle and Buffy to incorporate these detached fragments with their respective parties occupies many pages of this autobiography. While, however, as a contribution to political history, these 'Memoirs of an ex-Minister' can be accounted as of very little value, as a record of fashionable chit-chat they are amusing enough. Lord Malmesbury, as twice Foreign Secretary in Conservative Governments, and as an intimate friend of the father of the present Earl of Derby, has much to tell us that is interesting respecting that statesman, and his friend and colleague, Mr. Disraeli, as he then was. Of Mr. Gladstone he has less to tell, but still it is interesting to know that at one time in his life the present Prime Minister of Great Britain was deeply enamored of negro melodies, singing them repeatedly, without the omission of a single verse, and exhibiting a marked and special preference for "Camptown Races" (not "Camp Down," as the text has it). Lord Malmesbury was an intimate friend of Louis Napoleon when the latter was an exile in England, and it does credit to his reading of character that when English politicians, of all ways of thinking, were prognosticating that he would use his Imperial position to "revenge Waterloo," Lord Malmesbury maintained that the cultivation of a strict friendship with England would constitute a leading feature in his foreign policy. The notices of Louis Napoleon are, perhaps, the most interesting passages in these Memoirs. Lord Malmesbury owed his first introduction to the future Emperor of the French to another well-known

character, Mme. Guiccioli. Regarding her, he writes:

"One night I was at a ball given by the Austrian Ambassador, and was much struck by a lady quite unlike the Italian women who were there, as she had a profusion of auburn hair, which she wore in wavy and massive curls. Her face was handsome, with a brilliant complexion and blue eyes, and full of animation, showing splendid teeth when she laughed, which she was doing heartily at the time I remarked her. When she rose from her chair I saw she was of small stature, although with perfect shoulders and a bust made for a much taller woman."

Byron had then been dead about five years, and Mme. Guiccioli had recovered from her grief at his loss. She was excessively proud of the conquest she had made, and liked to talk about him, especially to Englishmen. In reference to "Don Juan" she told Lord Malmesbury that Byron

"wrote all the last cantos on play-bills (some of which I saw myself), or on any odd piece of paper at hand, and with repeated glasses of gin-punch by his side. He then used to rush out of his room to read to her what he had written, making many alterations and laughing immoderately. She was very proud and fond of him, but described him as having a very capricious temper, and with nothing of the passion which pervades his poetry, and which he was in the habit of ridiculing—in fact, with a cold temperament. With all his abuse of England he insisted upon keeping up old customs in small things, such as having hot cross buns on Good Friday and roast goose on Michaelmas Day. This last fancy led to a grotesque result. After buying a goose and fearing it might be too lean, he fed it every day for a month previously, so that the poet and the bird became so mutually attached that when September 29 arrived he could not kill it but bought another, and had the pet goose swung in a cage under his carriage when he travelled, so that after four years he was moving about with four geese.

"It was surprising to see the number of letters written to him by women offering themselves to him on any terms. Mme. Guiccioli had a large box full of these epistles which he never answered. They were mostly from English ladies, such was the folly and enthusiasm which his verses inspired at the time."

Louis Napoleon was, at this time, just twenty one, and no one, according to Lord Malmesbury, would have predicted a remarkable future for him. He was a harum-scarum youth, greatly devoted to athletic sports, fencing, pistol-shooting, and riding at full gallop down the streets, to the great peril of the public.

"He used to have several old officers of his uncle, the Emperor, about him, men who seemed to me ready for any adventure. I recollect one, an old cavalry colonel of dragoons, who had seen the whole Peninsular war, relating the following anecdote. One day he was reconnoitring with three or four troopers, when they came suddenly upon a young English officer mounted on a superb thoroughbred horse, and similarly occupied. Summoned by the Colonel to surrender, he quietly cantered away, laughing in the Frenchman's face. The dragoon pursued at full gallop on his heavy steed, and when the Englishman had allowed him to get quite close, he kissed his hand, and leaving him far behind, shouted, pointing to his (the Colonel's) horse, 'Cheval normand, monsieur!' Again the Frenchman pursued, threatening to shoot his enemy if he did not surrender, and pointed his pistol at him, but the weapon missed fire. With a roar of laughter, the young officer again shouted, 'Fabrique de Versailles, monsieur!' and, giving the thoroughbred his head, was seen no more. It was most amusing to hear the Colonel tell this story, and describe his rage, adding, however, that he had always felt glad that he had not shot *ce brave farceur*."

This story recalls another in reference to the funeral of the Duke of Wellington, also to be found in these memoirs:

"*November 16th* [1852].—Twenty-seven foreign officers are arrived as deputations from all European courts. Walewski was coquetting about attending the funeral, and asked Brünnow whether he thought that, as a Frenchman, he ought to do so; to which Brünnow replied: 'Mon cher, si nous allions *ressusciter* ce pauvre duc, je comprends que vous pourriez vous dispenser d'assister à cette cérémonie; mais, puisque nous sommes invités pour l'*enterrer*, il me semble que vous pouvez vous en faire votre deuil.'"

Here is another extract, not unamusing in its way, as showing the kind of incidents which among the Boodles and the Buffys are supposed to "produce a great sensation all over the world":

"*March 4th* [1865].— . . . All London is talking of the way in which the Corps Diplomatique has been invited to the Queen's reception. It was, as far as I could understand, in these terms: 'That the Queen would graciously receive them, *male and female*, at a court to be held at Buckingham Palace.' All those concerned are trying to shift the responsibility upon one another. The diplomatists have sent their cards of invitation to their respective courts, and, therefore, it has produced a great sensation all over the world, as the term *mâle et femelle* is never used in French except in speaking of animals."

Diplomatists, male and female, figure conspicuously in these pages, not a little of whose interest is due to their fantastic proceedings. Especially remarkable among them are the French Ambassador, Persigny, and his wife, a granddaughter of Marshal Ney. Lord Malmesbury, it is to be noted, is far above the use of asterisks or the sacrifice of a good story because it might prove painful or disagreeable to people still living. He discloses the pages of his diary as freely to the gaze of the public as he would have done to the most intimate of his friends; and the domestic jars and bickerings of the French Ambassador and his wife—who appear to have selected by preference the dinner-tables of the aristocracy as the theatre of their encounters—are related with great gusto. For example:

"*July 16th* [1857].—Gave a dinner to the Persignys, Jerseys, Lady Glengall and her daughter, Lord and Lady Raglan, Comte de Jaucourt, Barrington, and Norman Macdonald. Mme. de Persigny was late, as usual, and M. de Persigny came without her in a hack-cab, which is the way he generally goes out to dinner, as he is almost always obliged to leave the carriage for his wife. He was much put out, and begged us not to wait, so we went to dinner, and the only place left for her was near the door, between Norman Macdonald and Lady Raglan. Poor M. de Persigny looked miserable, could hardly answer, and kept continually looking toward the door. Mme. de Persigny arrived in the middle of the first course in a great flurry, her eyes evidently showing signs of tears. They exchanged a furious look of defiance, she eating her bread very fast, as if to keep down her rage. At last Lord Loughborough made her laugh by his usual jokes, and by the time we went up stairs she had recovered her good-humor, though not so poor M. de Persigny; I could get nothing out of him. When the party broke up, Comte de Jaucourt handed Mme. de Persigny to her carriage, and returned to us to say, 'Vous serez bien aises d'apprendre que l'Ambassadeur et Mme. de Persigny se sont embrassés sur l'escalier.'"

The foregoing is a fair sample of the contents of these volumes. They are the lightest reading conceivable, and from the first page to the last the student of them will find nothing in the way of opinion or reflection to disturb the even tenor of his way. The ex-Minister would seem to have passed through life absolutely untroubled by "the malady of thought." But to that class of readers—and what readers are there who ought not to be included in it?—who like to have powerful, distinguished, and aristocratic personages served up before them in dressing-gowns and slippers, it may be recommended as amply repaying the trouble of perusal.

THE CENSUS OF WEALTH.—I.

Tenth Census of the United States. Vol. VII. Valuation, Taxation, and Public Indebtedness. Washington: Government Printing Office. 1884.

THE Census Act of 1879 is in every way a great improvement upon the Act of 1850. In some respects its superiority is immeasurable. We use the word immeasurable advisedly, for there is no way of comparing the value of that which is worth something and of that which is worse than useless. The machinery for taking the Census provided by the earlier act was so ill adapted to the purpose as to make it certain that upon many important subjects the statistics which the reports contain are positively misleading. The volume before us shows that it would have been far better if the provision requiring a return to be made of the true value of all property had been left out of the old law. As it is, there is scarcely a doubt that the estimates of national wealth in 1850, 1860, and 1870, published in the Census reports for those years, are altogether untrustworthy. They cannot be depended upon as even approximately true statements, either of the total wealth of the country, or of the relative proportions in which the whole was distributed among the respective States and sections. The Census authorities have never pretended that they were entitled to much respect. General Walker characterized the estimates of true wealth given in the Census of 1870—in this respect incomparably superior to its predecessors—as impressions rather than opinions. These statistics (by courtesy so called) were officially published, as under the law they, of course, had to be; the natural and inevitable result being to give currency to grossly exaggerated ideas as to the material progress made by the country in the last thirty years. Well-informed persons make these inaccurate figures the premise from which they deduce conclusions of moment upon subjects of the greatest practical importance. Within the last few months the Census statement that the wealth of the country has trebled since 1860, has been countless times quoted as a proof of the wisdom of the tariff system now in operation. No matter how clearly it may be demonstrated that no reliance can be placed upon the Census in this respect, people will still continue to believe in it and to refer to it. Half a century hence there will doubtless be weighty arguments based upon its assumed accuracy.

Prior to 1880 the assessed valuation was made the basis of all estimates as to what the true wealth of the country was. In 1850 and in 1860 the marshals or their deputies employed in census-taking estimated as well as they could the proportion of its true value at which property in their district was assessed when it was assessed at all, and they guessed (for they had no way of doing anything more) the value of the property which from one cause or another had escaped assessment altogether. The assessors' totals were then increased in accordance with these conclusions, and returned as the true value of all property. A man specially qualified for such an investigation, and with time and appliances to make it thorough, could doubtless form a tolerably correct opinion as to the ratio borne by the assessed valuation to the real worth of all the property actually assessed in a given district. There is no reason to suppose, however, that the marshals of the United States have a training which would make them, as a class, peculiarly competent to form a correct judgment upon so complex a problem; and most certainly, with all their other duties, it was not possible for them to give much time to its solution. In 1870 the Superintendent of the Census was so thoroughly persuaded that it was not possible for the marshals or their ordinary deputies to do this work well, that wherever it was practicable he induced them to commit it to specialists who were commissioned as deputies for the express purpose. As will be seen presently, in many cases this innovation produced excellent results. But the data did not exist for an accurate determination of the real value of all the large classes of property which were not assessed at all. In 1870,

wherever scientific men were employed to estimate the real wealth, a nearer approach to the truth was attained than was ever reached before; but as each one was confined to a limited section of the country, he could not avail himself with much profit of those statistics of exports and imports, and of the annual production of the agricultural and manufacturing industries, which are absolutely necessary to be taken into account in determining the amount of personal property in the country at any given time. The most ragged tramp in the land has some property: the clothes almost falling off his back would bring something at the paper-mill; his clay pipe and his supply of tobacco have their value. The poorest tenement-house in New York is furnished after a fashion. The meanest negro hovel in the South has some household utensils. The toys of the child are property as well as the race-horses of its father. It is very certain that small things of these and kindred sorts, amounting in the aggregate for the country to many millions of dollars, were never thought of by an ordinary census-taker. The special deputies of 1870 must in most cases have realized that they had no way of arriving at any idea at all as to the real worth of the furniture, household supplies, clothing, or even the stock in trade of the merchants, and the products in the hands of farmers, miners, and manufacturers; and they probably as a rule contented themselves with an estimate which they were sure was within bounds. There is, then, every probability that the estimates of true value made upon the basis of the assessed valuation were in almost every instance less than the facts would have warranted had the facts been attainable.

Although a great deal of property was twice counted under the methods employed in 1850, 1860, and 1870, undervaluation was inevitable. In 1880 the way in which the estimate of true value was arrived at was altogether different. The statistics of assessment were used for some purposes, but they were not the starting point of the calculation. All the possible varieties of actual wealth in the country were classified, and the real worth of each class was separately determined. The values of farms, $10,197,000,000; of live stock and of farming tools and machinery, $2,406,000,000; of railroads and their equipment, $5,536,000,000; of telegraphs, shipping, and canals, $419,000,000; of mines, oil wells, and quarries, with product in hands of producers and dealers, $781,000,000, were, it is asserted, obtained from actual returns published in other parts of the Census reports. The estimated values of residence and business real estate and water power, $9,881,000,000; of household furniture, clothing, and household supplies of food and fuel, etc., $5,000,000,000; of the proportion of the products of agriculture and manufacturing in the hands of producers and dealers, $6,160,000,000; of churches, schools, and all other real estate exempt from taxation, $2,000,000,000; of specie, $612,000,000; and of miscellaneous items, including the tools of mechanics, $650,000,000, were the results of long, careful, and intricate calculations, as to the correctness of which it would be impossible to speak without being in possession of all the data upon which they were based. It may be safely affirmed, however, that if the value of clothing and household effects and of stock in hands of producers and dealers was in 1880 actually $11,160,000,000 (equal to 76 per cent. of the estimated worth of all the property in the country in 1860, slaves excluded), that latter estimate must have been much below the truth. An inspection of the detailed returns upon which some of the items going to make up the total wealth in 1880 are based proves that none of them are too small, while some of them are demonstrably too large. Thus, the value of the railroads and their equipment is put down at $5,536,000,000. Of this sum no less than $653,000,000 consists either of specie already counted or of Government, corporate, or individual indebtedness to the railroad companies, which, it is needless to say, adds nothing to the wealth of the country. The present value of the roads and their equipment is assumed to be equal to their original cost—an assumption with which the facts would, in a great number of cases, hardly be at one. The value of telegraphs and canals appears to have been estimated upon a like liberal basis.

If it be granted that the Census estimates of the wealth of the country at different periods are trustworthy, the increase has been truly marvellous. In 1850 the value of 3,204,313 slaves and in 1860 that of 3,953,760 formed a part of the valuation. A comparison of the per capita wealth of the free and the slave States, as returned in the light of the known facts of their relative material condition, shows that the slaves in 1850 must have been appraised at least as high as $300 a head, and in 1860 at not less than $400. If their value be deducted from the estimated wealth of the country at those periods, and if the valuation of 1870 be reduced to a gold basis, we can construct the following table:

Census year	Est. True Valuation.	Population.	Per Capita Wealth.	Percentage of Increase in Est. Wealth	Percentage of Increase in Population.	Percentage of Inc. in Per Capita Wealth
1850	$6,174,486,328	23,191,876		....	....	....
1860	14,578,112,068	31,443,321		136	35	74
1870	23,997,221,474	38,558,371		64	22	34
1880	43,642,000,000	50,155,783		81	30	39

The country is vastly richer than it was thirty years ago, but few will be prepared to believe that the per capita wealth is three times as great as it was in 1850. In spite of all the devastation and destruction of the war and the check to production occasioned by the withdrawal of some three millions of men from industrial pursuits, in spite of a lengthy period of commercial depression, during the continuance of which large numbers of workers spent months of enforced idleness, the wealth of the nation is far greater than it was in 1860; but it is not easy to suppose that the average man is nearly twice as rich as he was then. The returns of assessed valuation at the different Census periods do not correspond with a progress as rapid as this.

We attribute no importance to the fact that the assessed valuation of personal property is now less than it was in 1860. There is, however, no reason to suppose that any considerably greater portion of the real property of the country now escapes from assessment than was the case twenty years ago. The estimated true value of all the property in the country has since 1860 increased 199 per cent. The assessed valuation of real estate was in 1880 only 86 per cent. greater than it was two decades before. The increase in the aggregate amount and value of personal property has been a good deal more rapid, doubtless, than that of real estate, but not so much so as these figures would seem to indicate. In 1880 the value of farms, residence and business real estate, and of real estate exempt from taxation, was $22,078,000,000. As the assessed value of real property was $13,056,766,925, it must have been assessed at not more than 59 per cent. of its actual worth. If in 1860 real estate was not assessed at any higher rate, as it probably was not, its true value must have been $11,818,654,320. If the Census totals are correct, the value of all other sorts of property except slaves could not have exceeded $2,759,457,748. In 1880 the value of those same classes of property was $21,564,000,000—an increase in twenty years of 681 per cent.

In 1860 the assessed valuation of all property was 74 per cent. of its estimated true value, in 1870 it was 47 per cent., and in 1880 only 38 per cent. A smaller proportion of the whole wealth of the country is now taxed than was formerly the case; but it will not be doubted that there are many States whose present social and industrial condition is no more favorable to the escape of property from taxation than was in 1860 the case in some of the States at least. According to the Census, however, in 1860 in only three States was property assessed at below 60 per cent. of its real value, and in 1870 in nineteen States it was assessed at above 60 per cent.; in 1880 in no State did the assessment reach 61 per cent. of the actual worth of the property. Still another proof that the estimated true value in 1860 was too small, is to be found in the fact that the aggregate wealth of the country in that year, as it was returned to the census-takers in response to their question as to how much each individual was worth, exceeded the Census estimate of true value by no less than $2,929,540,221. In spite of the exaggerations growing out of vanity and of over-sanguine dispositions, the likelihood that most people would fail to take into account the value of a good deal of the personal property which they own and have in daily use is so great, that it may be safely assumed that any valuation based upon each individual's estimate of the worth of his own belongings will be under and not over the truth.

It seems clear, then, that the Census cannot be depended upon to show the rate at which the wealth of the country has increased. In 1850 the statistics of wealth were taken for the first time. Collecting them was new work for everybody, and it was very poorly done. In 1860 more experience and knowledge was brought to the task, and a much larger proportion of the property in the country was appraised. In 1870 General Walker's modifications of the old methods of census-taking brought still more property into the account. In 1880 the system upon which the estimates were made tended rather to over than to undervaluation. There has, therefore, been in operation a series of causes which, independent of the actual and undoubted advance in wealth, were certain to produce a very large apparent increase in valuation.

If the Census cannot be accepted as trustworthy evidence of the total wealth of the country at different periods, neither is it safe to base upon it any comparison of the relative riches of different States at the same time. Until the last Census, whether the valuation for any district was very nearly correct or very far out of the way, depended largely upon the individual temperament of the marshal. Some of the United States marshals, doubtless, made earnest efforts to come as near the truth as they could, others contented themselves with the roughest and most general estimates. Thus, in 1860, the Marshal of the District of Columbia seems to have concluded that property was assessed up to its true value, and consequently for the District the assessed and the estimated true valuation are the same. In 1870 the Marshal for North Carolina assumed that property was assessed at one-half its value, and the Marshal for Delaware reported that the assessment amounted to two-thirds of the actual worth. Some of the conclusions to which we should be led if we trusted to the Census to show the relative if not the absolute progress of the several States, would be a little surprising. For instance, we should find that between 1870 and 1880, in all the great stretch of country from the eastern coast to the Mississippi River, and from the southern borders of North Carolina and Tennessee to the Canadian frontier, the most prosperous of all the States was Maine, for according to the Census it was Maine that made the

greatest relative increase in wealth per capita. Reducing the values of 1870 to the gold standard, the increase of wealth per head of population for the country as a whole was at the rate of 39 per cent.; in Maine it was at the rate of 74 per cent., in Rhode Island 39 per cent., in Massachusetts 34 per cent., in New York 26 per cent., and in Connecticut 18 per cent. It is not easy to reconcile these statements with the large number of paupers in Maine and with the former strength of the Greenback party. The explanation is, however, not far to seek. It has already been mentioned that in 1870, in a number of States, General Walker so managed it that the estimates of wealth were made by gentlemen who, in fitness for the task, were far above the most capable of the ordinary deputy marshals. It is not possible to divide the States into two classes, according as these special agents were employed or not, so as to derive any clear light from comparing the results with each other; the difference of conditions in different parts of the country, and the unequal qualifications of the experts themselves, stand in the way of such a comparison. On a more limited scale, however, it is perfectly possible to test the workings of the two systems. The New England States, with New York, New Jersey, and Pennsylvania, make up a section of country which has strongly marked characteristics of its own. In each of these States a number of men quite capable of making an estimate of its wealth could be found. In New York, New Jersey, Pennsylvania, Connecticut, Massachusetts, and Vermont the estimates of 1870 were made by experts. The Census of 1880 shows that the per capita wealth of those States increased only 34 per cent., while in Maine, New Hampshire, and Rhode Island, where in 1870 the estimates were made by the ordinary deputy marshals, there was, in 1880, an apparent increase of 59 per cent. On the other hand, between 1860 and 1870 in the first group of States, the apparent increase was 91 per cent., and in the second only 44 per cent. It would be hard to find clearer proof that when the estimates are made after the old method they are almost certain to result in undervaluations.

James Madison. By Sydney Howard Gay. Boston: Houghton, Mifflin & Co. 1884.

The Life of Madison has been in good time added to the series of "American Statesmen"; no list of American statesmen, however short, could omit his name. The execution of the work deserves the highest praise. It is very readable, in a bright and vigorous style (the unconventionality of which is sometimes perhaps carried a trifle too far), and is marked by a unity and consecutiveness of plan which may be due to the even career of the quiet statesman. The view presented of Mr. Madison is, we think, that which is generally accepted—as a man of very high qualities of statesmanship, and entire personal integrity, but of a certain infirmity of purpose at great junctures which was not inconsistent with great strength of will on ordinary occasions. The principal occasion on which this weakness was exhibited is a matter of notoriety: when he suffered his party leaders to bully him into the declaration of war against England. For, if we regard this, as Mr. Gay does, as a surrender of his judgment for the purpose of securing a renomination, even in this point of view it was a piece of moral weakness.

The other great occasion on which he displayed this quality was in joining himself to the Anti-federalists at the beginning of Washington's administration. We do not remember to have seen this fact brought out with so much fulness and clearness as by Mr. Gay. It has always been a matter of remark that Madison, after acting consistently until now with the friends of a national government, and after doing more than any other person to impress the national character upon the instrument of government, in less than ten years had become so far out of sympathy with his old associates as to be the author of the Virginia resolutions, aimed directly at their policy. The change has generally been assumed to have been a gradual one; Mr. Gay gives cogent reasons for supposing that it was a sudden one. The nature of the change is well expressed by Hildreth: "A Federalist from natural largeness of views, he became a Jeffersonian Republican because that became the predominating policy of Virginia." This is also Mr. Gay's view, who, however, lays a great deal of stress also upon the personal influence of Jefferson, which seems to have been exerted just at this time. From the moment of the assembling of the First Congress, Madison appears as the steady and determined opponent of Hamilton, as the leader of the Opposition in the House of Representatives. That this was an unfortunate change is clear enough, from the point of view which Mr. Gay occupies, of positive sympathy with the Federalist party. "Had he been born in a free State," he says (p. 172), "it seems more than probable that he would never have been President; but it is quite possible that his place in the history of his country would have been higher." This seems very likely. Not only is it true that "the better part of his life was before he became a party leader"; it is also true that his moral and intellectual powers, which were very great, were not those which especially qualified him for the Presidential office. We sometimes lament that our great statesmen are not made Presidents. But it is in the Senate, the Department of State, and foreign ministries, that the statesman of the intellectual type finds his best field of action. It was very fortunate for us as a nation that when the War of the Rebellion broke out, Seward was Secretary of State and Lincoln was President.

The most significant event connected with this change of attitude on the part of Madison is his share in drafting the Virginia Resolutions of 1798. Of this matter we have an interesting discussion in chapter xv, in which, after quoting Mr. Madison's positive expression of opinion, in the last years of his life, that our Union is a nation, not a confederacy, and his assertion "that there is nothing inconsistent in the resolutions of 1798 with these opinions upon the sovereignty of the United States," Mr. Gay adds: "There is no possibility, then, of misunderstanding his opinions during the last six years of his life; and we should have no right to doubt his repeated and earnest assurances that these were his opinions when he wrote the resolutions of 1798. It can only be said that the construction he gave them thirty years afterward is opposed to the universal understanding of them at the time they were written" (p. 248). May it not be, however, that the popular opinion of the time confused the two sets of resolutions, nearly contemporaneous in their appearance, and the work of two personal and political friends—both, moreover, directed against what we now all admit to have been an abuse of power by the majority? Jefferson's Kentucky Resolutions clearly contain the doctrine of nullification. Madison's Virginia Resolutions, in their form as adopted, describe the Constitution as "the compact to which the States are parties," and since Webster's time we have seen that danger lurks in this expression. But in the early days of the republic, when it was a matter of personal recollection that the instrument was actually drawn up by delegates of the several States, and adopted by the States individually, it was a very natural expression. It was in another phrase of the resolutions that the party issues of the time found completest expression: "that the States . . . have the right, and are in duty bound to interpose." This does not necessarily mean nullification. It describes the action which the State of Virginia was taking at that moment, in protesting as a State against the Alien and Sedition Laws, and which no one would at the present day think of criticising in a State. But under the newly-formed Government, whose strength was untested, and in which the centrifugal forces appeared excessive, it is not to be wondered at that the supporters of the national authority, the Federalists, were sensitive and suspicious at any State action which touched national issues. The Federalists contended that the States had no power to act as States in matters of national interest, and it appears to have been Madison's object, in the phrase in question, to assert this right rather than the right of nullification.

The question of admitting Cabinet Ministers to the floor of Congress, urged so strongly at the present day, receives some light from the action of Congress in refusing "to permit the Secretary [Hamilton] to appear upon the floor of the House to explain some proposed measure" (p. 190). This action was no doubt largely partisan, but it appears to have been grounded principally in the theory of the independence of the departments, which is embodied in the Constitution. They "thought that they were quite capable of discharging the duties belonging to their branch of the Government, without instructions from a head of department whom many of them looked upon as only an official subordinate of Congress." This was a natural consideration at that time; at the present day the question must be decided on the ground of expediency rather than of abstract theory.

We find on page 82 what is obviously a slip of the pen—where the Spanish Minister, Guardoqui, is said to have consented to concede the navigation of the Mississippi for twenty-five years. The concession—as appears in the next paragraph, and the discussion following—was by the United States, of an exclusive right to the navigation of the river by Spain for this term of years, after which, if "the navigation of the Mississippi should be worth contending for, the question could be reopened."

Géographie Comparée de la Province Romaine d'Afrique. Vol. I. Géographie physique, Géographie historique, Chorographie. Par Charles Tissot. Paris: Hachette. 1884.

M. Charles Tissot, who died in Paris on July 2 of the present year, was not only a diplomatist of great ability, but an archæologist of exceptional learning, having devoted nearly thirty years to the study of comparative geography and antiquities in northern Africa. Like M. Waddington, his successor at the French Embassy in London, and M. de Vogüé, his predecessor at the Embassy in Constantinople, he bestowed equal attention and care on the present and the past, on politics and on archæology. But, unlike his two more privileged colleagues, and unfortunately for himself and for the public, the necessities of his career, so soon interrupted by illness and death, obliged him to dwell for long years in countries, such as Turkey and Morocco, where the want of a library impeded the progress and the publication of his scientific researches. In 1883, when he retired from public life, his health was already so much impaired that he scarcely had the strength to continue what he had begun in 1852 as a promising young man—his great work on the comparative geography of the Roman Province of Africa. The first volume was still going to press when he died, intrusting his secretary with the care of publishing it, together with the second and last one, the manuscript of which

he had happily brought to a conclusion. It is certainly a consolation to think that the result of so much labor and persevering research will not disappear with its author, insuring to his name the well-deserved esteem of all the learned. Any one who will take up the first volume, which has just appeared, will deeply feel the loss inflicted upon science by the early death of so accomplished a scholar.

The 'Géographie Comparée de la Province Romaine d'Afrique' has been printed at the Imprimerie Nationale, by order of the Ministry of Public Instruction. The book is intended to form the first part of a series of monographs devoted to the provinces of northern Africa, part of which, namely Algeria and Tunis, are actually under French rule. It is somewhat surprising that while continental Greece and the more accessible regions of Egypt and Asia Minor were long ago explored and described by distinguished travellers, so little has been done as yet for the Regency of Tunis, which lies nearly opposite to Marseilles, and is so rich in ruins of Punic and Roman times. The reason of this is to be sought in the political condition of that country, where fanaticism and misgovernment have changed into deserts the once thickly peopled and wealthy province of the Proconsularis. Indeed, up to the French occupation in 1881—the last Punic War, as it has been styled—the interior of the Regency was almost a *terra incognita* to geographers. The only map of the country, made in 1857 by the French War Department, was chiefly compiled from the statements of the natives, and large portions of the territory are left in blank. Travellers like Shaw, Temple, Barth, Bruce, and more recently Pellissier and Guérin, had surveyed a part of the Regency for archæological purposes and collected much valuable information; but the only general work on the subject, Mannert's compilation in his 'Géographie der Griechen und Roemer,' is nothing but a voluminous mass of misstatements and blunders, which have been repeated for the last sixty years by all the second-hand writers on geography and by all commentators on Sallust's Jugurthine War. The most interesting spot on the African coast, the site of Carthage, although visited and described by many travellers, is yet so imperfectly known that no good plan of the ancient Punic metropolis has ever been published. Nathan Davis's 'Topography of Carthage' (1862) is, perhaps, one of the worst books ever issued on an archæological subject; but notwithstanding the deal of nonsense it contains, it has been perpetually referred to as an authority, for the simple reason that very few people were capable of understanding and demonstrating its defects. If you take the last English book relating to the history of Carthage, Dr. Smith's 'Carthage and the Carthaginians' (1877), and compare the chapters it contains on topography with the corresponding part in Tissot's first volume, it will certainly seem as if a century had elapsed between the publication of the two works, and, in fact, the 'Géographie Comparée' may be said to open a new era in the treatment of a hitherto nearly unknown subject, just as was the case in 1842 with the 'Topography of Rome' published by Becker.

Tissot resided in Tunis from 1852 to 1858; during that period he undertook three long journeys to the little explored region of the south—the country about Lake Triton—to the neighborhood of Kairuan and to the mountainous districts of the Krumirs, on the frontier of Algeria. Being an experienced draftsman, capable of making a plan and sketching a map, and, moreover, very well acquainted with the Arabic language, he collected a number of documents of every description—drawings, paintings, inscriptions, testimony of natives—which enabled him to identify with the actual sites or ruins the greater part of the ancient cities recorded by the Greek and Roman authors. Thus he could for the first time explain and comment with admirable precision the campaigns of Agathocles, Marius, and Cæsar in Africa, following closely the statements of the historians, and correcting them, when necessary, by his personal knowledge of the country. In 1879, being Minister at Athens, he profited by some months' leisure to explore the valley of the Bagradas, and discovered there some of the most important inscriptions which Africa has yet yielded to Roman epigraphy. At that time the manuscript of his work was nearly complete, and he would certainly have published it if the occupation of the Regency by the French troops (1881), bringing about a sequel of new discoveries and greatly improving the facility of research, had not compelled him to modify many details and add new information to that which he had previously collected. Up to the last months of his life he cherished the hope of returning to Tunis and beginning excavations at Carthage, where he knew how many topographical problems can only be settled by the spade; if his hopes have not been fulfilled, it may at least be asserted that no serious work will ever be done at or about Carthage if not under the direct inspiration of the chapters in which he has thrown so much new light on the desiderata of Carthaginian topography. Indeed, it seems to us impossible in the future to dwell on any subject relating to the Punic, Numidian, or civil wars in northern Africa, without adopting as a starting-point, and more frequently as the adequate expression of truth, the opinions of so competent a judge as Tissot. Classical scholars are only too apt to forget that the Greek and Roman writers cannot be perfectly understood without the help of geography and archæology; to every serious reader of Appian, Sallust, and Cæsar, Tissot's first volume must be recommended as an indispensable guide.

The contents of the first volume, which it would be impossible to analyze here without exceeding the limits of a review, are briefly the following: Three chapters are devoted to the comparative survey of the mountains, rivers, lakes, coasts, and islands of the Regency. The author's method consists in exposing, first, the actual state of the land; second, the testimonies of the ancients; third, the identifications which may or may not be accepted between the ancient features of the land and the modern Arab or Italian names. Then comes a most interesting chapter on the mineral, vegetable, and animal kingdoms; on the agriculture of Roman Africa, once so flourishing and now so degraded. The second part of the work is devoted to ethnography, viz.: to the study of the different races—Libyans, Berbers, Iberians, Phœnicians—which lived together under Carthaginian, and later under Roman rule. The customs and the religion of the Libyan tribes are described with great detail, not only by comparing and discussing the statements of Herodotus and others, but with the help of the little known remains of Libyan art, such as rock-hewn reliefs and the frieze of a Libyan mausoleum now preserved in the Museum of Constantinople. Many customs recorded by Herodotus may yet be traced with perfect certitude among the present inhabitants of the Regency belonging to the Libyan and not to the Arabic stem. The last chapters refer to the topography of Carthage and the neighboring Punic towns, to the Atlantis of Plato (the existence of which, at a prehistoric period, is looked upon as certain by the author), and finally to the long-disputed problem of the ancient trireme or Roman war-ship. The volume is completed by a copious index, four large maps, including a plan of Carthage, and a number of woodcuts representing coins, mosaics, and miscellaneous antiquities.

The second volume is expected to be ready at the end of 1885. It will be entirely devoted to the study of the Roman routes in Africa and to descriptions of the most conspicuous ruins. If, as we are inclined to believe, it is by no means inferior to the first one, the whole work will rank in the future, by the side of Curtius's 'Peloponnesos' and Leake's 'Northern Greece,' among the noblest achievements of comparative geography in modern times.

Politics. An Introduction to the Study of Comparative Constitutional Law. By William W. Crane and Bernard Moses, Ph. D., Professor of History and Political Economy in the University of California. G. P. Putnam's Sons. 1884.

If we consider what California was forty years ago and what it is likely to be one hundred years hence, a work from that quarter upon the great questions of society and government possesses rather peculiar interest. Books of this kind may be divided into two classes, those which treat of politics from the abstract and theoretical point of view, and those which sum up the concrete lessons of history. This one must be ranked under the former class, and is upon the whole fairly satisfactory. We cordially agree with the view which regards the state or sovereignty as an aggregate of individual wills, whether forming the whole or a part of the citizens, inasmuch as we have never been able to conceive of the state as an entity apart from the individuals composing it. It is also a very practical view which denies that "governments may be said to be necessary evils, their necessity arising out of the selfishness and stupidity of mankind." This quotation expresses a tendency, quite too prevalent in this country, to maintain that as government is an evil the less we have of it the better; the fact being, as we regard it, that what we need is more and not less government. Consistent with this is the position of our authors, that political government is as much a necessity of man's being and growth as the vital forces of life themselves, and that it is a sign of the supremacy of will and reason over mere instinct and animal desire. A strong point is made of instinct as a factor in political organization, and by showing that the Aryan races have always tended, with more or less modification, to the adoption of (1) a national chief with limited authority, (2) a council of certain selected persons, and (3) an assembly of the people acting directly or through their representatives. This tendency has been most perfectly worked out in Great Britain, and is remarkably illustrated by the general agreement of the institutions adopted by all the separate colonies in this country. Another general tendency which may perhaps be conceded is that towards uniting the various groups, whether of families, villages, or still larger local organizations, into the more comprehensive whole called a nation; but it is as to the working of the powers of government within the nation that we begin to take exception.

There is one word in our Federal Constitution as to which we look for a good deal of controversy in the future, namely, the power of "initiating" legislation. In Great Britain, all important laws are proposed by the Ministry, and accepted or rejected by Parliament; but there is a popular impression, which our authors seem to share, that as the Constitution gives to Congress the right to "initiate" legislation, therefore proposals of laws can only emanate from members and be discussed and settled by committees of that body. If this is a necessary interpretation, it condemns us to what every session of Congress makes more manifest, namely, practical anarchy. But if to initiate legislation may be held to mean the passing it, while the proposing it can be

placed in the hands of responsible executive officials, it opens a future of quite different promise.

"The political evolution in a nation appears to be always towards the concentration of the law-making power and the control of its physical force or the executive power in one and the same person or department."

There is no doubt of this tendency, and the writer seems to think that the result is inevitable. If this is true, all attempts at popular government must end in failure. We hold, on the other hand, that it is the function of the popular will to keep the two branches in equilibrium; that is, to check the encroachments of each in turn. The defect in our system is that the executive is cut off from appeal to the country, and is too much in the control of the legislature, and that the latter is rapidly absorbing all power; while the peculiar merit of the English is, that the executive and the legislature are in daily contact, and the conflict of public discussion enables the people to judge and pronounce between them. This difference is, however, in no sense a necessity of the Constitution, because, as our authors remark, in another connection: "We may say that this makes of the Constitution but a sheet of rubber, to be stretched to suit every occasion. In a sense it is. It will always be worked in the interest of those having control of the Federal Government." It is this elasticity within a certain rigid framework which forms the highest merit of that instrument, and will enable it to meet the requirements of a people which has grown from small colonial settlements to be a mighty nation.

A Critical Inquiry into the Condition of the Conventual Builders and their Relations to Secular Guilds in the Middle Ages. By George F. Fort, author of 'The Early History and Antiquities of Freemasonry,' etc. J. W. Bouton. 1884.

Mr. Fort's book—it is hardly more than a brochure—contains a great many interesting facts and inferences touching the status of mediæval workmen. Such a contribution as this is especially welcome nowadays, since most of the zeal of archæologists and students of the history of the arts has reverted to the classical period, or gone forward to the Renaissance, leaving the mediæval field comparatively deserted. The essay is a natural sequel to the author's researches into the history of Freemasonry. It throws light on one of the most interesting phases of the history of the Middle Ages—the long nurture of the arts among the monastic orders, and the sudden secularization of them in the thirteenth century which has deceived many writers and readers of history with its appearance of a phenomenal rapidity of development. Mr. Fort's pages are full of the results of wide and curious reading and footnotes of references to mediæval writers, through which it would be laborious to follow him. If he is a Freemason, he is at least too much an historian to be carried away by that desire to detect modern Masonry in everything which seems to be an ignis-fatuus of Masonic writers. We are not quite sure how far he is beyond the common temptation of investigators to stretch an individual indication into a generalization. The conclusions he has reached are not always borne out by the citations with which he fortifies them; nor is he always careful to mark the distinction between original authorities and investigators like himself. In one case we find him putting with great positiveness the statement which he confirms by this passage from Mothes: "The plans [of mediæval churches] were very rarely designed by a single person, but were rather worked out in council by the brotherhood." There are indications that this was measurably true; but what the more cautious Mothes says is: "Man wird beinahe versucht anzunehmen dass, etc," *i. e.*, "One is almost tempted to assume that the plans," etc. In another place Mr. Fort, saying that "after the usual orisons were sung and prayers or adoration, they were set to work under the authority of the Decan operis," refers to Du Cange for support; but Du Cange only says that the Decanus operis was "operis monasticis prefectus." These examples, however, do not fairly indicate the quality of the book, for which we are grateful; and we can but regret that Mr. Fort succeeded in resisting the temptation, to which he confesses, "to enlarge the limits of the inquiry beyond the slender proportions of an *étude*."

The New Physics. A Manual of Experimental Study for High Schools and for Preparatory Schools for College. By John Trowbridge, Professor of Physics, Harvard College. D. Appleton & Co. 1884.

Professor Trowbridge's work is an attempt to place the teaching of physics in our preparatory schools upon a better basis than it has heretofore had. In old times we learned our "natural philosophy" by conning sentences in a book and reciting them to a teacher. The experiments which accompanied the teaching were of no great value, because the student could not readily see the principles which they were designed to illustrate. The greatest improvement which Professor Trowbridge makes upon this old system is, that the principles and experiments are brought together in such a way that the student grasps the fundamental principles of physics step by step as he goes on in his work. Many of the experiments are of the simplest kind, requiring but inexpensive apparatus, and can be performed by the student himself. The name of the author is a sufficient guarantee of their adaptation to the ends they are designed to subserve, and we wish every possible success to what will be in our elementary schools a new but much-needed system of teaching. Unfortunately, the old ideas that principles are to be learned abstractly, and not from observation, as well as the difficulties of putting a new plan into operation, will, we fear, make any improvement very slow.

We regret having to qualify our praise of this book by expressing doubt as to one of its features. There seems to be a lack of precise definitions, and indeed of clear, condensed, and precise statement generally. There is also much desultory remark put into the text, so that the pupil will be continually at a loss to know what he is intended to learn, and what he reads merely as a means of helping his understanding. The first two pages comprise a discussion of the advantages of quantitative over qualitative measurements. The pupil will have to search closely to learn what these terms mean, and may be left with some doubt on the subject. The feature to which we allude is seen as prominently in the opening remarks of the chapter on Motion as anywhere. At the same time, the reform embodied in the book is one so much needed that we hope Professor Trowbridge's system will have a fair trial, before any one decides whether the defect alluded to is a serious one.

Manual of Preaching. Lectures on Homiletics. By Franklin W. Fisk, Professor of Sacred Rhetoric in Chicago Theological Seminary. A. C. Armstrong & Son. 1884.

The multiplication of books upon the art of preaching during the last few years has been remarkable. Whether it indicates an increase of popular interest in the delivery of sermons, it is difficult, perhaps impossible, to decide; but there is little doubt that it implies an increasing consciousness of the importance of a careful preparation for the pulpit if its influence in the future is not to be conspicuously less than it has been in the past. The manual of Professor Fisk has a familiar tone for one who has read the various treatises that have preceded any or all of them. To the best of these it makes no sensible addition. In his second lecture the author enumerates the works on homiletics that he considers of the greatest value, and he places Prof. Austin Phelps's work, 'The Theory of Preaching,' at the head of these. His own will leave it undisturbed in its preëminence. It is, if not a much more formal, a much less interesting book. The work of Professor Fisk will make its principal appeal to the students who have enjoyed the advantage of his lectures during the quarter of a century for which he has been a teacher in the Chicago Theological Seminary.

Nine out of ten of the suggestions usually made in treatises on homiletics are either of no importance, or they are such as would occur to any preacher of ordinary intelligence. Professor Fisk's treatise is not exceptional in this respect. Especially unfruitful are his lectures on the use of texts, upon "the introduction," "the exposition," "the division," and "the development," and these lectures are fifteen of the twenty-three that make his book. There is here and there a hint that may be useful, but for the rest a man with anything to say, and endeavoring to say it in the most direct and simple manner possible, would easily dispense with all of these refinements. There are three lectures on the use and the abuse of texts, and they are the most entertaining of all. Professor Fisk is a great stickler for a text. A sermon without one is hardly a sermon in his eyes. Several amusing examples of the abuse of texts are given, and the average reader will regret that the list was not considerably extended, as it might easily have been. As good as any is that of the Pedobaptist preaching against immersion from the text, "Divers (weights) are an abomination to the Lord."

The lectures on style are calculated to be more useful than the others. What they advise has been approved by the experience of many public speakers. It is above all things to read the authors whose writings are models of simplicity and strength. In conclusion, the delivery of sermons is discussed with a brevity that is almost startling. Reading from a manuscript and speaking memoriter are set down as inferior to extempore preaching, by which is meant preaching in which the speaker relies upon the moment for the words of his discourse. But the dangers appertaining to this method are not disguised.

Life and Labour in the Far, Far West. Being Notes of a Tour in the Western States, British Columbia, Manitoba, and the Northwest Territory. By W. Henry Barneby. With specially prepared Map, showing the Author's Route. New York: Cassell & Co. 1884.

Under this somewhat far-fetched title the author has given to the public an account of a journey made by himself and two fellow-travellers during the summer of 1883, in the United States and Dominion of Canada. The volume has been prepared from the carefully preserved letters of the author, written while on his travels, to his wife at home in England. It lays no claim to a high literary quality, but the general reader might have been better pleased if the original epistolary material had been more thoroughly condensed before printing. The earlier chapters relate little else than the ordinary experiences of English travellers, by familiar routes, across the United States and in California, set forth with customary comments, some of which, touching the disagreeable features of such a journey, are

as just as they are familiar. The latter and larger portion of the book gives the writer's experiences and observations in Manitoba and along the line of the Canadian Pacific Railway as far West as Fort Calgary, concerning which less familiar region the author has much to say that is interesting, especially to those who think of seeking homes and fortunes in that new country. The appendix contains an entertaining chapter on the Kootenay Lake District, in the southeastern corner of British Columbia, contributed by Mr. W. A. Baillie-Grohman, author of 'Camps in the Rockies.'

The not infrequent misspelling of proper names in Mr. Barneby's book is a blemish that ought to have been avoided even in a work making no higher pretension than his does to literary excellence.

BOOKS OF THE WEEK.

Abbott, E. A Skeleton Outline of Greek History, Chronologically Arranged. London: Rivingtons.
A Thousand Questions on American History. Syracuse: C. W. Bardeen.
At the World's Mercy. D. Appleton & Co. 25 cents.
Bacon's Essays, and Wisdom of the Ancients. With a Biographical Notice, by A. Spiers. Boston: Little, Brown & Co.
Béguyer de Chancourtois, A. E. Programme Raisonné d'un Système de Géographie. Paris: Gauthier-Villars; New York: F. W. Christern.
Berean Beginner's Book for 1885. Phillips & Hunt. 15 cents.
Berean Question Book for 1885. Phillips & Hunt. 15 cents.
Boughton-Abbey. Sketching Rambles in Holland. Harper & Brothers.
Bourke, J. G. The Snake Dance of the Moquis of Arizona. Charles Scribner's Sons. $5.
Browne, W. H. Maryland: The History of a Palatinate. Boston: Houghton, Mifflin & Co. $1.25.
Bread-Making. G. P. Putnam's Sons. 50 cents.
Cameron, Mrs. H. L. A North Country Maid. Harper's Franklin Square Library. 20 cents.
Capel, Right Rev. T. J. The Faith of Catholics Confirmed by Scripture and Attested by the Fathers of the First Five Centuries of the Church. In three volumes. Fr. Pastet & Co.
Coffin, Capt. R. F. An Old Sailor's Yarns: Tales of Many Seas. Funk & Wagnalls. 75 cents.
D'Ooge, M. L. Sophocles: Antigone. Boston: Ginn, Heath & Co. $1.00.
Doris. A Novel. Philadelphia: J. B. Lippincott & Co. $1.00.
Drake, F. S. Indian History for Young Folks. Illustrated. Harper & Brothers.
Faithfull, Emily. Three Visits to America. Fowler, Wells & Co.
Field, M. Callirhoë: Fair Rosamund. Henry Holt & Co. $1.25.
First Italian Reading Book. Harper & Brothers.
Franklin, B. The Church and the Era. E. & J. B. Young & Co.
Fraser, Prof. A. C. Selections from Berkeley. With an Introduction and Notes for the Use of Students in the Universities. 3d Ed. Oxford: Clarendon Press.
Frazar, D. Perseverance Island; or, the Robinson Crusoe of the Nineteenth Century. Boston: Lee & Shepard. $1.50.
Frost, A. B. Stuff and Nonsense. Charles Scribner's Sons. $1.50.
Froude, J. A. Thomas Carlyle. A History of his Life in London. In two volumes. Vol. I. 1834-1881. Harper's Franklin Square Library. 15 cents.
Froude, J. A. Thomas Carlyle. A History of his Life in London. 1834-1881. Vol. I. Chas. Scribner's Sons. $1.50.
Ginn, F. B. Addition Manual. Boston: Ginn, Heath & Co. 20 cents.
Griswold, W. M. Index to Articles Relating to History, Biography, Literature, Society, and Travel, etc. 2d ed. revised. Bangor: Q. P. Index.
Hamilton, Dr. F. H. Conversations Between Drs. Warren and Putnam on the Subject of Medical Ethics. Bermingham & Co.
Hopkins, Louisa P. Natural History Plays, Dialogues, and Recitations, for School Exhibitions. Boston: Lee & Shepard. 30 cents.
Hoppin, A. Two Compton Boys. Illustrated. Boston: Houghton, Mifflin & Co. $1.50.
Hudson, Henry N. Studies in Wordsworth. Boston: Little, Brown & Co.
Ingoldsby, T. The Lay of St. Aloys: A Legend of Blois. With the Old Letters and New Illustrations of Ernest M. Jessop. E. & J. B. Young & Co. $4.50.
Johnson, Helen Kendrick. Illustrated Poems and Songs for Young People. George Routledge & Sons. $1.50.
Johonnot, J. Book of Cats and Dogs, and other Friends. D. Appleton & Co. 20 cents.
Kimball, Mrs. S. M. My Aunt Jeanette. Phillips & Hunt. $1.00.
Laboulaye, E. Fairy Tales. Illustrated. George Routledge & Sons. $1.50.
Le Conte, J. A Compend of Geology. D. Appleton & Co. $1.50.
Lowell, A. L. and F. C. The Transfer of Stock in Private Corporations. Boston: Little, Brown & Co.
Lowell, Josephine Shaw. Public Relief and Private Charity. G. P. Putnam's Sons. 75 cents.
Matheson, P. E. A Skeleton Outline of Roman History, Chronologically Arranged. London: Rivingtons.
Maudsley, H. Sex in Mind and Education. Syracuse: C. W. Bardeen.
McCarthy, J. A History of the Four Georges. In four volumes. Vol. I. Harper & Brothers.
Mielziner, Dr. M. The Jewish Law of Marriage and Divorce, in Ancient and Modern Times. Cincinnati: The Block Publishing Co.
Mitchell, D. G. My Farm of Edgewood. Charles Scribner's Sons. $1.25.
Morey, W. C. Outlines of Roman Law: Comprising its Historical Growth and General Principles. G. P. Putnam's Sons. $1.75.

GOODHOLME'S DOMESTIC CYCLOPÆDIA for Housekeepers. $2.50.
HENRY HOLT & CO., New York.

From the "Saturday Review's" notice of

"Callirrhoe: Fair Rosamund."

By MICHAEL FIELD. 16mo. $1.25.

"*It is many years since we have read a new poem so instinct with the immutable attributes of poetry, so free from current cant and trick, and animated by an inspiration so warm and native and unfailing. . . . A poet of notable endowments and distinguished powers.*"

From the "Spectator."

"*Poems of great promise. . . . We have found a wealth of surprises in the strength, the simplicity, and the terseness of the imaginative feeling they display. . . . If that has not the true poetic fire in it—dramatic fire, too, as well as poetic—the present writer must be destitute of all discernment. To him it sounds like the ring of a new voice, which is likely to be heard far and wide among the English-speaking peoples.*"

From the "Scotsman."

"*A work not only of remarkable promise, but of notable performance as well.*"

Henry Holt & Co.

X. Thurs., Dec. 18	The Hungarian Band & Vocalists.	

Each evening beginning with an Organ Recital. Course Tickets, $2, $3, and $4. Sale begins at Ditson's, 867 Broadway, on November 3. W. F. MORSE, Lyceum Building, 18 W. 23d St., Manager.

E. F. Bickford 490 30 285

Perseverance Island;

Or, Robinson Crusoe of the 19th Century.

By Douglas Frazar, author of 'Practical Boat Sailing.' 12mo, cloth, 16 illustrations. $1.50.

It is not often that a book is published that can be said to be more interesting than the story of 'Old Robinson Crusoe.' 'Perseverance Island,' however, is just such a book. Its hero was almost a naked castaway on a desert island, with no resources left to him save skilful hands and brains filled with practical knowledge. Still, he succeeded in getting away from his inhospitable situation. The story tells *how* he did it, and all about the stirring experience which he had beforehand. The book is not extravagant nor sensational.

*** Sold by all booksellers, or *mailed post-paid* on receipt of price. Send us your name and address, and receive in return our Illustrated Holiday Catalogue.

Catalogues now ready.

R. WORTHINGTON, 770 Broadway, N. Y.

THE LOMBARD INVESTMENT COMPANY, 13 Sears Building, Boston, Mass., offers to trustees, guardians, and conservative investors, Western Farm and City Mortgages, in denominations of $200 to $10,000, completed for sale and delivery, yielding 6 per cent. interest, payable semi-annually. The collection of principal and prompt payment of interest guaranteed. These loans are carefully selected by the Company's Vice-President and Western Manager, resident in the West, who has loaned to the eminent satisfaction of over 2,000 investors more than $6,000,000, mostly for parties occupying fiducial positions, Savings Banks, Insurance and Trust Companies.
Being based on actual values, free from speculative influences and the fluctuations of the stock market, they are particularly recommended to investors with whom *safety* is the first consideration.

This will afford a splendid opportunity to purchase strictly reliable Furs direct from manufacturer, and save retailer's profits. Fashion Book mailed free.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 6, 1884.

The Week.

ONE of Cleveland's great merits is that he is totally unpledged. Our sincere belief is that there has not, since Abraham Lincoln's second election, been a President so completely free from mortgages and liens and liabilities of every description on taking office as he will be. Moreover, we are ready, if any one wishes it, to make the admission that this is due in part to circumstances, and not wholly to the austerity and rigidity of his own character. One reason of it is, that he has not figured in public life as a legislator, or, in other words, has not had what Blaine's friends call "experience," and has not therefore had a chance, even if he were so disposed, to become an adept in making deals and bargains. Another reason is, that he did not get the nomination through a transaction with the corrupt element of his party, as Blaine got his through an "arrangement" with "Pow" Clayton and his Arkansas delegation. He was nominated, in fact, in spite of this element, in order to secure the support of the Independents, and as a marked contrast in the right direction to the Republican candidate. He consequently owes it nothing. His friends and associates are not speculators or great moneyed men, and his life has been passed not in "operations," but in the regular industry of his own profession and of weighty public trusts. His tastes, moreover, are simple. Nobody has been able to appear, even in a campaign of extraordinary lying, with the smallest charge against his integrity. He is poor, but he owes no man anything. Nobody says he ever cheated, or took advantage of him in any bargain, or unloaded on him any kind of "stuff." The sources of his income are known to all the world—an important point in these days—and nobody charges him with spending what he has not earned. Instead of being useful in "many channels," he has been useful only in one—that of an honest calling. He has never had to ask anybody, in any business transaction, to "keep his name quiet," or to burn a letter, and has never refused to explain any doubtful passage in his career.

If we are right in all this, and if we are right, as we think we are, in believing that his career as Mayor and Governor shows that he is himself, apart from all favoring circumstances, a man of sturdy and unbending independence, he will, when he comes to make up his Cabinet and choose his advisers, be extraordinarily, we might almost say unprecedentedly, free. We are not going to engage at this period in the business of Cabinet making, by guessing the names of persons who might possibly compose it. Nor are we going to do anything so invidious as to compare by name the leading men of the Republican party as it stood in the late contest, with the leading men of the Democratic party, who will probably stand around Cleveland. But we will say to all who doubt whether the United States Government will be safe and glorious in his hands that, in the estimation of all unprejudiced persons, the Democrats from among whom Cleveland will take his advisers are greatly superior in ability and, above all, in *personal character and devotion to the public interests*, to the band who have hitherto surrounded Blaine, and whom he would, willy-nilly, have been compelled to reward in case he was elected. On this point at least there can be no mistake. We owe an apology, in truth, to men like Randall, Carlisle, Hewitt, Bayard, Thurman, Gibson, McPherson, Pendleton, McDonald, Hurd, and Kernan, for mentioning them in the same column with the company of speculators who took a "flyer" in James G. Blaine's political fortunes. Any one who thinks that the American name or fame or prosperity will suffer in such hands, must believe that the Republican experiment on this continent has failed disastrously.

We extend our most profound commiseration to our esteemed contemporary, the *Sun*. After a campaign for Butler, which it conducted with great energy and a phenomenal disregard of its own previous utterances, it succeeded in polling for him in this city a grand total of 3,320 votes. In Brooklyn the grand total is somewhere between 1,000 and 2,000. We can recall no triumph in modern journalism at all comparable with this. As the editor of the *Sun* surveys the returns, from his point of view that Butler was the only worthy candidate in the field, what a pessimistic opinion he must be forced to adopt of the world in general, and of New York voters in particular.

The great object of Butler's candidacy, the saving of Massachusetts to Blaine, has been accomplished, but with this the *Sun* had nothing to do. Had Butler not been in the field, Massachusetts would have given her vote to swell the protest of the honest sentiment of the country against the infamy of Blaine's nomination. With the aid of Butler, Blaine has secured a beggarly plurality of 8,000 or 10,000 in the State, in place of the usual Republican majority of at least 50,000. In Boston alone Cleveland gained more than 6,000 votes. Blaine has only a minority of the vote of the State, and the verdict of Massachusetts goes upon the record against him.

In his final speech of the campaign General Butler said that if he had stuck to his profession, he could have made $5 for every $1 he has made by running as a side-show for Blaine. This is probably the most unquestionable truth which he has uttered during the canvass. His fees as a lawyer have been mainly derived from large corporations, and from criminals who have been trying to escape the payment of their just debts to the Government, and such clients have always been obliged to pay him liberally. The Blaine campaign fund has not supplied him with anything like so generous a source of income. He has had a palace-car, and has been paraded in it over the country, but, outside Massachusetts, his following dwindled so rapidly that it ceased to be looked upon as an important factor in Tuesday's result. As a candidate he has been a failure, and even as a buffoon he has fallen far short of many of his previous performances.

The defeat of Mr. Cabot Lodge for Congress in Massachusetts is to be regretted because he would undoubtedly have made a good legislator; but it is to be rejoiced over because it is a distinct discouragement to his kind of politician—we mean the kind furnished by nature and art with every assistance in being better than they are, but who refuse it vigorously, and insist on being bad or mediocre. It is the special function of such men to make a good show of moral fibre at great crises, and when they fail there is really nothing left of them. It was undoubtedly due to Mr. Lodge's influence that Mr. Theodore Roosevelt threw away the admirable position he had acquired in the politics of this State last spring, by not only coming out for Blaine, but going back on Governor Cleveland. They put their heads together and thought they would show the theorists a wonderful "wrinkle" in the way of practicalness, and now they are both out in the cold, and their natural friends and allies are not sorry, and the real "practical men" are laughing at them. It is, however, never too late to mend. They may both find still, if they try, that

> "The path of duty is the way to glory;
> He that walks it, only thirsting
> For the right, and learns to deaden
> Love of self, before his journey closes
> He shall find the stubborn thistle bursting
> Into glossy purples, which outredden
> All voluptuous garden-roses."

Colonel T. W. Higginson writes to the *Woman's Journal* that the late campaign, disagreeable as it has been, has had certain educational advantages, particularly for women, in that it has afforded them a good opportunity to study the principles of evidence. We believe this is true, and that many women have availed themselves of the opportunity, but we regret to say that we have not perceived the slightest sign that the women who conduct the *Woman's Journal* have done so. They have written a great deal on the charges against Cleveland, apparently without ever having given them any examination whatever, while they have written nothing, or next to nothing, on the charges against Blaine, apparently without giving them any examination either. In fact, they avowed in one issue that it was enough for them that Senator Hoar and a young Bostonian named Edwin D. Mead did not believe these charges. It was an excellent chance for some of the female politicians to show their powers of analysis and comparison in the fields both of logic and ethics, but not one of them, so far as we know, used it. What they furnished to the canvass was a considerable quantity of cheap, and sometimes foolish, declamation about chastity.

Governor Cleveland's brief speech at Bridgeport on Thursday was an admirably concise presentation of the great issue at stake. "There should," he said, "be no mistake about this contest. It is an attempt to break down the barrier between the people of the United States and those that rule them." "Let us feel that the people are the rulers of the nation and not the office-holders, whose sole ambition and purpose is private gain. Let us also feel that if the people will give us the power of the government we hold from the people a sacred trust." Compare those patriotic sentences with Blaine's speech at the Gould-Field banquet. There was nothing about a sacred trust from the people in Blaine's speech, but figures piled upon figures to show the power of wealth. There was no promise of reduced taxation, of economical government, of simple administration in case of Republican success. "See how rich you have grown under the high-tariff policy—put me in office and you will grow richer still." Those were not the words, but they were the spirit of the whole speech.

The great parade of business men on Saturday in honor of Governor Cleveland was one of those things which speak for themselves, and which newspapers can neither belittle nor magnify. To say that it was the most tremendous political demonstration ever seen in this country is to tell only half of the story. It was not the numbers so much as the character of the turnout that made it grand, imposing, and prophetic. It was the parade not of political clubs but of trade organizations—of men who seldom show themselves in line of march, and very few of whom ever before walked three hours in a muddy street in order to testify their interest in the result of an election. The frequent halts in the movement of the mighty column, caused by its very greatness, were extremely trying to the patience of the participants, but very few fell out of line. Old and young stood by their colors hour after hour while the great army waited to get itself disentangled, filling up the intermissions with cheers and songs and "kind regards to Mrs. Fisher." It was a thrilling sight, and one ever to be remembered both by those who participated in and those who witnessed it. It was like the uprising of the people at the firing on Fort Sumter, and the reason for it was the same: it was born of a determination to vindicate American honor and to avert a national catastrophe.

The fifteen hundred lawyers, one-third of them Republicans, who marched in this procession, did this act, unexampled in the history of the New York bar, in order publicly to advise their clients:

1. That they had studied the Blaine letters.

2. That they were convinced as lawyers, on this evidence, that he had sold his official power and influence for railroad bonds.

3. That if President he would do the same thing.

4. That consequently the rights of every citizen, even the humblest, would be endangered by his election. The property and liberty of every man are subject to the decision of the courts. The President appoints the Federal judges. Blaine if elected will appoint four judges of the Supreme Court. Federal judges appoint the supervisors of elections. The worst political evil that can happen to their clients then, the lawyers reasoned, is the election of Blaine.

There are a few facts about the Gould-Field-Blaine banquet which have not been given the prominence which they deserve, though the mere fact of the banquet itself has had a profound effect upon the country. For the first time, at gatherings of this kind, the reporters of the newspapers were excluded. The speeches delivered by Mr. Evarts and Mr. Blaine were given out by the Associated Press. All descriptions of the scene came through this one source. When the speeches were over, and the banqueters repaired to the parlor, even the stenographers of the Associated Press were excluded, and the proceedings were conducted in entire secrecy. Why did the party of moral ideas put itself in a position of this kind six days before election? In the memorable language of the guest of the evening, "Wherever concealment is desirable, avoidance is advisable, and I do not know any better test to apply to the honor and fairness of a business transaction."

There have been a great many grotesque claims in this campaign, but none of them have risen to the height of calling Jay Gould, Cyrus Field, Russell Sage, Henry Clews, John Roach, "Wash" Connor, and the other men of that class at the dinner the friends of the workingmen. More audacious than the attitude of their candidate toward his own record was his appearance at such a banquet on the very eve of election! With the news columns of all our journals peppered over each day with the intelligence of manufactories shutting down and throwing thousands of laborers out of employment; with three-fifths of the iron furnaces of the country closed; with business of all kinds at a lower ebb than it has been for a quarter of a century, Mr. Blaine appears at a banquet, originated and managed by one of the most unpopular and unscrupulous monopolists in the country, and delivers a speech which is written all over in large letters: "Money," "money," "money." This extraordinary spectacle carried its own comment.

It was the services rendered by the wretched Ball in Buffalo in spreading filthy stories, we fancy, that suggested the extraordinary course of calling clergymen by advertisement to meet Blaine on his recent arrival in this city. No minister of standing or repute in this city responded to it. The two most prominent ones—the only ones, indeed, whose names were ever heard outside their own denominations—were ministers without congregations, editing religious newspapers. Those who came were obscure men, eager for the little brief notoriety to be got out of an interview with a prominent politician. Apart from Dr. Burchard's mistake, nothing came of the interview but materials for fresh unbelieving sneers at the separation between religion and morality. Blaine gained nothing from it, and the clergy suffered much, as it has suffered, indeed, from the whole of its participation in this canvass. As Dr. Brown, rector of St. Paul's Episcopal Church in Buffalo, well said, in a letter to a friend about the doings of some of his clerical brethren in that city, "The ministers have poured more filth into the laps of this community than all their religious washings can cleanse for twenty years. You have no idea of the destruction of religious faith in this city." And what should we say if three or four hundred Catholic priests were called to meet a candidate on his travels and gave him their blessing, and he were to tell them that the high tariff was suggested and justified by the decrees of the Council of Trent?

As we go to press, the Constitutional Amendment voted on in this State appears to have been adopted. The importance of this amendment cannot be overestimated, and it was a fortunate circumstance that it has no partisan bearing or cast whatever. It is simply a prohibition against the creation of municipal debt beyond 10 per cent. of the assessed valuation of the real estate of the municipality affected. It provides that any debt created over and above that sum shall be absolutely null and void. In other words, it puts on the lender of money—the city bondholder—the onus of ascertaining whether the legal limit has been exceeded, in the same way that the mortgagee of real estate is bound to ascertain whether the title of the mortgaged premises is good. This is the only way to curtail municipal indebtedness. A similar provision was adopted by the people of Illinois in their Constitution in the year 1870. It has been productive of most wholesome results in that State, and especially in the city of Chicago, whose tax-eaters have been held in chains ever since, and whose municipal debt is now relatively one of the smallest in the United States or in the world, while the city itself has not suffered for the want of any really needful thing. The proposed amendment does not apply to the borrowing of money for securing supplies of water, but it puts such debts into a special class, by providing that bonds issued for this purpose shall not run more than twenty years, and that a special tax shall be levied sufficient to redeem them within that time.

The political excitement of the past two months has withdrawn attention in a great degree from financial and commercial interests of the highest importance. The large crops and the fall trade which were looked forward to in the month of August as brightening signs of a trade revival, have failed to realize the expectations founded upon them. On the other hand, an internecine war of railroad rates has been superadded to the other depressing facts, and has borne down the prices of leading investment securities to a lower range than they reached after the panic of 1873. The worst feature of the whole is that this difficulty does not admit of any immediate adjustment. The struggle between the West Shore and the New York Central, about which everything hinges, is a struggle of life and death. The New York Central people are convinced that the business tributary to the line will

not support the two roads, and that no compromises, no pools, no twisting or turning can yield net earnings sufficient for six parallel tracks between New York and Buffalo. Upon this belief they have rested their action. The West Shore people have met the common experience of new railways which run parallel with old ones, namely, that it takes time for the travelling and trading public to find out that there is any such new road in existence. Their cut of rates, they say, is in the nature of an advertisement. The public must be made to know that there is a West Shore Road, must be invited to travel on it, and to become generally acquainted with it. A railroad war grounded upon such ideas is not likely to be a brief one, or to end short of the exhaustion of one of the contestants.

The West Shore and New York Central fight carries its ravages necessarily into the ranks of all neighboring and competing lines. The Erie becomes a sufferer through no fault of its own. The Lackawanna is hurt in a less degree, and the Pennsylvania and the Baltimore and Ohio have a quarrel of their own, which adds to the difficulties of the situation. These difficulties are all comprised in the one overpowering fact, that more capital has been invested in trunk-line railways than the business will at present sustain. The "great boom" which began in 1879 was a misfortune to the country in many ways. It was born of the great crops of three successive years, which came in coincidence with an equal number of bad harvests in Europe. This remarkable occurrence brought a flood of new capital to the country which must needs find investment. Improvident and reckless undertakings were the consequences. These were not confined to railways, but extended to mines, mills, furnaces, and commercial adventure. Producing and transporting power was added to the fixed capital of the country on too great a scale for ordinary times and ordinary needs. Even this was not the worst. Men's habits were changed, and a scale of private expenditure was assumed which ordinary times and conditions would not justify. Liabilities were incurred which could only be met on condition that the abnormal prosperity resulting from good crops here and bad crops abroad should continue and be permanent. It was impossible that such a condition should last. Good seasons or bad are not permanent conditions of any part of the globe. The last two crops in Europe have relieved foreign countries from the necessity of taking the large quantities of our food products which they had taken in the period of the "boom," and also of paying the high prices which characterized that period. Time, which adjusts all things, will bring American trade back to its normal state of fair prosperity, but we must all be content to wait.

The judges of the City Court have decided the great Brewster-Hatch carriage case in favor of the defendant, Mr. Rufus Hatch, thus establishing the sound principle that it is illegal for carriage-builders to get or keep custom by bribing the coachmen of their customers. Brewster & Company were in the habit, it seems, of paying Mr. Hatch's coachman a small *douceur* from time to time, and the man naturally often took his employer's landaulet there, and everything went on pleasantly until a difficulty arose about the settlement of a bill, which led to a disclosure of the facts. Brewster & Company did not deny them, but insisted that the gifts had been made in accordance with a binding custom; that this custom was of European origin; that it was a good custom, moreover, as it "induces a man to feel more pride in his carriage"; and, further, that it was "treat money." All these defences the learned court brushed aside, declaring that no such custom, if it existed, could be upheld in a court of justice; that it "is subversive of all principles of good faith and fair dealing between man and man. It tends to corrupt the morals of employees, and to make them unfaithful to those who are entitled to their disinterested fidelity. Such practices are certainly not consonant with honorable business principle, and they who indulge in them must suffer the consequences, however onerous they may appear to be."

The subject of dress reform has been revived by the *Pall Mall Gazette*, and Oscar Wilde has once more had his say on the subject. One of the points on which the reformers insist, and it is certainly as important as any, is that we need reform in hats. The hat of the period is, they say, not only not picturesque, but it is of no use for protection against wind and rain, and the drift of opinion in reform circles seems to be that what we need for this purpose is a wide-brimmed soft hat—something like what was formerly known as a "wideawake," or, better still, like those we see in Vandyke's pictures. It is a curious fact, however, that most of the hat reformers overlook a fact with regard to the protection of the head from wind and rain which makes the question of protection entirely different from what it was in the time of the cavaliers, and that is, the popularization of the umbrella. The umbrella has come into general use in England and the United States in the last hundred years, and the encyclopædias still give the name of the first man who made a practice of carrying an umbrella in the streets of London. There, as well as in the United States in the earlier and purer days of the Republic, it was considered a mark of great effeminacy to carry one. Since the introduction of whalebone the umbrella has come into universal use, and strange and wrong as it may seem to Mr. Oscar Wilde, it is on the umbrella, and not on the brim of his hat, that the modern man relies for protection against rain. As to wind, it ought to be obvious, the best means of protection is by no means a flap of felt which in a storm is beaten down over the eyes, but just exactly the stiff brim which we commonly use. In summer, protection from the sun requires undoubtedly a wide straw brim; and in hot countries a wide straw brim, or the pith helmet which has been invented as a substitute for it, is exactly what is worn. But waiving these points, the use of the umbrella is a great fact in the modern history of dress which no real reformer can wholly overlook.

The trouble about the succession to the throne of the Duchy of Brunswick calls up some of the most bitter memories of the war of 1866. With the late Duke the eldest line of the great Guelph family, of which the royal family of England is only a branch, becomes extinct, and the next heir is the Duke of Cumberland, son of the late King of Hanover whom Bismarck deposed and whose dominions he annexed after the Austrian war. Bismarck also appropriated his private domains, and has been using the revenues ever since for what we call secret-service money, but what is called in Germany "the reptile fund," and devoted, it is said, to corrupting the press. The property itself, however, stands constantly ready to be turned over to the Duke of Cumberland, if he will relinquish his claims to the Hanoverian throne and accept the existing situation, but this he steadily refuses to do. He now claims the throne of Brunswick by hereditary right, but here again Bismarck has been too smart for him, for his jurists have given an opinion that the German Emperor, when appropriating the King of Hanover's dominions, appropriated also all his claims, inheritances, titles, and so forth, of a political nature, the throne of Brunswick among the rest. Anybody who does not agree with this opinion will argue in vain, inasmuch as the Pomeranian grenadiers are going to make it impregnable by occupying the Duchy. In fact, it is very hard to get the better of Bismarck either on the law or the facts.

The Czar's meeting with the two other Emperors, with all its promise of peace, order, and good will, has not interrupted for a moment the deadly struggle that has been going on for years between the Russian revolutionists and the Government. While Alexander III. was in Poland a military tribunal at Odessa, sitting with closed doors, sentenced Marya Kalyushnaya, a young lady who had attempted to imitate Vera Zasulitch by shooting the colonel of gendarmes in that city, to twenty years' hard labor in a fortress. Soon after there were students' riots in Kiev, which had to be quelled by the military, and were followed by the arrest of several hundred of the participants, by incarceration and transportation to Siberia. Scarcely had the Emperor returned to the neighborhood of his capital when a conspirator, Minyakoff, was executed at St. Petersburg. The Kiev riots met with imitation in Moscow, and Minyakoff's death proved to be only a prelude to an act of public vengeance which has hardly a parallel in the history of Russian autocracy in this century. Sentenced to death, after a long trial, by a secret military tribunal at the fortress of Schlüsselburg, six army officers and two ladies were executed, while six of their fellow-conspirators escaped with a sentence of transportation to Siberia. Of the ladies one was a noblewoman, Von Wolkenstein, and the other the daughter of a priest. The telegraphic report adds the extraordinary piece of information that, while the people were not admitted to the spectacle, the two leading members of the Imperial Cabinet found it expedient to give *éclat* to it by their presence.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, October 29, to TUESDAY, November 5, 1884, inclusive.]

DOMESTIC.

THE election throughout the country on Tuesday was very exciting, and, at the time of writing this paragraph, the result is in doubt, the State of New York, with thirty-six electoral votes, being in the balance, with the possibility of a few thousand majority for either Cleveland or Blaine. If Cleveland wins New York his election is assured; if he loses it, he may be elected by Wisconsin, California, Indiana, if Virginia and West Virginia go Democratic. In the following table of the electoral vote those States are classed as doubtful which are claimed by both sides, with no positive returns to settle the matter. Of these West Virginia and Virginia are almost certain to have voted for Cleveland, while the chances are altogether in favor of his getting others of the "doubtful" votes.

CLEVELAND.		BLAINE.	
Alabama	10	Colorado	3
Arkansas	7	Iowa	13
Connecticut	6	Kansas	9
Delaware	3	Maine	6
Florida	4	Massachusetts	14
Georgia	12	Minnesota	7
Indiana	15	Nebraska	5
Kentucky	13	Ohio	23
Louisiana	8	Pennsylvania	30
Maryland	8	Rhode Island	4
Mississippi	9	Vermont	4
Missouri	16		118
New Jersey	9		
North Carolina	11		
South Carolina	9		
Tennessee	12		
Texas	13		
New Hampshire	4		
	169		

DOUBTFUL.			
California	8	Virginia	12
Illinois	22	Wisconsin	11
Michigan	13	West Virginia	6
Nevada	3		
New York	36		114
Oregon	3		

The election in New York State was remarkable for the great gains in Brooklyn for Cleveland due to the Independent vote. Cleveland's majority was 15,587. In New York city it was 42,786. There are strong indications that Tammany was false to the Democratic ticket, as, notwithstanding the strong Independent vote, Cleveland's majority in this city was not equal to Hancock's. The new Assembly of this State will consist of 74 Republicans and 54 Democrats. As the Senate (holding over) has a Republican majority of 6, this gives a Republican majority on joint ballot of 36. In this city William R. Grace and the whole County Democracy and Citizens' ticket were elected by about 10,000 plurality.

The next National House of Representatives will probably stand about 185 Democrats to 140 Republicans.

Mr. Blaine received a number of the clergy of New York and vicinity at the Fifth Avenue Hotel on Wednesday morning. There were few well-known clergymen among them. Rev. Dr. Burchard made an address to Mr. Blaine in which he said: "We are Republicans, and don't propose to leave our party and identify ourselves with the party whose antecedents have been *rum, Romanism, and rebellion*. We are loyal to our flag, we are loyal to you." The slur at Romanism excited considerable indignation, even among Blaine organs. In the afternoon the Blaine business men paraded to the number of 16,000. The column started at the Bowling Green and was reviewed by Mr. Blaine at the foot of the Worth monument in Madison Square. About 200 persons attended the dinner given to Mr. Blaine at Delmonico's in the evening. The guest of the evening was escorted to his place by Cyrus W. Field and William M. Evarts, who presided. Among the guests were Jay Gould, Russell Sage, Washington E. Connor, and John Roach.

Mr. Blaine visited Brooklyn on Thursday. He held a reception at the Mansion House at 2 o'clock, and at the Academy of Music a ladies' reception, later in the afternoon. A mass meeting was held in the evening. The rain interfered with the day's ceremonies.

Mr. Blaine reviewed a procession of 30,000 men near the Worth monument in Madison Square on Friday evening.

Governor Cleveland visited New Haven on Thursday and was received by a great crowd.

Governor Cleveland, on Saturday afternoon, reviewed an immense procession in this city. The column moved from the Battery to Madison Square, and about 40,000 men were in line. It was one of the largest day-parades ever seen in this city.

Carl Schurz and Henry Ward Beecher addressed a large meeting at the lower end of Wall Street on Friday afternoon, under the auspices of the Down-Town Merchants' Cleveland Club.

Congressman J. S. Barbour, Chairman of the Democratic State Committee of Virginia, telegraphed to Washington on Wednesday from Alexandria asking the Democrats to raise all the money they could. He said that he had trustworthy information that Mahone had secured a large campaign fund from the National Committee.

About 200 Republicans, principally negroes, entered Loreauville, La., on Saturday, cheering in the wildest manner and using abusive language in regard to the local Democratic candidates. Fifteen of the Democrats protested and two of them were immediately killed, without apparent provocation. A general fight ensued in which sixteen negroes were killed.

Mr. Hugh McCulloch was formally qualified as Secretary of the Treasury on Friday morning.

The decrease of the public debt during October was $8,307,192.

Charles J. Faulkner, United States Minister to France in 1860, died near Martinsburg, W. Va., on Saturday.

The report of the Third Auditor of the United States Treasury for the fiscal year ended June 30, 1884, shows that there were 16-766 accounts, involving $92,674,093, settled during the year, and that there remain unsettled 37,487 accounts, involving $94,067,483.

A decision was rendered by the Supreme Court of the United States on Monday afternoon in another of the long series of cases which have arisen out of the adoption of the Fourteenth and Fifteenth Amendments to the Constitution. The present case, that of John Elk vs. Charles Wilkins, and which comes from the District of Nebraska, is a suit brought by an Indian against the Registrar of one of the wards of Omaha for refusing to register him as a qualified voter therein. The questions presented are whether the plaintiff in error is a citizen of the United States, and whether he has been denied any right guaranteed him by the Fifteenth Amendment to the Federal Constitution. The court, in a long and elaborate opinion by Justice Gray, holds (first) that an Indian who is born a member of one of the tribes within the United States, which still exists and is recognized as a tribe by the Government, and who has voluntarily separated himself from his tribe, and taken up his residence among the white citizens of a State, but who has not been naturalized, or taxed, or recognized as a citizen either by the United States or by the State, is not a citizen of the United States within the meaning of the first section of the Fourteenth Amendment; second, that the plaintiff in error, not being a citizen of the United States under the Fourteenth Amendment, has been deprived of no right secured by the Fifteenth Amendment, and cannot maintain this action. Justice Harlan read a long dissenting opinion in behalf of Justice Woods and himself.

On Saturday the members of the Prime Meridian Congress, which has been in session for the past month in Washington, met for the last time and adjourned *sine die*. Their work was substantially completed two weeks ago, and the last meetings have been entirely formal. They express the belief that the meridian selected by the majority will ultimately be universally adopted.

William Jones, indicted on November 25, 1881, for an assault and battery with intent to kill Charles J. Guiteau on the 19th of the same month, was acquitted on Monday, at Washington.

The steamer *Rhein* reached New York on Friday. She brought the passengers and crew of the steamer *Maasdam*, from Rotterdam for New York, which was burned at sea on October 24. The fire was started by a lamp placed near a leaking petroleum tank. The ship was abandoned at 4 P. M. on October 24, and five hours later everybody was rescued from the boats by the *Rhein*. The steamer was valued at $200,000. Nothing was saved by passengers or crew.

The eminent Italian actress, Mme. Adelaide Ristori-Grillo, with her husband, the Marquis del Grillo, and her son and daughter, arrived in New York by the *St. Germain* on Thursday morning. Her theatrical tour will begin in Philadelphia on November 10. She will appear in this city on December 22. The repertory will consist of "Mary Stuart," "Marie Antoinette," "Elizabeth," and "Macbeth."

The well-known tenor, Pasquilino Brignoli, died on Thursday afternoon at the Everett House, in this city, after a sickness of about two months. He was born in Naples about fifty-seven years ago, and made his first appearance in this city in the Academy of Music in 1855 in "Lucia." Since that time he has been constantly before the American public. In earlier days his voice was of most uncommon sweetness, with plenty of range, and the wide popularity he then won never entirely deserted him. He was a man of many eccentricities, but his excellent social qualities gained him many warm friendships.

Admiral Farragut's widow died in this city, on Friday, at the age of 60.

Francis Caswell Bowman, a well-known lawyer of this city, died on Thursday. He was an enthusiastic lover of music, and was at one time musical editor of the *Evening Post*. For seventeen years he has filled that position on the *Sun*. He wrote extensively for magazines and periodicals.

Rev. Dr. Paret was on Thursday, after a long contest, elected Bishop Pinkney's successor by the Protestant Episcopal Convention at Baltimore.

FOREIGN.

The motion granting precedence to the Franchise Bill was passed by the House of Commons on Thursday. The Radicals are combining to oppose the Government compromise with the Lords. They aim at the abolition of that body.

Lord Randolph Churchill, in the House of Commons on Thursday, moved his amendment to the address in reply to the Queen's speech, censuring the Right Hon. Joseph Chamberlain, President of the Board of Trade, for "inciting by his speeches interference with the freedom of political discussion, and justifying riot and disorders." Mr. Chamberlain said he did not believe the stories that the Liberals had hired ruffians to upset the Conservative meeting at Birmingham. He could not have prevented a counter demonstration, and would not if he could. He deeply regretted the annoyance suffered by Sir Stafford Northcote, who was a generous opponent. The amendment was rejected after an embittered debate, the vote standing 178 to 214. The Parnellites voted with the minority.

In the House of Commons, on Friday evening, an amendment to the address regretting that the speech from the throne contained no reference to the agricultural and commercial

depression of the country was rejected, 86 to 67.

In consequence of a statement made in the House of Commons by Lord Edmond Fitzmaurice, Under Secretary for Foreign Affairs, that neutrals must regard the French blockade of Formosa as a notification of the existence of a state of war between France and China, it is expected that the British ports will be closed to transports taking French troops to China.

The Duke of Connaught will return from India next March. He will come by way of San Francisco.

Frederick J. Allen, Vice-President of the Young Ireland Society, was arrested in Dublin on Sunday night on a charge of treason-felony, and was brought into court on Monday and arraigned. He was remanded to jail to await trial. Evidence was produced showing that he wrote a letter to the headquarters of the Fenians in Paris, containing an account of the receipts of cash for Fenian purposes, and an account of the Avengers' expenses. Among the Avengers the names of Joe Mullet and Patrick Malloy appeared. The letter likewise detailed the quantity of arms belonging to the various Fenian Centres in Ireland, and the numbers of men composing them. At Kilkenny, it is said, there were 332 members, at Dublin 650, and at Louth 503.

Cornwall and Kirwan, the Dublin Castle officials charged with unnatural crimes, have been acquitted.

The first of a series of meetings in behalf of the Tichborne claimant was held in London on Wednesday night, and was enthusiastic in his support.

A terrible panic occurred on Saturday at the Star Theatre, Glasgow. Two thousand people were present. About nine o'clock a drunken man raised a false alarm of fire. Instantly the audience rushed for the doors. The crowd from the pit met the crowd from the gallery and a fearful block ensued. Officers of the theatre and police were powerless. When the theatre was finally cleared, sixteen corpses were found on the stairs leading from the gallery, and twelve persons were badly injured.

The London *Daily News* on Tuesday, in a leader devoted to the American political contest, said: "The Republicans have much in their favor. They are in power, they have governed the republic for twenty-three years, they settled the slavery question forever, and they have most heroic recollections in the Northern and Western States associated with their name. But the Republican party has done its work, and has fallen into vices which long ascendency produces in all political parties. It has become more anxious to retain office than to perform any great national service. It has a bad candidate in Mr. Blaine, who comes forward as the representative of the party machine. A Democratic victory no longer means the return of Southern men to a monopoly of power. The old sectional jealousies are cold beyond the power of warming to new life. The old issues between Republicans and Democrats have lost their force. New issues are slowly replacing them."

Sir Moses Montefiore's illness, consequent upon his exertions at the recent centennial celebration, is grave.

The Paris *Morning News* on Sunday printed a sensational despatch from Cairo reporting the capture of General Gordon by the Mahdi, as follows: "The Mahdi, in the beginning of September, hearing of the advance of the British forces, made a supreme effort to reduce Khartum, which place at the end of September was surrounded by 150,000 rebels. The supplies failing, the garrison began to waver. A deputation of officers complained bitterly to General Gordon that they had been deceived by a promise of British assistance, and they accused him of aiding in the deception. The deputation also demanded that a retreat be made to Dongola, and threatened that if this action were not taken they would join the Mahdi. General Gordon thereupon consented to the plan proposed. Meanwhile a panic arose, and 8,000 soldiers and civilians deserted in a body. Two thousand men remained faithful, and embarked with General Gordon. The rebels were advised of what had occurred, and harassed the retreat to Shendy, where masses of rebels provided with artillery disabled the flotilla. Only Colonel Stewart's vessel succeeded in passing Berber, and soon afterward it was wrecked. The remainder of the flotilla was obliged to return southward, and on reaching Shendy the entire force was captured. About October 5 General Gordon was sent, under a strong escort, to the Mahdi's camp, where he is now a close prisoner." The British Foreign Office discredited this despatch, and there was no confirmation of it on Monday.

The London *Times's* Alexandria correspondent states that upon careful inquiry he learns that the report of the fall of Khartum originated from the following source, and gives it for what it is worth: A French merchant, formerly the French Consul at Khartum, learned from messengers who lately arrived from Khartum that General Gordon was in want of provisions and forced a sortie. He reached Berber only. Colonel Stewart was able to push further north, and General Gordon started to return to Khartum, and when near Shendy he learned that Khartum had been handed over to the rebels. General Gordon found himself unable to retire or advance and was killed there. General Wolseley arrived on Monday at Dongola, where he held a conference with the Mudir.

A despatch received on Monday from Dongola by Reuter's Telegram Company made no mention of the reported fall of Khartum. It said, however, that the Mahdi at last accounts was collecting his forces around Khartum, and had summoned General Gordon to surrender. It declared that a large force of rebels was at Berber, and that the rebels had possession of the wells on the caravan route between Debbeh and Khartum.

General Lord Wolseley on Tuesday telegraphed that the reports brought in by the natives indicate that General Gordon is still in possession of Khartum.

General Wolseley has been empowered to appoint the Mudir of Dongola as Provisional Governor of the Province of the Sudan, under the nominal suzerainty of the Khedive of Egypt. The terms of the agreement are to be subject to revision after the expiration of five years.

Lord Northbrook, who has returned to London from Egypt, whither he was sent by the Government as special High Commissioner to gain information concerning the state of the Egyptian administration, recommends that England pay the Alexandria indemnity, taking the sinking fund as security.

Admiral Courbet has forwarded a despatch to the French Minister of Marine, in which he describes in the darkest colors the sanitary condition of his men, and expresses a fear that he will be compelled to abandon the attempt to occupy Tamsui. There are reports that a severe type of cholera is spreading through the squadron.

An official despatch from Gen. Brière Delisle, dated Hanoi, October 27, says: "The garrison of Tuyen-Quang repulsed several attacks of the Chinese on the 14th and 19th instants without loss. The enemy withdrew discouraged."

It is reported that Japan has offered to act as mediator between China and France.

Chinese advices state that the Empress of China has offered half her jewels for the defence of the Empire against the French invasion.

Chinese advices state that the blocking of the Woosung River, on which Shanghai stands, and the massing of troops in the vicinity of Shanghai and Pekin, are still going on.

Five thousand three hundred troops to reinforce the French army in Tonquin will start on or before November 15. A second instalment will also start a fortnight later.

An agitation is in progress in Paris against the price of bread. A meeting of bakers was held on Wednesday to consider the request of the Prefect that they should reduce the price. They refused by a vote of 341 to 204 to accede to this.

Elections for members of the German Reichstag, held on October 28, resulted as follows: Conservatives 69, Centre 95, Imperials 24, Nationals 35, German Liberals 31, Poles 16, Volkspartei 2, Alsatians 14, Guelphs 5, Socialists 10, including Liebknecht. Ninety-seven second ballots will be necessary. It is believed that ten more Socialists will be elected. There was a great decline in the Liberal, and increase of the Socialist vote. The Anti-Jewish party are much elated.

The Crown Prince of Germany has become Regent of Brunswick. The title of Duke has been dropped. The Prince's eldest son will succeed to the Regency when his father becomes Emperor of Germany. The Duke of Cumberland will reside in England. The Emperor of Austria has notified him that his residence in that country is not agreeable to the Austrian Government, as they desire not to give offence to Germany. The London *Truth* says that Germany offered the Brunswick succession to the Duke of Cambridge and he refused it.

Gustav Reichardt, the composer of the music to which the famous song "Was ist des Deutschen Vaterland?" is set, is dead. Reichardt's compositions number only thirty-six, mostly popular songs. He was born in 1797 in Pomerania, studied theology at first, but soon abandoned it for the profession of music teacher and director in Berlin. He gave music lessons to the Crown Prince.

Professor Nordenskjöld, the Arctic explorer, is preparing to undertake an expedition to the South Pole.

M. de Lesseps will start for Panama early in February. The Secretary of the Panama Canal Company ridicules the idea that a French protectorate will be established over Panama.

At a meeting of the Spanish Cabinet on Thursday, presided over by King Alfonso, the Minister of Foreign Affairs submitted for consideration the conditions agreed upon between United States Minister Foster and the Spanish Commissioner for a special treaty of commerce with America. This treaty would be the starting point for a new colonial and tariff policy in the Spanish West Indies. It would open the Castilian colonies to American competition against Spanish imports, but it would also admit Cuba and Porto Rico into the Zollverein which America is gradually forming with Mexico and the other Spanish-speaking countries around the Gulf of Mexico. The special Hispano-American Convention stipulates that its advantages shall apply only to trade between the United States and Cuba and Porto Rico, which is carried on under the American and the Spanish flags respectively. By its terms America will admit sugars, molasses, and raw tobacco free of all duty, and the duty on other articles imported from the West Indies will be reduced. Spain will place American flour and cereals imported into her colonies upon the same footing as those imported from Spain, and will make a large reduction in the duties on cattle, salt, fresh fish, and all but a very few American manufactured goods. Spain will also suppress the consular tonnage duties which are now levied at American ports, and promises further to reform the Custom-house, harbor, and sanitary regulations and fines in her colonies. The convention is likely to meet with much opposition in the Cortes.

The Montreal Carnival has been finally fixed for the week beginning January 26, 1885.

THE LESSONS OF THE ELECTION.

THE result of the election, considering the amount of opposition and half-hearted support which Cleveland has received from the worst portion of his own party, must be regarded as in a very great degree the work of the best portion of the Republican party. There has been nothing more pitiful in American political history than the reliance during the last month of the canvass of the Republican managers on their gains among the more ignorant Irish, to make up for the loss of the flower of their own youth and a very considerable part of their wisest and most honored veterans. But they would have it so. They would insist upon it that whatever was good enough for "the boys" in the gallery of the Convention at Chicago, would do for the conscientious, scrupulous, and high-minded men all over the country, and that ridicule and insult were the best medicine for their qualms.

It is now certain that the experiment of imposing a tainted man on the voters will not be tried again in our time. The folly of that has been taught even to the most purblind among Republican politicians, and, indeed, to politicians of both parties. What the future may have in store nobody knows, but it is clear that as yet the American people are not ready to put in high office a man who cannot answer charges against his official integrity. The election of Cleveland is notice to all jobbers, contractors, and speculators that, great as their luck has hitherto been, their day has not yet come; that this Government does not exist simply for the security of ill-gotten gains, or for the fortification of great corporations against public opinion and the law, or to make profits the one test of national success. Honesty, and fair dealing, and truthfulness are still to receive official recognition, as signs and conditions of American prosperity.

To that large body of Republicans who voted for Blaine, believing all that was said against his integrity, making no attempt to disguise the fact that they accepted him only through sheer fear of the consequences of a Democratic administration, we have no word of reproach to utter. It may sometimes be the best policy to make even a chief of brigands ruler of a State, because its safety, through any instrumentality, has to be the first concern of every civilized man. But it is in no taunting spirit that we offer them to-day our congratulations on what we believe firmly they will themselves a year hence, if they do not now, acknowledge to be their deliverance from a most mischievous political superstition. Good government was not possible as long as so large and intelligent a class of the community as they are, gave the party in power a support based not on the facts of to-day, but on the facts of twenty years ago, and completely independent of the manner in which the public business is *now* transacted. This state of mind on the part of so considerable a body of voters of course put a premium on corruption and malfeasance, and offered the depraved element in politics an opportunity of pushing its schemes, of which it has only too fully availed itself. That uncontrolled power debauches rapidly is true of the best of men; it is tenfold more true of the best of parties. Parties are, no more than individuals, prone to be good if nobody expects them to be, and a party which finds that it is safe from punishment, if not from criticism, rapidly becomes a worse enemy of the state than any one tyrant can ever be. Moreover, it is an essential condition of party government in a free state that there shall always stand ready one party to be put in whenever another deserves to be turned out of office. A party in power for which there is no substitute in case of misbehavior, is not a party at all, but an oligarchy, and most probably a corrupt one. The Democratic party was deprived in Republican eyes of its proper function by the war. To have it restored as it has been to its place, as a possible alternative, in case of Republican excesses or shortcomings, is a great gain for everybody, and most of all for Republicans themselves.

Moreover, fanaticism, however valuable it may be in times of great peril, has no proper part in the ordinary work of government. Fanaticism is always unreasoning, and if there be anything in human affairs which more than all else needs reason, it is government by public opinion. Now the state of mind of a large body of Republicans about the Democrats has for many years been fanatical, unreasoning, and therefore most mischievous. The opinion on which a great many Republicans have for years based their political action, and base it now, is that the Democrats, numbering about half the voting population, are enemies of the Government, and unfit, either through wickedness or infirmity, to take charge of it. Of course, the value of a man as a citizen of a free state, who comes to the discussion of public questions under the influence of a feeling of this sort about half of his countrymen, must be greatly diminished. He can only be half an American and only half a patriot who regards one-half of his fellow-citizens with fear or contempt. And what foreign enemy of American institutions, we would ask, could desire more triumphant support for his belief in their complete failure, than the avowal by half the American people that, in the first century of the Republic, the other half had become too depraved or ignorant to be intrusted either with the making or enforcing of the laws? Relief from this deadly nightmare is a great gain for Republicans as well as for the country, and Cleveland's election will give it. Honest Republicans will acknowledge, we are sure, a year hence, that they have been for the past ten years going through the agonies of a man hanging from a window-sill by his fingers, and fancying he had an abyss beneath him, when his toes were only a foot from the ground, and he had only to let go in order to be happy. The worst of this situation was that it was one out of which it was apparently impossible to reason people. As long as the Democrats bore the name they bore during the war, no amount of argumentation would satisfy a large body of Republicans that they were not still rebels and traitors. There was nothing left for it at the end of twenty years but to try them.

M. LAVELEYE ON THE RIGHTS OF WAR.

M. EMILE LAVELEYE has published in a recent number of the *Pall Mall Gazette* an interesting article on the proposal of the International Law Reformers to abolish the right of maritime capture. The proposal is an old one, and in a certain sense has the authority of the United States on its side. The Powers which concluded the Treaty of Paris in 1856 united in a declaration—which is often confounded with the Treaty itself—by the first article of which "privateering is and remains abolished." The United States were invited to become a party to it, but Mr. Marcy, who was then Secretary of State, believing, as most Americans then believed, that letters of marque were, for a country like ours, having a small navy, a necessary weapon in case of a foreign war, made a counter proposition that we would agree to place privateering under "the ban of the law of nations," provided the other Powers would agree to the exemption of all private property from maritime capture. The subsequent history of this proposal is rather curious, for it illustrates how binding a nation's self-interest is in matters of international law. At the time of Mr. Marcy's proposal we were a great commercial nation, traditionally a neutral. Therefore whatever we gave up in abolishing privateering could be compensated for by establishing the principle that all commerce should be forever free from maritime injury. When the Rebellion broke out in 1861, we became a belligerent, and greatly feared Confederate letters of marque; accordingly Mr. Seward began to press for the abolition of privateering, though nothing further was heard about general exemption from maritime capture. But England and France had already recognized the Confederacy as a belligerent, and consequently nothing could be done, though they kindly offered to sign a convention against privateering, provided that it should not have any bearing on the internal troubles then prevailing in the United States. The matter was dropped; our commerce was destroyed by the cruisers of the Confederacy, we became in a few years a great belligerent instead of a neutral power, and the close of the war found us in the *Alabama* convention ready to do our utmost to strengthen belligerent as against neutral rights. Privateering had ceased to be of any interest to us, and the subject which Mr. Marcy undertook to couple with it near the close of the war has been relegated to the forum of volunteer agitation for the reform of international law.

The Institute of International Law has accordingly brought forward Mr. Marcy's old proposition to abolish the right of maritime capture, and M. Laveleye advances various reasons for desiring to see it incorporated into the law of nations. He, however, once more insists on considering it in connection with privateering, though he does not absolutely say that the two are interdependent, and thus introduces an unnecessary and unfortunate confusion into the subject. The arguments which have led to the abolition of privateering by so many of the leading nations of the civilized world are chiefly connected with the irregular

and predatory character of the warfare carried on by privateersmen. The chief motive of a privateersman is plunder—the motive, in fact, of a pirate. This is a motive which has such a debasing and degrading effect that it is excluded, so far as possible, from civilized warfare. Again, the control over the crew is slight, the responsibility very remote, and the risk of barbarity and inhumanity almost as great as in mediæval private war. These are the reasons urged by such writers as Franklin, Kent, Wharton, and Woolsey for the abolition of letters of marque, and that they constitute excellent arguments against privateering no one will deny.

What are the arguments against the abolition of maritime capture? M. Laveleye's statements of them show that they rest not merely on the consideration—of which everybody will admit the force—that persons engaged in peaceful pursuits should be spared the horrors of war as far as possible, but on a wholly new conception of the nature of war itself. He says:

"There are two different sorts of warfare, or rather two different conceptions of it. According to the first, war is a state of conflict between two or more nations, not only army against army, but citizen against citizen, and it is perfectly admissible that individuals of the contending countries should be allowed to employ all means to do each other the utmost possible harm. According to the second, the state of warfare only exists between the armies, who are expected to respect the life and property of all peaceful inhabitants of the enemy's land. The first of these systems prevailed in ancient times and in the Middle Ages; Louvois applied it when he ordered the devastation of the Palatinate. The barbarous hordes were but putting it into practice when they set fire to dwellings and fields on their march through an enemy's country, slaying all the vanquished or reducing them to a state of slavery. This is the principle England is now defending by maintaining the right of capture, or, in case of necessity, the burning of private property at sea. At the present time the second of these theories is the one which is admitted by all civilized lands."

This admission "by all civilized lands," however, really means, not an admission by the governments of civilized lands, but chiefly by the law reformers in civilized lands who agree with M. Laveleye. He gives only one instance, and that rather an unfortunate one, of the adoption by a sovereign of the new theory—the proclamation issued by the King of Prussia in 1870 that he was making war "against soldiers, not against French citizens," and that the latter would "continue to enjoy perfect security, both as regards their persons and their possessions, so long as they do not deprive me of the right of protecting them by engaging in any enterprise hostile to the German troops." This proclamation did not prevent the German army from levying "requisitions" on non-combatants whenever they found it necessary. M. Laveleye meets this difficulty by saying that requisitions are for the purposes of providing sustenance for an army and not to injure the enemy, and thus differ from maritime capture. But can there be any better way of injuring an enemy than by levying a tax on his industry and wealth for the support of an invading army? Moreover, the invader is not bound to render an account either to the enemy or to neutral nations of what he does with the money, and practically it all goes to make his warfare more efficient and deadly. But this is the object of maritime capture. Here, therefore, M. Laveleye's argument seems very weak.

But is there not an inherent weakness in the theory on which it is founded? This theory makes a war simply a duel between two armies, in which the nation which has the worst army goes to the wall and surrenders. But we know that with commercial nations the main support of the armies they call into the field is their wealth and commerce, internal and external. It is difficult to see any inherent distinction between bombarding a wealthy town because it will not surrender and capturing a ship at sea, or between levying a requisition on a number of defenceless inhabitants and sinking or burning a merchant vessel. The fact is that the theory of M. Laveleye is thus far mere theory, and ought to be advo cated as such. It has not been adopted by any leading nation, least of all France, a country which is now laying waste defenceless cities in China as a "form of negotiation" for the purpose of preventing war. If this can be done in a state of profound peace, it will be very difficult for France, at least, to argue that it may not be done in time of actual war. England thus far seems to be opposed to the new theory for excellent reasons, and the United States will hardly be likely to take much interest in the matter. Germany and Russia remain; but Germany, if not really "estopped," as the lawyers say, by her war of 1870, is at least placed in an awkward position by it.

FRIEDRICH KAPP.

THERE are natures whose bearing on history is never fully understood by the teacher or by the student of history. The secret of it is their personal influence, which dies with them, and cannot be related or reproduced. Rufus Choate was of this description. So was Friedrich Kapp. He gave a force to what may be called the German impetus of this country which it had never had without him.

His father was teacher at the Gymnasium at Hamm, a position half way between a schoolmaster and a professor. After his retirement he engaged in authorship, and even late in life started a periodical on educational subjects. His son had not in his manners a trace of the fragment of society from which he came. Every one knew, from an hour's conversation with him, that he had been a student at a university, but no one could divine from what sort of a family he had gone there. Kapp studied at Heidelberg and at one other university—was it Berlin, or Goettingen, or Bonn?—but Heidelberg was the one about which he principally talked; where he had formed his college friendships; where the professors made the greatest impression upon him. Mittermaier was one of these. When the Revolution broke out in Germany he was twenty-four years old. He was at Frankfort-on-the-Main for much of the time that the Parliament sat there, and particularly during the outbreak in which General Auerswald and Prince Lichnowsky lost their lives. The first portion of his exile was passed in Switzerland, of which he cherished many recollections, and where we last saw him alive this very year.

In New York, his first law firm was that of Zitz, Kapp & Froebel. Mr. Zitz, the Nestor of the bar of Mayence, had the expectation of a large business in New York, to the attainment of which his deafness was the principal obstacle. At this point Mr. Kapp was to come to his relief. Their coöperation continued for twenty years. As a negotiator, or, as he called himself, broker-in-law, Kapp was inimitable. He had no especial liking for the law before he came here, nor can he be said to have acquired it afterward. There was not life enough in it to captivate his fancy. It is a privilege of common-law countries to produce combinations of political enthusiasm and of admiration for the civil law in one and the same person. Kapp had a turn, not generally known, for novel-writing. He was struck with the idea of translating Dickens into American, so to speak—of writing something which should depict American life in all its varieties, in the same manner that Dickens delineated the life of the English people. The idea occupied much of his reflections and talk; the success of his historical works probably drew off his attention from it.

Politics was, of course, his principal occupation so far as revealed in his intercourse with others. Those whose recollection does not go back to the fifties cannot imagine the attraction of the politics of that time to a young and ardent mind. Both here and in Europe the springs were unloosed, and the waters of heaven seemed to pour down upon the favored field. And the nature of the battle differed so much on the two sides of the Atlantic as materially to add to the charm. The Wilmot Proviso was the engrossing topic about the time of Kapp's arrival. The force of argument was all on the Free-Soil side; the Hunkers had ceased to offer anything but a feeble contention. A German, moreover, with any ideal tendency, was bound to see American politics wholly on its ideal side. The dicker and thimble-rigging were concealed from him, and the actors in the game were to him as high-strung as their speeches and their resolutions. We seem to remember that Kapp edited a paper (the name of which has escaped us), and that as his business grew it went out of his hands. It was not, however, by writing that he attained the position he held in New York, and which has not been held by any other person. Whatever scheme was afoot among Germans, he was consulted. It mattered not whether it was among the down-town bankers, or the up-town journeymen—whatever was planned required his signature to make it effective. A real Jove, he smiled, and all was sunshine; he frowned, and all was storm. Auerbach has introduced him into his novel, 'The Villa on the Rhine,' not as a character, but as a figure, under the title of the Citizen of Two Worlds. This sobriquet recalls him to us as we saw him one afternoon leaning out of his office window, the wind catching his locks and playing with them. There was something extremely youthful in his appearance as well as his manner. "He is a good boy," said a friend, who saw him at the same time. There was a ring of welcome in his voice, and a tone of irresistible good-humor in the manner in which he coaxed you to sit down and recount your wants or wishes—grievances he called them. He seemed fully to understand every man the first time he met him, and we never knew him to err in the prompt judgment he passed on individuals and on measures. Toward the end of his life here, he visibly tired of the proceedings of public meetings, of which previously he must have been fond—the resolutions and motions, considerations, reconsiderations, organizations, and parliamentary jargon in general. But he did not allow this new state of feeling to take him out of the measures to which he already stood committed.

His love of wine was a material part of his patriotism. He loved the wine of his own country, courted it, and petted it. He knew the hillsides from which it came, and descanted their praises whenever it was on the board. Every brand was entwined with recollections, which oozed from him as he drank it. He lived well, in

every sense. He had a princely tendency to adorn his household with pretty things of all kinds. The engravings in his parlors were very fine. We particularly remember a something which looked like a leather receptacle for United States bonds, set in silver, which he was accustomed to open with mock-heroic solemnity when you were taking leave of him at night, and extract therefrom a beautifully chased decanter, with glasses to match, from which we were to take the stirrup cup.

He was a great traveller. He was an expert in discovering how the pieces of business intrusted to him made it necessary for him to visit distant parts of the country; and in the course of these journeys we have frequently heard him declare that there was, at that time, not a State of the Union which he had not visited. In one of his books he makes the same remark, and adds that the finest of all the States is Texas. His experiences there among a heroic non-slaveholding band of German cotton growers, near San Antonio, had given him a deep insight into the tyranny of the slave power, and a theory of what must be done to meet its steady advance. His earliest efforts socially in the free States were in company with his friend Frederick Law Olmsted, to obtain sympathy and pecuniary aid for his countrymen in Texas. In this he succeeded, and the beneficiaries afterward became of much consequence in the struggle with secession. In like manner he and Brace and Norton and others promoted an important emigration of German vine-growers to Missouri, under the leadership of Mr. Frederick Münch, and these likewise had much to do with retaining that State on the side of the Union, and in furnishing German soldiers for the Federal army. Kapp's labors for the Free-Soil and early Republican party were incessant, and no German, except his friend, Mr. Schurz, did more to unite the German Americans in upholding the cause of resistance to slavery.

Kapp was as familiar with all the Germans of Texas as if he had been one of them. To Missouri, also, he frequently went, and kept up the remembrances of Herman and Far West. It was one of these trips that made him acquainted with General Fremont, and had nearly carried him off to the Pacific. On one of his Southern journeys he was seized with the yellow fever, and for five or six hours was jolted about in a car when in the height of the attack, after which he was nursed for a long time by a negro woman—we believe in Savannah, Ga. He also made two visits to Cuba, during which he spent something like a month at a plantation, which, he was in the habit of saying, was the most agreeable time he had spent in his life. When, at the end of it, he said to his host that he positively must go, the latter begged him to be candid and say wherein he had offended him.

Kapp went to Europe in 1859, and some time in 1865, and finally in 1870. In 1859 he returned with the report that people would cross-question him to discover whether he intended to stay there, and, when they were satisfied he would not, were profuse in their expressions of welcome to him as a visitor. In 1865 he generally introduced himself to his German friends by asking whether they had not a secretary's position for him, and on his return the plan was ready in his head to re-migrate in 1870. Whether it would have been carried out if the wars of 1866 and 1870 had not occurred cannot be known.

He was a member of the Board of Emigration from 1867 to 1870. This service engrossed his attention more and more. He would frequently go on board the ships, and come back with stories of what he had encountered. He would enlist the emigrants in conversation, and, as soon as he had made them talk, would ask them what it was that induced them to quit their native country. The answer was never in set terms, "The Prussian Constitution," but still so nearly in substance, that he would be always worried into repeating the attempt on another subject. Once he had met a Mecklenburg woman, a matron, with evidently a clearer head than other peasant women. (He imitated her Low-German dialect to perfection.) She was frightened at his questions about the motive of her emigration, thinking it was dictated by some regulation of the service, and said: "Nu, ich wollte mine Verhältnisse verbetten; dat darf man doch" ("I wanted to improve my circumstances; there is nothing against that, is there?")

Kapp was on very intimate terms with Professor Lieber. But the Professor was hard on him. He always, in his own publications, gave citations, particularly from Roman jurists, and then wanted Kapp to find chapter and verse for them. Kapp really knew less of the text of the Corpus Juris than did the Professor himself. His historical studies naturally brought him into social connection with the leading historical scholars of this country. He was able to be of great service to Mr. Bancroft, Mr. Greene, and others in procuring manuscripts from Berlin, or in giving them access to rare authorities which he himself possessed. They always found in him a careful and thorough investigator, and a candid reasoner even where his conclusions differed from theirs. His own scholarship in many directions was not often surpassed. Of his books written in this country,* we have heard from his German friends but one criticism, to the effect that his style was "burschikos," or that of a student. This was generally said in a disapproving sense. We have frequently read his works with a view to finding out the truth of this criticism, and have always failed. The thing which mainly distinguishes them is their great realism, and the humor which he introduced wherever it was practicable. Both peculiarities are averse to a student's manner, which is naturally theoretical and stiff. His manner of writing history was not at the time so usual as it has since become—very strict adherence to what may be called the text, and abstinence from anything like general disquisition. There was, perhaps, too strong a tendency to give dates and particulars concerning matters which, especially in biography, cannot be called of historical interest. His works written in Europe† contain a certain train of reflections on this country which has been made an accusation against him. It is but simple justice to his memory to say that these reflections were his inmost convictions—precisely such as he had always uttered in private conversation. There is no conflict between them and anything contained in his works written here. The latter are equally sincere. But it is astonishing how little Republicanism will suffice for setting up a Prussian revolutionary; and we must not overlook the pains which, as a member of the Reichstag, Kapp took to deprive that body of any excuse for ignorance about America. Thanks to his intelligent care and incentive, the library of the German Reichstag has the finest collection in Europe of the works pertaining to the United States which are most needful for the legislator, the statesman, and the historian. We remember his telling us this past summer of his having enabled a poor woman in Germany to recover an estate left her by a relative in Idaho, by referring to the laws of that Territory, which were accessible in the library just mentioned. Death overtook him while deeply engrossed with a new and laborious work on the history of the book-trade in Germany, which we hope is so far advanced as to be sure of publication.

* 'The Slavery Question in America' (1854), and a 'History of Slavery in the United States' (1860); Lives of General Steuben (1858) and Kalb (1862), the latter recently published in English in this city; 'The Traffic of German Princes in Soldiers for America' (1864); a 'History of German Emigration to America' (1867).

† 'Frederick the Great and the United States' (1871); 'From and Concerning America' (1876); 'Justus Ehrich Bollmann' (1880).

BELGIUM AND EUROPE.

PARIS, October 22, 1884.

THE state of Belgium becomes disquieting. Hitherto it could almost be said of the little kingdom, placed on the frontier of France, and protected by the engagements made by Europe in 1834, that it realized the maxim: "Happy the people which has no history." Belgium was able to preserve her integrity not only during the golden days of the reign of Louis Philippe, but even during the Second Empire, though Napoleon III. was bent on changing everything in the Old World, and even tried his hand in the New. Its neutrality was respected during the terrible war between France and Germany in 1870. No external danger seems to have threatened its existence since it received its official recognition from diplomacy. After the great wars of Napoleon, it was felt that a barrier, a strong barrier, must be placed against France on the north, and the kingdom of the Netherlands was created by the allied sovereigns and formed of all the ancient possessions of Spain and of the House of Austria. But it was found that this creation was somewhat too artificial; there was nothing in common between the provinces of the North and the provinces of the South of the new kingdom, and the French Revolution of 1830 had a *contre-coup* in the revolution of Brussels. M. de Talleyrand was chosen by Louis Philippe as the representative of France in the Conference of London. The French King not only acted diplomatically, he sent Marshal Gérard with a French army into Belgium, and Antwerp was besieged at a time when Louis Philippe himself was not well assured of his own position in Europe. The movement of Belgium was, however, irresistible—as irresistible as the movement of the French people against Charles X. The ill-humor of the Northern courts could only contrary, it could not prevent, the establishment of a new order of things at Brussels. Louis Philippe showed his disinterestedness by refusing for his son, the Duc de Nemours, the crown of Belgium, and the new star in the constellation of kings became Leopold of Saxe-Coburg.

While Prince Talleyrand was in London at the Conference, he wished at times to correspond directly with the King. His official correspondence was sent to the Minister of Foreign Affairs, but ministerial life is short after a revolution. Paris was still agitated; there was not much stability in the new administration, and this affair of Belgium, which was of so much importance to France as a nation, required to be conducted with some sort of unity and of fixity. The Ministers who were to introduce parliamentary government into France, in what they considered its purity, were very jealous of the action of the sovereign, though he was the sovereign of their choice. Louis Philippe could not easily carry on a correspondence with Talleyrand over the head of the Minister, though he felt that officially he was not sufficiently well informed. He had a sister, Princess Adelaide, who was very devoted to him, and who was herself a friend of Talleyrand, and even more of the Princess of Vaudemont, who belonged to the circle of Talleyrand's intimate friends. Talleyrand wrote very interesting letters to Princess Adelaide during the Conference of London, which were always sent to the Princess of Vaudemont through an English banker. The Princess of Vaudemont be-

longed to the house of Lorraine. She had a very high rank, and received the visits of the Princes and Princesses of the royal blood. She was never married, and died long ago. Still, many people still living remember her very well. The letters which she carried to Princess Adelaide were in reality written for the King; they give a very exact account of the negotiations, and show the state of London at the time very vividly. The collection of these letters, which are very creditable to the old diplomat, was pilfered in 1848, in the plunder of the Palais Royal, and was sold afterward for a trifling sum to an engineer. I have been allowed to make a copy of it, but the letters cannot be published, on account of the strict precautions taken by Talleyrand against any publication of his memoirs and letters.

I only mention this collection because there sometimes appears in the letters of Talleyrand the expression of a doubt as to the future of Belgium. He even goes so far in these confidential letters as to ask himself if there *is* such a thing as Belgium—if such a country is not the artificial child of diplomacy. History would answer here that Belgium has not entirely an artificial life and an artificial independence. The great American historian, Motley, writing the history of the independence of the Netherlands, has well shown that the tie between the northern and the southern provinces was not durable. The tyranny of Spain had united the Calvinists of the Netherlands and the Catholics of Brabant, Hainaut, and Flanders. The confederacy was formed at Ghent, but the tie was never solid, and the southern provinces were finally separated from Holland and Zealand. The House of Orange became identified with these last provinces, while the others were reconquered by the Prince of Parma, Alexander Farnese, who inaugurated a policy of conciliation. The perversely insane policy of Philip II. was forever abandoned. The Prince of Parma, with his Italian finesse, understood that there was no real connection between Holland and what we must call Belgium; that between the French frontier of Artois and Antwerp the old nobility was still attached to the Catholic faith, and that the cities only cared for their municipal liberties and privileges.

The Catholic religion was the cement which united Belgium to Spain, and it has ever since remained the living force in a country covered with monasteries and magnificent churches. In 1830 the Catholics were found side by side with the Liberals against the detested House of Orange; it may even be said, without exaggeration, that the Catholics were the bitterest enemies of Holland. Their leader at the time, Félix de Mérode, belonged to a house which has always been famous for its devotion to the Church, and which has served its cause in many countries—in Germany, in Italy, in France. At one time he was so popular that he was mentioned among the possible candidates to the new throne. The feeling of communion and of sympathy between the Belgian Catholics and those who were called Liberals was a strong tie, which could not easily be cut. It was a fortunate circumstance for the new dynasty, which had for its principal object the establishment of constitutional government in Belgium, that it found at once the elements for what has been called government by parties. Catholics and Liberals were equally devoted to the new order of things, equally anxious not to create too many difficulties for the new sovereign. They looked upon him as an arbiter, and succeeded each other in power with the same regularity as the Conservatives and the Liberals in England. By a sort of common and patriotic consent it was understood that the lease of power of each of the parties should not become eternal, that neither of them should become tyrannical and arbitrary, that the Liberals and the Catholics should carry out the maxim, "Live and let live."

The parliamentary life of Belgium was as quiet for a long series of years as the movement of a pendulum. King Leopold, by the taciturnity of his character, his reticence, his indifference, served extremely well this natural development of representative institutions and government. He was a Protestant among Catholics, he was a foreigner, he had seen many men and many things, he had learned in England the rules of constitutional government. His son Leopold II. has inherited many of his faculties: he is as calm, as wise, as silent; he sees things from above, he has no favorites, no enemies. "I make no difference among Belgians," said he some time ago to the Burgomaster of Brussels. His position became gradually almost the same as the position of his father, who has sometimes been called the Nestor of Sovereigns. How is it that things are changed, that the King has been attacked in person, and that there seems to be an end to the quiet existence of the monarch who ruled in Brussels as in a sort of political Arcadia?

It is not very easy to answer this question, but there seems little doubt that the new spirit of political intolerance which threatens Belgium has its origin in the struggle which is raging between religion and positivism, or, if you like it better, between clericalism and anti-clericalism. A positivist is willing to admit the spiritual instinct and the established religions as facts. The anti-clerical, who calls himself a Liberal in Belgium as he does in France, is not always a philosopher—it may even be said that he is seldom a philosopher, but he objects to the slightest interference of the religious element not only in the affairs of the state, but even in the education of the people. The struggle began in Germany with the *Kulturkampf;* in France a terrible war was declared against the congregations, and the public schools became, without exception, lay schools. It could hardly be expected that a spiritual warfare, which has now for several years convulsed Germany and France, should not be felt in Belgium. The issue between the Catholics and the Liberals in Belgium is the education of the people. The Catholics have passed a school law which leaves the choice of lay or clerical teachers in a commune to the majority of the fathers who live in it. The law, even when there is a lay school, forces the commune to give some support to a clerical school, if there is a certain minority, sufficiently large, which claims it. This is not all; it is not possible to admit that the existence *de facto* of a Republic in France for a number of years should not affect a country like Belgium, which is, in every respect, a small counterfeit of France. The Belgians read our books, play our plays, copy all our fashions. There are fashions also in politics. There are now avowed republicans in Belgium; they will not be numerous at first; they will not be, they are not, men of substance, of pure reputation. They are in Brussels now what they were once in France. Who will say that in two years or sooner they will not be what the French republicans were in 1870? An idea which triumphs in France, in the centre of Europe, acts by a sort of perpetual radiation. Napoleon said at Austerlitz: "La République est comme le soleil: malheur à qui ne la voit pas." But there are other powers in France—there are Kings and Emperors. What will they say of this invincible propagandism; what measures can they take? It is not enough to exchange orders and uniforms. The little Belgian fire may kindle all Europe. There is a spirit abroad which it may be difficult to understand and to conquer.

MANNERS AND MORALS IN ENGLAND.

LONDON, October 20, 1884.

THE question is constantly discussed in England, and I perceive from a recent article in your paper that it is discussed in America also, whether there has been a decline of late years in the tone of English society—whether our manners are less polished, our conversation less decorous, our moral standard less strict, than in the earlier years of the present reign. It is a question very difficult to answer, not only because it embraces so wide a field, but because those whose personal recollections, extending over forty or fifty years of adult life, best qualify them to answer it, are likely to have contracted the usual fault of the old, and to see too keenly the faults of to-day while they remember the charms of youthful days. Such persons have several explanations to give, but before hearing them one must ask whether the alleged decadence does in fact exist.

To take the lightest part of the charge first, is it true that the manners of men toward one another are less suave and courteous than formerly? Suavity has never been a strong point with the English, who seem to Continental eyes both stiff and brusque. But the only reason given for holding us less courteous than formerly is that rude language and scenes of violence have grown more frequent in Parliament. This must be admitted. Nor is it only, as many Englishmen will tell you, the Irish members who transgress good manners. Several English members, some of them people of high social position, are pretty nearly as bad. The House of Commons, however, contains only 650 persons, and its sins can be easily accounted for by special causes. Two or three men set the example, and the last Speaker's leniency allowed the evil to grow. The very fact that the country notes and condemns it, and that the present Speaker is generally praised for his greater stringency, shows that the House of Commons is in this respect below the average level of good private society. "Scenes" in town councils or other local assemblies are occasionally reported in the newspapers, but on the whole the business of these bodies goes on with wonderfully little personal friction, especially as they are chiefly composed of persons who are not, in the conventional English sense of the word, "gentlemen" in station. Considering that duelling completely died out thirty or forty years ago, while it still holds its ground on the Continent, it is remarkable that none of the evils its defenders predicted have followed. Insulting language, personal assaults, violent quarrels of all kinds, are less common now than they were when duelling flourished, and, considering the infirmity of human nature, may be pronounced very rare. We retain, besides our brusquerie, the great fault of indicating by manner our sense of caste differences. Inferiors are apt to be servile, superiors haughty. But this is not an increasing fault; the sentiment of equality grows, although slowly, and will remove it in time.

Everybody knows what a character we bore on the Continent for the use of profane language. I could mention places in France where the ordinary name for an Englishman is still "un godam." But swearing has now disappeared not only from ordinary polite society, but from the army and navy. Not all commanders have reached the level of the Captain of the *Pinafore*, and on board ship, where things have to be done quickly and a mishap may be serious, it may be necessary to relieve one's feelings forcibly. But on shore a naval officer, who, in the novels of sixty years ago, could hardly open his mouth without an oath, is as decorous as other people. The improvement among the laboring classes is less marked, but if one excepts certain classes, such

as dock laborers and draymen, canal boatmen and such like, there is less bad language than in France. This is the more remarkable because it doesn't seem due to any growth of religious feeling. Sixty years ago it was the professedly religious people only who objected to swearing, and persons who joined them from the ranks of what used to be called "the world" had hard work to rid themselves of a habit which scandalized the congregation. Now the practice has ceased to be a sin and become merely (if habitual, for no one thinks much of an occasional word) a mark of ill-breeding.

To come to a more serious matter, there can be no doubt that intoxication is far less common among the middle and upper classes than it was in our grandfathers' or fathers' times. One sees this in many ways. Thirty years ago people sat over their wine after dinner for an hour at least, and drank five or six glasses of port. Now they sit, unless some interesting subject of talk turns up, only twenty minutes, and drink two or three glasses at most. It is true that more is drunk at dinner, but it is less trying to the head then. The number of those who drink nothing is large and increases daily, partly because many physicians prescribe abstinence, partly from philanthropic motives and the desire to set a good example to the poor. On the stage, in comic papers, and in after-dinner speeches, it is still a conventional joke to assume that people get drunk in good society; but in reality the phenomenon is rare. A few weeks ago I heard a man of fifty, who had moved a great deal in the best circles of London and of a University city, declare that he had never but twice in his life seen a gentleman the worse for liquor; and several persons among the party present declared their experience to be similar. Others could not say quite so much, yet all agreed that, considering how common intoxication is among certain classes, and used to be among all classes, it had become surprisingly rare in their own rank. This does not mean that there are not still many people who injure their health and character by the too frequent resort to stimulants, for one hears many lamentations over the practice of taking "nips" and "pick-me-ups" through the day; a practice alleged to prevail among ladies of fashion as well as young men in the city. I speak only of intoxication, which has become a mark of gross ill-breeding in the society of ladies, and is condemned as "bad form" even in a party of men.

It is more difficult to express an opinion as to the standard of morality in matters which regard the relations of the two sexes. England used to plume itself on being a specially well conducted country in this respect; but the large use made of the Divorce Court, established for the first time in 1857, showed that irregularities were commoner than people had liked to believe. Divorce can be obtained only on the ground of conjugal infidelity, accompanied, if the charge is made against the husband, by cruelty. The number of divorces does not appear to increase faster than the growth of population, so that we have no special uneasiness on this score since the first two or three years of the Court's working. There seems no ground for assuming any decline in the morality of the middle classes, or of what may be called the non-fashionable section of the upper class. Much, however, is said about the fashionable section, which, although small in numbers, is influential from the wealth and rank of those who compose it, and attracts public notice to a degree even beyond its political influence. People say that not only are irregularities increasingly frequent, but that there is less decorum in manners, less reserve in the intercourse of men with women, less regard for propriety in language. Certain it is that the ladies in some of these fashionable sets, the married quite as much as the unmarried ones, permit themselves to be more easy and familiar in the company of men than would have been approved by their mothers or grandmothers thirty years ago. Some will romp, others frequent the smoking-room at the country house where they are staying; others seek to join in men's amusements, and learn to talk about shooting or racing. Subjects are discussed, books are owned to have been read, which would not be tolerated outside these fashionable circles. Even where gossip, which of course is very rife in such a society, has no positive transgression to suspect, there is an unmistakable tendency towards fastness in conduct and slanginess in language. Within the last decade there has arisen a group of journals devoted to social gossip, which may be seen on the drawing-room tables of these persons, although their contents are sometimes scandalous, and often unpleasantly suggestive. They are read with avidity by a part of the middle class, and go even to India, where people fancy that through them they keep abreast of the doings of high society; but it is also the fashionable class which supports them, for its members enjoy the importance of being written about, and sometimes are not above earning a disgraceful guinea by contributing malicious paragraphs. In a book of recollections published lately by the brother of a duke, he owned to having done this, and everybody knows of other instances.

It must not be supposed that this infection has spread far. The great bulk of our cultivated society is untouched by it. One may live in the capital of England and have as much company as one desires of the kind which an intelligent stranger would most wish to see—the company of men of letters and science, the heads of the great professions, the prominent figures in politics—without knowing anything except by hearsay of the doings of these fashionable sets. They are not the best society; they are only a section even of the people of rank and wealth; and the fuss made about them both in our own journals and in the letters of correspondents to newspapers in the colonies and in foreign countries gives an exaggerated impression of their actual influence on English life. England is doubtless the chosen home of snobbishness, as Thackeray explained to the world long ago; yet she is not so snobbish as casual visitors, or the superficial readers of her press, are apt to fancy.

Whatever be the area over which the deterioration spreads, it is generally admitted to exist, and people busy themselves with accounting for it in the way which least wounds our national self-esteem. Some set it down to the influence of French literature. Paris is doubtless a sort of poison manufactory for the rest of Europe. The novels which profess to paint the life of her most depraved classes are read with avidity not only in new or raw countries which have little imaginative literature of their own, like Russia, Greece, Rumania—one may perhaps add Spain and Portugal—but also in England and Germany. The children of luxury find our English fiction, which, however sensational, is always decent, not high-spiced enough; and one is told by booksellers and the owners of circulating libraries in London that the demand for French fiction is very large, and not confined to men. If this is not a cause, it is at any rate a symptom, and one which tends to aggravate the disease.

Another explanation which people frequently offer, and which I recollect to have seen assigned in the *Evening Post* some months ago, is the influence of the heir to the throne and those who surround him. Although he is personally a good-natured and agreeable man, his example has not been a good one, and is the more to be regretted when one compares it with that set by his parents. The most serious, and, indeed, the only charge that can be brought against the Queen is, that since her husband's death she has virtually abdicated her headship of society, abandoning those opportunities of maintaining the level of good morals and good manners which she used so well while she kept a court in London. The social duties of the Crown are now its main duties, and the way she and her husband discharged them almost marked a new era in the history of our monarchy, which could not long survive any grave scandal attaching to the sovereign. But too much importance has been assigned to the unsatisfactory tone of what is called the Prince of Wales's set, which is itself a result of other facts; and I believe that the causes of the evil are to be sought deeper. Wherever there is a great accumulation of wealth in the hands of idle people, who have neither public duties to discharge nor any intellectual or artistic interests to occupy their minds, the permanent weaknesses of human nature will grow apace and bear their appropriate fruits. We have in England not only a territorial aristocracy with immense incomes, but a crowd of new rich men, who, while aping the habits of the aristocracy, seek to secure their entrance into its ranks by a lavish expenditure in ministering to its pleasures. Luxury and self-indulgence are the natural result of these conditions, and the other evils referred to follow in due course. One can imagine other influences checking or modifying these conditions—some national peril, for instance, or a strong religious movement, which should sway men's wills and engross their thoughts. But none such is present; and the tendencies described have therefore full scope, being more potent now than they were forty years ago, because there has been a longer and fuller tide of material prosperity. They have not prevented a steady improvement in the moral and intellectual, as well as material, well-being of the people at large. Even the class against which are brought the accusations I have been examining may be favorably compared with the corresponding class in Berlin, Vienna, St. Petersburg, never to speak of Paris. But it must frankly be admitted, though persons in other countries seem slow to realize the fact, that those sets in England whose social pretensions are the highest do not, either in morals or manners, in intellect or taste, in public spirit and a sense of national duty, furnish the most laudable specimen of English worth. Those who have here begun to ask what are the political uses of an hereditary nobility, will go on to ask what are its social uses. Y.

A NEW HAMLET.

LONDON, October 25, 1884.

THE event of the London theatrical season up to the present has been the revival of "Hamlet" at the Princess's Theatre. To play this part is the familiar ambition of every rising actor, who must, however, to accomplish it, be his own manager, and it has long been known that Mr. Wilson Barrett had made up his mind that his opportunity had come. He has risen by faithful work from the bottom of his profession, and although it was known that whatever he undertook he was likely to do well, his performance in the "Silver King," of Jones and Herman, was a complete surprise for the great advance it showed upon previous assumptions. This was followed by another and greater success in "Claudian," a poetical melodrama, which was fortunate enough to start with the praise of Mr. Ruskin and Mr. Matthew Arnold. Then came "Chatterton," of which the *Nation* gave an account at the time. Now at length "Hamlet" has made its appearance at the Princess's, with Mr. Ruskin and Mr. Arnold again well to the front at the first representation. That

it has proved another of the series of successes it is no longer necessary to say; indeed, Garrick used to assert that no actor with any qualifications at all for his profession, could possibly fail entirely as *Hamlet*. But Mr. Barrett's success is of that three-fold character which is demanded of an actor-manager at the present day. His version of the text, his arrangement of the actual details of presentation—including the division of the acts, choice of costumes and decorations, and "business"—and his own assumption of the title rôle, have all been received with approval, and completely justify the classic ambition in his case.

His *Hamlet*, it may be said at once, is an original one. He has gone back to the oldest sources—even as far back as the first folio—and has decided for himself in all uncertain points without regard for the superstructure of tradition which has turned Shakspere's *Hamlet* into the actor's *Hamlet*. To begin with his arrangement of the play into acts and scenes, the principal changes from the customary division are three in number. First, after the soliloquy, "Oh, what a rogue and peasant slave am I!" the act proceeds, instead of closing with the applause which this is calculated to produce. The next act thus opens with the speech to the players, given while they, with *Hamlet*, are on their way through the grounds of the castle to the place of performance. And after the scene in the *Queen's* chamber the play goes on with the entrance of the *King* to consult her, and to arrange about the burial of *Polonius* and the despatch of *Hamlet* to England. By these changes many speeches for the *King* are retained which serve to make him a more complete character and a more integral part of the play. The most conspicuous, and indeed most fortunate, innovation is the removal of the play-scene to the open air, thus making *Hamlet* attempt to "catch the conscience of the *King*" upon the very spot where the murder was committed. A low platform is erected on the right of the stage between two trees, from which thick curtains are hung from side to side; torches are held by attendants and fixed to the walls of the castle, and the *King* and *Queen*, *Hamlet* and *Ophelia*, sit on the left of the stage upon rustic benches. When the court withdraws in confusion, the stage is naturally left in semi-darkness, and *Hamlet* rushes upon the vacant platform and declaims his wild words from there, instead of jumping on the *King's* seat, as Mr. Irving makes him do.

The archæology of the play was determined by Mr. Godwin, the well-known Fellow of the Society of Antiquaries, who visited Denmark some time ago for the purpose of producing the decorations for the present revival. On the whole, a series of brilliant stage pictures were displayed, whose slightly barbaric coloring and outline seemed strange after the æsthetic combinations of color and simplicity of form to which we have lately been accustomed, especially since Shakspere himself thought so little of accuracy in these matters as to give to his play, as Schlegel puts it, "a tone of the most modish society and in every respect the costumes of the most recent period."

The first innovation upon the received text was furnished by *Hamlet's* first line, "A little more than kin and less than kind," in which the last word was pronounced to rhyme with "sinn'd," the allusion being to the German word for child, still current in some parts of England—more than "cosin," less than "sonne." This is said to have been first suggested by Dr. Johnson. "The air bites shrewdly; is it very cold?" is another return to the reading of the first folio. "A very, very Paicocke," is read as "paddock," *i. e.*, toad. But the reading upon which the spirit of the present revival turned was "a dozen years," as the time *Yorick's* skull had lain in the earth, instead of the customary "three and twenty." From the latter reading and the saying of *Hamlet* that he had been carried upon *Yorick's* back "a thousand times," his age is reckoned at about thirty, and that of his mother at not much less than fifty. But following the reading "a dozen years," which is that of the earliest edition, the quarto of 1603, Mr. Barrett appears about twenty, and the *Queen* an attractive woman of less than forty. The line referring to *Hamlet* going "back to school at Wittenberg" is strictly in support of this reading, and as to the *Queen's* remark during the fencing that *Hamlet* is "fat and scant of breath," it may well be that Shakspere himself inserted that line to excuse the corpulence of Burbage, who "created" the part of *Hamlet*. At any rate, the whole play gains by the change; the villain-king "smiles and smiles," their amorous majesties exchange caresses in public, and the whole court, taking its cue from them, is merry with wine and music and jester.

One customary aspect of the play that Mr. Barrett's revival removes is its melancholy; "the melancholy Dane" no longer weights the whole performance with his private troubles. A second customary aspect that is equally removed is mystery. As Mr. Barrett represents him, there is never any doubt as to whether *Hamlet* is mad or feigns to be so; the first moment of his assumption is clearly seen to be when he catches sight of *Polonius* in hiding while he is talking with *Ophelia*, and, instantly changing his tone, asks her sharply, "Art thou honest?" Schlegel compares the tragedy of "Hamlet" to "one of those irrational equations in which a fraction of unknown magnitude always remains, that will in no way admit of solution." If the simile be a just one, it can be said that in the person of the latest *Hamlet* the fraction of unknown magnitude is reduced to its lowest terms. The springs of all his actions are apparent; he ventures far more freely than his predecessors upon the use of the familiar style; he is more of a man like ourselves than an incarnate psychological problem, as we have often known him. In short, he is probably more like the *Hamlet* that Shakspere had in mind. Mr. Barrett's personality is perhaps not so peculiar and stimulating to curiosity as those of some who have recently preceded him in the part, and there has never been, of course, a performance in which there were not minor points open to criticism; but a true verdict upon Mr. Barrett's revival as a whole may be given in the words of one of the leading London dramatic critics: "It is not too much to say that it restores to the stage both the text and the spirit of the play."

O. R.

Correspondence.

TELEPATHY?

To the Editor of The Nation:

Sir: Apropos of the article in the *Nation*, No. 1008, p. 350, the following case is related. Some two and a-half years ago a dealer in futures found it prudent to leave home and put the Atlantic between his creditors and himself. He returned (unaccountably) to this side a few weeks ago, and the morning of his arrest, 1,000 miles away, his wife awoke in a nightmare, and told her mother she was miserable because she had seen (in her sleep) her husband arrested by three men, whom she described accurately. Eight hours later a telegram brought her the first intelligence of her husband's being in the States, and fuller accounts came later and were substantially as she had dreamed. The time she woke from the dream and the time of the arrest coincided very closely, making proper longitudinal allowances. Was this a case of telepathy? * * *

October 27, 1884.

"TO LAY ON LOAD."

To the Editor of The Nation:

Sir: It seems to me that this fine old idiomatic phrase has been rather slighted by English lexicographers. In Sewall's 'Diary,' vol. i, p. 442, we find him writing: "This morn Madam Elisa Bellingham came to our house and upbraided me with setting my hand to pass Mr. Wharton's account. . . . I was wheadled and hector'd into that business, and have all along been uneasy in the remembrance of it; and now there is one come that will not spare *to lay load*." (The italics are not in the original.) Doctor Johnson, in the last edition of his Dictionary, gives as one of the definitions of the word *load*, "weight or violence of blows," and cites in its support the following three passages:

"Like lions moved (?) they layd on load."
—Chevy Chase, l. 123 (135).

"Far heavier load thyself expect to feel
From my prevailing arm."
—*Milton*, P. L., iv, 972.

"And Mnestheus laid hard load upon his helm."
—*Dryden*, Æneid, iv, 812.

But he does not intimate that there was ever any such idiomatic use of the expression as is evidently made by Judge Sewall. So his later editors, Todd and Latham, and Webster (Goodrich's ed.) and Ogilvie, in the 'Imperial Dictionary,' repeat the definition with one or the other of the same citations to sustain it. Yet the phrase is a good idiomatic one of the Elizabethan age:

"So dreadful strokes each did at other drive,
And laid on load with all their might and power."
—*Spenser*, F. Q., B. iv, c. ix, st. 22.

"They all at once at him gan fiercely flie,
And lay on load, as they him downe would beare."
—*Id.*, *ib.* st. 33.

"But still continued his assault the more,
And layd on load with his huge yron flaile."
—*Id.*, b. v, c. ii, st. 24.

"And because my armor was gilded and glittering they all lay'd load on me."—*Trans. of Coronado's Relation in Hakluyt*, Voyages, etc., v. iii, p. 450 (ed. 1810).

The only authority I have found to notice the expression is Halliwell, who, in his 'Dictionary of Archaic and Provincial Words,' s. v. *lay*, gives the phrase *to lay on load*, 'to strike violently and repeatedly,' without, however, citing any examples of this use of it.

Henry W. Haynes,

Boston, October 26, 1884.

JUDGE TOURGÉE AND THE CENSUS.

To the Editor of The Nation:

Sir: In the *Church Press* of October 18 I find, copied from the *Critic*, a notice of Judge Tourgée's 'Appeal to Cæsar,' with quotations from it purporting to give "the facts and suggestions of the last Census." I have not seen the book, but presume the quotations are correctly given. "The white population," we are told, "increasing at the rate of twenty per cent. (it should be twenty-nine; see Spofford's *American Almanac* for 1883, p. 110) in ten years, or two per cent. per annum, doubles itself every *thirty-five years*. The black, increasing at the rate of thirty-five per cent. in ten years, or three and a half per cent. per annum, doubles itself in *twenty* years." And from this the inference is drawn that "before the conclusion of this century we shall have a chain of States extending from the Potomac to the Mississippi, in every one of which the colored race will have a clear and indisputable majority, and in several of which their predominance will be very nearly in the ratio of two to one."

Judge Tourgée has evidently been misled by the gross inaccuracy, so far as the colored population is concerned, of the Census of 1870—an in-

accuracy so gross and so obvious, that it is strange he should not have perceived it. The percentage of increase of white and of colored in each decade of the present century, as deduced from the figures of the Census (Spofford, p. 110), omitting fractions less than half of one per cent. and adding one per cent. for fractions over half, is as follows.

Decade.	White.	Col'd.	Decade.	White.	Col'd.
1800-1810....	.36	.38	1840-1850....	.38	.27
1810-1820....	.34	.28	1850-1860....	.38	.22
1820-1830....	.34	.31	1860-1870....	.25	.10
1830-1840....	.35	.23	1870-1880....	.29	.35

It will be seen that, in the war decade, while, from losses in the field on both sides and diminished immigration, the percentage of increase of the white population fell off but a trifle over one-third, that of the colored population, which was comparatively little affected by one of these causes and not at all by the other, dropped down, according to the figures of the Census, from twenty-two per cent. to ten, and then rebounded to thirty-five! Obviously, there is an error, and a very serious one, in the enumeration of the colored population of 1870. As, however, there is no way to get at its exact magnitude, let us eliminate it, by taking successive periods of twenty years each:

1800-1820.....69 per cent. increase.
1820-1840.....62 " "
1840-1860.....55 " "
1860-1880.....48 " "

The actual increase in the first of these periods is seventy-seven per cent. A part of this increase, however, is to be credited to the importation of slaves during the first seven years: how much, I do not know, not having access to the statistics, but I have estimated it at one-tenth, which leaves sixty-nine per cent. of *natural* increase. It will be seen that the percentage of increase goes on diminishing from each preceding period to that which follows, at the uniform rate of seven per cent.; and that if this continues, the colored population, so far from doubling in the twenty years from 1880, will increase only forty-one per cent.; while the white population, which from 1800 to 1820 increased eighty-two per cent., 1820 to 1840 eighty-one per cent., 1840 to 1860 ninety per cent., and from 1860 to 1880, notwithstanding the war, sixty-one per cent., will in all probability, now that that disturbing element is eliminated, resume its old rate of increase of from eighty to ninety per cent. There is no occasion, then, for alarm lest the Judge's chain of negro States extending from the Potomac to the Mississippi should swamp our civilization; they exist only in his teeming imagination.

E. J. Stearns.

Easton, Md., October 25, 1884.

THE ACADIAN TRAGEDY.

To the Editor of The Nation:

Sir: A recent letter in the *Nation*, signed by Mr. Philip H. Smith, takes me to task for an article on the removal of the Acadians in *Harper's Monthly* for November. If he had read it with more care he would have escaped several errors in his account of it. The article is but the latter half, much curtailed, of what I have written on the subject. The whole may be found in 'Montcalm and Wolfe,' vol. i, just now published, and the former part is necessary to a good understanding of the latter.

Mr. Smith seems to think that the Acadian story is one-sided, from an alleged destruction of French records. The French documents relating to the treatment of the Acadians are far more abundant than the English, and of the most unquestionable authenticity. I have by me two large folio volumes of them, of about 500 pages each, copied from the archives of the Marine and Colonies at Paris. These papers have been hitherto unknown to history. They set in the plainest light the condition of Acadia between 1748 and 1755—that is, down to the removal of its inhabitants—and give the clearest insight into the causes that led to this removal. Up to the present time no accurate view of the subject has been possible from ignorance of the evidence on the French side.

It is needless to point out the errors of Mr. Smith's communication. The narrative in 'Montcalm and Wolfe,' along with the documents appended in vol. ii, soon to be published, will carry its own proof. In another part of the same number of the *Nation*, I find the following by another writer, apropos of the article in *Harper's*: "Most people, when they desire to know the true history of Acadia, will be content to read Longfellow." If so, they will not find what they seek, but in its place a graceful and touching poem and a charming ideal picture. The author of the remark just quoted adds that "the history of events is not always the history of humanity." But the history of humanity, to be good for anything, must rest not on imagination but on truth.

F. Parkman.

Boston, November 1, 1884.

Notes.

L. R. Hamersly, Philadelphia, announces 'The Indian Sign Language,' by the late Captain W. P. Clark, Second Cavalry, U. S. A., completed by Colonel James F. Gregory, U. S. A.

Charles Scribner's Sons have in press Canon Rawlinson's 'Egypt and Babylon,' and will also publish E. T. A. Hoffmann's 'Weird Tales,' a work on the Scotch Highlands by Professor John Stuart Blackie, and Dr. Schliemann's forthcoming work on Tiryns.

A translation by Mrs. Francis Brooks, from the German of Johanna Spyri, entitled 'Heidi: Her Years of Wandering and Learning: a Story for Children and Those Who Love Children,' will be published, solely for the benefit of the Kindergarten Department of the Blind Asylum at South Boston, through Cupples, Upham & Co., Boston. The same publishers will issue immediately a second edition of Besant's 'Art of Fiction,' adding to it Mr. Henry James's answer.

Ginn, Heath & Co. announce for December 1 a second revised edition of Hunt's edition of Cædmon's 'Exodus and Daniel,' in their library of Anglo-Saxon poetry. They will issue during the present month the following new volumes in their series of "Classics for Children": Scott's 'Lady of the Lake,' edited by Edwin Ginn, and Kingsley's 'Water Babies,' edited by Miss J. H. Stickney. Kingsley's 'Grecian Heroes,' edited by John Tetlow, and the 'Swiss Family Robinson,' edited by Miss Stickney, will follow soon in the same series. Vol. i of the "Educational Classics," 'Extracts from Rousseau's Émile,' edited by Jules Steeg and translated by Miss Worthington, and Miss Turner's 'Stories for Young Children,' are also set down among the November issues of this house.

A novel magazine is announced to be published in this city at No. 18 Spruce Street. It is a monthly magazine bearing the title *Babyhood*, and designed "to become a medium for the dissemination among parents of the best thoughts of the time on every subject connected with the needs of early childhood." The editorship of the department relating to general nursery routine and cooking will be in the hands of Marion Harland; and Dr. Leroy Milton Yale, of Bellevue Hospital Medical College, will oversee the medical and hygienic articles. The other writers whose names are given as co-laborers have a standing which seems to insure a high quality in the contents of *Babyhood*, for which we can readily believe there is a large field of usefulness. The first number will appear in December.

The Salmagundi Sketch Club's seventh annual exhibition will be held at the Academy of Design on December 11-23. Works will be received only on the 5th. The Secretary's address is 80 Washington Square, East.

Parts 10 and 11 of 'Stormonth's Dictionary of the English Language' (Harpers) reach the word *mint*.

We have received the first number of the illustrated *Magazine of Western History*, published at No. 145 St. Clair Street, Cleveland, O., and appropriately having for its frontispiece a portrait of General Arthur St. Clair. A portrait of Rufus Putnam accompanies an article on the organization of the Ohio Land Company. Among the attractions of this new enterprise, which we wish success, will be a serial history of Ohio, beginning, perhaps, with the geographical history of the State in the present number.

Thomas Y. Crowell & Co. add to their illustrated edition of Scott's poems "The Lay of the Last Minstrel," uniform with the "Marmion," lately produced, and quite equal to it in typography and in the general character of the designs.

A beautiful edition of Bacon's 'Essays' and 'Wisdom of the Ancients' between two covers has just been issued by Little, Brown & Co. The care usually taken by this firm in the proportions of the page and the scrupulous typography is observable here. The supplementary matter, such as the biographical sketch of Bacon, Basil Montagu's preface, etc., has been derived from a variety of sources.

'The Good Things of *Life*' is the felicitous title of a volume of cartoons taken from our humorous contemporary (White, Stokes & Allen). The drawing is nearly all clever, although the facsimile of pen-work by photography will never equal in artistic effect that by wood-engraving. The essential quality, after all, is to be sought and is here found in the legends, which are generally pointed and never flat. The one with which the book opens is a good specimen, even if neither original nor American, and has, besides, a timely application for a certain class of citizens who could not bring themselves, from social considerations, to vote for Cleveland: "*Visiting Briton*—'Ya-as, Miss Wosalind; but your politicians—aw—are a lot of blawsted cads, y' knaw. You are—aw—wuled by a set of wiotous wascals whom you wouldn't dweam of—aw—inviting to your house.' *Rosalind*—'True, but in England you are governed by persons who wouldn't dream of inviting you to theirs.'"

A pleasing paper on Boileau and Boursault, by Alphonse Pauly, introduces *Le Livre* for October. The lesser poet is shown to have been the nobler man, and to have been able to win over his satirist, after a retort in kind, to a friendship creditable to both parties. Champfleury describes Caragueuz, the demoralizing Punch and Judy of the East, with the aid of authentic representations of the puppets employed. His comments on the various accounts of the show scattered through French literature, and here gathered together by him, stand ethically in much the same relation to those which an English writer would feel bound to make, that Caragueuz does to Punch and Judy as an index of civilization.

A German edition of Mr. Andrew Carnegie's 'Round the World' is soon to be published, probably in Leipsic.

The drawback to owning a museum of antiquities is that one is not always sure that one's trea-

sures are antique. M. Frédéric Moreau has adopted the same method that Schliemann did to insure the genuineness of his, viz., he digs them up himself. The whole of the summer he spends in explorations in the old cemeteries of the department of the Aisne; in the autumn he makes a detailed report of his findings, with full descriptions and numerous plates, called "Album Caranda," because he starts from Caranda. The seventh part has just been issued. During the winter he shows his museum to visitors with great good-nature, and no doubt with great satisfaction.

We have received from Professor Karl Geldner, of Tübingen, the first advance sheet of his edition of the 'Avesta.' Geldner is a pupil of Roth, the famous Vedic and Avestan scholar of Tübingen, and has already distinguished himself by valuable contributions to the text-criticism, lexicography, and exegesis of the 'Avesta.' These are contained in his 'Metrik des jüngeren Avesta' (1877), 'Studien zum Avesta' (1882), and in volumes 24, 25, and 27 of Kuhn's *Zeitschrift*. The edition of Westergaard was a splendid achievement for its day, and has been the standard for thirty years; but it is now out of print, and in the meantime much new and valuable critical material has become accessible. A new edition of the text is therefore a pressing need of Avestan scholars. The results of Geldner's previous work warrant us in believing that he will supply this need in a worthy way. He sends us this first sheet in two forms: the one with the ample critical foot-notes in German, and the other with the same notes in English. If this is for the sake of scholars in India who are ignorant of German, why not dispense with the German foot-notes altogether (for Avestan scholars in Germany surely know English)? The externals of the work are truly magnificent. It is printed with no less than three fonts of Zend types, with beautiful rubric initials, on heavy, well-sized paper of fine quality, with quarto pages and broad margins. Geldner will have in full measure the cordial good wishes of scholars for the success of his undertaking.

Dr. Marion Sims, to whom woman is so great a debtor, and whose fame is secure among the benefactors of the race, when a young man practised medicine in Alabama. It is now nearly forty years since he published a theory of the very fatal and hitherto mysterious lockjaw of infants, a serious scourge in some sections, and advised a mode of treatment. The seed fell upon stony ground. Very recently, however, Dr. J. F. Hartigan, of Washington, has demonstrated the complete correctness of those views, and has successfully put them into operation. Dr. Hartigan's 'Lockjaw of Infants' (Bermingham & Co.) is a monograph interesting to medical men and to all intelligent persons who care to see what mechanical levers govern pathological states. It is appropriately dedicated to the memory of Dr. Sims, and the practice it influences will be another leaf in his honorable chaplet.

—By a curious accident of the press, the *per-capita* calculations in the fourth column of the following table were dropped bodily in printing our last issue. The reader could, indeed, make them for himself, but their loss was nevertheless a provoking annoyance:

Census year	Est. True Valuation.	Population.	Per Capita Wealth.	Percentage of Increase in Est. Wealth	Percentage of Increase in Population.	Percentage of Inc. in Per Capita Wealth
1850	$6,174,486,328	23,191,876	266	....	....	....
1860	14,578,112,068	31,443,321	463	136	35	74
1870	23,997,221,474	38,558,371	622	64	22	34
1880	43,642,000,000	50,155,783	870	81	30	39

— Though it is now nearly four years since we have published anything from his pen, the death of Karl Hillebrand, announced in the latest foreign papers to have occurred at Florence on October 19, should not go unnoticed in the *Nation*, if only as a loss to this journal. Professor Hillebrand was born in September, 1829, at Giessen, his father being Joseph Hillebrand, author of a 'History of German National Literature from the Beginning of the Eighteenth Century.' On account of his participation in the revolution in Baden he was forced to flee to France, where for a time he became the private secretary of Heine. In 1863 he was made professor at the University of Douai. This residence made him a very sympathetic judge of the traditional enemies of his fatherland, and his writings were marked by a charitable appreciation not usual in foreign criticism of the French. His chief works relate to the history of that nation ('Geschichte Frankreichs seit 1830,' and *passim* in 'Zeiten, Völker, und Menschen'). He had thoroughly mastered the language, and became a constant contributor to the *Débats* and the *Revue des Deux Mondes*. In 1868 he published in Paris, at the request of the Government, a work on the reform of the higher education. In 1870 he removed to Florence, where his literary activity began to take shape in the works cited above and in articles for the reviews of all nations, as well as in founding in 1873 the Circolo Filologico, of which he became librarian, and editing (in German) the periodical collection called *Italia* (begun in October, 1874), and designed to satisfy German interest in Italian affairs. Into these he entered as heartily as he had done into those of France, and it was in search of an American audience that he first began to correspond with the *Nation* in 1872. In the following year and in the years 1877, 1878, 1879, and again in 1881, he continued this relation, writing in English of remarkable though not faultless purity.

— We need not characterize the writings of this highly gifted cosmopolitan, who will long be read for his brilliant and entertaining style, as well as for his solid judgments on contemporary events and historical personages in many lands. The following extracts from letters which we chance to have preserved will perhaps be read with interest:

(December 21, 1877.)—"It is understood that in case of a conclave I shall write to the *Nation*, although I am not *dentro nelle segrete cose* with regard to the *papabili* and not-*papabili*, etc. In other terms, I ignore the personalities of the 'Sacro Consesso' (in which ignorance I am at a par with all other lay writers, the difference being only one of more or less frankness in confessing this truth). There are, however, other aspects of the question than the gossip side; and I think I can master *them*. We are again in a ministerial crisis, as in the good old time of the Right. You see, parties in Italy are 'bonnet blanc et blanc bonnet,' as elsewhere. That is why I never write to you about their squabbles and quarrels. Only when the shades of the Left are driven out, I shall take up again the subject, unless you express different wishes."

(April 6, 1878.)—"Will you allow me to congratulate you upon your most admirable articles on the Russo-English difficulties. NO journal in Europe has this unprejudiced, candidly elevated view of the situation; and you know that for me *candid* does not mean *naïveté*. But you need not my approbation."

(March 4, 1879.)—"I am very obliged for your kindness, and entirely approve the way you have disposed of my article. Only I am afraid printers who are not familiar with my handwriting will be puzzled, and an Editor who does not know me and has not the very great indulgence you have always shown me, will be more than shocked at the aspect of my MS. The fact is, that I had written it first in French and then given it to a friend of mine for translation. As, however, I was not satisfied with the translation, I gave it to my (future) wife to correct it, as I was very busy just then and thought every moment's delay would be serious. Finally, I looked it through again and made annotations, which accounts for the three different handwritings. . . . Next week (9th March) appears a third entirely revised and augmented edition of my 'Frankreich und die Franzosen,' and in May the second volume of my 'History of France.' You might mention also my article in the last *Rundschau*, not to flatter me, not even to name *me*, but to touch the question. It has made an enormous *Tolle* in Germany. The editor writes to me that he cannot show himself without being interpellated.

"I have been called to London for *six lectures* at the *Royal Institution* (13th May to 20th June). If you think you might use them, I would send you extracts."

These lectures, on "England and the English," afterward formed a volume in the 'Zeiten, Völker, und Menschen.'

—M. Gabriel Charmes has concluded, in the *Revue Politique*, his articles on "La Marine de Guerre et la Guerre Maritime." He expresses the opinion that privateering and the bombardment of unfortified seaports are to be hereafter the chief features of maritime war; and to relieve himself from the charge of barbarism, he makes quotations from high authorities on international law, which show that both practices are fully authorized. For there is a distinction between land war and sea war: the former will not allow anything of the sort, and forbids the bombardment, of unarmed cities; the latter does not respect private property, and allows such bombardment, on the theory that anything is justifiable which will break an enemy's naval power. To attack fortified places with ships is almost useless, so great is the defensive power of earthworks and torpedoes, and so limited in comparison is the armor-carrying power of ships. Whereas, to send to a rich and undefended seaport a fleet or a single swift cruiser that, before it can be followed, may do incalculable damage, is not only easy and without risk, but promises to the attacking Power that result so ardently desired in our expensive wars—a heavy contribution. The thought is not pleasant to one who looks at the wealth collected at certain points along our seacoast, or easily to be reached from the sea, and remembers how utterly undefended these cities are in the modern acceptation of defence. M. Charmes devotes the greater part of his papers, however, to the advocacy of privateering against the arguments of M. Gougeard's 'La Marine de Guerre, son passé et son avenir.' For M. Charmes, privateering is the only maritime warfare. The age of pitched battles between large squadrons is passed. The weaker naval Power now does not risk a fight—*pas si bête*. She simply draws her fleet into her ports, where they are protected by heavy fortifications, and the stronger enemy has to stay stupidly outside, blockading the harbor, to be sure, but doing no other harm. In the meantime the weaker Power fits out a few swift corsairs and ruins her blockading enemy's commerce. So acted Germany in the Franco-Prussian war; so acted Russia in the Russo-Turkish war; so acted the Confederate States in our civil war, or would have done if Semmes had not made one great mistake: forgetting that he was a Yankee—that is to say, nothing if not practical—and offering to fight the *Kearsarge* "as if he had been a fool of a Frenchman, a European Don Quixote."

—M. Charmes accordingly thinks that France made an egregious mistake at the Congress of Paris in proposing the abolition of privateering, and would have her recede from that agreement, the sooner the better. France has too long been preaching philanthropy, and international fraternity, and other noble sentiments, which her neighbors applaud so long as they profit by them, and do not mind in the least the instant they stand in their way. It is idle to waste any more money on heavily-armored vessels, for torpedoes have destroyed their usefulness. Speed is the criterion of superiority in the navy of the future. The country which can best defend its

own coast by torpedoes, and at the same time most thoroughly ruin the enemy's commerce and harass his seaboard cities, is the country which will win the next naval contest. This is not a kind of warfare that is especially suited for the injury of Germany; but for the enemy on the other side, England, with whom late colonial rivalries have by no means increased the *entente cordiale*, it is the best weapon that could be desired. Four or five great commercial routes connect England with the rest of the world. Let twenty swift vessels lurk along these routes; let them cut her communications with her Indian, Canadian, and Australian colonies; let them intercept the American cotton that keeps her looms in motion and brings her in wealth from all the nations of the earth, and cut off the supplies of American corn that feed her people, and her cry of distress would soon be heard. Certainly no other method would have so great an effect. This is the way to invade England, and not by debarkations or through Channel tunnels. But for France to do anything like this, she must create her torpedo and cruiser navy. She has spent already forty-nine and a half million francs on unfinished armored vessels that will cost 130,000,000 to complete, and will be worthless when done. Why should she not abandon this way altogether, leave the plated boats on the stocks, and, with the millions which she is now going to waste, provide three or four hundred torpedo-boats and a fleet of gunboats and swift ocean cruisers?

— Mme. Adam, having for some time coquetted—"*Honni soit qui mal y pense*"; in her *Nouvelle Revue*, we mean to say—with the heroes of Panslavism, discovered, not long after the death of Skobeleff, that the hosts of Muscovy were not yet ready to invade Germany in coöperation with the armies of France, and that in the meanwhile the pro-Russian sympathies of the French Republicans had the effect of intensifying the pro-German leanings of the Magyars, who dread and hate the Muscovites. Thinking that the resuscitation of the enthusiastic feelings which, in the time of the Second French Republic and Kossuth's leadership in Hungary, animated the two countries toward each other, would be a patriotic task, she betook herself to rereading her friend Irányi's History of the Hungarian Revolution of 1848-9 and Chassin's unrhymed translation of the songs of Petöfi, the bard of that revolution, and thus easily rekindled in her own heart the admiration of "the people of the East" whose heroic struggle had thrilled it when she was young Juliette Lamber. To these sentiments she gave full vent on the opportune arrival last year of a party of Hungarian Gallophils, who had come to Paris *via* Venice and Milan, carefully avoiding to tread upon German soil. Mme. Adam now felt it incumbent upon her, as the representative French woman, to carry the love of France to Buda-Pesth, to the great Magyar plain, to the banks of the Theiss. She departed last spring. She felt like entering upon a high national mission, and suspected that the wide-awake Magyar nation knew all about her position in Parisian society, about her *salon*, her lead in politics, her books, her *Review*. And the chivalrous Magyars did not disappoint her. Magnates, journalists, politicians, artists, husbandmen, herdsmen, vied with each other in reciprocating the kind feelings of France's fair messenger. Her tour was an uninterrupted succession of charming scenes and incidents. These she hastened, on her return, to depict in pages of "souvenirs personnels," collected under the title of 'La Patrie Hongroise,' of which the second edition is now before us. It is a book overflowing with ecstasy, poetic exuberance, and democratic gush. It glorifies Hungary as a country in which Arcadian simplicity, Roman civic virtue, Hunnish vigor, British political wisdom, French chevaleresqueness, and the general refinement of the nineteenth century bloom side by side. All leading Magyars of the day appear as patterns of nobility of character and patriotism, excepting two—Premier Tisza and Count Andrássy, both supporters of the German alliance, whom she, as a French woman and admirer of the Hungarian Radical opposition, passionately caricatures. Her historical retrospects are done in the same vein, with a vast amount of poetic license as to the facts. Mme. Adam is, however, most precise in describing the external appearance of prominent Magyars, and thus we learn that the novelist Jókai has "an observer's delicate mouth" and fine hands; old Pulszky, an "eagle's nose" and a "sly mouth"; Liszt, the pianist, the face of an apostle; the orator Szilágyi, the most delicate smile she ever saw ("que je connaisse"); Count Albert Apponyi, brown eyes and "admirable teeth"; and Kossuth, whom she visited in Turin, fascinating blue eyes and a wonderful mouth ("une bouche merveilleuse"), to mention only a few of the traits minutely described.

—In place of the articles, common forty years ago, urging aspiring youth to cultivate their minds by foreign travel, we have of late years noticed numerous editorials and paragraphs pointing out the folly, if not wickedness, of wasting one's substance in foreign parts. Persons accustomed to breathe the pure air engendered by the democratic simplicity of American life, naturally cannot traverse the effete monarchies, etc. (and especially, we may suppose, come in contact with the pauper labor of those regions), without suffering for their temerity. But worse than this is the fact that this sort of thing diminishes the national wealth by we forget how many millions yearly, while incidentally it has an equally bad effect on domestic prosperity by failing to encourage domestic attractions, and thus secure a home market for local beauties. As misery loves company, we are, however, pleased to learn from an article by an elderly and respected Munich writer, Friedrich Pecht, which appears in a recent number of one of the new German magazines whose extraordinary success so disgusts Prof. Treitschke, that we are no worse off than some of our neighbors. The passion for foreign travel, remarks Mr. Pecht, constantly stimulated by improved means of communication, involves the greatest danger to the nation—moral as well as political. Not less than $40,000,000 to $60,000,000 are annually thus lost to Germany, and, as if this were not bad enough, "our railways don't pay, while innumerable hotels become bankrupt, and the enormous sums invested in these enterprises are absolutely lost. . . . The loss in patriotism, character, contentment, and domestic happiness is even greater. The more we enrich our neighbors by our folly, the more we increase their power and lessen our own." The rich who travel are culpable because they are "absentees"; but it is the middle class who themselves suffer. "The great majority of these travellers are persons with little leisure and less money—civil servants and teachers who thus employ their six-weeks' vacations—or persons with a small fixed income, business men, and even artisans, who indulge themselves in a holiday once in a lifetime." The enjoyment they get out of it is simply exasperating to Mr. Pecht. "For four weeks they live in a heaven upon earth. Under the palms of the Pincio, or on the pavement of the Boulevard Italien (*sic*) they realize that golden time of which they long have dreamed—a time without care for the present, or thought for the morrow. To them, all women are Helens, every dirty alley is picturesque, every ragged beggar is a Murillo, every broken-windowed palace an architectural masterpiece." But when they come home, Mr. Pecht gets his revenge: "They are more tired and nervous than when they started, and after having luxuriated in dinners of six courses, they have to content themselves with what their wives [who evidently have been left behind] give them—boiled beef and cabbage. And when they take up their daily work, they find it ten times as hard as before." In short, at home, "where they have to earn their living, and, incidentally, to put up with the ill-humor of their official superiors or their wives, who did not accompany them," they are much worse off for their journey. It is only artists and scholars whom Mr. Pecht would allow to travel.

—About two years ago a young man of Russian descent and Cincinnati birth was standing one morning on a Parisian boulevard, wondering whatever was to become of him. He had only two francs in his pocket and had already tried in vain every means he could think of for getting a living. While he was contemplating the black prospect for him, a gentleman stepped up to a newspaper kiosk close by, received a copy of a paper costing two sous, laid down a franc in payment, and walked away. It was not for nothing that this young man had been born in America, since to witness this mysterious transaction was for him the same thing as to realize that there was place and fortune for a middleman between the two parties to it. The explanation, as he learned afterward, was that the gentleman was an artist, that the old woman carefully searched each morning's papers for any remarks upon his pictures, and that when she found one he gave her a franc for the paper containing it. What the apple was to Newton, or the deer's skull to Geoffroy Saint-Hilaire, this monetary spectacle on the boulevard was to Henry Romeike; in so far, at any rate, as it pointed the way to fame. He managed to get to London, invested his last penny in a copy of the *Daily Telegraph* during the picture season, cut out the notices of artists' works, and positively peddled them from studio to studio. The next day he was in a position to buy several papers, and the next week a large number, and to extend his operations to other persons than artists. At the present moment, so accurate was his *idée mère*, and so skilfully has he followed it up, that his handful of newspaper snippings has become nothing less than "The Artistic and Literary Correspondence, and Universal Compendium of the Press," with offices where a score of clerks, male and female, are busily engaged all day long in cutting up great heaps of newspapers, pasting the cuttings upon printed forms, and mailing them literally to all parts of the world.

—Three thousand English newspapers, 600 American ones, and several hundred published on the European continent are thus regularly searched through and dismembered under the direction of this ingenious American. The papers as they come in are examined by Romeike himself or one of his head clerks (French, German, Italian, and Russian are read in the office), passages referring to any person or subject on the books of the bureau are marked, numbered, and a printed slip, correspondingly numbered and having blank spaces for the date, name, and address of the newspaper, and name of the subscriber, is placed between the leaves, and finally the paper is handed to the boys or girls, who cut out the passages, stick them on the slips, enter them in a book, and mail them. The charge made for 100 notices—"To see ourselves as others see us" or on any matter whatever—is $5, or $20 for 500. From its humble beginnings, the "Artistic

and Literary Correspondence" has grown into an institution of recognized merit and importance. Among its 7,000 subscribers are a majority of the members of Parliament, numbers of actors, artists, novelists, poets, institutions, and every person who makes a hobby of any public matter. When Lord Dufferin was appointed Viceroy of India, he telegraphed to Romeike from Constantinople to forward him all allusions to India. Lord Randolph Churchill was provided with 8,000 cuttings about himself in eight months; Barnum received 1,000 notices of his white elephant in three days; Mr. Chamberlain has been supplied with opinions concerning the shipping legislation, and Lord Derby concerning New Guinea; the Irish members have a standing order for cuttings upon which troublesome questions to her Majesty's ministers may be founded. Not a few persons are actuated by the same motives as the lady (not the major's wife) who writes for all allusions to Major ———, of the ——th, now serving in Egypt; and Oscar Wilde, it need hardly be added in conclusion, has been a patron of the enterprise from the first.

—There is no other class of literature that throws into such strong relief the prodigious changes that have taken place in the last century as books of travel. Whoever reads Arthur Young's account of his short excursions in the South of England, or even Mme. Riedesel's description of her journey from her home to her husband in America, will have no difficulty in realizing that we are as far removed from the eighteenth century as the eighteenth was from the twelfth. To the information contained in this class of books a valuable addition has recently been made in Germany by the publication of the travels of the Countess of Kurland ('Elise v. d. Recke's Reisen durch Deutschland, 1784-1786, nach dem Tagebuch ihrer Begleiterin Sophie Becker': Stuttgart, Spemann). Coming to Germany in 1784, the Countess passed the first winter on the southern border of the Hartz Mountains, whence she made various expeditions to places of interest in the vicinity. A little later she visited Halberstadt, Weimar, Gotha, Erfurt, Leipzig, Dresden, Halle, Göttingen, Frankfort, Hamburg, and Berlin. At all of these places her rank gave her immediate access to the most prominent people of the time. There is scarcely one of the literary men of the day then living in north Germany of whom some account is not given. Not a little light is thrown on the political discontents that were then showing themselves in Germany as well as in France. Göckingk remarked to his guest that it was a pity he could not show her a beheaded or a drawn and quartered prince. But the most interesting and valuable parts of the book are the descriptions and incidental notices of more or less trifling events. The keeper of the diary was not negligent of her work, and on the whole seems to have seen and heard with intelligent eyes and ears. What a journey was a hundred years ago is very clearly portrayed. There are some descriptions that remind the reader of Frederick the Great's famous visitations on the "sausage wagon," and even one or two that recall the earlier journey when Frederick the First's back was permanently crooked by the jolting of the carriage. An occasional upset or even the breaking of an axle was hardly worth mentioning, but when, as between Hanau and Brückenau, the carriage was overturned three times in the course of a few hours, and this variety was further spiced with the incidents of a broken axle and a ruined wheel, the matter was deemed worthy of especial note. A good measure of equanimity, however, was at all times preserved.

BAYARD TAYLOR.

Life and Letters of Bayard Taylor. Edited by Marie Hansen-Taylor and Horace E. Scudder. In two volumes. Boston: Houghton, Mifflin & Co. 1884.

It is so much a literary fashion to divide a man's life into periods of development, although they may not in reality differ from Shakspere's Seven Ages, that one is often inclined to be impatient with such an exordium. In Bayard Taylor's growth, however, there seem to have been two lives, so marked was the change in his nature; and he has, in fact, left two reputations in consequence—one widespread and established, the other narrow in its range and of doubtful permanence. Out of the still farm life of the Quaker settlement in Chester County, where he was cradled into poetry in the midst of a simple and pure people and under the guardianship of a quiet and cheerful landscape, he came at a very early age into the excitement, the busy triviality, and incessant vicissitude of our earlier journalism; and having made a successful stroke at the start by his first book of travels, he won his way with rapidity and comparative ease to the position of best American reporter of scenes and incidents. This was what he called his service of mammon, and he said he hated it. But from the first there was a purely literary strain in his blood, a spring of poetic thought in his heart that would not be choked, and an effort of his will toward artistic expression of the best of his spirit. His early friends, the sponsors of his baptism before the muses, were not of the choicest. Rufus Wilmot Griswold was the editor to discover him; but for the youth to whom Griswold was a Mæcenas, the auguries were certainly of doubtful complexion; and when he found his Augustus in the person of the natty Willis, the odds against his making a man of himself were to be counted off only by his innate virtue and the vigor of his mind. It is as good, at least, as one of his own novels to see from his youthful letters how much he prized the first literary society into which he was admitted, the New York coterie of mutual admiration and secret envy, of which here and there in our literary annals some mention may still be found under the name of "the Literati," as they called themselves. Taylor was so far imposed on by it as to write of "that charmed circle of artist and author life, which is the only real life of this world," and he was in middle life before he decribed it as under-bred, half-refined, and superficially cultivated. Perhaps his travels, by removing him from the danger of constantly breathing this atmosphere, served him better than he knew. However that may have been, it is enough to beget a charitable spirit in one to remember that in his youth the *Tribune* was his taskmaster and Willis the high-priest of his cult.

Taylor quickly enlarged his circle through the opportunities of travel and the readiness and freshness of his instincts for fraternity. He made friends with everybody he met, and one might almost say with every creature, even to savage beasts. He enlarged his mind, too, and on returning from his visit to the East he was able to draw to himself an audience distinctly his own. Money flowed in from books, lectures, and successful investments, and he built Cedarcroft and settled down in the expectation that fortune would continue to shower gifts upon him. He was soon to be ready, he thought, to be a poet; he had been making sure of his bread first, and now he would make sure of his fame. But the war came; and when it was gone there was a new nation, and Taylor found he had outlived his early reputation and had lost his own audience. Trouble in one form or another was at hand. His manor-house on the paternal acres was a millstone round his neck; and finally, after a long struggle of incessant hard work at bookmaking, he went back to his hack-life on the *Tribune*, from which he was relieved by his appointment to the German court and his speedy death. In the latter part of his career he had translated 'Faust' and written long poems, and it was for these works that he cared; for he had learned by experience the ephemeral nature of a traveller's reputation, and he desired most ardently to leave an enduring name. The mass of his writings is very large, but his heart was in his poetry only; the rest was what he called mere pot-boiling literature. In these last years, too, there was an expansion of his intellectual nature and a sharpening of his artistic perception, due in large measure to his study of Goethe, who overmastered his mind and determined the character of the latest products of his genius. It was from the Goethean point of view that he looked down almost contemptuously on the earlier period of his literary activity, and looked forward and up to the future work of his hands, the true work, which was to prolong his memory among men. His death was thus, he would have thought, as truly premature as if he had died in youth. Hope was so strong in him that when past fifty the best of his life seemed still before him.

The most prominent point in the popular conception of Bayard Taylor is that he was a man of great vitality; and, as is frequently the case, the people have seized on the main characteristic. The activity of his mind was enormous, and it may fairly be said that it was the overflow of physical health in no small degree. But just as he would say that the public did not see that he could not be so good a traveller had he not been a poet, so the vital force that enabled him to grasp and master such masses of work would never have sustained him had he not been buoyed up also by an eagerness of the spirit. The trait which these volumes reveal on nearly every page, from the days of youthful ardor to those of untiring manhood, is aspiration of the most unflagging and incorruptible kind. Whether Taylor succeeded or not in realizing the fondest wish of his heart, to be known as one of his country's great poets, there is no doubt that he always was working upward to the plane of their life with a high, firm purpose that grew more strong and simple at each turn of his worldly fortune. It was because of this aspiration that the difference between his first and second period has so marked a character as to seem a difference between two lives; he left his youthful environment and all that it contained behind him, and rose out of "the Literati" into literature.

It belongs to this strong aspiration, too, that he was so avaricious of praise, hoarded up his commendations from "the poets," and overvalued their meaning. He was all his days hungry for recognition; he welcomed it from any quarter, and repaid it profusely with his own good-will. It was not vanity that made him listen so keenly for applause; it was not self-conceit that was bred in him by the praise he got; and yet it is not a pleasant characteristic to meet with when one finds the hero so anxious for the roses. It made some people misunderstand and dislike Taylor in his lifetime, and there is in it certainly some proof that he was without the assurance that goes with matured genius of high order. A discomfortable doubt of his position always haunted him, and this made him prize distinction of an outward kind, and practically look to his friends to mint his coin with their royal approval. The trait of the parvenu, too, is very disagreeably conspicuous in the attitude of his mind toward the great men whom he met, and particularly in his pleasure at being favored by Bismarck and others whose worldly position

attracted his respectful admiration. It is said that we all like titles, and perhaps he shared a national weakness; but it would seem rather that this regard for the aristocratic was another phase of his desire to be admitted to an inner circle, as if he were in some way accredited by such an admission.

To meet at once a second questionable trait, he was always self-absorbed, engaged mainly in his own affairs, with a word now and then for others and what they were doing and hoping, but nevertheless, kindly and cordial though he was, essentially preoccupied with his plans and deeds. He was too busy, in fact, to think about other matters than his own; he had no time. Of course he was not lacking in any liberality to his kindred and his friends; he gave what he had—his good-fortune, his hospitality, the favor of his name, the good-will of his heart—everything except his thoughts. For this reason the letters here published are concerned, more than is usual in this class of writing, with private and temporary details—his new ventures in material or literary affairs, and especially with what he was going to do; for he was more attentive to the future than to the present. Thus one comes about again to what was the leading mark, the saving power of his life—his irrepressible aspiration, of which his deference to authority and his engrossing interest in the development of himself were, in part, results. It is not necessary to point out how fit such a nature was to imbibe the ideas of Goethe and incorporate them in his own life.

Throughout the latter part of his career Bayard Taylor evidently felt much aggrieved by the fact that the people judged him by his achievements in the lower walk of literature. At first, when his mental horizon was still bounded by a foreign landscape, he was pleased to be known as the most successful traveller of his age, and, if he dipped into poetry, as he could not help doing, he wrote a Californian ballad. But after "the age of sensations and short poems," as he called it, was gone by, and especially after he had translated "Faust," he sent letters to the *Tribune* for pay only, and occupied himself with the ambition of composing, not epics, to be sure, but a "cosmic poem"—one or more, according to the length of his life, for there was never any question in his own mind that he was inexhaustible. The experience he had acquired in outgrowing the bonds of his early education and breaking away from the formulas of Chester County life, and his observations of the creeds of alien races, with the knowledge thus impressed upon him as to the contingencies of religious dogma, had made a foundation in his mind for a poem of philosophic scope, and he wrote one or two of such a character. They may have been "cosmic," but they were not popular, and since his death they have not grown in esteem. Some of the Arab lyrics will outlive 'Prince Deucalion.'

Without undertaking to decide whether Taylor's complaint that the people looked on him as a traveller primarily and as a poet only secondarily, was just or not, one may make one or two observations on his poetic method. He wrote with great facility, and his final composition was unusually rapid, but the subject, he frequently declares, was for years in his mind slowly taking shape and was at last suddenly developed. He speaks of poems as of other literary work—a newspaper article or a review for example—as if they could be made to order: so many last week, so many to be ready by such a day next month; and similarly of long poems: he will be through at such a date, and there will be so many lines—and this he knows before the draft is completed. These trifles are straws, but they show a good deal; and from them and other hints the impression is left on the mind that Taylor chose his subject first and wrote about it afterward, and the availability of any particular subject from the supply he had always in his mind, was determined by various considerations other than that need for expression which is the only true inspiration. The great poets are more likely to name their verses after they are composed, and to have the substance of thought or passion before they cast about for a heading. Shelley's 'Prometheus Unbound' is only the 'Paradise Regained' of a new age—the lyric for the epic, the Greek for the Jewish, the human for the puritanic; but the idea, the same Messianic one that "springs eternal in the human breast." Bayard Taylor, on the other hand, apparently thought of a "cosmic poem" first and of what he should say in it afterward. It is also significant that in his later poems he was so much given to symbolism. To a genius of the loftiest order, like Goethe, allegory is merely a mode of expression; the thought is thus conveyed by a symbol, but the thought is far more than the symbol, and is no more contained in it than an elemental force is contained in a single phenomenon. To minds of a lower rank, like Rossetti's, symbolization itself is a mode of thinking rather than of expression; the symbol gives rise to the thought instead of the thought to the symbol. The instrument of poetry is, of course, concrete images in all cases, though not necessarily visual ones; but to poets in whom intellectual power is preëminent, images are a language, while to poets of lower rank the images themselves are the poetry. Many a time in literature we have had rhymesters who strung similes and metaphors, and thought they were producing poems: similarly, since Goethe's time, we have had thinkers, both mystic and scientific, who string symbols and allegories and believe they are composing philosophy in verse.

It would be unjust to say that Taylor was merely one of these latter, but he helps us to understand them. The mode of poetic composition he chose in 'Prince Deucalion' was of this kind; it requires the very highest intellectual genius to employ it successfully, and he failed. When he was appointed Minister to Germany he was felt to be the representative of our journalists rather than of our literary men, and the publication of 'Prince Deucalion' shortly afterward confirmed the view. This last drama of his life is dwelt on because it marks his line of development, and was one of the mainstays of his hope of immortality in literature. He wrote much better poems when his mind was not filled with such large ambition. But whether his fame shall prove to be transitory, and to rest still on his muscles and pluck and vivacity as when he was thirty years old, the history of his later career is that of a very noble effort to achieve the highest, and together with it a constant and toilsome fulfilment of the duties of his material life as a man with bread to earn. In outliving the era when reputations were easily won, he entered on a harder career, and bore himself in it in a way to win respect from his successors as largely as he won affection from his contemporaries.

STANWOOD'S PRESIDENTIAL ELECTIONS.

A History of Presidential Elections. By Edward Stanwood. Boston: James R. Osgood & Co. 1884.

THE more we look back upon the work of the men who established the Constitution of the United States, and upon the results which have followed from it, the more wonderful it seems. As one feature of it, that the chief ruler of a great nation should have been regularly and peacefully elected every four years, not even excepting the period of the civil war, for nearly a century, and that by a popular vote swelling from 360,000 in 1824, the first given in this book, to 9,200,000 in 1880, is a thing without parallel in the history of the world. It seems hardly possible to recite the story without giving way to an occasional flight of imagination. But Mr. Stanwood has resisted any such temptation; he has given us a severely prosaic account, and has left the reader to draw his own inferences. The first thing which strikes us is the steady tendency to throw the decision into the hands of the people. It is commonly remarked that the electors were at first supposed to be a certain number of judicious and discreet men, to be selected on general principles by the people, and that these men were to agree upon the two men who seemed to them fittest to govern the nation—in other words, it was an election in the second degree. But the electors are now a mere matter of form, the choice being made directly by the people between the nominees of conventions. Under the former theory, the choice of electors by districts had some meaning, which disappeared under the latter. Accordingly, while in 1824 eleven of the twenty-four States pursued a different course, by 1832 all except Maryland and South Carolina chose electors by popular vote at large, or what the French call *scrutin de liste*. And there was still another change in the same direction: the Constitution left to the State Legislatures to prescribe the mode of choosing electors; but whereas in 1796 in ten out of sixteen States, and in 1824 in six out of twenty-four, the electors were appointed by the Legislature, in 1832, without any amendment to the Constitution, every one of the twenty-four had assigned the choice of electors to the people, except South Carolina, which retained choice by the Legislature till 1860, though Maryland still adhered to the district system. An irresistible tide has carried this great question out of the control of local cliques into that of the whole nation, and the question became and still is, How is this enormous and increasing mass of votes to be influenced and directed?

The drift under this head forms another item of interest. Washington was the obvious first choice of the nation, and Jefferson and Adams followed in a rather natural line of succession, but it soon became evident that some means of guiding the popular choice must be resorted to. "The first caucus of members of Congress for the nomination of Presidential candidates was held on the 25th of February, 1804," and the call was addressed to the Republican members of the two houses. They met and nominated Jefferson unanimously, and Clinton "by a very large majority." The Federalists agreed—it is not known where or by whom the agreement was made—to support Pinckney and King. In 1816 Mr. Clay made a motion in the caucus that it was not expedient to nominate candidates, and in 1824 the caucus which nominated Crawford and Gallatin formed the last instance of this method. At the same period Clay was nominated by the members of the Kentucky Legislature, and Jackson by a mass convention of the people of Blount County, Tenn. J. Q. Adams was nominated by the Legislatures of most of the New England States, Mr. Clinton by several counties in Ohio, Mr. Calhoun by the Legislature of South Carolina, Mr. Crawford by the Legislature of Virginia. In October, 1825—that is, three years before the next election—Jackson was nominated by the Tennessee Legislature, followed by similar nominations from conventions and meetings in all parts of the country.

The first National Convention was held by the Anti-Masons in September, 1830. The other parties followed the example, and "thus was established the convention system of nominations and the practice of adopting a platform of principles." As delegates are elected to these conventions from

the whole country, it seems the method most adapted for the expression of the will of the people, and it has the further advantage that a serious discussion of candidates is postponed till within a few months of the election, and the country has at least a part of the four years in peace. But there are signs that we are outgrowing this system also. The habit of compromise upon unknown men, and the occupancy of the White House for four years by a figure-head (though this is really only in part a result of the system), have made the people very impatient, while the stupendous farce of platforms has brought in the element of ridicule, the most fatal to any system. The incredible platitude of these manifestoes, covering in some cases several pages of fine print, can best be appreciated when they are brought together as in this book. The purest generalities, so adjusted as to give the least possible offence, are prepared by a committee whom nobody knows, and left to stand on their own legs. They have not the slightest binding force either upon Congress or the President, and are generally never heard of after the first flourish of trumpets. It is manifest that some change is impending; and the probable direction, strikingly illustrated by the events of the last year, is that strong individualities, with policies, good or bad, of their own, will force themselves upon the attention of the country, and therefore of the conventions.

Another curious reflection is, how the political sense of the country tends to the organization and maintenance of two political parties. We have been tempted to collate the tables given in this book, and the result is not without interest. The first popular vote given is that of 1824, a fact itself of interest as showing how gradually the popular will began to receive attention:

	Total Popular Vote.	Per Cent.		to Candidates.	
1824	356,038	43	31	13	13
1828	1,155,340	56	44		
1832	1,217,691	56	44		
1836	1,498,329	51	49		
1840	2,411,127	53	47	0.29	
1844	2,698,605	50	47.8	2.20	
1848	2,871,906	47	43	10	
1852	3,143,679	51	44	5	
1856	4,053,967	45	33	22	
1860	4,680,193	39	29	18	14
1864	4,166,037	56	44		
1868	5,716,082	53	47		
1872	6,466,354	55.6	43.9	0.4	0.1
1876	8,411,019	51	48	0.9	0.1
1880	9,218,251	48.32	48.22	3.34	0.12

Note how closely, during three elections, covering twelve years, the proportion of public opinion was maintained, till in 1840 a cloud appeared, no bigger than a man's hand, in the first nomination of an abolition party (which, by the way, was not Birney and Lemoyne, as stated on page 135, but Birney and Earle); then how this canker began to eat into the solid mass of party, till it ended in the explosion of 1860. With 1864 begins again the division into two compact masses, till in 1872 a new divergence sets in. The figures for 1884 will form an instructive addition to this table.

We will sink one more shaft into this mine of raw material. It is obvious that the counting of ten millions of votes is a very serious matter; but this becomes infinitely worse when it is considered that each State prescribes the mode of appointment of its electors, and that a certified list of these, transmitted to Washington, forms the basis of the count. In case of a disputed election, or a technical informality in any State, the two houses of Congress have to decide what votes shall be counted; and in view of the immense interests involved, and the violence of party conflict, the danger of this state of things is apparent. The history of the Electoral Commission which seated President Hayes, while the country was filled with alarm, furnishes ample explanation of the paralysis which affects all business in a Presidential year. From the earliest time repeated efforts have been made—notably by Senator Morton in 1874-5—to arrive at some establishment of an arbitrating tribunal; but they have all failed, owing mainly to the impossibility of concerted action between the two branches. A bill which gets through the Senate fails in the House, and *vice versa*. It is one of innumerable instances of the necessity of stronger executive government, of a responsible Cabinet, who, backed by the country, can force through Congress measures demanded by the welfare of the nation.

We have by no means exhausted the inferences to be drawn from this valuable book, which is most timely in its appearance and full of instruction for those who will read between the lines.

CHILDREN'S BOOKS.—II.

THE four volumes by Mrs. Helen W. Pierson, respectively a History of the United States, of England, of France, of Germany, in words of one syllable (Geo. Routledge & Sons), must be thought a *tour de force* by any one who considers the self-imposed trammels of the compiler. They are clever performances, and calculated to interest the childish reader, while, at the same time, it may be doubted whether the infant who requires such condescension in the style is a fit subject for the teaching of history; or, conversely, whether, if he can understand the history, he cannot read words of the ordinary variety of length without difficulty. As a matter of fact, the one-syllable rule has to be broken constantly: only one of the countries treated of has a monosyllabic name, while proper names of two and three syllables of course appear at every turn. This makes such paraphrases as "home of those who have lost their wits" for "Bedlam" or "insane asylum" ('Germany,' p. 216)—eight syllables against two or four—seem somewhat absurd. The matter can seldom be seriously objected to. In the 'France,' rather too much of the Napoleonic glamour is thrown around the late Prince Imperial, and there is no excuse for saying, on p. 206, of the Mexican patriots, that "*these fierce, bad men* rose up, and took Max-i-mil-i-an and shot him. His poor wife lost her mind from grief. They were a good and true young pair, and *would have done what was right by all.*" However, on the next page occurs the sound remark, on the beginning of the war against Prussia, "The worst sign was that no one told the truth." We are glad to have our infants thus taught the value of truthfulness, which so many gray-haired Americans have lately been denying; and, in the 'United States,' to have the story of Washington and his hatchet once more revived. All these books are brought down to date, and are well if not very freshly illustrated.

'Little Arthur's History of England,' by Lady Callcott (T. Y. Crowell & Co.), "was written for a real little Arthur," and contains just the things that a judicious mother would tell to a child. It is in a simple, pleasant style, intelligible to children, and is full of the stories that children love; at the same time it has a seriousness of tone quite removed from the flippancy that characterizes parts of Dickens's 'Child's History,' and the child is not treated as incapable of enjoying something besides stories. It is a pity that such incidents as the branding of Elgiva's cheek, and Shakspere's story of Hubert and Arthur, are told as if they were unquestioned history. The illustrations are not especially good.

Louis Rousselet's 'Ralph the Drummer-Boy' (Henry Holt & Co.) is an account of the adventures of a French lad of sixteen while serving in the Revolution with the force under Rochambeau. As a book of adventures in the manner of Jules Verne, it is fairly interesting; but it is utterly wanting in local color, and has less than no value as an historical story. Arnold, who is persistently called the "hero of Behmus [Bemis]," is made a mere stage villain. Among other exploits, he steals into the American camp by night to murder Washington, who is rescued, of course, by the French drummer-boy. After the surrender of Yorktown he is dragged before Washington by Ralph, who has taken him prisoner, and in a highly melodramatic scene is ordered to immediate execution, but is rescued from the gallows by the English Colonel Tarleton. It should be said that a note informs the reader of the fictitious character of this part of the book. It would have been well also, in our opinion, in a story translated for American boys, to have denied the statement made on page 181, in reference to a mutiny of the New Jersey troops, that "a whole battalion had to be surrounded and decimated." We cannot praise the work of the translator, as in places it betrays either ignorance or carelessness.

Of an entirely different character from the preceding is 'Captain Phil,' by M. M. Thomas (Henry Holt & Co.). The hero is an orphan lad who accompanies his older brother, a soldier in an Ohio regiment, during the whole of the civil war. He goes with the three months' troops to Washington, and is present at the first battle of Bull Run. Afterwards he joins the Western army, then under General Rosecrans, remains with it during the pursuit first of Bragg and afterwards of Johnston, and is in the battles of Shiloh, Murfreesboro, and Chickamauga, and in the "march to the sea." No detailed description of the various campaigns is attempted, the author's aim being to give merely a picture of the daily life of a Union soldier. In this he has succeeded admirably. All the phases of camp life, its humors and its hardships, the peculiarities of the different men, their talk, their songs, their heroism, often their simple piety, are represented with a graphic force and truthfulness worthy of great praise. Scattered throughout the book are incidents, almost every one of which, Mr. Thomas assures us, "is a real experience," of courage and devotion displayed on the battlefield and especially after the battle, in rescuing or in succoring the wounded. Equally well done are the descriptions of the contrabands and the poor whites, and the scenery of the country through which the army passed. The interest of the book, which is well sustained up to the fall of Atlanta, flags somewhat in the account of Sherman's famous raid. Here the story is hurriedly told, and the lack of incident is apparently made up by unnecessarily detailed accounts of the destruction wrought by the army during its march through Georgia and South Carolina. A map of the country in which the Western army operated would have added much to the value of 'Captain Phil.' The style is simple, straightforward, and such as a boy would use in narration. Though just published, the preface is dated March, 1866.

It is natural to find the name of Drake on the title-page of a book about Indians. Mr. Francis S. Drake's 'Indian History for Young Folks (Harpers) might have alleged an hereditary justification for itself, but the author prefers to put it forward as a "lesson," which "shows conclusively the superiority of the civilized man over the savage, even in those warlike arts in which the latter most excelled," and which shows also "in some small degree the cost and the value of the peaceful, happy homes we now enjoy." There are, to our thinking, much better and less commonplace lessons to be drawn from the history of the Indians in this country, and we cannot think it a service to children to rehearse exhaustively their bloody record, even when this is done in a humane spirit and mixed with a certain amount of ethnological information. The story of the removal of the Creeks and Cherokees, of

which the foul injustice is barely hinted at on p. 176, would have borne expansion into a chapter instead of a paragraph or two, and the iniquity of the Seminole War might also have been more fully pointed out, and a reference given to Giddings's history of this war, which is singularly overlooked in the customary bibliographical footnote. In an extraordinary passage—almost like an interpolation, so much is it out of key with the author's general way of regarding the aborigines—Mr. Drake avers (p. 431) that "the Indian has no code of morals, no conception of right and wrong; bad and good are the words nearest in meaning to these." No wonder, therefore, that his narrative is not made to include the recent triumph of General Crook over the Apaches, in which the possession of a moral code on both sides was so brilliantly exemplified; or can there be good faith without a "conception of right and wrong"? We know of nothing in the relations of Blaine to Mulligan which will compare with those existing between General Crook and his late formidable foes! In the domain of Indian adventure, we are surprised that Mr. Drake has drawn nothing from Lewis and Clark. So many men who became eminent in civil life, or who won a military reputation in other fields, had at one time or another to do with the Indians, that Mr. Drake's volume embraces a large province of American biography; and this is among the chief of its merits. The illustrations are very numerous and of diverse quality; the so-called portraits of the early explorers, Columbus not excepted, ought certainly not to have been admitted.

'The Viking Bodleys' (Houghton, Mifflin & Co.) is the latest and last of Mr. Horace E. Scudder's Bodley books. The Vikings are a family party of six New Englanders, who are not at all savage, or predatory, or reckless of comfort. They put up at the best hotels, exhibit the modern civilized interest in pictures and statues and books, and go constantly in search of literary reminiscences. Altogether, their title to the formidable name they assume is shared by all persons who cross the North Sea or travel along its coast for amusement and instruction. Mr. Scudder has attempted to differentiate his travellers from ordinary tourists by giving a definite aim to their wanderings—this aim being to discover connecting links between the Old World and the New, or, in other words, to search for the footprints of their ancestors. The Vikings cross from Hull to Christiania, travel thence by rail to Throndhjem, thence by steamer to Hammerfest and the North Cape. Here the tourist's dread enemy, fog, interferes with their plan of seeing the midnight sun shining across the Arctic Ocean; they set their faces southward, and finally reach Copenhagen. The descriptions are vivid and interesting, and the temptation to gush is steadily resisted. Small talk and family banter flow freely at all times and places, and not a Bodley of them all ever shows any signs of being overawed. The result is a sufficiently realistic picture, not only of the places visited and the impressions received, but also of the way in which average well-bred people talk and act while sight-seeing. We are sometimes puzzled, however, to know how old a public Mr. Scudder has in his mind's eye. But it is not best to press this point. Children of a smaller growth will perhaps skip some of the learning, and those of a larger growth the frivolity; but young people of all ages will be pleased with the fluent narrative and with the excellent woodcuts, both large and small, with which the book is adorned.

The scene of the 'Story of Viteau,' by Frank R. Stockton (Chas. Scribner's Sons), is laid in Burgundy in the year 1236. At the beginning of the tale, the younger of the two sons of the widowed Countess of Viteau is captured by one of the bands of robbers which infested France at that epoch. He finally escapes only to find that his mother and brother have been obliged to flee from the officers of the Inquisition, which had just been established at Toulouse. The castle is then taken by the robbers, and the boys go to Paris to intercede for their mother, who is accused of holding heretical opinions, with the young King St. Louis. The story ends happily with the recapture of Viteau and the destruction of the robber band. There is, it will be evident, no lack of stirring incident, and the interest of the reader is kept alive from the beginning to the end. The author has wisely, in our opinion, refrained from the attempt to imitate the speech of those days, and all the characters talk naturally and simply. It is a thoroughly good story, though of rather slight texture.

The audience, of young and old, whom Mr. Augustus Hoppin captivated with his 'Auton House'—may their number never grow less—will experience no disappointment on reading his 'Two Compton Boys' (Houghton, Mifflin & Co.). We have again a graphic picture of Providence, and to a considerable extent of New England, life in the youth of men now just past the middle age, and one which the historian may accept as implicitly as any chronicle he is likely to depend upon. But whereas in 'Auton House' we were made acquainted with the *vie intime* of a single family, in 'Two Compton Boys' the scenes are mostly away from home (not the same home, if one may guess), at school and afield, and there is something like the evolution of a plot with half a tragedy. The humor remains, the comical illustrations are renewed, and an hour of profitable relaxation can be promised any one who follows the fortunes of Dick Reydon and his sable *alter ego*, Peez Fitts. A wholesome lesson in humanity is indirectly inculcated, for it cannot be said that on the subject of color prejudice the rising generation is beyond the need of religious instruction. The one false note, as it seems to us, in this delightful narrative, is the praise of his own son's manliness in open court by his father. There was a joy to be felt and not to be spoken. And even if we are assured by our genial chronicler that in this incident, as in the case of others which he apologetically records, he is simply faithful to the truth of history, we shall still reply that suppression or alteration would have been better. The artist takes the same liberty with nature when he eliminates an ugly feature from an otherwise picturesque landscape.

The subject of "Oliver Optic's" last book, 'Square and Compasses,' the third of the "Boat Builder Series" (Boston: Lee & Shepard), is the adventures of the students of an industrial school, and the endeavor is made to teach the value of discipline, and "to interest young people in the mechanic arts." The author is more successful, however, in describing their contests with the "ruffianly" Chesterfield boys and Topovers, than in making either interesting or easily intelligible their method of framing a building.

"It would seem a pity if the increase of poetry for the young should cause them to commit less to memory; for a poem learned in childhood becomes a portion of the child." When we read these words in Mrs. Helen Kendrick Johnson's 'Illustrated Poems and Songs for Young People' (Geo. Routledge & Sons), we were filled with hope for the contents of the pretty volume. And indeed there are many pieces in it which any child would be the better for committing to heart. But along with these what a motley assortment of verses which can have no other effect than to cultivate a low standard of taste, and some of which ought to be by no means learned by rote, and some to be forgotten as speedily as possible lest they do become "a portion of the child." It is but too common to observe how the makers of collections like this, and of text-books as well, lose sight of everything but what is entertaining or morally instructive for the young. They thus abdicate the function of discrimination in style and subject which is most necessary in the teacher if the child is to acquire a preference for elevating literature, and an instinctive recognition of it. The moral side of this function is invisible to the generality both of parents and school-book makers and instructors.

The English version of Édouard Laboulaye's 'Fairy Tales' (Geo. Routledge & Sons) will be heartily welcomed. Here the choice is excellent, and the narrative has the literary quality which made the reputation of the genial compiler. The pictures, too, are good of their kind—of French origin, like the text—though, to be sure, they have settled, like plums in a pudding, to one end of the book. The translation is fluent and idiomatic, so far as the tales proper are concerned, but a defective intelligence is manifested in rendering the charming little discourses which Laboulaye prefixed to some of his stories. Thus, on one page (49) we meet with "Rongé" for Rougé; with Panchatantra transformed into "Pancha Zantra," in a connection ("the learned commentary of Pancha Zantra") which makes the venerable work appear to be a man; and with "Wak Stephanovitch," which, following Laboulaye, is declared a household name in France. On page 75 this name is repeated in a new form, "Vonk Stepanovitch," and sorely will it puzzle the infant student to identify the two with one another and with the real Vuk Stefanovitch Karajitch. Equally grotesque is the bestowal of a tenth muse, "Enterpius," on the history of Herodotus, as is done on page 61. Happily, these inexcusable slips occur in just those portions which are intentionally a little above the heads of our youngsters, who will consequently pass them by—wit, blunders, and all.

The Early Records of Lancaster, Mass., 1643-1725. Edited by Henry S. Nourse, A.M. Lancaster. 1884.

THIS work is of the same high grade with Mr. Walcott's 'Concord in the Colonial Period,' lately noticed by us. It represents probably an even greater laboriousness of research, being an attempt to reconstruct the town records of Lancaster prior to 1726, in which, besides other lacunæ, there is a broad gap of forty-six years. The history has been made good, as far as may be, chiefly from court records and the State archives, and we do not know where to look for a better example of editorial work, or a more perfect typographical conception and execution. The annals of Lancaster possess less human interest than those of Concord, but some connection exists between them. When the Indians, in King Philip's war, raided and burnt the former town so that it had to be temporarily abandoned, and the Rev. Mr. Rowlandson had the grief to lose his wife and children among the captives, it was John Hoar, of Concord, who effected their ransom, having deservedly the confidence of the savages. It cannot be said that the Indians had a peculiar spite against the clergy in Lancaster, but true it is that one of the victims in the raid of September 11, 1697, was the Rev. John Whiting, and that when the town was beset in October, 1704, the Rev. Andrew Gardner, "coming down from the watchbox in the night with a darkish colored gown, was mistaken for an Indian & solemnly slain by a sorry souldier belonging to the Garrison nomine Presket." Twice the dusky marauders burnt the meeting-house on the west side of the town, and damaged the cause of religion by inspiring an attempt to erect a new house on the safer east side, out of which grew

an injunction, frequent appeals to the Legislature, and a "damnifying" of the frame of the unfinished house; to say nothing of the discomfort of holding meeting in the minister's house, with a larger audience outside than in, and the outside acoustics decidedly bad. The town, by the way, is memorable as having early established a mode of arbitration "in Actions of Debt or Damages one towards another either in name or state, . . . except in cases Cappitall or Criminall."

The Apostle Eliot appears in these pages, visiting the hopefully converted Nashaways (after whom and their river the town was originally named), and again deploring that "Sathan hath so emboldened the Pauwauees" among them that the pow-wowing was revived. The same diabolical agency had been manifested at the very beginning of the settlement, when Dr. Robert Child, of Corpus Christi College, Cambridge, England, petitioned for the enlargement of political and religious privilege, and was incontinently driven back across seas. Somewhat later, Satan possessed the mind of Elizabeth, the wife of John Hall, who perplexed a visitor from Cambridge, Mass., with the demand "whether all things were not common now as in the apostles tyme, & before that Sr. Phillips could give answer she did further say that this is my judgment, that all things are common, mens wiues alsoe"—a distinct forecast of the Oneida Community. That Lancaster was still regarded, in witchcraft time, as a refuge for the minions of the Evil One, is shown in the case of John Willard, who, says Calef,

"had been employed to fetch in several that were accused; but taking dissatisfaction from his being sent to fetch up some that he had better thoughts of, he declined the Service, and presently after he himself was accused of the same Crime, and that with such vehemency that they sent after him to apprehend him: he had made his Escape as far as *Nashawag*, about 40 miles from *Salem*: yet tis said those Accusers did then presently tell the exact time, saying now *Willard* is taken."

We commend this primitive case of telepathy to the Society for Psychic Research.

Steven Day had stood up for Goodwife Hall as long as he could, acting as a sort of buffer between her accuser, his neighbor Whaley in Cambridge, and herself, a neighbor of his grandson Boardman in Lancaster, whom he often visited. His tribulations as a printer receive proper mention in this volume, his being the first press set up in America north of Mexico. Dr. Trumbull has shown, by the way, that the patron who brought him over was the Rev. Jose or Josse (not Jesse) Glover. The allotment of lands and the laying out of roads are also carefully elucidated by Mr. Nourse. "When, in 1734," he tells us, "Captain Jonas Houghton, the Lancaster surveyor, was employed by the proprietors of Nichewaug to reconstruct the road from Lancaster along the north side of Wachusett, the contract test for acceptance of this highway was that it should be 'so feasible . . . as to carry comfortably, with four oxen, four barrels of cider at once.'" A good inspector of this road would have been the Rev. Mr. John Prentice, for whom Judge Joseph Wilder in 1728 made sixty-one barrels of cider, or just one-tenth of his total product as taken up by twenty-three of his townsmen.

The Organs of Speech. By George Hermann von Meyer. D. Appleton & Co. Pp. 349.

Voice, Song, and Speech. By Lennox Browne, F. R. C. S., and Emil Behnke. G. P. Putnam's Sons. Pp. 322.

The author of the first of these books, who is Professor of Anatomy at the University of Zurich, is convinced that philologists should be thoroughly acquainted with the structure and functions of the organs of speech, but that "the ordinary anatomical handbooks are little adapted to this purpose, for much is there discussed at length which is of no use to the philologist." The first thing which strikes one in looking over Professor Meyer's volume is that the same criticism applies to it also. It bristles with anatomical details which are thoroughly accurate and true, no doubt, but which have only an exceedingly remote bearing on the immediate topic in hand. One consequence of this is that the author's hope that his treatise will be welcomed by musicians is doomed to disappointment, for no musician would ever dream of reading such a book through, while there are others not a few that give all the necessary facts in a quarter of the compass, and in a much more interesting form. Philologists, on the other hand, who are accustomed to deal with dry data, will find in the third chapter a convenient summary of the facts concerning the formation of articulate sounds. If, perchance, a reader of some other profession should get the book into his hands, he may find something to attract him in the full account given between pages 174 and 180 of the processes of gaping, stammering, sighing, sneezing, coughing, and laughing. Gaping is thus described:

"The whole phenomenon seems an indication of strong desire for air; and the existence of this desire under those circumstances in which gaping is generally observed—sleepiness, for instance, or weariness—may be perfectly explained as follows: Such circumstances are accompanied by a general inactivity of the nervous system, which shows itself in a weak respiratory action, insufficient for the body when awake, so that after a time a more or less marked desire for air must arise, the demand for which is announced by gaping."

From this it would seem to follow that if there is a desire to gape where it would be impolite to do so, the danger might be averted by making a sudden deep inspiration. But however valuable such an inference from the author's statements may be, it must be admitted that they have nothing to do with the subject of the book, of which the full title is: 'The Organs of Speech and their Application in the Formation of Articulate Sounds.' The one art which German professors have not yet learned is the elimination of irrelevant facts.

Quite different in character is the joint production of Dr. Browne and Mr. Behnke, which is described as "a practical guide for singers and speakers from the combined view of vocal surgeon and voice trainer," and which does unite these functions admirably. A striking feature of the work is the numerous photographs of the vocal organs, illustrating their action during the formation of tones of various pitch. The first chapter, entitled "A Plea for Vocal Physiology," contains the best summary we know of the reasons why vocalists should have a thorough knowledge of the physiological processes involved in singing. Such arguments are often met by the retort that some of the greatest vocalists were ignorant of the facts in question. But this only proves that one who is born with a special aptitude can find his way by a sort of instinct, whereas the vast majority, who have no such gift, can learn from physiology numerous hints which will greatly facilitate and abbreviate their labors. Very clear and readable is the brief account given of Helmholtz's discoveries, and of the mechanism by which tone is produced in various instruments. In the chapter on the "Hygienic Aspect of the Vocal Apparatus," attention is paid to the importance of nose-breathing and the dangers of tight lacing, which last not only deprives the lungs of one-third of the air that would normally enter them, but injures the quality of the voice, and mars the gracefulness of motion:

"In the ball-room the ungraceful motions of our stiff-figured ladies are bad enough; there is no possibility for poetry of motion; but nowhere is this more ludicrously and (to the thoughtful) painfully manifest than in the tennis court. Let any one watch the movements of ladies as compared with those of male players, and the absolute ugliness of the female figure, with its stiff, unyielding, deformed, round waist, will at once be seen."

Perhaps an æsthetic *argumentum ad feminam* of this sort will prove more effective than the efforts of hygienists and dress reformers. Clergyman's sore-throat and other ailments of the voice-user are described with directions for their cure; and in the "Daily Life of the Voice-User" minute directions are given concerning diet, clothing, exercise, amusements, stimulants, ablutions, etc.

Three Visits to America. By Emily Faithfull. Fowler & Wells Co.

After twenty years of work in aid of her countrywomen, Miss Faithfull came here to study the position and opportunities of women, socially, intellectually, and industrially. In this record of her three visits (which consists of articles published at different times in English and American papers, with addition of considerable new material), she brings to our notice many important facts in relation to the matters which she has most at heart, but does not confine herself to them. She gives also an entertaining account of her pleasant social experiences, of the many noted people whom she met, and of her enjoyments and discomforts in travelling; not to speak of touches of political disquisition, which are apt to be tedious, as for example the far too long chapter on Mormonism.

On first opening the book we are struck by its great discursiveness. In her desire to omit nothing of interest, and to follow out connected subjects, the author passes so abruptly from one scene to another, and pays so little regard to orderly sequence, that a sense of confusion and bewilderment comes over the reader. Moreover, the book would have gained in force by greater brevity, more scholarly method, and closer adherence to what gives it its distinctive value, the subject of employment of women in new fields of labor. However, as we proceed in our reading we lose any disposition to criticise in our interest in the general theme, and admiration of the enthusiasm and ability of this woman, who has made it her life-work to help her sister-women.

Miss Faithfull has travelled extensively in the United States, and also visited Canada—everywhere in search of the upraising of women into new and fruitful activities; everywhere closely observant of all that has been done to help them on, whether in mental culture, or toward industrial facilities or political power; everywhere warmly welcomed by all men and women who sympathized in this vast new movement, or who appreciated her earnest work in a most worthy cause. The average reader will be surprised to find how many employments are now open to women, as well as at the great success which some capable individuals have had in pursuits generally considered purely masculine. We are told that "when Harriet Martineau visited America in 1840 [*sic* for 1834] she found only seven occupations open to women; to-day, in Massachusetts alone, there are nearly three hundred different branches of industry by which women can earn from one hundred to three thousand dollars a year." Among individual examples of success are mentioned that of Miss Austin, of California, who has a large vineyard reported to produce the best raisins in the State; of Mrs. Rogers, of Texas, who has a herd of 40,000 cattle; of Mrs. Janet Taylor, of London, who

taught navigation and even made improvements in nautical instruments. Among the industries here or in England which are comparatively new to women, Miss Faithfull speaks of house-decorating, drawing in connection with ship-building—that is, in the employ of ship-builders—glass-staining, silk-weaving, specimen-mounting, etc., etc. In some countries to which emigration is flowing the openings for women's work seem very promising. Miss Faithfull thinks that silk-culture in California ought to become a very profitable field of labor.

Her remarks in regard to "home employments" and to the necessity of *fitting* for work are very sensible. In regard to the first she says: "After many years of practical work in various directions I do not hesitate to describe (them) as delusive. Artists and authors are the only people who can earn an income under such conditions." She censures the indisposition of people in easy circumstances to train their daughters to useful work. "All work requires an apprenticeship, and those who wait till the hour of need really comes, will probably discover that they have lost the strength of body and elasticity of mind to encounter difficulties which could have been faced in youth with every chance of success."

It goes without saying that Miss Faithfull advocates the franchise for women. Her opinion on this matter is not embellished by flights of fancy, but enforced by strong, practical reasons, as indeed are her opinions on all subjects of which she treats. It would be hard to find a more thoroughly sensible book, or one fuller of suggestion, or one better adapted to encourage young women to throw off conventionalism and see things in the clear light of truth. We cordially recommend it to those who have kept abreast of the "woman question" and to those who have not. The former will know how to enjoy and appreciate it; the latter will be amazed and instructed, and all must feel how richly Miss Faithfull deserves the gratitude of women.

Outlines of Historic Ornament. Translated from the German. Edited by Gilbert R. Redgrave. With illustrations. Scribner & Welford. 1884.

SIC *vos non vobis* might be the motto of this little book. Three persons are concerned in making it—author, translator, and editor—but we are given the name of only that one, the editor, who has had least to do with it, having only, as it seems, read the proof and patted author and translator on the head in an inconsiderable preface. It is not new to see Mr. Redgrave's name on the title-pages of books upon this and like subjects; we may frankly say that experience of his writing makes the disappearance of the real producers behind his name seem a needless modesty or an undue vassalage. This was probably written for a school text-book, and we may assume that South Kensington had to do with its translation. It might be used in cramming for a particular examination; its valid excuse for being we do not see. It is too rudimentary for a student, or for any one but the uninstructed general reader, and too lacking in perspective and emphasis to be of real use to him. The catechetical method adopted has a value in marking salient points, but the interchange of question and answer makes a clear, broad sketch of the subject almost impossible, while it calls for a skill in analysis which this author has not. It leads him to a profitless cataloguing of details, together with an attempt at conciseness which vacillates between statements too vague to be significant and generalizations so abrupt as to be untrustworthy or misleading. The author has apparently thrown away upon a thankless undertaking a considerable examination of authorities and a fair general knowledge of his subject, though not enough close study to save him from blunders in detail.

Aids to Writing Latin Prose. With Exercises. By G. G. Bradley, D.D., Dean of Westminster. Edited and arranged by T. L. Papillon, M.A. London: Rivingtons. 1884. 12mo, pp. 317.

THE materials for this admirable treatise were prepared by Dean Bradley before his appointment to his present dignity, and are now put in shape by Mr. Papillon, the duties of his new office preventing the author from giving to them the time that they needed. The several heads of Latin grammar are taken up in order, with discussions of great insight and suggestiveness, and then follow more than a hundred pages of exercises, of a very varied character. The aim is to train the pupil in idiomatic translation, both from Latin into English and from English into Latin. "The style," he says in the Introduction, "of what is called 'liberal translation,' that is, the rendering of Latin into the uncouth and unnatural English with which the ill-taught youth still shocks the University examiner, should be either materially abridged or absolutely annihilated." Taught properly, the study of Latin is as valuable for a knowledge of English as for a knowledge of the language in hand, and for this purpose it would be hard to find a better aid than that before us. It would be well if it could be put in the hands of every Latin teacher in the country.

Dynamo-Electricity: Its Generation, Application, Transmission, Storage, and Measurement. By George B. Prescott. D. Appleton & Co. 1884.

THE first 126 pages of this book are to be found in pages 400 to 525 of Mr. Prescott's 'Speaking Telephone,' etc., published by Appleton & Co. in 1879, and, with the exception of a one-page illustration copied from Dechanel, the first thirty pages are also to be found in pages 400 to 428 of his 'Speaking Telephone, Talking Phonograph,' etc., published by the same firm in 1878. Mr. Prescott's so-called "works" mainly consist of excerpts transferred bodily, usually without credit and without quotation marks, from the writings of other people. In the present case, he seems to have drawn largely from the circulars and trade publications of electric-light companies and other parties engaged in the manufacture and sale of electrical appliances. The result is a jumble of undigested materials, brought together by a process for which we have in vain sought an exact epithet; perhaps, prescotting (after the analogy of boycotting) will answer.

BOOKS OF THE WEEK.

Johonnot-Bouton. How We Live. The Human Body and How to Take Care of It. D. Appleton & Co. 20 cents.
Seton, Sir H. W. Forms of Decrees, Judgments, and Orders. With Practical Notes. Am. ed. by F. F. Heard. Boston: Little, Brown & Co.
Sheridan's Comedies. The Rivals and the School for Scandal. Biographical Sketch by Brander Matthews. Boston: J. R. Osgood & Co. $3.
Spence-Exell-Neil. Thirty Thousand Thoughts, being Extracts Covering a Comprehensive Circle of Religious and Allied Topics. Vol. II. Funk & Wagnalls.
Stevens, Frances. The Usages of the Best Society. A. L. Burt. 50 cents.
Stevens, J. L. History of Gustavus Adolphus. G. P. Putnam's Sons. $2.50.
Stories by American Authors. No. 7. Charles Scribner's Sons. $1.25.

Wentworth-Hill. Exercise Manual of Geometry. Boston: Ginn, Heath & Co. 80 cents.
Woods, Prof. L. History of the Andover Theological Seminary. Boston: J. R. Osgood & Co. $3.50.
Wright, T. W. A Treatise on the Adjustment of Observations, with Applications to Geodetic Work and other Measures of Precision. D. Van Nostrand.
Young, A. The Catholic Hymnal: Containing Hymns for Congregational and Home Use. Catholic Publication Society.
Zola, E. Mysteries of Marseilles. Philadelphia: T. B. Peterson & Brothers. 50 cents.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2.50.
HENRY HOLT & CO., New York.

From the "Saturday Review's" notice of

"Callirrhoe: Fair Rosamund."

By MICHAEL FIELD. 16mo. $1.25.

"*It is many years since we have read a new poem so instinct with the immutable attributes of poetry, so free from current cant and trick, and animated by an inspiration so warm and native and unfailing. . . . A poet of notable endowments and distinguished powers.*"

From the "Spectator."

"*Poems of great promise. . . . We have found a wealth of surprises in the strength, the simplicity, and the terseness of the imaginative feeling they display. . . . If that has not the true poetic fire in it—dramatic fire, too, as well as poetic—the present writer must be destitute of all discernment. To him it sounds like the ring of a new voice, which is likely to be heard far and wide among the English-speaking peoples.*"

From the "Scotsman."

"*A work not only of remarkable promise, but of notable performance as well.*"

Henry Holt & Co.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 13, 1884.

The Week.

THE Independent Republicans of the country have elected Grover Cleveland President. That point is so clear in the result that nobody questions it. The very narrowness of the majority in this State emphasizes it. Every corrupt element in the politics of the country rushed to the side of Blaine, and the figures will be searched in vain for any evidence that a single one of them contributed to the success of Cleveland. So powerful was the combination of money, patronage, political trickery, greed and humbug of all kinds, that it is even now difficult to realize that it has been overthrown. It seems too good to be true that, having got all the rascality and clap-trap of politics together in one heap, we have really swept it out of existence. Since the fall of Richmond there has been no such triumph in this country. We have saved and vindicated our national honor before the world. We have made it plain to all the world that our highest office cannot be bought, and that no man can enter into it with a tarnished record. Never again will a party in this country attempt to elect a candidate to the Presidency by saying that if he is dishonest all other public men are the same. Never again, we venture to say, will any party defy what Mr. Evarts calls the "very particular and finicky set of our people" who believe that honesty is an essential requisite in a Presidential candidate. It was the "particular and finicky" people who have defeated Mr. Blaine. Had not the rascals in Cleveland's own party deserted him, he would have been elected by an enormous majority of the popular vote, and, we believe, by the electoral vote of nearly every State in the Union. Without Butler's opposition he would have carried Massachusetts, and without Kelly's treachery and the influence of Blaine money, he would have had at least 50,000 majority in this State. It is a great victory to elect him at all, but it is a far greater one to elect him without the aid of these and other rascals. They are cleared away forever with the other rubbish, and their influence hereafter as a disturbing element in Presidential elections is destroyed. We have saved the country without making a compromise of any sort, and we have also saved our greatest commercial city from the clutches of a gang of thieves.

The bearing of Governor Cleveland during the entire campaign and through the exciting events of the past few days has been admirable. He has grown with every day's developments, and has steadily gained in the admiration and esteem of his supporters. He has not said one word that need be altered or explained, and has done nothing which has lowered his dignity. Support of him throughout the contest was a steadily increasing pleasure. Every public utterance was fresh proof that the confidence placed in him was well bestowed. There was no "uncommon anxiety" displayed on his part, and no frantic eagerness to snatch an office which it was the people's privilege to bestow unasked. No man was ever less of a demagogue. He is, as some one said during the canvass, a man of the Washington type, not showy, or "aggressive," or "brilliant," but a true American in the best sense of the term.

The behavior of stocks during the campaign has been, according to the Republicans, extremely reprehensible. They did not go up as they ought to have done when Blaine was nominated, nor did they rise from month to month on the strength of his cheery speeches on the prosperity of the country, nor have they "slumped" on the news of Cleveland's election. They have really remained very low all summer, being apparently affected more by low prices for grain and low rates than by politics or the campaign. The fact is, that the President under the Constitution has no power to put up stocks. All he can do is to administer the Government honestly, and in the long run it is unlikely that the preference of the country for an honest President will depress securities. No great publicist before Mr. Cyrus Field ever advanced such an idea.

The persistence and audacity with which the process of "claiming" States for Blaine was carried on on Wednesday week were something unprecedented. They were not wholly due to malice prepense. Much of them was the result of the momentum which a man's mendacity acquires when he has been lying steadily for three months. He often, under these circumstances, goes on lying like clockwork, automatically as it were, for several days after it has become plain to his mind that his lies are absolutely useless. But there were features in the "claiming" on Wednesday which cannot be explained in this way, and yet need explanation. The first thing the claimants did was to spread the report in Wall Street that the *Evening Post* had conceded New York to Blaine by 6,000 majority. This was represented with such perseverance and boldness that inquiries about it were poured on that journal through the whole forenoon by telegraph from as far off as St. Louis. Then, as if to keep the claimants going, the Associated Press returns came in so slowly, and in such a fragmentary and imperfect form, that it was very difficult until late in the afternoon to form any idea as to what they were indicating. At about 3 P. M. the Associated Press announced a plurality of 11,000 for Blaine in this State, and at the same hour the Western Union Telegraph bulletin announced a Republican majority in Indiana. An elaborate calculation of the Troy *Telegram* made before the election was also sent abroad, showing a very confused state of things, but with the probabilities in favor of Blaine; the *Telegram* being a paper of such very limited authority that its electioneering estimates were about as valuable for the purposes of the day as an article on floriculture would have been.

Of course the effect of all this on the Blaine editors, betters, and shouters was very marked. It furnished them with a basis for their "claims," and the claims rose every hour. One of our evening contemporaries—the *Mail and Express*—got so excited that it published, in support of a double-leaded announcement that Blaine had carried the State, a table of returns, in which, however, it neglected to foot up the columns of figures; these showed a plurality of over 4,000 for Cleveland. The *Commercial Advertiser* was almost equally reckless on its bulletin board and news columns, but it hedged on the editorial page by writing articles only on a "Bed-ridden Girl" in Brooklyn, on "Native Wines," "Camp Fires at New Orleans," and "Evolution or Orthodoxy." In fact, we may mention to the more simple-minded reader of a party newspaper that he may nearly always tell whether the editor believes his own election "claims" by the nature of the topics he discusses in his editorial columns on the same day. If he announces in leaded type that his candidate has carried the day in a very important election, and then goes to work to discuss, not the consequences of this most momentous event, but "Absolutism against Civilization," or "Gladiatorial Rewards," it may be taken for certain that he attaches no more importance to his own "claims" than they merit. We are bound to add, however, that the delay of the Western Union in forwarding the returns, taken in connection with their confused and unsatisfactory form, created toward evening a very ugly feeling in the public mind, which might have done great mischief had there been any serious dispute over the final result. The crowds in the streets got it into their heads that the delays were intentional, and were meant either to facilitate some stock-jobbing scheme of Jay Gould's, or to enable Blaine betters to "hedge," or to enable the Blaine managers to perfect some plan of fraud. This latter suspicion is, of course, one to which the events of 1876 readily give color.

We are in receipt of frequent requests for an explanation of the course of our esteemed contemporary the *Sun* during the late canvass, which we always meet by advising the writers to apply to the *Sun* itself. They still come in, however, and we are compelled in self-defence to ask the editor to be kind enough to answer the following questions at his earliest convenience:

I. Why did you say on the 21st of September that "it was a safe prediction that in New York city Butler would have more votes than Cleveland," you being at the time a political prophet of some distinction?

II. Why did you say on the 27th of October that "no sensible politician believed that Cleveland stood any chance of saving Connecticut, New Jersey, or California," and on October 29 that "there was scarcely a doubt that Grover Cleveland would lose New York, New Jersey, and Connecticut," you being at the time one of the most sensible politicians in the country?

III. Why did you say on the 31st of Octo-

ber that "the (then) present struggle, in which a mixture of incompetency and ignominy is opposed to acknowledged power and political experience, must inevitably end with Republican success"?

IV. What do you suppose now was the reason that so many New Yorkers failed to see the purity and integrity of Butler's character, which you daily or nearly daily pointed out? and why were they so deaf to your powerful and pungent homilies on the political and social value of chastity?

We feel sure that tens of thousands would peruse our esteemed contemporary's answers to these questions with keen delight.

We have tried to make excuses for the behavior of the *Sun* and other papers during the past campaign, and to believe that when it was over they would refrain from further perversions of truth, and at all events not carry them beyond the political field. The habit, however, contracted in one department of activity is almost certain to extend to others, and in the end the mind appears to get into a condition in which it fails to distinguish between fact and what the late Mr. Carlyle used to call not-fact. The *Sun* on Tuesday published conspicuously the well-known lines—

> "Right [Truth] forever on the scaffold,
> Wrong forever on the throne;
> Yet that scaffold guides the future,
> And behind the great Unknown
> Sitteth God within the shadow,
> Keeping watch above his own"—

and then proceeded to father them on Whittier. They were written, as the *Sun* would have been sure to state six months ago, by Lowell, and may be found in any cyclopædia of quotations. We admit, of course, that if Whittier and Lowell were running for the Presidency, it would be a capital idea for a Whittier organ to claim that its candidate had written the best verses of his antagonist, and to prove it by quoting them under his name. Done just before election it might change enough votes to carry a doubtful State; but as the poets are not running, why transfer poems in this way?

We earnestly trust that the rumors of a coolness between Mr. Blaine and his devoted friend, Mr. William Walter Phelps, are not true. As the *Sun* publishes them, they are that Mr. Blaine is angry with Mr. Phelps because he allowed himself to run 500 votes ahead of Blaine in his district, and because he allowed New Jersey to be carried for Cleveland. This is very ungrateful of Blaine. No man ever did for another more than Phelps has done for Blaine in this memorable campaign. He not only allowed himself to be used as Blaine's mouthpiece, but when it was shown that Blaine had used him as a mouthpiece for the promulgation of statements which he (Blaine) knew to be lies, the faithful Phelps did not complain. He saw that he had been deceived by his idol, but he still continued to worship it in public. More than this no man could ask of a friend. As for the offence of running ahead of the Presidential ticket, Phelps could not help that. The wicked mugwumps of his district took a malicious pleasure in putting him ahead in order to show that, while they could not take his endorsement of Blaine, they had hopes that with Blaine out of the way Phelps would return to his right mind, and, in the language of Mr. Cox, reverse himself and resume his judgment.

We suspect that the real trouble with Mr. Phelps is that he has refused to take any part in the disgraceful efforts of Blaine, Elkins, and the *Tribune* to count Cleveland out. He has been silent since election, and no word of encouragement for the conspirators has come from him. Silence of this kind in a crisis is an unpardonable offence in a Blaine disciple. He who enlists with the Plumed Knight enlists for the war, and must follow to the end without flinching. We are unable to see how any man who followed Blaine after the second series of Mulligan letters came out should have any scruples about following him in the plot to steal the Presidency. It is certainly no worse to try to steal it than it was to try to buy it, and there is no doubt that the latter effort was made without a protest from any of Blaine's supporters.

The most significant feature of the election returns, so far as they have been received, is the enormous falling off in Republican majorities in nearly every State in the Union which Garfield carried. We are confident that when the figures of the total vote are received, this revolt of the Republican party from Blaine's candidacy will come out in even stronger proportions. He was from the start a burden upon his party, and nothing but the most lavish use of money and gross slander of his opponent brought him within sight of election. The moral sense of the country was too strong and healthy to accept his standard of public morality as sufficient for the office held by Washington and Lincoln. Never again will the experiment of lowering that standard by the nomination of such a man be repeated. We have met the issue and have conquered it forever. The result will be, we fervently hope, a warning to the professional misleaders of public opinion, who have had so fine a contempt for the "holier-than-thou" element in politics. A majority of the American people are unmistakably in sympathy with that despised element.

The threatened contest of Mayor Grace's election by Tammany Hall on the ground that he is not a citizen, promises to be an event of great interest, especially as he has been Mayor once already for two years, notwithstanding this flaw in his title. It should not be forgotten, also, that he has been naturalized twice, the last time in 1880. The proceeding resorted to to oust him will, we presume, be a *quo warranto* brought by Grant, the Tammany candidate, and when it is brought we shall learn precisely what the trouble is. Thus far we have had no intelligible statement of the matter, except one from Judge Donohue, who "claims" that Mr. Grace came to him in 1880 and privately confessed that he was an alien, and had committed perjury about his naturalization, and frankly asked the Judge what, under the circumstances, he had better do to get the Mayoralty. This story is so preposterous that it does not look as if Mr. Grace would have much trouble in serving out his term.

The attempt of John J. O'Brien to keep his election returns secret, and prevent their examination by a committee of reputable lawyers on Friday, was frustrated only on application for mandamus and a threat of indictment. This was in the face of the following explicit provision of law:

> "All data and statistics, and all registers, pollbooks and records of every kind and nature, which under this chapter or under any law of this State, or which in compliance with, any direction, resolution, or order of the Board of Police of the city of New York, are or may be required to be made, ascertained or kept by, or returned to or filed with, either the Chief of the Bureau of Elections or the Register of Records, in the Board of Health, shall at all times, during office hours, be open to the inspection, examination, comparison, and copying of any citizen or elector, free of any charge whatsoever."—*L.* 1882, *c.* 410, *s.* 1878.

No matter what the result in the present case may be, we trust that this city is to be spared any further opportunity for frauds on the part of this rascally vote-monger. An attempt was made to get rid of him and his "Bureau of Elections" and to take the Police Board out of politics a few months since, and was of course defeated by O'Brien himself. As long as O'Brien is left there, there will in every doubtful election be a widespread suspicion of fraud, because the Board is "non-partisan," and the Chief of the Bureau of Elections is a Republican boss and dealer in votes. A more corrupt piece of machinery has never existed in New York. John J. O'Brien "must go," and the Police Board must be separated from politics.

If the Blaine managers really wish to go into an investigation of "fraud" in the election in this city, we hope they will be accommodated. The amount of deception and trading practised by Tammany would be a most fruitful field of inquiry, and an equally fruitful one would be the question of direct bribery. Money was used as it never was before. Men were bought up in platoons to vote for Blaine, and the buying was so open and general that proof is within reach of everybody who looks for it. How would Elkins and his agents, for example, like to have their operations with the waiters in the restaurants of the city carefully investigated? Is it true that these men were paid $3 apiece, and furnished with their outfit to walk in the great Blaine parade on the Friday night before election, and other sums for their votes on election day? We merely throw out the question in the interest of truth and the purity of the ballot.

The Commission on the Boston City Charter proposes a scheme of reform which elsewhere will seem open to the criticism that it does not go far enough. They would give the "legislative" powers to a City Council of forty-eight members, elected by districts; the executive powers being lodged in the hands of a Mayor, an Executive Council of five, elected on the minority plan, and heads of departments appointed by the Mayor with the approval of the Executive Council. The police, health, and other important bureaus are made single-headed. Municipal elections are to be held only once in two years, the Mayor, the Executive Council, and the City Council to be then chosen. The Mayor is to have the power to veto items or parts of any appropriation. There is to be a great reduction in offices

and salaries; nineteen departments controlled by forty-six men being substituted for thirty-seven departments controlled by one hundred and five men. The evils which these changes are expected to remedy are best understood through what the Commission says on the subject of taxes. They declare that property in Boston is more heavily taxed than in any other large city in this country. The appropriations in New York for the current year, excluding State tax, interest on debt, payments for redemption of debt, and maintenance of judiciary, amount to $20,232,786, equal to $16 76 for each inhabitant, according to the census of 1880. The appropriations for city purposes in Baltimore for the year 1883 amounted to $3,878,804, equal to $11 67 for each inhabitant. The appropriations for city purposes in Philadelphia for the current year amount to $8,599,196, equal to $10 15 for each inhabitant. The appropriation for city purposes in Cincinnati for the year 1883 was $2,718,804, equal to $10 63 for each inhabitant. The appropriations to carry on the government in Boston during the current year, exclusive of payments on account of interest and city debt, State tax, and county expenses, amount to $9,909,019, equal to *$27 30 for each inhabitant, census of 1880.*

There seems no doubt that the proposed changes would be very beneficial. Comparing the scheme with the existing charter of this city, representing as it does the struggle of twenty-five years for improved municipal government, we find that it takes a long stride in the direction in which we have been moving in New York and Brooklyn. In freeing the Mayor from the control of the "legislature," and creating as far as possible single-headed bureaus, it copies our reforms. Curiously enough, it substitutes a system which has extremely vicious features of its own. It creates a new elective Board, which is to have the power of confirming or rejecting the Mayor's nominations. This Board is to be elected on the minority plan; that is, it will contain three Democrats and two Republicans, or vice versa. The politicians will of course do their utmost to control it, and no matter how good the Mayor may be, the power of appointment will really be lodged in this "non-partisan" Board, the members of which, however innocent at first, will soon learn how to make "deals," and thus render the Mayor their puppet. Such at least is one distinct tendency of the system. The legislative machinery—that is, the taxing power—is given to a large body, corresponding to the Aldermen, from whom we have taken it away here. The taxing power here is vested in the Board of Apportionment, which consists of the Mayor and one appointed member, the Comptroller (elective), and the President of the Board of Aldermen (elective). Tammany Hall has just been defeated in an attempt to get control of this system, and, owing to the small number and conspicuous character of the offices, it must in the nature of things be very difficult to control.

The publication of the love letters of Lord Lytton to his wife has brought up the question of property in correspondence, and the law reports have been searched high and low for cases bearing on the subject. The result of this examination has not been very conclusive. The London *Solicitors' Journal* makes out the law to be, first, that the receiver of the letter has the clear right to the possession of it—that is, he may read it and keep it, and prevent anybody, even the writer, from taking it away from him; second, that the writer has a right to control or to restrain publication; third, that this is simply a right of property, and is not based on the breach of confidence in publication, nor upon the danger to the feelings of the writer; fourth, upon the death of the writer, the right to restrain goes to his executors. On the other hand, it has been thought, as the lawyers cautiously say, that the receiver of a letter may publish it when the publication is necessary for the vindication of his character; but whether this justification would be available to an executor of the receiver does not seem to have been hitherto decided. It was apparently with the public-spirited object of testing this interesting question that the late Lady Lytton made her will. She made it before the appearance of the biography of Lord Lytton, in which a picture of the Bulwer "interior" was given somewhat more favorable to Bulwer than to herself, but made it no doubt in the expectation that some such book would be published. She made Miss Louisa Devey her executrix, and to her left by will all her papers, including a correspondence between herself and her husband, such as has never got into print before, an unfinished "autobiography," and a manuscript prophetically entitled "Nemesis." So determined was she that her intention should be carried out that she directed that these papers should not, on any pretext, "however plausible and apparently truthful," be permitted to pass into the hands of any member of certain families she named.

Miss Devey, apparently rather startled by the contents of the letters, as a single lady might well be, has declared that her first intention was to delay the publication for some years, but in consequence of the appearance of the biography of Lord Lytton, which, as she says, contains "unjust notices" of Lady Lytton, she felt "delay would be prejudicial to the very object of my trust." She, accordingly, gave to the world a series of letters which, as she indignantly declares, "exhaust the whole vocabulary of amatory declamation," though "their want of reticence and dignity too clearly betray a sensual abandonment to what she (Lady Lytton) called the 'love of a Bashaw,' not concealed by the affected but ponderous philandering of his playful correspondence under the names of 'Puppy' and 'Poodle.'" The marriage, she goes on to show, which began in this way, ended, after brutal personal violence on the part of the husband—kicks and cuffs, an attack with a carving knife, etc.—in a deed of separation, and had for its final result these interesting literary memoirs. According to a cable despatch this faithful trustee has, on the application of the executor of Lord Lytton, been restrained from continuing to publish this vindication, but whether on the ground that the book is unfit for publication, and calculated to promote breaches of domestic peace in other households, or whether simply on the ground that the right of an executor to vindicate the character of a deceased person does not go so far as this, the cable leaves in doubt. However this may be, the case shows that the law in such matters is really of little use. The correspondence is published already, and as there is a universal market all over the world for such literary scandals, it will be published elsewhere, and read by millions of people, notwithstanding that the executor of Lord Lytton has established his right to prevent it.

The news of the death of Mr. Fawcett, the British Postmaster-General, will be received with genuine regret on this side of the Atlantic as well as in his own country. He was not simply a writer of the first order in the economical field, an excellent legislator and administrator, he was all these things in spite of total blindness, through an accident occurring just after he had left college. He kept up his studies through a devoted wife, herself a woman of remarkable acquirements, and with them his cheerfulness and enjoyment of life. In a touching account which he gave, in an address a few years ago, of the way in which the world seemed to a blind man, he mentioned a gallop over the turf on a good horse as one of the keenest of the pleasures still left him. The improvements he introduced into the English Post-office were numerous and important, the chief being the postal savings bank, which takes charge of the smallest sums from two cents upward, and the most recent the starting of a postal express for large parcels. Mr. Fawcett was not a strong debater, his mind being rather of the didactic than the combative order, but his speeches were always lucid and instructive, and he was always closely listened to, which is the highest compliment the House of Commons pays to an orator. It will be difficult for the Government to fill his place as an administrator.

The French Ministry has been obliged to get another credit from the Chambers for the Tonquin account, and the Minister of War admits that it will not be enough, and that probably something like $2,000,000 more will be necessary. In fact, the outlook in that region is apparently worse now than it was two months ago. The Chinese have a chain of mountains which form an impenetrable veil for their operations, and through the passes they have been pouring considerable bodies of troops, who have a safe retreat in case of a check, and who cannot be pursued effectively with the force which the French now have at command, or pursued at all without great difficulty, owing in part to difficulties of transportation and in part to the unhealthiness of much of the region to be traversed. In fact, the final outcome of the enterprise appears to be wholly dependent on Chinese pertinacity. If they do not choose to give in, they can cause prodigious loss and annoyance to the French, at very little expense to themselves. The moderate French press admits this freely,

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 5, to TUESDAY, November 11, 1884, inclusive.]

DOMESTIC.

INTENSE excitement has prevailed during the week over the Presidential election. On Wednesday the official county returns of New York showed a fair majority for Cleveland of more than 6,000, but several counties were yet to be heard from and the result of the election in this State remained in doubt. Virginia, West Virginia, Michigan, Indiana, Illinois, and Wisconsin, were still claimed by both parties, adding to the complexity of the situation. It soon become apparent, however, that the result mainly hinged on New York, and the excitement throughout city, State, and country increased as the claims of the majorities, made by both parties, gradually diminished. There was no doubt that the vote was exceedingly close, but the best estimates showed several thousand safe for Cleveland. The Associated Press, however, received its returns by election districts, and not by counties, and made extravagant claims for Blaine on its basis of calculation, even claiming a probable majority of 11,000 for him. The Blaine organs in this city were encouraged by this to announce confidently the success of their candidate.

On Thursday the estimates of conservative newspapers gave Cleveland a majority ranging from 1,300 to 2,000, but Blaine organs and the Associated Press still claimed a Republican victory. In the afternoon the National Committees of both parties issued proclamations announcing the success of their candidates. Daniel Manning, Chairman of the Democratic State Committee, telegraphed to the *Evening Post* that the State had surely gone for Cleveland, as shown by the official votes of all counties, and that the Democratic State Board of Canvassers would see to it that there was a true and honest count.

On Friday morning the *Tribune* boldly claimed New York for Blaine, while other newspapers, including the New York *Sun*, asserted positively that Cleveland had carried New York State, and had been elected President. Returns from all other States showed that only one, Michigan, remained doubtful, and that Cleveland had 219 electoral votes, including New York's 36, and Blaine had 169, without Michigan. The Associated Press announced very early in the day that the county returns showed a plurality of nearly 1,000 for Cleveland, while the footings from their district returns showed 800 for Blaine. They devoted the day to making a complete recount and verification of their returns. In the afternoon the Albany *Journal* (Rep.) conceded the election of Cleveland, and said: "The *Journal* has devoted all of its energies toward securing another result, and it now reluctantly states that the election has been decided differently from its desire, because it believes that the prompt recognition of the will of the majority is essential to the maintenance and preservation of American institutions. So long as the people of the United States have decided to transfer the Federal Administration to the Democratic party, we are glad that the decision has been made in favor of a Democrat from New York State."

On Wednesday and Thursday there were widely circulated reports that Jay Gould, through the Western Union and Associated Press, was delaying full returns and manipulating reports in Blaine's favor. There was every indication that these reports had a good foundation. The feeling against Mr. Gould became very bitter, and the crowds on the streets were very demonstrative in regard to that shrewd and unscrupulous speculator. On Friday morning, therefore, the public was considerably amused when it was informed that Mr. Gould had sent the following telegram to Governor Cleveland: "I heartily congratulate you on your election. All concede that your administration as Governor has been wise and conservative, and in the larger field, as President, I feel that you will do still better, and that the vast business interests of the country will be entirely safe in your hands." It was generally believed that he sent the despatch in hopes to abate popular indignation against himself

The confidence of the Democrats that they had been victorious was very much strengthened on Friday, and demonstrations were made in many towns and cities. A salute of 219 guns was fired in the New York City Hall Park, one for each Cleveland electoral vote. In the evening the Blaine men in this city made a demonstration, claiming that the Associated Press returns showed Blaine's election, but about 1:30 o'clock on Saturday morning the Associated Press sent out the following bulletin: "On a careful review of the figures by districts, as furnished by agents of the Associated Press, corrected by returns received during the day so as to bring the record down to this time, the total vote of the State stands for Blaine 558,426, for Cleveland 559,886. There are eighteen districts from which returns are still behind or questioned. These in 1880 gave Garfield a plurality of 736." The *Times's* table of New York majorities by counties, verified with great care, gave Cleveland 1,361 plurality. Definite returns from Michigan showed that Blaine had carried that State.

These facts assured the election of Cleveland by an electoral vote of 219 to 182 for Blaine, as follows:

CLEVELAND.		BLAINE.	
States.	*Votes.*	*States.*	*Votes.*
Alabama	10	California	8
Arkansas	7	Colorado	3
Connecticut	6	Illinois	22
Delaware	3	Iowa	13
Florida	4	Kansas	9
Georgia	12	Maine	6
Indiana	15	Massachusetts	14
Kentucky	13	Michigan	13
Louisiana	8	Minnesota	7
Maryland	8	Nebraska	5
Mississippi	9	Nevada	3
Missouri	16	New Hampshire	4
New Jersey	9	Ohio	23
New York	36	Oregon	3
North Carolina	11	Pennsylvania	30
South Carolina	9	Rhode Island	4
Tennessee	12	Vermont	4
Texas	13	Wisconsin	11
Virginia	12		
West Virginia	6	Total	182
Total	219		

Mr. Blaine on Friday expressed confidence in his election, and added: "I feel great pride that no imputation of fraud has ever been seriously uttered against the members of the Republican party in any State or district. I do not believe the American people will accept a fraudulent result. The Republicans have carried the Northern States by more than 300,000 majority, and they do not propose to have the leading State taken from them by fraud."

There were enthusiastic celebrations by the Democrats in many large cities on Saturday, in accordance with a proclamation of the Democratic National Committee that Cleveland's election was beyond a doubt. At the Academy of Music in this city an immense mass meeting was held, and speeches were made by Carl Schurz, ex-Speaker Randall, ex-Senator Gordon, and others.

The next United States Senate will probably contain 41 Republicans (two of them Readjusters) and 35 Democrats, and the House of Representatives 141 Republicans and 184 Democrats.

On Tuesday the County Boards of Canvassers met in the sixty counties of New York State and proceeded to declare the official vote. The unofficial returns of the leading Independent and Democratic newspapers in this city have been abundantly verified and Cleveland's election assured. Forty-one counties have returned their official vote, and Cleveland's plurality is 1,258. In the remaining nineteen counties the official returns are delayed on account of technical errors which will not materially change the result. In New York and Kings the count will occupy several days, but there is no reason to believe that the unofficial returns will be materially altered.

President Arthur on Saturday issued a proclamation designating Thursday, November 27, as a day of National Thanksgiving. Governor Cleveland on the same day issued the State proclamation.

The report of Internal Revenue Commissioner Evans, for the year ending June 30 last, shows that the total receipts from all sources of internal-revenue taxation for the year were $121,590,039, as compared with $144,553,344 for the year 1883, $146,523,273 for the year 1882, and $135,229,912 for the year 1881. It is estimated that $115,000,000 will be collected during the present fiscal year. A comparative statement of the receipts for 1883 and 1884 shows a decrease of $16,011,850 from tobacco, an increase of $2,536,610 from spirits, an increase of $1,184,338 from fermented liquors, and a decrease of $10,642,404 from taxes under repealed laws and penalties, making a total decrease of $22,963,305.

Commodore W. S. Schley, Chief of the Bureau of Equipment and Recruiting, in his first annual report to the Secretary of the Navy, says sixty-six vessels have been either wholly or partially equipped during the past fiscal year, at a cost of $639,332. The sum of $896,000 is asked for as actually necessary for the fitting out and keeping in repair of the vessels contemplated to be kept in commission during the next fiscal year.

Lieutenant-Commander H. E. Nichols, in a despatch to the Navy Department dated Sitka, September 15, says J. H. Kinkead had arrived and assumed civil control of Alaska, as Territorial Governor. No proclamation was issued.

The dynamite works of H. W. Stump & Co., three-quarters of a mile from Stouchsburg, Pa., blew up on Thursday afternoon, shaking the country for a distance of from ten to twenty miles. Eleven men were killed.

Silver Plume, Col., was partly destroyed by fire on Thursday, forty buildings being burned. The loss is estimated at about $200,000.

An incendiary fire in Palatka, Fla., on Friday night caused a loss of $750,000. Fifty-six business firms were burned out. It is charged that the fire was caused by negroes who, imbued with the idea that a return of the Democracy to power meant their reënslavement, marched through the town with guns on their shoulders. The whites were greatly alarmed, and a military patrol was called out.

Maud S. on Tuesday, at Lexington, Ky., trotted a mile in 2:09¼, beating the best previous record by one-half second.

Rear-Admiral Alexander Murray died in Washington on Monday. He was born in 1818, and entered the navy in August, 1835. He participated in the war with Mexico, and was actively engaged in the naval conflicts of the Rebellion.

Mrs. Lucius J. Knowles, of Worcester, Mass., leaves her estate at Worcester, valued at $25,000 or $30,000, to her executors, to be used in the promotion of art education in Worcester, (her object being a cultivation of a love and taste for art in the community), and $25,000 to the city of Worcester for a ward in the City Hospital for poor women and children afflicted with incurable diseases or for a lying-in ward, with other charitable bequests.

FOREIGN.

In the House of Commons on Friday night the Franchise Bill was read a second time by a vote of 372 to 232.

The House of Commons on Monday rejected, by a vote of 194 to 109, an amendment to the Franchise Bill, the purpose of which was to prevent the bill from going into operation until a scheme of redistribution should be adopted. Finally the bill was passed by the House in Committee of the Whole without amendment. The Parnellites to a man supported the Liberals. On Tuesday evening the bill was finally passed without division.

In the House of Commons on Thursday night Mr. Henry Labouchere, Radical member for Northampton, gave notice that he intended

to make a motion providing for a change in the relations between the House of Lords and the House of Commons, so as to prevent the Conservatives from impeding legislation. Mr. Gladstone moved the second reading of the Franchise Bill. After the debate upon the Franchise Bill, the House adjourned out of respect for the memory of the late Postmaster-General Fawcett. Eulogies upon his life were pronounced by Sir Stafford Northcote and the Marquis of Hartington. Mr. Justin McCarthy, in behalf of the Irish nation, also paid an eloquent tribute to his memory.

Sir Stafford Northcote and the Marquis of Salisbury, the British Conservative leaders, are preparing a scheme of redistribution, to be submitted to Parliament. It is reported that their plan adheres to the principle of separation of the urban from the rural voters, and groups the small towns into single-member constituencies. No town will be entitled to district representation that has less than 10,000 inhabitants. The general tendency of the scheme will be to eliminate town influences from the country.

The British Cabinet have been unable to agree on a plan for the redistribution of Parliamentary seats, and have referred the draft of the scheme recently published to a ministerial committee for amendment. A number of the Liberal members of Parliament outside the Cabinet are privately conferring with the leaders of the Opposition on the subject of a compromise. The basis of an agreement proposed is a division of city constituencies into single-member districts, one member to represent every 50,000 of population; three-cornered constituencies to be abolished; burghs containing under 10,000 inhabitants to be merged into counties, and burghs containing under 5,000 inhabitants to be allowed one member. An agreement will probably be arrived at.

A resolution has been introduced in the House of Commons to suspend the sinking fund for two years and devote the amount ($60,000,000) to the increase of the British navy. This would render additional taxation unnecessary. The Government, however, has decided to limit the increased expenditure in the navy during the coming financial year to $6,000,000, and in opposition to the above scheme proposes an increase of the income tax of twopence.

The Right Hon. Henry Fawcett, Postmaster-General of Great Britain, died on Thursday. Mr. Fawcett was born at Salisbury, England, in 1833, and was educated at Trinity Hall, Cambridge, whence he graduated with high mathematical honors in 1856. In the same year he was chosen a Fellow of his college. When out shooting, in the autumn of 1858, he met with an accident that totally deprived him of his sight. His interest in public affairs and social science remained alive after this great misfortune, and he devised means for keeping up his studies. Within a year after the loss of his eyesight he appeared in politics as a Liberal, competing for the privilege to represent Southwark in Parliament. Having been defeated, he applied himself vigorously to the study and discussion of economic topics, contributing many articles to the magazines, and finally presenting to the world his 'Manual of Political Economy' and 'The Economic Position of the British Laborer.' Meanwhile he had been elected Professor of Political Economy in Cambridge, and, after several defeats, had got into Parliament as the representative of Brighton, which constituency he represented continuously until 1874. In 1875 he was elected for Hackney. His literary labors were stimulated rather than checked by his public work. He revised his 'Manual of Political Economy,' and he wrote a work entitled 'Free Trade and Protection.' His wife assisted him in all his literary labors after 1867, and he and she have jointly published a volume of essays and lectures. Mr. Gladstone took Mr. Fawcett into the Cabinet as Postmaster-General about four years ago, and he introduced many improvements into the postal service.

The funeral of the late Postmaster-General Fawcett occurred at Cambridge, England, on Monday. Fully 15,000 persons were in attendance.

Mr. Thomas Shaw, member of Parliament from Halifax, was appointed, on Friday, successor of the late Postmaster-General Fawcett.

The Marquis of Londonderry is dead. His full name was George Henry Robert Charles William Vane Tempest. He was the fifth Marquis of the name. As Viscount Seaham he represented North Durham in Parliament for the years 1847-54. He was born April 26, 1821. He succeeded his father in the Earldom of Vane March 6, 1854, and his half-brother, the fourth Marquis of Londonderry, November 25, 1872.

An injunction has been granted restraining Miss Devey from publishing Lord Lytton's letters to his wife.

The trial in London of Captain Dudley and the mate of the wrecked yacht *Mignonette* for having killed the boy Parker to keep themselves alive was concluded on Thursday. The jury brought in a special verdict, finding the facts as stated, and referring the question of law as to whether a murder had been committed to the Superior Court. The verdict was coupled also with a recommendation to mercy. The prisoners were released on bail.

The safety of General Gordon at Khartum has been confirmed. According to native reports the rebels are concentrating forces on all the roads leading to Khartum. The native spies allege that the Mahdi has sent guns and ammunition to Osman Digna to enable him to resume operations on the Red Sea littoral.

Gen. Lord Wolseley telegraphed on Saturday that the Mahdi with a small following was reported to be at Korthambat, north of Khartum, whither he went after the fight at Umderman. All of the Kabbabeesh tribe have left him.

The Canadian boatmen have materially modified their original views as to the difficulty of navigating the River Nile. They now admit that the passage of one of the cataracts will be a very serious and arduous undertaking, and much harder to accomplish than they expected. They do not think the troops can be taken up that cataract without a serious accident.

Sir George Bowen, Governor of Hong Kong, was ordered on Thursday by telegraph from London to refuse permission to any French man-of-war to refit or to ship contraband-of-war stores within the limits of that colony.

A despatch from Foo-Choo states that the Kinpai forts have been repaired, Krupp guns mounted, and torpedoes laid in the river, leaving a channel of only one hundred feet in width. The return of the French fleet, however, is not anticipated.

The London *Times's* correspondent at Tien-Tsin telegraphed on Wednesday that he had just had an interview with Li-Hung-Chang, who said that China would probably agree to the following terms with France: To resume the May treaty, but France must waive the question of indemnity, and can occupy Kelung until the frontier terms are executed. These terms are to be the maximum. On Thursday it was announced from Shanghai that the Chinese Council of State had failed to arrange for a settlement of the difficulty with France.

Prime Minister Ferry, of France, announced on Thursday to the Tonquin Committee of the Deputies that England had offered to mediate between China and France, but had not yet made any official overture to the Chinese Government. The Paris *Temps* asserted on that day that France was negotiating direct with China.

The Tonquin Committee of the French Deputies has voted a credit for reinforcements to be sent to the French forces in Tonquin. Both General Campenon, Minister of War, and Admiral Peyron, Minister of Marine, intimated to the Committee that if the conflict continued in Tonquin they should be obliged to ask for a further credit, in December, of $8,000,000.

The French Senate adopted on Monday the Senatorial Reform Bill, providing for the election of 225 Senators by the departments and colonies, and 75 by the Senate. The term of service of Senatorships is fixed at nine years instead of for life. The pretenders to the throne are declared ineligible to seats in the Senate.

The French Cabinet are said to have decided to forego demanding an indemnity of China.

A despatch from General Brière Delisle, dated Friday, November 7, said: "The Chinese have made a fresh attack on Tuyen-Quan. They were easily repulsed, however. One French sailor was killed." A despatch from Admiral Courbet, dated Kelung, Friday, November 7, said that the Chinese had attacked the fortified works commanding the road to Tamsui, but had been repulsed with heavy loss after three hours' fighting.

Cholera made its appearance in Paris during the week. From Wednesday morning until noon on Friday there had been twenty-one cases and thirteen deaths in that city. The centre of the epidemic is the Rue Marguerite and the St. Antoine quarter. The public is not alarmed, and every precaution has been taken to prevent the spread of the contagion.

Cholera reappeared at Naples on Wednesday. There were seven cases and two deaths.

At a consistory in Rome, on Monday, the Pope created nine new Cardinals. In his allocution the Pope adverted to the painful position in which the head of the Church was placed and the trial through which the Church was now passing. He dwelt on the progress that the Catholic faith was making throughout the world, and especially in the United States, where a Plenary Council had just assembled. He mentioned the fact that new Bishops had been appointed in Australia and India, and throughout the East, and expressed especial gratification at the restoration of the See of Carthage.

Heavy floods have occurred in the eastern provinces of Spain. Several villages have been destroyed and many people rendered homeless.

Madame Erminia Nencini Frezzolini, the celebrated prima donna of a generation ago, is dead. She was born at Viterbo in 1820, and was the daughter of a comic singer of considerable fame. She made her début at Florence in 1838. She sang in the principal cities of Spain, and then went to Paris in 1857, where she was a prominent figure for four successive seasons at the Italian Opera. In 1853 she paid a visit to the United States with M. Vieuxtemps, and sang in the most important cities. Madame Frezzolini had a soprano voice of great compass.

Prince Bismarck will open the Congo Conference at Berlin on November 15, in the hall of the palace, where the Berlin Conference was held six years ago. Mr. Henry M. Stanley is going to the Conference on the invitation of the German Minister of Foreign Affairs.

It is asserted that Prince Bismarck has entered into a secret agreement with France to propose to the forthcoming Congo Conference to recognize the African Association as the sovereign State of Congo, and that, under this agreement, Germany will share with France the right to purchase the territory of the association if that organization should be dissolved. It is reported that Earl Granville, the British Foreign Secretary, has demanded an explanation of this matter.

Alexandre de Stieglitz, the famous Russian banker and railway financier, is dead.

High spring tides in conjunction with a severe storm caused a flood along the wharves at Quebec on Wednesday, damaging property to the amount of $500,000. Serious damage was also done along the coasts of New Brunswick.

SOME ELECTION MEMORANDA.

Now that it is all over, the time has come for a little inquiry as to who was to blame. The Republican party is hardly likely to go placidly into opposition after twenty-four years' exercise of power, without trying to discover the authors of the catastrophe which has overtaken it. There will be little if any difficulty in fixing upon them. They are the managers who at Chicago allowed the noisy importunity of a small knot of Mr. Blaine's personal adherents to blind them to all the leading facts of the situation, and notably the fact that both in 1876 and in 1880 the Republican party, though united, and still in some degree enthusiastic, only held its own with exceeding difficulty. Its majorities everywhere were so small that it was plain that it could not run a single risk, or in any State safely disregard the prejudices of even a thousand voters.

On one point in particular it was in General Garfield's case amply forewarned—namely, the danger of nominating anybody with a vulnerable personal character. The charge against him was a comparatively small one and the proof was imperfect, but it made it difficult for thousands of good men to support him, and would, if the tariff issue had not cropped up so opportunely at the last moment, very probably have worked his defeat. Not only was the warning not taken, however, but, as the "Berkshire Farmer" observed in one of his admirable letters in the late canvass, it actually proved the entering wedge. It encouraged the managers to believe that, having got Garfield in, they might safely try somebody still worse. But this time they were not, as in Garfield's case, taken unawares. Blaine was not a dark horse, or a sudden "happy thought." His nomination was planned with great deliberation and publicity, and the objections to him were also in like manner fully stated months and even years before the Convention met. The criticisms on him, however, were treated with simple defiance, and people who did not like him were given to understand that if he did not suit them they might leave the party, as plainly as if it were desirable to have the party rather smaller and more select than it had previously been.

Now, good party management is shown even more in the selection of candidates than in the conduct of the canvass. With a first-rate candidate, the electioneering is easy work. With a really bad candidate, the best management can do very little. But the men who accepted Mr. Blaine from his little knot of noisy admirers seem to have had no judgment about candidates at all. They apparently never gave themselves the trouble even to examine his record and what the Republican newspapers said about him in 1876 and 1880, or to inquire what the probable strength of the opposition to him in the Eastern States would be. What is still more extraordinary, they seem to have formed no estimate of his strength in the West either. From whom did they get the notion that he would sweep the West like a prairie fire? As a matter of fact, he has run worse in the West than any Republican candidate has ever done.

In truth, it looks now as if the nomination had been made, not after a calm review of the party needs and weaknesses, but on the urgent solicitation of a few close personal friends and admirers of Blaine's, like Mr. William Walter Phelps, who of course thought there could be no difficulty in getting a whole nation to see their idol as they saw him themselves. Nor after the nomination was made was the precaution taken to keep his financial friends away from him. Wherever he went he was surrounded by speculators, almost as if the Presidency was a new "enterprise," and they did not care who knew it.

Some consequences of this tremendous blunder are already patent to the public eye. The loss of power by the Republican party is the one of which most people are thinking now, but every day for months minor ones will rise up before their eyes. First and foremost, it must be remembered that not only is the Republican party out of power, but there is not the smallest likelihood of its getting back into power, without providing itself with better agents than it now possesses. What the country has said in electing Cleveland is substantially this—that although it may be true that the Republican party possesses most of the virtue and intelligence of the country, until it provides the means of bringing this virtue and intelligence to bear on the Government, they will be of no political value; or, in other words, that the voters of the party might just as well be bad as good for all the difference it has of late made to the nation. The Democratic majorities at the late election were not large in the Northern States, but if Cleveland's administration turns out well they will be very large at the next election. In other words, voters will go over to the party which, no matter how small its stock of morality may be, makes it tell on public affairs.

Another consequence of Blaine's nomination for which we believe Republican voters will every day bear the managers a greater and greater grudge, is the humiliation and disgrace which the defence of his private character has brought on the whole country. It will be a good while before Americans, both at home and abroad, will recall without wincing the fact that in order to save the Blaine ticket some dozens of leading American divines, jurists, and publicists and professors actually mounted the stump to persuade their countrymen that black was white, that lies were truth, that wrong was nearly right, that no American was much honester than Blaine was, and that anybody who said *he* was, was a hypocrite. We do not believe that Americans who care for the national fame will get over this incident of the late extraordinary canvass for a long time, and as long as recollection of it lasts the Republican party will suffer for it. It was a shameful episode in a party struggle, and those politicians who made it appear necessary will undoubtedly be held even more accountable for it than those who actually took part in it.

WHAT PRESIDENT CLEVELAND WILL DO.

As things have gone for some years past, it is almost easier to give some idea of what the policy of the new Administration will be by describing the things which it will not do, than by describing the things which it will do. In fact, most of the speculators about the political future are guessing at this moment rather at what will not happen when Cleveland comes into power than at what will. That which calls for the most guessing is naturally enough his course about what are called "spoils." When the Democrats were last in power, the expulsion from office of everybody, high and low, belonging to the opposite party, was considered by both parties a natural and reasonable consequence of a party victory. Ever since the Democrats went out of power, the Republican politicians have left nothing unsaid or undone to produce or confirm the impression that this was the permanent and American order of things. They have at every election treated an office as a favor bestowed by the party, which was not paid for simply by the efficient discharge of the duties attaching thereto, but which called also for political "work." They have, moreover, by levying assessments with great regularity, emphasized in the strongest way their belief that dismissal would follow party defeat as a matter of course, the Civil-Service Act to the contrary notwithstanding. They never have, in fact, to our recollection, during any canvass, State or Federal, uttered one word to indicate that they thought the office-holders no more interested in the result than anybody else, or that it was unreasonable to make them contribute more to the expenses of the election than any other class of the community, or expected the Democrats, if they got into power, to refrain, on any ground, from making a clean sweep.

It is not surprising, therefore, that we should hear from Washington now that the clerks in all the departments are trembling in their boots, and expect to be expelled after the fourth of March. The wonder would be if they did not expect it. This is what all their political advisers have been telling them to expect. It is the contingency against which the assessments on them have ostensibly been levied. We can hardly hope, therefore, to be believed by them when we say that nothing of the kind will happen; nevertheless this is what we do say. We do not believe, and we have reason for not believing, that President Cleveland will disturb, or allow to be disturbed, any officer of the Federal Government on account of his political opinions. We believe that, as regards the subordinate offices, the Civil-Service Act will be faithfully enforced; and as long as it is faithfully enforced, there will be no political motive for making removals. Under the old régime, an officer was, when arbitrarily dismissed, always dismissed to make room for a particular person designated beforehand. Under the present law no particular person can be designated for any place beforehand. Whenever a vacancy is made in the lower grades it has to be filled by competitive examination. Whenever one is made in the higher grades it has to be filled by promotion. There is, in short, no legal way at present of putting a "worker" into a subordinate office. It is safe to infer from this alone that no arbitrary dismissals will be made by Mr. Cleveland, even if he were not pledged to civil-service reform at all, and if he had not given at Albany numerous practical proofs of his adhesion to it.

As regards the non-political offices not covered by the Civil-Service Act, we believe the principle of the Act will be applied to them also. In other words, no man will be removed on account of his political opinions, or for any reason but incompetency and neglect of his official duties. We will not disguise our fear, however, that twenty-four years' Republican tenure of office independent of good behavior have put into the service plenty of material for removal for the specified cause. No Democratic President will have any difficulty in finding plenty of incompetent persons to dismiss; but that President Cleveland will not remove without good proof of incompetency we have the fullest confidence. His action in this field, however, will receive the strictest scrutiny, and he will not, we are sure, seek to evade it. Moreover, the weeding out of the service will be one of his duties—one, in truth, of the tasks imposed on him by his election. A party which has held office on the terms on which the Republican party has held it for the last twenty years, is sure to have abused the appointing power grossly—not because it is Republican, but because it is human. A party directed by Archbishops would, under like circumstances, have abused it, as certainly as one directed by Blaines and Chandlers and Robesons and Logans. Logan's own relatives and retainers in office would alone, we have no doubt, give an able-bodied reformer a good week's work.

But no class of officials ought to be so severely and peremptorily dealt with as those who have, while drawing the public money, given their time and strength, which they owed to the public, to the work of political partisanship. Until this sort of thing is punished in the severest way there will never be an end to it, and the spectacle of its punishment will be made all the more effective if contrasted with the undisturbed repose of the officers who have attended to their duties, and kept out of politics. It would not, for instance, be fair to the service, even if it were reasonable to expect it of him personally, for President Cleveland to keep in office Federal functionaries who have been lying actively in the late canvass, or spreading Ball's filthy stories under the direction of the Republican Committees. This class of offenders in fact ought to "go," and their removal is the only thing which will put a stop to this great abuse.

As to the new Cabinet, we believe we are expressing the feeling of the great majority of Independent Republicans in uttering the hope that it will contain what is best in the Democratic party, and nothing else. The Independent support the Democratic ticket received in the late canvass was certainly not given with the hope or expectation of what is called "recognition." We are sure, therefore, that there will be no disappointment, or chagrin, or disaffection if no Independent gets any substantial reward for the Independent share in winning the victory. What is most important and most valuable in the victory is really the restoration of party government in the United States, or, in other words, the opportunity it furnishes of showing the country that it is not dependent, as Republican orators have for twenty years been trying to persuade it, on one party or set of politicians for its safety, honor, or welfare. Government by party is now in the United States once more going to be carried on by two parties instead of one. When the party in power misbehaves, the nation is to be hereafter in possession of the old-fashioned remedy of making a change, instead of being confined, as during the last quarter of a century, to appeals to the wicked to be good, or, if they could not be good, to be as good as convenient. To the success of this remedy, however, we believe it to be imperatively necessary that the new Administration should have nothing hybrid or heterogeneous about it. The Cabinet should be a specimen of what the Democratic party can do when put to its trumps. Its composition from top to bottom should be a demonstration to the whole country of the folly of the notion that all the honesty and statesmanship of the nation was to be found in the Republican ranks. Its work should show also the folly of putting up with Republican shortcomings, in the belief that, bad or good, this was the best the United States could command. Let us, therefore, have a Democratic Administration pure and simple, without any division of responsibility, or of the honor or shame.

DANGEROUS REMEDIES.

THE recent hours of anxious and irritating suspense occasioned by untrustworthy telegraphic returns have seriously aggravated the bitterness already felt toward the Western Union monopoly. That feeling has been hitherto intense enough, but rather vague in character, the general iniquity of the company being an accepted article of popular belief, although its particular manifestations were known only to individual sufferers. The present grievance, however, seems to be of a very positive and definite kind, in spite of the fact that the Western Union Company and the Associated Press have been included in rather indiscriminate censure. Perhaps for the first time it has been clearly seen precisely how the existence of the telegraph monopoly may have very important political consequences, and it is only natural that people should turn—as within a few days a great many people have turned with renewed interest—to the project of a Government telegraph. Whatever the economic consequences may be, it is urged, it is not safe to have the sole means of the immediate ascertainment of knowledge of such supreme importance to the tranquillity, and even to the stability, of our Government in the hands of a few individuals, who may be interested in the success of a particular party.

Before adopting this conclusion, however, it is well to reflect upon the precise nature of the improvement that we hope to make. If the Government had had a monopoly of the telegraph at the time of the recent election instead of the Western Union Company, in what respect, we may well ask, would the people have been safer? The present Administration has been supposed to be somewhat lukewarm, but we have seen what a Commissioner of Pensions could do; and the Postmaster-General, who would have charge of the telegraph if the Government assumed it, is not so scrupulous that his newspaper has not supported the Star-route conspirators through thick and thin. Suppose Mr. Blaine to have been elected and to be a candidate for reëlection four years hence, would not the telegraph be a much more formidable implement in his hands than in those of any private person? If Mr. Elkins, or any of the Blaine crew, were Postmaster-General, does any one doubt that the telegraph would be almost wholly unavailable to his opponents, not only at the final moment, but throughout the whole campaign? And if Mr. Blaine were successful, would there have been any prospect of punishing such abuses? The prosecution of those by whose malfeasance we are benefited is not likely to be very energetic. When punishment is to be administered by those who are interested in having the wrong committed, it is not likely to be severe.

To give the Government a monopoly of the telegraph would, therefore, be to put in its hands the control of a most potent weapon for the perpetuation of the power of the Administration. It would be impossible to frame laws—if it were politic to do so—that should prevent the Government's business from having precedence of all other, and at the time of a Presidential election it is safe to say that the business of the Administration would be treated as the business of the Government. The coming Democratic Administration would find its tenure of power much more certain if it controlled the telegraph. By delaying returns from doubtful Southern States it might be able to have those returns, in case of dire necessity, altered to correspond with the exigencies of the situation.

The question of the assumption of the telegraph by the Government is a large one, and cannot be decided solely upon the grounds that we have stated. But the present impulse may well be checked by the considerations that we have advanced. It can hardly be contended that if the persons now in control of the telegraph as private citizens were in control as representatives of an Administration fighting for its life, the Opposition would be much better off than at present. It may very well be that we should "rather bear those ills we have, than fly to others that we know not of." The impulse in question illustrates a propensity in man that is both a cause and a result of his weakness—the propensity to appeal to a superior power whenever he finds things not to his satisfaction. Independent and courageous men are disposed to rely upon their own exertions to remedy their sufferings, while the most impotent and abject of the race are prone to call upon the Almighty to right their wrongs and punish their adversaries. Before committing to the general Government a monopoly which, it is safe to say, can never be taken from it, it is desirable to consider whether the people have not in their own hands the necessary remedies for the present abuses.

SOME POLITICAL OPINIONS OF MEN OF LETTERS.

THE new volumes of memoirs of Carlyle give us many illustrations added to the many previous ones of his intense disbelief in the modes of action and the results of modern political life. And those of his readers who also read Flaubert's letters will find very striking parallelisms of thought and feeling between the two writers. Unknown to one another, of utterly different

birth and life, witnessing entirely different national movements, their patriotism touched by entirely different influences, it is continually, nevertheless, as if the one were echoing and enforcing the speech of the other. Their common hatred of universal suffrage, their conviction of the ever-increasing evils attendant upon it, is the keynote of their bitterest apprehensions and fears. "The theory of equality of voting," Carlyle used to say, "the good and the bad on the same level, Judas Iscariot and Paul of Tarsus counting equal at the polling booth—the annals of human infatuation does not contain the equal." Flaubert thought: "The first remedy [for the maladies of France] would be to get rid of universal suffrage, the disgrace of the human intelligence. As it is at present constituted, one single element tyrannizes over all others: multitude [*le nombre*] controls intelligence, education, race, and even money—which is worth more than multitude. . . . Universal suffrage is as foolish as divine right, though a little less odious." He elsewhere gives some indication how he thinks it might be modified: "Every man (in my opinion), however low he may be, has a right to *one* vote, . . . but he is not the equal of his neighbor, who may be worth a hundred such as he. In an industrial association (joint-stock company) every shareholder votes in proportion to what he puts into it. It should be so in the government of a nation. I am worth any twenty voters of Croisset. Money, intelligence, and even race ought to be counted—in short, all powers. Now, up to the present time only one is estimated—multitude!"

Flaubert's remarks were addressed to George Sand. On her part she wrote to another friend what may be interpolated as a make-weight against these masculine censures: "When universal suffrage began I was alarmed by it. I should have desired one restriction, the obligation to know how to read. But in these twenty years I have seen, first, that the young peasant learned a little, and that this little voluntarily learned was much; then, that book-learned or not, he had an extraordinary and always progressive consciousness of his right. It is the first rung of the Republic, this, and if it were taken away there would be nothing. But it cannot be taken away, it is too late, and whoever should touch it would be destroyed."

The same spirit that rebels against universal suffrage craves government by the *wisest*, by those whom Flaubert calls "mandarins." "Do you think that if France, instead of being governed in fact by the crowd, were under the power of the mandarins, we should be where we are? . . . The only reasonable thing (I come always back to this) is a government of mandarins, provided that the mandarins know something and even that they know a good deal." Here he unconsciously "echoes" Fielding, who, apropos of Tom Jones's encounter with the gypsies, discourses of government and declares, "I know but of one solid objection to absolute monarchy, . . . the difficulty of finding any man adequate to the office of an absolute monarch." In view of this difficulty he concludes that "it is not consonant with even the least degree of prudence to hazard an alteration, where our hopes are poorly kept in countenance by only two or three exceptions out of a thousand instances to alarm our fears"; and he declares it to be "wiser to submit to a few inconveniences arising from the dispassionate deafness of laws, than to remedy them by applying to the passionate open ears of a tyrant." Still, he previously makes the concession that "no limited form of government is capable of rising to the same degree of perfection, or of producing the same benefits to society with this." "Mankind are happier in a state of inequality and subordination," said Johnson; ". . . the Crown has not power enough." "Mankind have never been so happy," continues Fielding, "as when the greatest part of the then known world was under the dominion of a single master; and this state of their felicity continued during the reigns of five successive princes—Nerva, Trajan, Adrian, and the two Antonini." At this Coleridge exclaims: "Strange that such a lover of political liberty as Fielding should have forgotten that the glaring infamy of the Roman morals and manners immediately on the ascent of Commodus prove that even five excellent despots in succession were but a mere temporary palliative of the evils inherent in despotism and its causes. Think you that all the sub-despots were Trajans and Antonines? No! Rome was left as it was found by them, incapable of freedom."

Was it the wisdom of Ulysses, or, as Estienne de la Boëtie suggests, a momentary policy, that inspired his words: "A government of many is not a good thing; let there be but one chief, one king"? Was it wisdom in Carlyle or that involuntary lifelong policy of "peculiarity" which saps the strength of so much of his teaching, when he said: "A king, or leader, in all bodies of men there must be: be their work what it may, there is one man here who by character, faculty, position, is fittest of all to do it"? Flaubert is not for one leader but for *few;* he insists: "It is of little importance whether many peasants know how to read and no longer listen to their priests, but it is of infinite importance that many men like Renan or Littré should live and be listened to! Our salvation now lies only in *a legitimate aristocracy.* I mean by that a majority which shall be composed of something besides numbers."

One might fancy a peculiar force and point given to this last sentence in view of the conditions of American political life during the last months, and in remembering our conditions of feeling last week. But as Montaigne says: "These great and long discussions concerning the best form of society . . . are discussions useful only for the exercise of our minds. . . . We have a world already made and formed to certain customs: we do not engender it like Pyrrha or Cadmus. By whatever means we may rule to arrange it and put it to rights, we can scarcely wrench it from its accustomed bent, except by breaking the whole."

THE FRANCHISE BILL CAMPAIGN.

London, October 28.

The opening of Parliament has put a stop to the agitation which has raged over England, Scotland, and Wales ever since the House of Lords refused, in the middle of last July, to pass the County Franchise Bill. It was high time that it should cease, for the good order and good humor which had marked the meetings during the first two months were beginning to be replaced by bitterness and tumult. Notwithstanding the long practice which the English people have had in free government—local as well as national—and in discussions at popular gatherings, they have not yet completely learnt the greatest lesson that a democracy needs to learn, viz.: that of abstaining altogether from the use of force, and allowing opponents, even if they be in a minority, to talk and pass resolutions without interruption. Meetings in England are of three kinds—open meetings, to which the whole of the inhabitants are invited; party meetings with open doors; and ticket meetings. In those of the first class, where an attempt is virtually made to represent the resolutions passed as being the expression of the wishes of the locality, it is natural that both parties should appear, that amendments to the resolutions proposed by those who summon the meeting should be moved, and that some disorder should result in ascertaining by a show of hands the opinion of the persons present. Much fairness, much good temper, is needed to carry on such meetings in a quiet way; and hence this class of meeting is comparatively rare. Far commoner is the plan of announcing the meeting as one held by the party, but of letting any one who pleases attend. As such a gathering does not profess to speak for the locality, but only for the party in the locality, there is no reason why the opposite party should feel called on to put in an appearance and endeavor to capture the meeting. However, they frequently do appear; and when, as usually happens, they are unable to carry their amendments to the resolutions, they are apt to make a noise drowning the speakers' voices. Tumult follows, sometimes they are removed by force, sometimes they succeed in stopping the proceedings, and in that event there is generally a little fighting, with resulting damage to the furniture, for which the promoters of the meeting have to pay. The fear of these annoyances has suggested meetings of the third class, the admission to which is by tickets issued to the members of the party. Order is secured, but as the meeting is stigmatized by the other side as a hole-and-corner affair, and produces less effect on opinion, people don't like to resort to it unless absolutely compelled to do so.

Nearly all the large popular demonstrations of the last three months have belonged to the second class. Those held by the Liberals have been in or near the great centres of population—London, Manchester, Birmingham, Leeds, Newcastle, Glasgow, and other cities. The numbers attending have been enormous, and there has been little or no interruption, because the Liberals command a decided majority in all these places, and also, perhaps, because the cause of the House of Lords is not a popular one among the masses, so that even the Conservative workingmen do not rally heartily in its behalf. However, the Tory leaders felt bound to meet their foes by counter demonstrations. They threw open their parks and country seats for the purpose, provided amusements and in some cases refreshments, arranged for a special service of trains to bring excursionists from the neighborhood to the scene of the meeting, and did succeed on four or five occasions in collecting very large crowds. It was alleged by the Liberals that only a small part of these crowds listened to the speeches, the rest enjoying a summer's day among the trees, but no one can doubt that the Tory party has, among the lower, middle, and working class, adherents enough to furnish out respectable meetings in populous districts. These meetings had at any rate the result of encouraging the Tory newspapers to declare, and the Tory leaders to believe, that the counter agitation might be set against the agitation, and that it could not therefore be argued that the country was wholly against the Lords. As such meetings were mostly held a little way off the big towns, no collisions occurred between the two parties. But when, three weeks ago, a great Tory demonstration was held in the suburbs of Birmingham, which is the most Radical city in the country, it was regarded by the Radicals as a challenge. Many endeavored to enter, they were refused admission, and thereupon a crowd who had been demonstrating against the Peers in a piece of ground hard by, forced an entrance, a physical struggle took place, the speeches were interrupted, and some furniture was destroyed. A few days later Lord Salisbury's carriage windows were broken as he was driving to the station at Dumfries from a ticket meeting held there, while an Orange mob attacked a Liberal meeting at Portadown in Ulster, and seriously wounded Mr. Dick-

son, one of the most respected of the Ulster members of Parliament. These and other minor conflicts, the blame for which belongs about equally to both parties, are signs that the temperature of public feeling has been rising. It will rise further if the agitation should recommence. From the North of England, from Scotland, from Wales, one hears that the masses are at length excited, and might overstep the line which separates moral from physical force. Mr. Gladstone has, of course, done his best to enforce the duty of patience and self-restraint, but his example has not been followed by all of his lieutenants, nor by some of the prominent Tory leaders. Party spirit runs so high that it has blinded even responsible statesmen to the truth that, in a country like England, both parties and parliamentary government itself have far more to lose by disorder and violence than the Liberals can lose by the postponement of the Franchise Bill, or the Tories by its immediate passage.

What has the effect of the agitation been? Has its course justified the Liberals in starting it, or its failure approved the conduct of the Tory leaders whose conduct led to it? It was at first intended to secure the passing of the Franchise Bill. When the Lords refused to consider that bill unless accompanied by a bill for the redistribution of seats, Mr. Gladstone, in announcing that he would present the Franchise Bill to the Upper House a second time, appealed to the country to express its opinion by meetings upon two issues—whether it desired the extension of the franchise; whether it considered that a rearrangement of constituencies must necessarily go hand in hand with that extension. But of these two, the first ceased to be real when the Tory leaders announced that they also accepted and denied the enlargement of the suffrage, while the second was too technical, too much a matter of procedure, to come home to the popular mind, or be a suitable theme for impassioned harangues. Hence a third issue arose, which was broad, obvious, easy to grow warm upon, viz., the conduct, character, and position of the House of Lords. Radicals who had for years past been waiting for an opportunity of attacking that House, found it at last, and found that the people received it more gladly than most of them had believed. Hence the campaign soon became, what impartial observers saw three months ago that it must become, a campaign against the House of Lords.

The first result of the agitation has, therefore, been to shake the foundations of that House. The attack has been much more powerful than the defence, because it is not easy at this time of day to defend any hereditary House, because the Lords have of late years been so overwhelmingly Tory in sentiment that even moderate Liberals have come to regard them as a sort of dignified Tory Club, and because Lord Salisbury and his fellow-leaders are so sensible of the real weakness of the Upper House that they do not seem to care much about its fate. It would have been damaged even more seriously but for the fact that Mr. Gladstone, reluctant at his advanced age to open a new question, has dwelt upon the difficulties of making changes in the Constitution, while his more impatient followers are not agreed as to the change wanted. Many clamor for immediate abolition, and insist that England does not require a Second Chamber at all. Others propose to retain such a chamber, but are divided among themselves as to whether it should be wholly or partially hereditary, or by what other means its members should be chosen. For these reasons the question is felt by practical men to be still rather a question for the future than for the present. Such men perceive that we must settle not only the Franchise Bill, but redistribution also, before the Lords can be dealt with. Still, I repeat that the Lords have received a blow, because they have for the first time been openly impeached on a thousand platforms; and while the attack has proved unexpectedly popular, the defence has proved unexpectedly weak.

As regards the immediate issue of the Franchise Bill, the agitation has done less than its promoters seem to have expected. It has not shaken Lord Salisbury's resolution, nor the warmth of the support given him by the Tories in the House of Commons. He and they still maintain that the country is with them, still demand that its opinion should be taken in the regular constitutional way by a general election. Their meetings have been numerous enough to lend some color to this assertion, and they insist that the mistakes of the Government in foreign and colonial affairs have been so grave as to outweigh, in the electors' judgment, its merits as the author of the Franchise Bill. It was supposed that the threats against the House of Lords would make them fear for the existence of that august body, and induce them to seek its safety by a prompt retreat. But this is not Lord Salisbury's way. He finds a sort of pleasure in braving dangers. He reflects that it is just as bad to run away as to be beaten. Perhaps he does not greatly care what becomes of a House of Lords which should have to live on mere sufferance, unable to assert its will against a Radical majority in the Commons.

If the anticipation that the Tory leaders would be frightened by the agitation has been so far unrealized, the counter expectation that the vehemence of the Radicals would provoke a reaction in favor of the Peers has also been disappointed. Whether it be that the Upper House has really lost its hold even on moderate Liberals, or that its conduct in rejecting the Franchise Bill on a point of procedure has appeared factious and vexatious to such men, the fact is certain that very few of the safe men, the "arm-chair politicians," as they are called, seem disposed to go over to the Tories. The unity and loyalty of the whole Liberal party to Mr. Gladstone remain unshaken, while the enthusiasm of the more extreme men burns hotter in the atmosphere of conflict. There seems more chance that Lord Salisbury may be forsaken by some moderate or timid Tory Peers, than of any defection among the Ministerial party in the House of Lords. Mr. Gladstone's efforts are of course directed to attract and reassure such wavering Tories. He has repeatedly offered to negotiate and accept any fair arrangement Lord Salisbury may offer. It is possible that in the three weeks which remain before the bill goes up again to the House of Lords, some compromise may be arranged. The air has been full of rumors of it for two months or more, and everybody except those Radicals who wish to continue the crusade against the Lords would welcome it as a quick ending to a struggle which has become tedious, because on both sides everything has been said that can be said.

Whether the agitation has tended to disturb our Constitution by undermining the authority of Parliament, by teaching the people to consider themselves and not their representatives the direct arbiters of a great political issue, is a grave question, which it is still too early to answer. The current has been setting in that direction for some years past, and although these recent demonstrations have been made in support of a majority in the House of Commons, it may be argued that they imply that the parliamentary machine cannot work on by its own force, but needs the additional propulsion of the masses. Certain it is that the leaders on both sides own their immediate allegiance to those masses more fully than of yore, and are now at least as anxious to appear in person before them and win applause from them as the statesmen of the last generation were to conciliate the good-will of the House of Commons. Y.

NEW VIENNA.

VIENNA, October 16.

ARCHITECTURALLY, Vienna has had a great opportunity, and has made the most of it. This opportunity lay in finding space for grand buildings just where it was most desirable for them to stand, and that after the city had become large enough to need them. When the writer first saw Vienna, two and forty years ago, no city seemed so utterly destitute of elbow-room for modern improvements in its wealthy and populous quarters. I used to call it a cup-and-saucer city. The old town, a huddle of imperial or princely palaces with labyrinthian lanes winding among them, was the cup. Round this was a rampart thick and high, circled by a moat proportionally broad and deep, as well as a glacis lawn several times wider than both. These fortifications formed the saucer. Within the cup the dwellers were dignitaries and their servitors——in all perhaps 50,000. Parted from them by a great gulf fixed, and outside the saucer, more than half a million had their abodes in thirty-four suburbs—the home mainly of shopkeepers, mechanics, and other plebeians. The Prater (4,270 acres) was already a peerless park, but was too far off for the masses to reach. A strange solution of continuity prevailed between the heart and outlying members of the metropolis.

This state of things lasted till 1858. It was then discovered that the greatest curse of Vienna might be turned into its greatest blessing. The high wall was tumbled down into the deep ditch, and thus a fair foundation was laid for the edifices demanded exactly on that inner ring by the state, the city, and all industrial interests. The belt thus opportunely discovered was two miles long and about 1,500 feet wide. It was a relief to the inner town so long laced in too tightly for breathing, and to the suburbs so long vainly pressing toward the metropolitan centre. Ample room and verge enough being thus vouchsafed, such an array of majestic buildings as I nowhere remember in a consecutive series straightway began to rise, each side of a Ring Street 150 feet wide—wider than the Parisian boulevards and than any other street of equal extent. But few sites now remain unoccupied. The last building finished was the University, dedicated on the 11th of October. A few among many other noteworthy edifices are the headquarters of the General of the Garrison, the new Council House, the Parliament House, the Supreme Court House; half-a-dozen museums, as of Natural History, of Fine Art, of Useful Art, of Oriental curiosities; Academies of Art, and of Music; an Opera surpassed only by the Grand in Paris; several theatres; the Exchange, and the Votive Church—one of the best examples of modern Gothic. Hundreds of statues adorn and enliven the outside of these buildings. The palaces, however, do not engross all the ground. Scattered among them, and setting them off to the best advantage, there are five or six parks, close by the places where men most congregate or inhabit. It is easy to see that the glory and honor of Vienna must more and more gravitate toward its Ring Street, the band which unites (like Siamese twins) the sections that were so long severed by a wall of partition. It is hard to recall a city which has had such an opportunity, and that at such a stage of its growth, as Vienna, or which has improved its opportunity so well. Vienna has beaten the sword into a plowshare to some purpose.

No sooner had the ramparts fallen, and the value of the land thus thrown open become apparent, than the title to that inheritance began to

be disputed. It was too rich a windfall not to be claimed by more than one heir. The state, the city, and the imperial family each said it was all their own. Had they gone into litigation the matter would have hung in chancery to this day; the litigants would have learned that only one thing is certain in law, namely, expense, and, worst of all, no fraction would have been woven of the golden girdle which has already long bound the old and new towns in a well-matched union. But in this regard, also, the Austrians used their opportunity wisely. The contending parties compromised, and each thus secured not only standing room for the structures it needed, but a residue of land the sale of which to private parties materially helped to erect them.

New Vienna, as I may call the new belt around it, has breathed a new spirit alike into the city proper and the outlying suburbs. In passing through that new zone, wherever you catch any glimpse of things, urban or suburban, you see improvements that would never have been thought of but for the example of Ring Street. The changes are so great that an officer told me to-day that, coming home from ten years of garrison duty, he was at a loss how to find the house he was born in. Since my first visit the population has doubled.

The relative positions of the imposing structures on the Ring-Strasse are such that they may be compared to mirrors which lend and borrow light by mutual reflection. The impression is cumulative. But several of them—as the House of Parliament, the Opera, the twin Museums, and the Rathhaus, where thirteen million florins have been economically spent—are each in and of themselves almost unsurpassed in their line. Just now the University, filling an entire block and more than two thousand feet in circuit—rich in frescoes, carving, and statues, in Viennese eyes without a peer anywhere—is attracting special attention. By favor of the American Consul I was among the invited guests at the dedication less than a week ago. The ceremony was simple and brief, and chiefly of interest as marking the beginning of the second half thousand years in the life of the institution, and as showing an Emperor, yes, "His apostolic majesty," delighting to honor higher culture. The monarch, received at the door by the academical senate, was escorted to their hall, not large, and densely packed. He took a chair in front of a table on a low platform, and listened to a fifteen minutes' speech from the rector standing on the floor before him. After a few historical sketches he was thanked for his granting the ground for the building to stand on thirty years before, and aiding in its construction at least half as long. In reply the Emperor stood up and read a speech of fourteen lines, rejoicing in the completion of a work which he had always had at heart, and trusting that multitudes would make full proof of the institution, and learn there alike science and patriotism. He was greeted with a student song, and a triple shout of "Hoch!" Then several persons prominent in building the pile were presented to him as he walked about, and all was over. His dress was the ordinary Austrian uniform, with no ornaments save the medals and chains of certain orders. This uniform, a tight fit with short skirts, is decidedly unbecoming. An American would call it a bob-tailed blue.

The Ring-Strasse has interested me the more because we need such a godsend in almost every American city, and we can never hope for it anywhere. In none of our larger places can I recollect such a field for the display of grand architecture, nor in the heart of any of them is there such a public garden near every man's door, and where he can walk abroad and recreate himself, as Cæsar would have had the Roman commons. One thinks of monotonous Chicago, where he wanders mile after mile in every direction and espies no single block unfilled with buildings. Boston has spent many millions for many a decade in making land; it has gained something commercially and for building lots, but little in the way of genuine people's parks, or of the ample spaces its public edifices will require to show them off fitly when its population shall exceed a million, as that of Vienna does now. It is needless to add that no other American city has more open space near its core than Boston. What I chiefly regret is that our newer cities, as Minneapolis, which were nothing three decades ago, took no warning from the mistakes of our older towns, and have refused to learn anything from the excellent example which Vienna has been so long setting before them in common with all the world. May some of them yet, by some wonderful streak of luck, be blessed with an opportunity like that of Vienna, and may they show themselves as wise opportunists as the Viennese! J. D. B.

Correspondence.

WHO ARE RESPONSIBLE?

To the Editor of The Nation:

Sir: It is not usually worth while to examine the excuses made by the members of a party for bad nominations, which of course rested entirely in their own volition; but those put forth by the more decent supporters of Blaine since their defeat (they did not think of needing excuse at all while they expected victory) ought not to be allowed to furnish them a shelter, for they justify an evasion of the most momentous duties of citizenship, and, what is even more important, are largely false. For example, it is often alleged that the Eastern delegates and leaders are blameless, because they protested and forewarned the others of the revolt that was sure to follow. I assert, on the contrary, that however true this may have been four years ago, or one year ago, it is grossly untrue of their action at or for some time before the Convention; and that their confident assurances of the certainty of victory under *any* leader, and of the powerlessness of the Independent section, are wholly responsible for the nomination, and the consequent transference of the Administration into Democratic hands. The most trusted Republican chief in Connecticut, the apostle for many years of high-toned politics, when asked before the Convention if he thought Blaine could be elected if nominated, is said to have replied with emphasis, "Certainly he will be; *anybody* who gets the Republican nomination will be elected; we could elect a wooden figure from a cigar store if we put him up." As this gentleman's paper had been for years proclaiming Blaine to be a dangerous man, whom the party ought not to nominate, nothing could be better calculated to convince the Blaine gang that the "kickers" were a set of chicken-hearted milksops, all tongue and no backbone, whom it would be silly to fear, and who at worst would only groan over the wickedness of the Machine—and vote for its candidates. (I must not be understood as applying these epithets to General Hawley, a man whom I have loved and honored for many years, and who half redeemed his weakness in precipitating the nomination of Blaine by the disgusted and half-hearted way in which he supported him, almost more damaging than outright opposition. I merely put into words the feeling with which his action and that of others like him inspired the corruptionists.)

The bulk of the other Northern leaders gave the same power of attorney to whosoever should, by whatsoever means, gain control of a convention nearly half of whose members came from Democratic States, and half of which latter were notoriously for sale to the highest bidder; and if Elkins, Clayton & Co. should now bring suit against Hawley, Hoar, Roosevelt, and their fellows, with $100,000,000 damages, for having duped them into a nomination whereby they lost a dozen years' profitable pickings from the public out of greed to seize and plunder the entire treasury in four years, I do not see how a court could avoid finding for the plaintiffs. They already had a serviceable army of towards a hundred thousand office-holding voters, many of them influencing or directly controlling other votes, fired with the patriotic zeal that animates every man whose bread and butter is at stake, and squeezable of money to an almost unlimited extent; they had the enormous aid of party inertia and party fidelity; they had the still powerful bugaboos of industrial ruin, and Confederate debt and pensions, and payment for slaves, and fiat money; and if they could be secured against a defection of the suspicious and squeamish Puritans who did not want to have their pockets picked, and did not like to be ruled by thieves anyhow, they had a "sure thing" of a haul beside which that of the buccaneers who sacked Carthagena was petty pilfering, besides there being fewer to share it and absolutely no danger. The eager servility of most of the men who had hitherto accurately represented the party feeling, their uncalled-for anxiety to disclaim, both for themselves and the party, the possession of any more conscience than the rabble of Southern *Republican* delegates or their precious leaders had, gave just this final touch of security, and lured the whole crew on to a destruction which bids fair to involve the entire Republican party. These respectable Republicans cannot shift the responsibility upon the Blaine howlers; they had it in their power absolutely to prevent Blaine's nomination from being even considered for an instant, and thus absolutely securing Republican victory—for the Independents bound themselves to support *any* decent Republican candidate. The real nominators of Blaine are not the Arkansas delegation or the Alabama delegation, they are the weak-kneed Northern Republicans who objected to him, but took great and even uproarious pains to assure his supporters that their opposition amounted to nothing and carried no weight with it, and need not be minded at all.

Nor can they justify their action even after the Convention. Supposing the Blaine gang to have defied them, and risked their political existence on this stake, a resolute union of most of the party leaders and press against him would have forced even him to resign his candidacy, and allow another convention to be called. That his ambition for the office is as unscrupulous as ever Burr's was, no rational man can doubt: to get it he has shown himself willing to make such bargains and give such pledges as would have made his administration more like a flock of buzzards devouring a carcass than a band of politicians conducting a government. But even his desperate and unprincipled ambition would have halted before a combination of two-thirds of the electoral vote of the Northern and Middle States against him, and he would have accepted the inevitable, though with bitter rage and hate and heartrending shrieks to the public. Instead of this, leaders and followers alike swallowed the dose, and declared that it was the sort they liked and good enough for any Republican; and the defence of free institutions against sheer organized and legal brigandage was left to a few thousands—in this State a few

hundreds—of the party, who were at once outlawed so far as partisan zeal could do it.

How shameless this change of front was in hundreds of cases may be illustrated by the case of a prominent Hartford lawyer and politician, hitherto regarded as a man of principle and independence. Not two weeks before the Convention he declared that the difference between Blaine and John Sherman was that between a dangerous man with brains and a dangerous man without brains; that the people who would vote for Sherman but not for Blaine were fools, because Blaine would be the real manager of Sherman's Administration, and he would be just as dangerous as Sherman's Secretary of State as if President; that Blaine was a corrupt, unscrupulous demagogue, who ought not to be in public life at all. The Convention had scarcely adjourned before this positive gentleman was "booming" for Blaine and turning popular indignation against the bolters.

It may be mentioned that one of the things which make the apostasy of these leaders—who knew the right but had not courage to uphold it—the less excusable, is the rancorous public hate most of them took pains to stir up against the Independents, who were simply that portion of the party who had not thrown away their own principles, and had preferred turning their party coats rather than those of their consciences. One of their favorite charges was that the bolters were liars in claiming to have ever been Republicans at all; that they were always Democrats and voted with that party. Why, if so, they should have disclaimed their party, and where Garfield's majority came from, were points they never explained. As we have proved our ability to carry the State our own way, we can smile at these outbursts of spite, but they do no honor to the renegade Republicans—renegade to the interests of their country for the sake of their party. I must say, also, that the excuses which lay it all to "the Machine" are meaningless. The men whom I am charging with this responsibility *are* the Northern Machine; they operate it, and they grind out themselves. They cannot shift blame from themselves as citizens on to themselves as Machinists, and if they could, it would not alter the case—if the Minister of State is damned, the Cardinal is damned too. And as parts of the National Machine, if they really mean to tell us that they belong to an organization which they are loyally bound to obey, even if it requires them to give up the Government into the hands of highwaymen, then they and their Machine alike are public nuisances, and should be swept out of the way together.—Truly yours,

A Bolting Connecticut Republican.

Hartford, Conn., November 10, 1884.

THE LATE PROFESSOR PACKARD.

To the Editor of The Nation:

Sir: In the Notes of a recent number of the *Nation* you gave a kindly appreciative notice of Prof. Lewis R. Packard. As one thrown in contact with him, not only in the regular college course, but also as a graduate student, I would like in addition to bear testimony to that earnestness which distinguished his work.

When I entered college it was he who examined me in Greek, and the thoroughness of his examination was very apparent when, at the close, notes were compared with those who had met other examiners in the same subject. Then in Freshman year we had him as instructor in the 'Odyssey.' It was before elective studies were allowed at Yale, and, of course, the whole class without choice had recitations in Greek. Those who had a fondness for the subject felt deeply the wealth of information which he brought to bear upon the text, the kindly suggestions to the inquirer, and the richness of his translations. But for the idlers he had a fund of stinging satire which, while it attained its purpose, could hardly fail to arouse hostility in some minds. He had no sympathy with evasion of work, and made the student feel that in teaching him he had a right to his best efforts. He may have erred in several cases, and probably did, since a free use of satire in recitation, though it may prove beneficial to the idler, is an injury to the sensitive worker.

Most of us knew the struggles which he had made against insidious disease, though we only half realized the persistency of his opposition to its overpowering mastery. Outside of the recitation-room I well recall a sermon which he preached in the old College Chapel—an occasion of rare occurrence. It was from the text, "I have written unto you, young men, because ye are strong." The sermons for several Sundays had been of a decidedly theological nature, and the contrast was striking between them and this plain, unpretentious homily on matters of daily life. The earnest spirit for honest endeavor which breathed through every sentence was a healthful stimulant for true manliness.

Bnt it was not until I met him in graduate studies that there came to me a full realization of his mental power and his force of character. Here were no sluggards at work to bring forth his scorn, and his kindly treatment of every one was noteworthy. He deferentially listened to every opinion on text and matter; kindly gave us an exposition of what he considered to be our mistakes; stated little dogmatically, but offered his corrections by way of suggestion. We felt that we were co-workers and not merely pupils. A display of pretentious ignorance on the part of commentators was all that called forth contemptuous remarks. At that time he was Secretary of the Philological Association of Yale, composed of graduate students and professors, for which small body his papers were as carefully prepared as if he were to address a large body of critical savants. His words of praise were rare, but the recipient felt great happiness in thinking that he had deserved them.

Let me close this tribute with an illustration of the force of his will. He had been confined to the house by sickness for over a week, but before recovery he sent us word to meet him at his house prepared with a certain portion of an Æschylean drama. Still showing his recent illness in the weakness of his frame and the marble-like pallor of his countenance, he received us in his bedroom. He accepted kindly our expressions of condolence, but waived them as not needed, and proceeded to discourse, lucidly and acutely, differences of text, expression of thought, and elegance of translation, even though, as we could see, he was battling with suffering.

It is true, as you say, that his published works were not extensive, but the living example which he presented of earnestness of purpose, conscientious discharge of duty, and thoroughness of work, has carried more with it in its influence upon a generation of young men toward manliness than would many books.—Respectfully,

David A. Kennedy.

Brick Church, N. J., November 10, 1884.

A PARALLEL.

To the Editor of The Nation:

Sir: The manifesto of the Republican National Committee under date of November 6, wherein such love for the "sanctity of the ballot" and such horror at the idea of thwarting "the will of the people expressed at the polls" is expressed, calls to one's mind the following passage from the 'Fortunes of Nigel,' wherein James I. is made to say of his unfortunate son and the Duke of Buckingham:

"O Geordie, jingling Geordie, it was grand to hear Baby Charles laying down the guilt of dissimulation, and Steenie lecturing on the turpitude of incontinence."

Yours truly, Mugwump.

University Club, Philadelphia, November 8, 1884.

"TO LAY ON LOAD."

To the Editor of The Nation:

Sir: As for idiomatic use of the phrase written at the head of this note, referred to in the letter of Mr. Henry W. Haynes in the last number of the *Nation*, I can furnish a modern instance from Sir Samuel Fergusson's "glorious lay," "The Forging of the Anchor," first printed in *Blackwood's Magazine* ('Noctes Ambrosianæ,' No. LX.) for February, 1832:

"'Hurrah!' they shout, 'leap out, leap out!' bang bang! the sledges go.

"Leap out, leap out, my masters! leap out, and lay on load!"

Seventy-first Street.

New York, November 6.

MORE TELEPATHY.

To the Editor of The Nation:

Sir: Your interesting article on Telepathy in No. 1008 moved a correspondent to cite, in your last number, a case in point. Perhaps the following may also be deemed worthy of record:

In 1869 Mrs. S. A. Fisher went from Boston to Charlottetown, P. E. Island, to spend the summer with a friend there. After she had been at Charlottetown a few days it was suddenly "borne in upon" her—how or why she does not know—that her mother, whom she had left at Boston as well as usual, was dangerously ill. In great distress, Mrs. Fisher mentioned the matter to her friend, who tried to remove the impression from her mind by argument and ridicule. But it was in vain. Mrs. Fisher cut short her visit, and returned to Boston, where she found, without the slightest surprise, that her mother was very ill indeed. Her belief that her mother was ill and her hasty return were both due *solely* to the presentiment, or whatever it was, beforementioned.

Mrs. Fisher is not a spiritist, and has never had anything to do with spiritists or clairvoyants. No one who knows her would question either her sanity or her truthfulness.

I write this letter, with her consent, for the benefit of those who are seeking facts pertaining to that class of subjects which the Psychical Society has been organized to study.

Any member of the Psychical Society who wishes to make inquiries regarding the incident I have related may address me.

J. C. Cozens.

Amsterdam, N. Y., November 10, 1884.

Notes.

J. B. Lippincott & Co. announce, among their holiday publications, 'The Seven Ages of Man,' illustrated by Church, Harper, Hovenden, Frost, Smedley, and other American artists; and Sterne's 'Sentimental Journey,' with illustrations by Maurice Leloir. They have in press Gallenga's 'Episodes of My Second Life'; 'The Cruise of the *Brooklyn*,' in the South Seas, by Lieut. W. H. Beehler, U. S. N.; and 'The Story of the Resurrection of Christ,' by W. H. Furness, D.D.

Chateaubriand's 'Atala,' which the author's countrymen visiting this country have some-

times condemned for its romancing, will be published in one of the several English versions by Cassell & Co., with Doré's illustrations and an introduction by E. J. Harding.

Ginn, Heath & Co. have in press a text-book for teaching temperance in the schools, edited by Axel Gustafson, author of the 'Foundation of Death.'

'Nimrod in the North; or, The Hunter in Hyperborean Regions,' by Lieut. Frederick Schwatka; 'Prairie Experiences in Handling Cattle and Sheep,' by Maj. W. Shepherd; 'From Home to Home,' an account of two vacations spent at the foot of the Rocky Mountains, by Stavely Hill, M. P., illustrated by woodcuts and photogravures; and 'Recollections of Fly Fishing for Salmon-Trout and Grayling,' by Edward Hamilton, M.D., with a mezzotint illustration by Seymour Haden, are in the press of the Orange Judd Company.

Mr. Charles Burr Todd, No. 11 West Twenty-second Street, New York city, invites subscriptions to a 'Life and Letters of Joel Barlow,' author of 'The Columbiad,' based on the poet's literary remains in the possession of the late Prof. Lemuel G. Olmstead, and now ready for publication. Barlow's life was extremely varied. A journal kept in England and on the Continent; letters relating to the invention of the steamboat by Fulton while a resident of his house; contemporary letters on the Russian campaign of Napoleon I., etc., etc., are among the contents of Mr. Todd's work, which will also be illustrated with a portrait and with views.

Mr. H. A. Jones's lecture on "The Drama," delivered at the opening of the Playgoers' Club in London, and of which an account was given in these columns a short time ago, will appear in an early number of the *English Illustrated Magazine*.

Mr. George Dolby, who was manager for Charles Dickens during several trips in this country and in England, is about to issue, through T. Fisher Unwin, a narrative of his experiences in that capacity. It will be practically a picture of the private and home life of Dickens, and will give accounts of the incidents of their travel, of the many interesting people met, of the entertainments offered them, and even, it is said, of sundry humorous escapades with well-known persons.

A Christmas annual of a very peculiar nature is announced for publication. The Society for Psychical Research, which, as our readers know, has been engaged for some time in collecting properly-authenticated ghost stories, examining into the details of them, classifying them, and drawing "psychical" inferences, now proposes to issue a selection from them in the form of a Christmas annual. This can hardly fail to be of a very thrilling nature, and it will be interesting to see truth thus challenging fiction for strangeness on its own ground, in support of the old proverb.

Currency has been given to a number of misapprehensions concerning Lord Tennyson's forthcoming volume. It will be called "Thomas à Becket," and will consist of the single play of that name, forming a companion volume to "Harold" and "Queen Mary." The play was written for the stage, and, indeed, almost with a view to the Lyceum Theatre, where, it is stated, Mr. Irving had at one time the intention of producing it. The part of *Fair Rosamond* is said to have been regarded by the author as specially adapted to the powers and physique of Miss Ellen Terry. In dramatic power "Thomas à Becket" will be found to excel any of Lord Tennyson's previous historical dramas. A considerable obstacle, however, to its production lies in the fact that two actors and two actresses of exceptional powers would be required for its proper presentation, to fill the parts, namely, of *Becket* and *Henry II*, *Rosamond* and *Queen Eleanor*. A remarkable scene in the play is furnished by the refusal of the Barons to accept Becket's invitation to a banquet, whereupon the Archbishop, like the entertainer in the parable, sends out into the highways and byways and compels a company of poor starving folks to come in. Mr. Lawrence Barrett has announced his intention of producing the play in this country.

George Ebers will publish shortly at Stuttgart a new Egyptian novel, 'Serapis,' founded on the historical facts of the final struggle of the heathen world against Christianity, the downfall of Serapis at Alexandria, and the dawn of a new world.

The latest addition to the Daniel Boone literature, 'The Border Boy, and How He Became the Great Pioneer of the West: a Life of Daniel Boone,' by W. H. Bogart (Boston, Lee & Shepard, "1885"), is an old book with a new name. It was first published in 1854, by Miller, Orton & Mulligan, of Auburn, N. Y., with the title 'Daniel Boone and the Hunters of Kentucky.' Several editions of the book appeared thirty years ago, and this new issue has been printed from the old and worn plates.

No such concealment attends the new edition of Thomas Bulfinch's 'Age of Chivalry; or Legends of King Arthur,' originally published in 1858, and now brought out afresh by S. W. Tilton & Co., Boston. Mr. Edward Everett Hale has both enlarged and improved the work, but we miss careful editing when we find Agravain, Agravaine, and Agrivain, given successively as the name of Gawain's brother.

Four volumes, in two series each, of Selections from the poetry of Robert Browning and Mrs. Browning (Macmillan & Co.) revive editions brought out in 1872 and 1865 respectively. The form is most convenient, and the choice (up to the former date) made by the survivor of the poetic pair will be sanctioned by the admirers of both.

An old friend in a new guise is seen in 'Doctor Johnson: His Life, Works, and Table Talk' (London: T. Fisher Unwin; New York: Scribner & Welford). This is a little volume in parchment covers and old-style typography, produced in sympathy with the celebration this year at Lichfield of the hundredth anniversary of Johnson's death, and hence called the centenary edition. The life is by Doctor Macaulay, editor of the *Leisure Hour*, and fills the lesser half of the book. The excerpts are mainly but not wholly from Boswell, and the whole is a pleasant companion for the pocket.

The fullest and most accurate edition of 'Pepys's Diary and Correspondence' is surely the best, and such is the Rev. Mynor Bright's recension of his former editions, in the ten handsome duodecimo volumes bearing the American imprint of Dodd, Mead & Co. A list of former mistakes corrected in the present text is given at the close of each volume. The price of this set puts it within the reach of almost any book-buyer; and were it twice as great, it would not exceed the amusement and instruction to be got from this perennial "human document."

The *Library Journal* for October, in noticing the closing of the Fletcher Free Library at Burlington, Vt., for want of the usual appropriation by the city authorities, remarks that it is probably the first instance of such an occurrence in this country. Municipal extravagance in other directions was the cause of this retrenchment.

In the October number of the *Pennsylvania Magazine of History and Biography* is printed for the first time a partial list of the families who arrived in that city between 1682 and 1687.

Mr. W. E. Foster, mindful that the New Orleans Exposition is not far off, and that this is the eightieth year since the organization of territorial government in what is now Louisiana, devotes the whole of his October *Monthly Reference Lists* to that State and its metropolis.

The October number of the *Antiquary* is a very interesting and valuable one. The first article is a continuation of that in the last number upon "The Hazlitts in America a Century Since." This presents an entertaining picture of New England life, containing, however, the astonishing information that the woods contain "snakes and monkeys more than enough," and that it is to protect her young from the depredations of the monkeys that the fire-hang-bird builds its nest at the end of a bough. The prediction of an earthquake from observing that the water in the well was red, is a curious item. The second article is a continuation, by Mr. J. H. Round, of the series upon the House of Lords. This valuable series is prepared by different specialists—Mr. Gomme having treated of its origin, Mr. Gairdner (in two papers) of its functions, and Mr. Wheatley of its place of meeting. Mr. Round's topic, in Part IV., is "the transition from tenure to writ." The present paper, however, takes up the preliminary investigation of the transition from "wisdom" to "tenure." The writer maintains, and we think with great probability, that this transition was made at the time of the Norman Conquest, when the Witenagemot was transformed into a Magnum Concilium—holding, against Stubbs and Freeman, that this Great Council was from the first a feudal body. The paper is to be continued. A long and rather technical article follows, by Clapton Rolfe, upon "The Numerical Principles of Ancient Gothic Art," after which comes a continuation of Mr. Wake's genealogical paper upon "The Nevills of Raby"; an entertaining Manx legend, by E. Stuart; and a short paper upon Swift's birthplace ("Celebrated Birthplaces"). The second article upon "Forest Laws and Forest Animals in England" treats of the animals—hart, hind, hare, boar, and wolf—with some curious details.

The Report of the Commissioner of Education for the year 1882-1883 makes a volume of some eleven hundred pages. Generally for the several States progress is indicated, but in Florida and Louisiana the condition of education was thoroughly bad. Some of the figures are worth remembering. The average school year consists in North Carolina of 62.5 days, in Georgia of 65, in Tennessee of 73, in Rhode Island of 184, in New Jersey of 192, in Maryland of 199. In Alabama the annual per capita expense for each child is $1 01, in Massachusetts, $15 83. There is a valuable synopsis of the present condition of education throughout the world, and an abstract of what has been done in the way of technical education in Europe. Under the State reports are given obituary notices of prominent educators. In Alaska the Presbyterian Church maintains six out of seven schools, but no provision is made for the 8,000 Russians to whom Protestant schools are distasteful. Gratifying advance is noted among the Indians. The table of benefactions for 1882 shows in detail the large sum of $7,143,363. The special library formed by and for the Bureau of Education promises to be as curious in its way as that of the Surgeon-General's Office; and the present custodians of the former, as of the latter, are naturally and properly averse to seeing it absorbed in the National Library.

We must not overlook home talent, and hence, after having described Romeike's London 'Artistic and Literary Correspondence and Universal Compendium of the Press,' we must share our knowledge, just obtained, of a similar enterprise in this city, conducted by Mr. Samuel Leavitt at No. 60 Ann Street. We are glad to notice Mr. William Walter Phelps among its patrons.

Part 9 of the 'Diccionario Tecnológico' (N. Ponce de Leon, 42 Broadway) brings down the English-Spanish portion to the prolific word *lamp*. *Iron* affords another good example of the exhaustive minuteness of this work.

There is always a certain entertainment in learning what was the moment when a word first made its way into the language, or was first used in a special sense. An indication of such a moment is to be found in an entry in Lord Byron's Journal of 1814 (March 6th): "Asked to Lady Keith's to-morrow evening. I think I will go; but it is the first party invitation I have accepted this 'season,' as the learned Fletcher [his manservant] called it, when that youngest brat of Lady ——'s cut my eye and cheek open with a misdirected pebble. 'Never mind, my Lord, the scar will be gone before the *season*'—as if one's eye were of no importance in the meantime." The date of this passage shows that the London "season" began earlier in those days than now.

Two volumes have lately been put forth, with the authorization of the French Government, upon the early French versions of the Bible. One, by S. Berger, treats of the prose versions, while the other, by Jean Bonnard, is upon the texts in verse. These two works are the result of two memoirs presented by M. Berger and M. Bonnard respectively, in competition, to the Académie des Inscriptions in 1880. After the award of a prize to the former, the two authors, in preparing their theses for the press, have made an interchange of documents, M. Berger taking the prose portion, he having made that his especial study, and M. Bonnard the poetical matter. In the prose work, the *Revue Critique* notices, there are many inedited texts, among which is the imitation in verse of the 'Liber de Infantia Salvatoris,' full of legends and of miraculous narratives about Christ. M. Bonnard assigns the date about 1140 to the Bible of Hermann de Valenciennes, which would make it antedate the 'Brut' of Wace by twenty years at least, claims for a hitherto unknown poet, Landri de Wabers, a rhymed paraphrase of the Canticle, and brings new details upon Jean Malkaraume, translator of a large part of the Old Testament, and plagiarist of Benoît de Sainte-Maure.

Later advices from Italy fix the date of the death of Professor Karl Arnold Hillebrand as the 18th of October.

—A competent authority writes us as follows: "In the notice regarding the late Dr. Friedrich Kapp, in this week's edition of your paper, there is a statement made which gives a wrong impression, and will, moreover, offend the nearer relatives and members of Dr. Kapp's family. It is stated that Dr. Kapp's father was a 'teacher in the Gymnasium at Hamm—a position between that of a schoolmaster and professor.' Friedrich Kapp, senior, was 'Director,' *i. e.*, Principal of the Gymnasium, which, under his influence and labors, became one of the best in Westphalia. 'Director' Kapp received this appointment while comparatively young for such a position, which is rarely given, even now, to young men unless they show unusual ability. He retained it through many (some twenty-five to thirty) years. He was an early disciple of Pestalozzi; later, a thorough Hegelian—a man so thorough, scholarly, and incorruptible as to make his name loved and influence felt beyond his immediate circle and surroundings. Like his younger brother, Prof. Ch. Kapp, of Heidelberg, he was a student in the fine sense of the word. The late Dr. Kapp owed very much to his father. This father was just as fond of good living as his better known son, and with just as charming a grace, only he rarely indulged in it. It cost money even in those days to send a son to Heidelberg, and this the 'Director' did out of his own meagre salary. His life had many struggles with limited means. A rather large family to care for and educate, he practised much self-denial. He loved his books, and the fine courtesy of manner as well as charm of conversation did not leave him even when a lonely and often sick old man."

—The library of the late Alexander Farnum, of Providence, R. I., is advertised to be sold at auction by Messrs. George A. Leavitt & Co., Clinton Hall, Astor Place, on the 18th, 19th, and 20th of the present month. A somewhat careful examination of the catalogue inclines us to say that this is an extraordinary collection of books—in some respects one of the very finest that have yet come under the auctioneer's hammer, and not improperly described as "one in a thousand." It contains about forty-five hundred volumes. "Every book in the library, almost without exception, is the very best edition ever issued, in whatever form that may be; and of works of an important character, of which several approved editions exist, the best are usually to be found among its treasures." Mr. Farnum's theory was large-paper copies. His practice was in harmony with his theory, and in works of this description he succeeded in bringing together about eight hundred volumes. A passion for large-paper copies is mentioned by Dibdin as the leading symptom of book-madness. These large-paper copies are, according to the same authority, "a certain set or limited number of the work, printed in a superior manner, both in regard to ink and press-work, on paper of a larger size and better quality than the ordinary copies, their price being enhanced in proportion to their beauty and rarity." A large-paper craze prevailed in this country during the civil war, and a few years before and after; and, looking to his catalogue, we find that Mr. Farnum laid his hands upon almost everything which conformed to his "theory." Munsell's 'Historical Series,' W. E. Woodward's 'Records of Salem Witchcraft,' the publications of the "Bradford" and other amateur clubs, 'British Essayists' (38 vols.), 'British Poets (130 vols.), etc., etc., were some of the large-paper productions of that period which found their way to Mr. Farnum's library. The Dibdin in this collection is regarded by book men as the finest in existence. Fifteen pages of the catalogue are required for its description. It comprises forty-six volumes, some of them unique, almost all large-paper copies, and all bound in the best style of the best binders. 'Le Moyen Âge,' by Lacroix and Séré, described as a "genuine original subscription copy," has the reputation of being one of the finest works ever issued. Byron's 'English Bards and Scotch Reviewers,' illustrated with numerous portraits and autographs, cost Mr. Farnum $130 at the John Allan sale. There will doubtless be lively competition for the gems of this collection, and long purses emptied in securing them.

—A pamphlet has recently been issued, under General Hazen's endorsement, called "Temperature of the Atmosphere and Earth's Surface" (Professional Papers of the Signal Service, No. xiii), which is a masterpiece of pretension. It is chiefly made up of pseudo-algebraic formulæ, and therefore looks quite learned, but these formulæ lack not only introduction, coherence, and application, but even definition of their elements. Thus, in the following:

$$C_1 = \frac{1}{\pi}\sqrt{(2e\,B_0\cos\phi)^2 + (B_1 + 2e\,B_0\sin\phi)^2}$$

(which is a sample of the whole), it would scarcely be credited that neither "B" nor "C" is interpreted in any part of the pamphlet. It is therefore of no consequence whether or not these "equations" are correct. Nobody can tell whether they are or not. There are nearly a thousand of such in the book, and over a hundred of these are formally numbered. But the non-algebraic portion is equally remarkable. The very opening sentence contains the modest assertion that "without temperature and differences of temperature there would be a perfect calm over all parts of the globe." This hypothesis is not only wild but incorrect; for both the earth's rotation and its magnetic currents would cause winds.

—The overmastering power of fiction is well shown in the ten numbers of the "Classified Lists of the most Popular Books" in the Apprentices' Library of this city. In May, 1883, a series of four-page classed lists of books was begun, intended to guide the inexperienced reader in his choice, and to cultivate a taste for solid and instructive literature. It was solemnly announced that it was "the intention of the Library Committee to entirely discourage the reading of novels, observing with regret that this class of literature is much more widely read, especially by the younger readers (many of whom hardly ever read anything else) than is either necessary or judicious, in view of the fact that the library possesses so many interesting and instructive works on all subjects of permanent interest." The Committee continued to bear their testimony against fiction for a year, and call the issue of May, 1884, "the ninth and last of a series intended to embrace all the departments of knowledge, *except novels*." Two months later they issue "No. 10, Fiction," alleging as the excuse for their change of front that "many requests have been received from readers for a list of the *best fiction*." The apology is sufficient, and although the inconsistency is amusing, the first attempt of the Committee was praiseworthy, and their subsequent modification wise. It would be well if all Prohibitionists were equally sensible.

—The much-discussed question as to the depth to which sunlight penetrates water, and the influence which such penetration, or want of penetration, may exert upon the phenomena of life at great depths, has attracted renewed attention of late on the part of both physicists and biologists. The carefully conducted observation of Prof. F. A. Forel, of Geneva, made upon the Lake of Geneva in 1874, proved—at least as far as the resources of photography and the human retina permitted—that the limit of absolute darkness in that lake was reached in summer at the very moderate depth of 45 metres, and in winter at 100 metres. Under normal conditions of sight a shining object disappeared when immersed below 16 to 17 metres. Asper, who continued the researches of Forel upon the Lake of Zurich, found in 1881 that photographic plates sensitized with bromide of silver emulsion indicated the penetration of light to at least 90 metres. But while the researches here recorded fix the limit of luminous perception as dependent upon the powers of the human retina, they do not necessarily determine the same for the retina and visual nerves of the lower animals. Indeed, the presence of well-developed eyes in many of the animal forms inhabiting the greatest depths, no less than the varied coloring of their teguments, have frequently been taken in evidence to prove not only the existence of light there, but also the unequal visual powers of the different organisms. Prof. Verrill has recently enunciated the startling proposition that not improbably light of the intensity of ordinary moonlight may penetrate to depths of 2,000, or even 3,000 fathoms, and that possibly some sunlight penetrates even to the lowest bottom of the ocean. Evidently, however, the tegumentary coloring as we observe it has no bearing on the question at issue, inasmuch as it appears as such only when brought within the influence of white light, which may be at, or quite near to, the surface of the water. Whether or not the quantity of phosphorescent light emitted by the organisms themselves is sufficient to account for the full development of visual organs, still remain to be proved. In the meantime, the recently conducted investigations of a special committee of Swiss scientists, among whose names we find those of Sarasin, Soret, Pictet, C. De Candolle, and Fol, seem to affirm in a general way the conclusions reached by Forel—

namely, that luminous penetration extends to only moderate depths. Three candles (contained in a lantern), immersed in the clearest water of the Lake of Geneva, were visible at a depth of 30 metres; and an electric light, at 3 metres further. The distance of clear vision was found to be but very feebly dependent upon either the increase of brilliancy in the luminous body, or its absolute magnitude. The extreme limit of the sun's luminous action was determined photographically to be 250 metres, beyond which absolute darkness was supposed to prevail.

—A distinguished European archæologist, in a private letter, writes us as follows:

"I really cannot believe that the Boston men will be silly enough to drop the matter about the Assos epistyle. I thought, and still think, that Americans have got a little backbone of their own, and do not allow a set of ruffians like the Turks to take away from them what they legally possess. I, for my sake, don't care about it, as New York is still further off from me than Constantinople; but if the matter is dropped, the Turks will see that they can do anything against Europeans and civilized men in general without the least fear of getting a lesson. If the Boston men began a regular action against Hamdi Bey and the Turkish Ministry of Public Instruction, *no tribunal in the world* could give them wrong, because: 1st. The excavations at Assos were begun under the régime of the law of 1874, which enacts that *indivisible sculptures shall not be divided*, but valued and given up to the finder in exchange for their estimated value. 2d. In allowing Benndorf, in 1882, to carry away the frieze of the Göl-Bagtché Mausoleum, the Turks formally acknowledged that a frieze formed an indivisible whole. 3d. In allowing the Germans, in 1884, to take away their discoveries from Pergamon, *after* the promulgation of the new law (February, 1884) forbidding the exportation of antiquities, the Turks acknowledged that excavations begun under the régime of the former law of 1874 remain subjected to the clauses of that now abolished law. The Assos case, therefore, is quite an *abus de pouvoir* on the side of the Turks, and an *abus de laisser aller* on the side of the Bostonians. The money for excavating at Assos was raised by private means; the subscribers have a right to see that they get something for their money. If your Minister in Constantinople made a row at the Porte, and said what we all think about Hamdi's impudence and encroachments, the missing fragments of the epistyle and all the architectural specimens would be returned to their rightful owners."

—The last number of the *Revue Internationale de l'Enseignement* (October 15) is one of unusual interest. Besides the conclusion of the paper of M. Lavisse on the life of Charles Graux, the most wonderful young scholar of our times, we have the first instalment of M. Camille Jullian's notes on the historical and philological *seminarien* of the German universities. There is no more hopeful sign of the future of France than this careful and in the main dispassionate study of the intellectual resources of Germany. It means that French scholars, in the spirit of enlightened patriotism, are trying to find out the secret of the strength of German institutions in order to appropriate what is best. There is no sign of wholesale and uncritical adoption of German methods—such as has been noticed in other lines of work. The self-criticism suggested by the organization of the German *seminarien* is keen enough. M. Jullian regrets that so much of the force of the École Normale Supérieure goes into what may be called the mechanical introduction to pedagogy, and emphasizes the purely scientific preparation of the German *seminar;* but while he has little to say that is not good of the *seminar* proper, he deplores the innovation of the *proseminarien*, which are intended to give less advanced students an opportunity to practise themselves in the study of philology. "The institution of *proseminarien*, with their two divisions of ancient history and modern history, of Greek and of Latin, with the distinction between bursars and non-bursars, especially with the permission accorded to be half-savants and to follow elementary courses, changes without any advantage the organic character of the *seminar*. The difference between regular members and members extraordinary sufficed, and there was no use in making of the latter category a preparatory class independent of the former. This shows a tendency little by little to substitute for the teaching of the university, which is scientific and uniform, the education of the gymnasium, which is methodical, progressive, and one-half routine." These views of M. Jullian's are a confirmation of the views of some who studied in Germany before the *proseminar* was known. The *proseminar* is practically a confession that the *gymnasium* has failed; but even if the *gymnasium* has failed it is better to let those who come short of the *seminar* standard work up privately to the required point than to surrender the essential character of university teaching. The question will soon be a practical question with us here in the university life that is developing at different points, and we ought not to neglect the observations of those who are studying the situation from without. American students in Germany are apt to be more German than the Germans themselves.

—The *Bibliothèque Universelle* mentions a new *divina commedia* in prose. "Letters from Hell," by the Danish writer Rowel, have had a great success in a German translation. Literary people like the form, which is piquant, poetical, and moving; religious people like the matter, which is serious. Some one else has written, as a sequel, "Letters from Heaven," a clever imitation, but, like most continuations, not a success. As the writer in the *Bibliothèque* remarks, Dante himself is more vague, less human, less powerful in the 'Paradiso' than in the 'Inferno'—an inferiority which is also shown in Doré's illustrations. So that Rowel himself would probably have failed if he had written his own second part. Hell is, no doubt, nearer to man than heaven. The race has been steeped in the sins and terrors which are its essence, and the first part of the 'Divine Comedy' needed only to appeal to memory, individual or racial. The second part rested on the less vivid imagination. Mankind has had no such experience of the joys of heaven. It is easy to find punishments which all will feel to be painful. Those pleasures that are equally universal could not all be admitted into a Christian heaven.

COLERIDGE AS A POETICAL CRITIC.

Lectures and Notes on Shakspere and other English Poets. By Samuel Taylor Coleridge. Now first collected, by T. Ashe, B. A., of St. John's College, Cambridge. London: George Bell & Sons. 1884.

COLERIDGE'S name has now been well known to three generations, and still his literary position—the eminence of his place—remains open to discussion. The world has not yet decided what to think of him, and critics of equal ability judge him with wide disparity of result. About Wordsworth—so closely associated with him in relations of time and space and friendship, so far removed from him in modes of thought and life—about Wordsworth, there is no longer any question: the numberless spirits that have been touched by him to fine issues, the numberless eloquent lips that have proclaimed the high value of his genius, make contradiction impossible, except as based on mere individual taste. But as yet no Arnold—summing in himself the accumulation of literary judgment, of personal tradition, of intimate study, of kindred intelligence—has uttered decisive words concerning Coleridge. We still approach him with uncertainty of expectation, with an unpreparedness which his own irregularities even enhance rather than diminish, as we grope through his mind. Yet never was a large and interesting mind more thrown open to the public by its possessor: in his most formal work and in his lectures, his countless notes, his incessant talk, intellectual self-revelation in every shape found expression. Nevertheless (even setting aside his philosophical tenets and fancies, which should be considered by themselves), in spite of this openness, there is almost everywhere dimness, a sort of obscurity which justifies our saying just now that we "grope" through it. *Almost* everywhere is this dimness; but there are chambers of his mind full of a beautiful poetic luminousness, and it is these illuminations, of a singularly majestic nature, which make us seek his confusions again and again.

The volume which is the occasion of these remarks is highly characteristic. Much that has unusual value lies here embedded in what has no value at all, and a certain effort and weariness attend the interest with which we dig it out. A great deal of the work we have to do should have been done by the editor. On seeing in the forerunning advertisement of this volume the words "now first collected," one took it for granted, now first *arranged;* and the mere arrangement of Coleridge's *disjecta membra* would often make of them a beautiful body. But nothing of the kind has been attempted by Mr. Ashe, and the reader's consequent annoyance is great and constant. The head of one statue, and the arms and hands of another, are in one corner of the volume, two or three torsos in a heap elsewhere, and other parts and fragments, often of extreme beauty, scattered here and there. Any competent editor would have perceived it to be his part to reduce chaos to order, and it needs nothing but much labor and some judgment. The most important and consecutive pieces of work should have been used as the text, and all the author's numberless repetitions of himself in his different writings should have been thrown into notes as "various readings." They are here given one after another and widely apart; the arrangement is neither by subject nor chronology, and we have to turn the pages so often back and forth to compare passages which are of similar import and character, and to which there are very few cross-references, with no sufficient running-titles, and a very inadequate index, that the book is almost worn out, and the reader's patience quite so, by the first reading. Mr. Ashe's indifferent carelessness is continually evident, and is past endurance when he tells us on p. 458 that a note of his own on p. 231 should be cancelled, and leaves it to his reader, with only "suggestions" from him, to "account" for a point it was the special province of an editor to clear up! A very minor misdoing is so indicative as to be worth notice. Hooker's well-known magnificent passage about Law is twice entered in the index as "Hooker on Poetry"—because Coleridge so applies it. Of the too few notes it is to be regretted that several should be merely intrusive in character; one being some clumsy sentences from Walt Whitman—the only piece of "new cloth," as the editor remarks, in the volume.

Of the contents of this book the passages of most permanent value and interest are those expressive of Coleridge's admirable appreciation of Shakspere's greatness—the passages of general criticism, or where he connects special observations with general laws. His attempts at minute criticism were not often fortunate and may be lightly passed over. He makes one suggestion of such incredible absurdity that if there be no imperceptible jest in it, it is worth quoting as an illustration of the insanity which seems an inevitable misfortune of Shakspere's commentators. It is in connection with

"The twinn'd stones upon the number'd beach."

First he suggests that the "twinn'd stones" are

muscles, cockles, and other hinged shells (!); then he adds: "One other possible interpretation of this sentence has occurred to me, just barely worth mentioning—that the 'twinn'd stones' are the *augrim* stones upon the number'd beech: that is, the astronomical tables of beech wood"!!! It seems inconceivable that a mind capable of this should be capable of delicate perceptions. No mind, indeed, but Coleridge's was ever Tupper-like and Shelley-like by turns.

He was Philistinism in person when he wrote a Prospectus for Lectures in 1817. We will quote largely from it in order to bring into full contrast afterward a passage of Shaksperian criticism of great beauty. He begins by speaking of "literary topics and the productions of the Fine Arts" as "contributing to the entertainment of the social board and the amusement of the circle at the fireside," but asserts bravely that the intellect should "hold a very inferior rank" opposed to "moral worth or even to . . . skill, prudence, and industry." He then questions the necessity of its being opposed, when it can be subordinated, and continues, rather irrelevantly: "It can rarely happen that a man of social disposition, altogether a stranger to subjects of taste (almost the only ones on which persons of both sexes can converse with a common interest[!]), should pass through the world without at times feeling dissatisfied with himself"!! "Under this conviction," Coleridge announces that he has planned a course of lectures of which "an attentive auditor . . . would rarely feel himself, for the time to come, excluded from taking an intelligent interest in any general conversation likely to occur in mixed society"!! From this point of view the syllabus of the course is simply amazing. The first lecture was to give "a portrait of the dark ages," including "the manners, morals, literature, philosophy, religion, and the state of society in general"! Another was to make it possible to join in any general conversation on Chaucer, Spenser, Petrarch, Ariosto, Pulci, and Boiardo. Another was to inspire an intelligent interest in Donne, Dante, and Milton. And the last was to give "a few easy rules for the attainment of a manly, unaffected, and pure language, in our genuine mother-tongue, whether for the purposes of writing, oratory, or conversation"!

But—who could believe it?—it is in notes probably used for these very lectures that a passage occurs of the utmost fineness of feeling and charm of expression. It is on Shakspere's women. He compares them with the female characters of Beaumont and Fletcher, and says:

"In Shakspere all the elements of womanhood are holy, and there is the sweet yet dignified feeling of all that *continuates* society, as sense of ancestry and of sex, with a purity unassailable by sophistry, because it rests not in the analytic processes, but in that sane equipoise of the faculties during which the feelings are representative of all past experience—not of the individual only, but of all those by whom she has been educated, and their predecessors even up to the first mother that lived. . . . He has drawn woman's character in all its distinctive energies of faith, patience, constancy, fortitude; . . . the heart, . . . [which] sees all things in and by the light of the affections, and errs, if it ever err, in the exaggerations of love alone. In all the Shaksperian women there is essentially the same foundation and principle; the distinct individuality and variety are merely the result of the modification of circumstances, whether in *Miranda* the maiden, in *Imogen* the wife, or in *Katharine* the Queen."

With such power to describe women, it is not to be wondered at that Coleridge's power of describing the passion of love was of the noblest quality. The expressions of it on pp. 114 and 115 are unequalled of their kind in English prose. They are, in fact, made too sacred for chance quotation, by the loftiness of the tone with which they utter truths of the utmost intimacy. But a remark of his on old age, of kindred strength and delicacy of feeling, may be here given: "The affection of old age"—that is, not the affection *for* old age, but the affection felt by the old for younger persons—"the affection of old age is one of the greatest consolations of humanity. I have often thought what a melancholy world this would be without children, and what an inhuman world without the aged."

It is well for the lover of Shakspere not to forget (even if he does not share it) the opinion of Coleridge that some of his plays ought never to be acted, but looked on as poems to be read; and the following remarks may be considered with special advantage at this moment, when we are all being "carried away" by Mr. Irving, the most beguiling of stage managers:

"It ["The Tempest"] addresses itself entirely to the imaginative faculty; and although the illusion may be assisted by the effect on the senses of the complicated scenery and decorations of modern times, yet this sort of assistance is dangerous. For the principal and only genuine excitement ought to come from within—from the moved and sympathetic imagination; whereas, where so much is addressed to the mere external senses of seeing and hearing, the spiritual vision is apt to languish, and the attraction from without will withdraw the mind from the proper and only legitimate interest which is intended to spring from within."

We have spoken of the desirableness of bringing into juxtaposition many of the scattered passages in this volume. Certain qualities of Coleridge's mind are very effectively exhibited if we place side by side these two passages. In 1812 Mr. H. Crabb Robinson wrote in a letter:

"Last night he [Coleridge] concluded his fine development of the Prince of Denmark by an eloquent statement of the moral of the play. 'Action,' he said, 'is the great end of all; no intellect, however grand, is valuable if it draw us from action and lead us to think and think till the time of action is passed by and we can do nothing.' Somebody said to me, 'This is a satire on himself.' 'No,' said I, 'it is an elegy.' A great many of his remarks on *Hamlet* were capable of a like application."

Fifteen years afterward Coleridge said in conversation:

"*Hamlet's* character is the prevalence of the abstracting and generalizing habit over the practical. He does not want courage, skill, will, or opportunity; but every incident sets him thinking. . . . I have a smack of *Hamlet* myself, if I may say so."

It is no wonder that Coleridge's fame burns waveringly, if what seemed to his friends "an elegy" on himself was to his own mind a eulogy.

KEYES'S REMINISCENCES.

Fifty Years' Observation of Men and Events, Civil and Military. By E. D. Keyes, Bvt. Brig. Gen. U. S. A., late Major-General U. S. Vols., commanding the Fourth Corps. Charles Scribner's Sons. 1884. Pp. 515, 12mo.

It would be a fairly accurate description of General Keyes's book to call it reminiscences of service on the staff of General Scott. He devotes but one chapter of the twenty-one to the events subsequent to the beginning of the War of the Rebellion, when he himself left the staff of the Lieutenant-General and took active service in the field. The relative importance of the periods is so completely inverted in this division of the subject, that we are justified in assuming that the writer must intend to put into equally full recorded form his "observation of men and events" during the later time. Every year removes some of the objections a participant in great events may feel toward the narration of his own experience and the disclosure of his inmost judgment of men and things. We hope many such narratives are written or being written, and that the tendency of the age to literary activity will give the future student of our history an unprecedented amount and variety of testimony out of which to construct the true story of our great struggle.

It is a sort of fashion among our veteran soldiers to speak with some bitterness of contempt for "the fiction called history"; but they are apt to forget that the first impression the world may get is not always a lasting one. That other saying, "as lying as a bulletin," characterizes the still more transient impression given the public by the leaders who have an immediate and strong interest in making a falsehood to stand for the truth, and whose purpose will be gained if it so stands even for a little while. The newspaper account makes way for the official report. A little later we hear from the other side, and a good many illusions are destroyed and bubbles of exaggeration exploded. Then comes contemporaneous private writing and collateral circumstantial evidence to add its corrections, and, in time, the chaff gets pretty well blown away. In the interest of truth, therefore, we may fairly say, give us testimony enough, and the keen, disinterested future student will get the truth out of it. And the more the testimony, the surer the evolution of the truth. A man may feel that the odds are terribly against him—that the accepted version of an event has been stereotyped beyond the possibility of revision; but if he will courageously and circumstantially tell the truth as he knows or believes it, it may prove the clue to the unravelling of contradictions and falsities, and vindicate itself by that highest of all tests of hypotheses in science and in fact, that it harmonizes a mass of other facts that can only thus be brought into accord.

This principle finds an excellent illustration in General Keyes's single chapter upon the campaign of 1862, where he gives his version of the battle of Seven Pines. Heintzelman's and Keyes's corps of the Army of the Potomac had been put over the Chickahominy River, and the Confederate General Johnston determined to seize the opportunity to attack them in force while they were thus separated from the rest of McClellan's army. Johnston, in fact, supposed that only Keyes's corps was across the river, which, by reason of the unusual rains, was a formidable obstruction to the rapid concentration of troops, and was swollen to a torrent by a remarkable rain storm on the night before the battle. Keyes's corps was arranged in two lines about half a mile apart, the advanced position being held by Casey's division. Heintzelman's corps was nearer the river and about three miles in rear of Keyes. The greater part of the Confederate army was concentrated for the attack, which seems to have begun soon after noon. Keyes, finding his own corps overmatched, called upon Heintzelman for aid, and Heintzelman, who was in general command on that side of the Chickahominy, reported the facts to McClellan, who, about half-past 2 P. M., ordered Sumner to reinforce them by crossing the river with two divisions. Sumner crossed upon a bridge of which the floor was afloat in the swollen stream, and marched to the right of Keyes and Heintzelman. A new line was formed some two miles in rear of Seven Pines, at intrenchments which Keyes had made there before his advance to the latter place. Here the advance of the enemy was arrested, and he was finally repulsed. McClellan did not himself cross the river on the first day of the battle; but his telegraphic report to Washington was that "Casey's division gave way unaccountably and discreditably," which caused the loss of some ground, but that Heintzelman and Sumner then repulsed the enemy, and a final victory for the national forces was claimed. A few days later he modified this despatch by saying he was "induced to believe," by the statements of Generals Casey and Naglee, that

"portions of the division behaved well," and that "when the facts are clearly ascertained the exceptional good conduct will be properly acknowledged." His official report endorses as true the statement of General Casey that it was the discreditable conduct which was exceptional, while good conduct was the rule. The official report, however, was dated in August, 1863, more than fourteen months after the battle, and was quite too late to be of any use to the officers and men injured in reputation, so far as position during the war was concerned.

The points General Keyes now makes are, first, that the position at Seven Pines was a too hazardous one, in view of the separation of the wings of the army by the Chickahominy River; second, that the position was selected by McClellan, overruling his (Keyes's) judgment; third, that by his own orders Casey's division was promptly and fully supported from Couch's division, and made a stubborn fight to hold the position, the corps receiving no help till about four o'clock or later. Collaterally to these he calls our attention to the fact that McClellan ignores the corps commander entirely, and says nothing of the coöperation of the parts of the corps as an organization under one head. Keyes gives, however, as he very properly may, under these circumstances, a somewhat detailed statement of his own orders, observations, and personal positions.

We have, therefore, some positively fresh evidence in regard to an important engagement, and, coming from so respectable a source, it must have a certain degree of weight given to it. It challenges further discussion of the animus of the commanding general in his telegraphic report of the battle. General Keyes pretty plainly indicates his own opinion that when the Confederate attack burst upon the advanced corps, McClellan was made conscious of the error of leaving that wing of his army thus exposed, and sought to cover his own mistake of plan by seizing upon the appearance of a rout as proof that Casey's division had made no courageous stand against the enemy. He opens, also, another subject of controversy, namely, whether McClellan's dissatisfaction at the President's appointment of Keyes as a corps commander was intensified by the rather radical political earnestness of the latter on the subject of rebellion, so that the commanding general was willing to ignore his personal good conduct on the field, and to leave him under the implied censure of having failed to handle his corps properly in resisting the Confederate attack.

These questions are not merely personal ones: they affect our judgment of many matters connected with that campaign. For this reason the debate will never be closed till all the accessible evidence has been exhausted and maturely considered; for, in regard to so important a conjuncture in history, the world never wearies of the discussion of the character and the motives of the chief actors and of the consequences of their acts. Much, therefore, may turn upon the question whether Keyes's corps was judiciously handled, and whether Casey's division made a brave effort to resist the formidable and well-planned attack of the Confederate army. It seems to be now conceded that Keyes's corps did not receive support till it had fought desperately for two or three hours, and that most of its brigades were still making organized and valiant resistance when Heintzelman's troops arrived upon the field, though they had been forced back some two miles.

The bulkier part of General Keyes's book deals with matter in regard to which the general interest, if not languid, is by no means so keen. The greater part of his military life was spent on the personal staff of General Scott during times of peace, and large as was the place that grandiose figure filled in the history of his time, it was, on the whole, too quiet a time to be very picturesque in narrative. We would gladly exchange the long chapter in review of Scott's autobiography for one upon the internal history of the organization of the Army of the Potomac in 1861, and of the influences for and against action in the autumn of that year. But we are reminded of the adage that "Beggars must not be choosers," and are too glad to see our literature enriched by narratives of personal observations of this sort, written by conspicuous actors in great events, to be over-critical as to the proportion of parts, or the value of some collateral discussions of general questions such as we find in some chapters of this book.

ILLUSTRATED BOOKS.

The Magazine of Art. Vol. VII. Cassell & Co.

An Unsentimental Journey through Cornwall. By the Author of 'John Halifax.' With Illustrations by C. Napier Hemy. Macmillan & Co.

Sketching Rambles in Holland. By Geo. H. Boughton, A.R.A. With Illustrations by the Author and Edwin Abbey. Harper & Brothers.

Illustrated Poems of Oliver Wendell Holmes. Boston: Houghton, Mifflin & Co.

The Rubaiyát of Omar Khayyám, Rendered into English Verse by Edward Fitzgerald. With an Accompaniment of Drawings by Elihu Vedder. Boston: Houghton, Mifflin & Co.

THE extraordinary progress made in the art of illustrating in the United States within the past few years has been noticed in all the countries where the modern forms of art are cultivated, and furnishes the refrain of most of the self-laudation of American criticism. But let us not go too fast—there is a danger that we mistake the superficial qualities of technique. The higher the aim of the art which is translated, the less significant are the qualities for which the *Century* school holds the honor of first achievement; and when we look at a good sample of the work of Bewick, of Dürer, of Holbein on one side, and certain work of the modern French school on the other, we shall note plainly that the qualities we have attained are mainly purely imitative, with a hitherto uncommon fidelity in reproducing all the technical characteristics of a black-and-white version of the original; whereas in selecting the facts which are most worth taking out of the original—the attributes of pure form and intellectual abstraction—we are in no ways distinguished. Our wood-engraving has gone further than our painting, and made an original school, but it has not taken any more the higher walk. It is the newest phase of the art, and in its way unrivalled, but not by any means the best or the most important in the work of illustration. As compared with English work aiming at the same ends, it is triumphantly superior; and nothing in the English illustrated works of the day equals it in skill and tenderness, or in fidelity to a given original. The bound volume of the *Magazine of Art* is, however, hardly an example of the best that English wood-engravers can do. It is hardly more artistic than other illustrated periodicals for the popular instruction, and has no higher purpose than to be instructive, which in art matters is a secondary matter. It serves, moreover, as a kind of essay ground for the 'prentice hands of would-be art critics, with here and there an article of genuine value, as, for instance, one on "Old Wood-Printing and Wood-Cutting," by W. Martin Conway; and now and then the illustrations are noteworthy in their way, as, particularly, some process reproduction of drawings by Burne Jones and others; engravings from a rather *pose plastique* study of Boughton, "A Field Handmaiden"; "The Minister's Garden" of Cecil Lawson, and "An Old Canal," by Boggs, which is, in the American vein, an excellent piece of work, as is also a "Cairene Shopkeeper." The most ambitious blocks are, however, of the *Graphic* class.

The 'Unsentimental Journey through Cornwall' is, as to its wood-cutting, a generally weak affair. The illustrator is a man of distinct power, and some of the designs have great merit, but the engraver has betrayed him. A full-page cut, "The Lizard Lights by Night," is, however, as bad as need be, either as drawing or cutting. Mr. Hemy can draw a boat as few men can do it, but it is clear that the drawings for this book were a job lot.

Mr. Boughton's book on Holland will be a great success, and deserves to be so in spite of its literary weakness; for its illustrations are, with some inequality and much diversity, of great excellence. We should like to warn Mr. Boughton against the *cacoethes scribendi.* He is too good an artist to be lost for a very mediocre literary success, which is all that the 'Sketching Rambles' promises. A keen observer he is certainly, but this is quite subordinate in the book, making it a sort of chaffing journal-keeping of trivial events and the funny side of the trip, which becomes very wearisome in its monotony. The illustrations are, of course, in the hands of the engravers of *Harper's Monthly* (where the 'Rambles' appeared), excellent, although some of the minor cuts, such as "Leeuwarden Gossip," "Waiting for the Ferry Boat," "Village behind the Dykes," "Katwyk Within," and some others, are of a very cheap type of workmanship, while others—for example, the cuts of "In Scheveningen," "The Bell Ringers," "On the Dykes," etc.—are of that style made familiar but not to our mind praiseworthy by the London *Graphic:* dexterous, but flimsy. Abbey's "An Idyll" is a delightful bit of character, as, with too much of the *Graphic* style, however, is "Fisher Folk of the Zuider Zee." The frontispiece, "A Fair Daughter of Holland," "A Vegetable Girl," and several others of the full-page figure drawings are in Mr. Boughton's best vein, and when we add that there are forty-eight of his drawings and twenty-six of Mr. Abbey's, those who have not seen the papers as they appeared in *Harper's* can form some idea of the wealth of illustration. The literary tone may be judged from a single characteristic quotation taken at random:

"It is a trying moment for a 'happy-go-lucky' temperament to find itself early in the morning in a strange land face to face with problems of a new and uncanny-looking currency. Two or three of the biggest of the coins won't go into any decent purse, and if left loose in the trousers' pocket they go rasping and knocking about, setting the teeth on edge and jamming the fingers that are in search of smaller coinage about the size of shirt buttons. It seemed part of a liberal education to get up a knowledge of the intermediate specimens—combinations of copper, nickel, bronze, pewter, and silver. Still, it must be done; it would never do to go on paying away at this rate."

This is, as fooling, good enough, but tiresome as literature when we have 340 pages or more of it. People who want to see Holland seriously, however, will find many useful notes in Mr. Boughton's book.

Dr. Holmes's etched portrait, which makes the frontispiece to the volume of his poems, is an excellent likeness, and the seventy wood-cuts, in the best vein of our American school, give as high an average of excellence and illustrative interest as those of any book of its class we can remember. This class is, of course, that in which the illustration is, on the whole, professedly only decora-

tive, and in the book under review there are no designs which demand notice for any intellectual quality in them. Of decidedly inferior art, and unworthy a place in the collection, are the head and tail-pieces of "The Pilgrim's Vision," the tail-piece of "The Ballad of the Boston Tea Party" and the head-piece of "De Sauty." The steeple scene in the story of Bunker Hill is a most faithfully and admirably cut block from a drawing of little merit or intention; but of the better grade of design and execution are the two Back-bay bits in "My Aviary," the tail-piece to "On Lending a Punch Bowl," and the landscape in "The Ploughman." The head-piece of the Boston tea-party ballad is a delightful bit of figure composition, well cut, and the tail-piece of "Lexington" has the best qualities of American work. The get-up and typography of the book are of the highest excellence.

Of Vedder's much talked of 'Omar Khayyám' a great deal will be said, and it is easy to foresee that the critics will not agree, and, even when competent, will have some excuse for very varying opinions. That it is a work which displays the highest order of artistic gifts is, we believe, indisputable, though probably it will not be so generally conceded that those gifts are the highest in their order. That the drawings are intended by the artist as illustrations in the higher sense of the word, viz., as throwing new light on the poem or series of poems, is clear from the title-page, which describes them as "an accompaniment of drawings"; and the critical approach is thus necessarily made from the intellectual side; for if they form a true commentary, really elucidating the quatrains, no merely technical shortcoming can rate them with the commonplace book illustration, which simply adds pictorial embellishment to the volume it belongs to, without implying the sympathy with its thought which is necessary to a true illustration. Of the essential quality—consanguinity of conception—the possession by Mr. Vedder's work is indisputable, we believe, as well as that it is of that imaginative order which, like Blake's illustrations to Young, imposes finally its law on the art public, and makes its own fashion, as has Blake's work. Like it or dislike it, any one may; but no competent person can deny that it must be measured by a very different standard from that by which we judge ordinary book illustration. We have an imaginative and original artist to deal with, whose sphere has almost no point of contact with that of the professed book illustrator, be he ever so good, in the commonplace way. Comparisons are odious, but this is not a case of comparison but contrast, and the distinction between work of this type and that of —say, for an example of unquestioned excellence in its way—Abbey, is rather that between Emerson and Moore than between better and worse.

And as one of the roots of imagination is mystery, Vedder's work is charged with mysticism, studded with involved meanings, which to the common mind constitute the gravest offence, but which to its proper public gives only the grateful food for study and sympathetic unravelling. The second title will serve as an excellent example of the artist's thought. It is an illustration of no passage in the poem, but a commentary on the philosophy of the whole. The background is the double volute or spiral, the infolding and unfolding, involution and evolution, which seems to be the leading motive in the entire work, and recurs continually, probably as the symbol of life; and on this float rose-leaves and a loosening rose. Unfolded in the lower volute is a skull, on which sits singing a skylark, and the mind recalls Shelley's "Hail to thee, blithe spirit." To judge the design as drawing simply would be absurd, until we have determined whether the qualities we might blame are not essential to the idea which is the *raison d'être* of the whole. The design for the thirty-first quatrain, again, though it may be considered poverty-stricken *per se*, is a note in the general commentary on the poet quite worthy its embodiment: the double volute once more, life past and life to come, and, at the turning point, life present, a wine-cup—the burthen of Omar's teaching: Live while we live, with wine and song—*Wein, Weib, und Gesang.* So, in the plate which holds quatrains 25-28, the book-table littered with well-worn volumes, on which lies the skull again and stands the extinguished lamp, while the cobwebs entangle all, and form a background through which dimly sweep by in windy vastness the aureoled hobgoblins of theology, whose volume lies closed beneath—all tell the same moral: death, dispersion, nothingness. Then a change, in 29-30, brings in life in its highest form—woman, coming in from the *néant*, going out again into the unknown; and then the wine-cup design, 31, as the conclusion of that reflection:

> "Yesterday this day's madness did prepare,
> To-morrow's silence, triumph or despair:
> Drink! for you know not whence you came, nor why;
> Drink! for you know not why you go, nor where."

To say that of the fifty-two illustrations proper, which, with the signature and illustrations to the notes, make fifty-six drawings, some are unequal to the general plan, is needless. Some are, measured by the average, weaker, and some are, we believe, redundant, and if we do not say frivolous or of no meaning, it is because a work of the gravity and imaginative power of this, the deliberate and studied expression of an artist distinguished in his generation for imagination and earnestness, should not be judged hastily or without the sober and prolonged study which the reviewer's functions do not make possible with holiday books. The decorative quality of Vedder's illustrations has never been better shown than in these designs. The artist's colophon is a gem of its kind, and might, a little less naturalistically given, be a bit of Greek ornament. The ninety-sixth quatrain has a charming bit of composition. Those for the 81st and 72d-79th are perhaps at the high-water mark of the series; that belonging to 52-54, besides its profundity of meaning, is a charming composition, and contains in the turbaned head at the right lower corner the portrait of the artist.

This is not the place to discuss Vedder's art in general, but the plastic qualities of these designs are, with extreme simplicity and a refinement not to be bettered by any greater delicacy of elaboration, of the largest and most robust type. The book will long furnish subject for discussion and conjecture, and is distinctly by far the most important work of this kind which American art has ever given birth to. The general getting up is of a sober sumptuousness. Each drawing is reproduced in the most faithful photographic facsimile, of about the size of the original, and practically not to be distinguished from it, the quatrains being inscribed on a tablet included in the design; and each print has its separate leaf, a heavy board. We can frankly say that, taken as a whole, we do not recall so thoroughly artistic a piece of work of our day.

History of the Andover Theological Seminary. By the Rev. Leonard Woods, D.D., first Abbot Professor of Christian Theology. Boston: J. R. Osgood & Co. 1884.

Dr. Leonard Woods, the author of this posthumous work, was a famous controversialist in his day. His controversy with the elder Ware was one of the most conspicuous events of 1820, and to speak of it as the "Wood' an' Ware controversy" was a joke that was much relished in that year of grace. One of the most interesting passages in the present work is that in which he refers to certain expressions in his "letters to Unitarians" which "I now look back upon with regret, and would here openly retract." The expressions quoted reflect adversely on the doctrine of the imputed sin of Adam. Doctor Woods "cannot but think it strange that the Trustees did not exercise the same watchful fidelity in this case as they did afterwards in the case of others. They should have labored to preserve me from disregarding, or seeming to disregard, the standard of doctrine and duty to which I was bound to conform."

There may be some reason for the publication of this history at the present time which does not appear to those who are not specially acquainted with the fortunes of the Andover Seminary. It may be intended as a *mémoire pour servir* in some impending controversy. Had it been published a few years ago it would have been a magazine of weapons and combustibles for the more orthodox in the controversy growing out of the affair of Dr. Newman Smyth. But from the standpoint of the uninitiated it is certainly to be regretted that a history written more than thirty years ago should now be published without the addition of material bringing it down into more recent and the most recent times. What we have here is hardly more than a history of the foundation of the Seminary, together with an account of one of Doctor Woods's most painful controversies of a later time. The work is edited by the Rev. George S. Baker, of St. Luke's Hospital, New York, an Episcopal clergyman, a grandson of Doctor Woods. His interest in the subject of his grandfather's history is evidently remote, and a few notes of explanation from an instructed hand would have been very useful. Why not reveal the name of the professor who was removed from office in December, 1827, whose name the body of the text so tenderly obscures? Why not have looked up the article in the *Bibliotheca Sacra* so imperfectly indicated on page 154? And why are we not favored with a word of explanation in regard to "The plea of Doctor Woods," pp. 385-408, so that we may know something of the circumstances that occasioned it and of the final outcome of the controversy of which it was a part? Indeed, the editing of all the sections relating to a subscription controversy—whether professors should sign "the Associate Creed" alone or the Assembly's Catechism also—is so imperfect, if editing it can be called, that their value for any but an esoteric few is next to nothing.

Doctor Woods had great merits as a theologian and controversialist, and his earnestness and industry were remarkable, but for the work of an historian he had no special fitness. His introductory chapter on the state of theological education in New England previous to the founding of the Seminary at Andover is interesting, but too brief. Training for the ministry was conducted mainly by clergymen of ability and reputation, who received young men into their families. Doctor Woods names and characterizes the most prominent of these. There was also some little professorial instruction at Harvard, Dartmouth, and Yale. The appointment of Dr. Henry Ware as Hollis Professor of Divinity at Cambridge, a distinctly liberal move, excited the more orthodox to a counteracting enterprise. But the latter were divided a good deal among themselves. In his second chapter Doctor Woods attempts to draw the lines of demarcation. Nothing is so pathetic in his book as the obsoleteness at the present time of the controversies that were in 1807 so passionate and engrossing. They have passed entirely out of men's interest and thought. They have given place to an entirely different set of problems. But in 1807 the differences between straight-out Calvinists and Hopkinsians were not to be despised, and they

made the attempt to found a seminary, in whose organization and management these differences should not seriously conflict, a very difficult matter. In five successive chapters we have an account of all the ins and outs of this attempt. It was complicated with questions not purely theological: Should the Seminary be in Newburyport or Andover? Should it be connected with Phillips Academy or not? How should the different foundations be adjusted? There was need of a good deal of patience and of some *finesse* to settle all these questions in an amicable way, especially when Dr. Samuel Spring, of Newburyport, was one of the contracting parties. Doctor Woods was evidently the great pacificator. His correspondence during the controversy with various persons, which is given in the appendix, throws a flood of light upon the difficulties of the situation, and emphasizes the importance of Doctor Woods's laborious interest in the matter.

The chapters on the subsequent history of the school are very slight. In a second part we have the various acts of incorporation of the Academy, the Seminary, and Board of Visitors, with constitutions and additional statutes almost numberless. Evidently the founders meant to leave nothing to the wisdom or discretion of those who should come after them. Every detail of thought or action has its appropriate provision. There is something startling to our present thought and feeling in the sincere conviction of those weighty men that they had arrived at the ultimate truth—their confidence that the teachings of their institution would not need amendment in any lapse of years or centuries.

The Countess of Albany. By Vernon Lee. Famous Women Series. Boston: Roberts Bros.

FROM Elizabeth Fry to the Countess of Albany! Could contrast further go than between that deep, steady nature and this "bright, light handful of thistle-bloom"? No one of the writers in this series has brought to her work anything like the fulness of preparation or the brilliant ability of Vernon Lee. The eighteenth century in Italy is known to her as it could only be known to one thoroughly at home in the great ages preceding it. She has but to turn a leaf of memory, and figure after figure steps forth. She has also great power of description of the kind which carries on a narrative by a succession of swiftly sketched pictures. Her episodes are so many vignettes of vivid color. Very admirable, too, is the spirit in which she approaches the evil things which were the too obvious characteristics of the time of which she writes. She will not defend or palliate evil, but she will not ascribe evil motives when the good are at least equally probable. If her subject leads her far into the gossip of history, no hand of hers shall help to turn it into scandal.

The great figure of her book is, of course, Alfieri, whom she has the opportunity to present to a world which, in the present general neglect of Italian literature, knows hardly more of him than the fact of his existence. Not that the world should be expected to care now for his tragedies, or to understand now the tears or the shudders which they excited in the first quarter of this century; but a personality so eager, so masterful as his, a genius that could make itself heard and felt under such immense disadvantages, ought not to be remembered only by scholars. There is great felicity in the passage in which Vernon Lee marks his position, and traces his influence upon his own countrymen:

"The moral attitude and gesture of Alfieri happened to be just those which were rarest in the eighteenth century in all countries, and more especially rare in Italy; and they were the moral attitude and gesture which the eighteenth century absolutely required to become the nineteenth, and which the Italy of Peter Leopold and Pius VI. and Metastasio and Goldoni absolutely required to become the Italy of Mazzini and Garibaldi, the Italy of Foscolo and Leopardi: they were the attitude and the gesture of single-mindedness, haughtiness, indifference to one's own comfort and one's neighbors' opinion, the attitude and gesture of manliness, of strength—if you will, of heroism.

"To have written tragedies whose whole value depended upon the striking exhibition of these qualities, and to have made this exhibition interesting, nay, fascinating to the very people—to the amiable, humane, indifferent, lying, feeble-spirited Italians of the latter eighteenth century—till these very men were ashamed of what they had hitherto been; to stamp the new generation with the clear-cut die of his own strong character—this was the reality of the mission which Alfieri had felt within himself; a reality which will be remembered when his plays shall have long ceased to be acted, and shall long have ceased to be read."

By this figure, so strange yet so grand even in its contradictions, stands another more perfect as a contrast, a foil to it, than any novelist could have imagined. If there be in history one man more than another for whom friends should mourn that the privilege of an early death was denied to him, that man is the Young Pretender Charles Edward. Vernon Lee, in righteous indignation, does not spare the adjectives to describe him in the days when he had "let himself become a disgrace to the very memory of the men who had died for him." Such he was when married by French intrigues to Louise of Stolberg, a bright-haired, dark-eyed girl, brought straight out of her convent school. We have named her the last of the three because her place in the book is least. Though as Countess of Albany she gives her name to it, not a fifth of it is devoted to her, and that will be a careful reader who makes up from it any distinct conception of her. This may be, not that the author does not see her distinctly, but that she is viewed as three or more separate personages as she appeared to the different persons who knew her intimately, Bonstetten, Alfieri, Sismondi, Foscolo. To make all these into one and the same woman, altering or developing under the defeat or the discipline of her changeful life, required another perspective, another focus, than that chosen by the author. We need not recount her story nor pass judgment on it here. We have already alluded to the writer's endeavor to see it in the best light, and the charity which is born of the pity felt in our time for a girl sacrificed to such a marriage, may make us glad to agree with the theory of her relations with Alfieri and others presented here.

There is, however, a question that will be asked by those careful for form and jealous for the substance which can only be preserved through form: Is this a *biography?* The series in which it appears purported to be, and has been, a series of biographies of women. The Countess of Albany, whose name is prefixed to this volume, is never of more than secondary importance in it, often of less. The few times she appears in the foreground she is more than overshadowed by her immediate companion. Events and facts even are omitted or altered very curiously, if it be a biography which Vernon Lee has written. As a single instance, we are given the words *left out* of the epitaph on her tomb. The words suppressed, *A Victorio Alferio dilecta*, etc., belong to Alfieri's part of the story, not hers. The actual epitaph, which would so fittingly close the life, is not given at all. How the book should be classed is of the greater moment inasmuch as it is by far the most clever in execution, the most entertaining in its material, of the whole set. (This is, of course, understood as apart from the personal interest that might be inspired by the subjects of the others.) In no one of them was the intended purpose accomplished nearly so well; but, whether that were a study of Alfieri and his friends, or a glimpse of Italy and Rome in the days of Alfieri, it certainly was not, according to any accepted rules, the life of the Countess of Albany.

With Lord Stratford in the Crimean War. By James Henry Skene, author of 'The Frontier Land of the Christian and the Turk,' etc. London.

WE are unable to discover what was the connection, official or unofficial, of the author of this book of war reminiscences with the famous diplomatist whose name is in its title. We find Mr. Skene in Constantinople, in Varna, in Shumla, at Balaklava, at Inkerman, and at other places made memorable by the terrible grapple of Czar Nicholas with Turkey and the Western Powers; we see him going forward and backward, sailing and galloping on horseback; we hear him conversing, quite confidentially, with England's great Ambassador, and with her commanders before Sebastopol; we hear him joking with the generals and troopers of the Allies, in French, Turkish, and other tongues—but we do not learn whether he does his work and talk in the capacity of an attaché, an orderly, a private secretary, a dragoman, a newspaper reporter, or a patriot volunteer. The question is, however, unimportant. Mr. Skene brings no revelations, communicates no new documents or diplomatic secrets, writes no history, makes no additions to it, publishes no leaves of an old diary kept in the shade for thirty years. He merely details "incidents and gossip, trivial indeed, it may be, many of them, and beneath the notice of the historian, but serving to give a glow of life to the memory of men whom another generation will look upon as the mere lay-figures which go to make up history." He writes down what he remembers, he tells us, "setting down naught in malice."

Of malice, indeed, not a trace is to be discovered in these narratives. The Emperor Nicholas and his enemy Napoleon III. are, we believe, the only conspicuous persons of whom he speaks harshly, and if he imputes more lust of conquest to the one and more cruel calculation to the other than they were actuated by in that contest, he does it from British patriotism and as a faithful echo of his hero, Lord Stratford's, sentiments. His reminiscences are almost all eulogistic. There is no end in them to shining deeds of bravery and devotion, to heroic acts of British (and also of French) warriors, worthy of Spartan or Maccabean hosts. Nor are the prowess and self-sacrificing spirit of the enemy unrecorded. Here (p. 149) we read of "upwards of 2,000 Russians . . . defeated by 130 Englishmen under a captain of the Guards"—at Inkerman—a defeat immediately followed by so terrible a rout of two Russian battalions, 1,500 strong, by "the Seventy-seventh Regiment, which mustered then only 250 men, that many of the Russians flung themselves on the ground among the brushwood, pretending to be killed or wounded"; so that "when the Seventy-seventh halted, they discovered in their rear a larger number of those men than the whole strength of their regiment." Elsewhere (p. 32) we learn from a Russian prisoner, who had commanded one of the batteries in the battle of the Alma, that there "one volley of his grapeshot had mowed down a whole company of the advancing Coldstream Guards, a second laid low an equal number of the Highland Brigade, and a third would have been as deadly against the Scots Fusilier Guards had he not felt sick at heart with the carnage he was inflicting, and almost involuntarily restrained his fire." Unfortunately, we cannot always share the narrator's faith in the perfect veracity and accuracy of his informants—ranging from nameless prisoners to men like General Todleben or General Bosquet—

or his still more implicit reliance upon his memory, unaided by notes, which makes him relate anecdote after anecdote, and conversation after conversation, with a minuteness of detail which to all but ready believers in everything contained in well-printed books must appear more or less suspicious. Nor is it easy to presuppose general accuracy in "incidents and gossip, trivial indeed," where we find an historical statement like this: "At Sevastopol the strength of the allied armies was little more than half that of the Russians" (p. 173), or many an anecdote like the following:

"An attaché had made one or two mistakes in copying a despatch, which he took to the Ambassador for signature.

"'Mistakes may be made,' said Lord Stratford, after pointing them out, 'by the most careful attaché—how much more by the most careless!'

"The high-spirited young diplomatist got exceedingly incensed, and told Lord Stratford that, although he was his Ambassador, he had no right to reprimand him for what was untrue, as he was not habitually careless.

"'You accuse me of untruthfulness! D—— your eyes!' exclaimed Lord Stratford.

"'D—— your Excellency's eyes!' retorted the youth.

"The Elchi burst out laughing. Holding out his hand to him, he begged the attaché to excuse the infirmity of his temper, and they shook hands most cordially."

Nouvelles Lettres d'Italie. Par Émile de Laveleye. London and Brussels. 1884.

LAVELEYE'S first 'Lettres d'Italie' (1880) presented his impressions during a journey in 1878-79. He had gone there, "not to see landscapes and works of art already known" to him, "but to study more closely than before the institutions and the men." It was an extensive tour, from the Alps to the Gulf of Salerno, in the course of which he visited the principal cities, and had familiar intercourse with the leading statesmen and economists of the Peninsula. His observations, and the salient points of his conversations, referring chiefly to things politically, socially, or ethnographically interesting, he penned down in scraps of sketches which one would call fugitive were they not full of pith, and, if never exhaustive, always intensely suggestive. The present collection of "letters"—like the former ones addressed to his learned countryman and friend, the Count Goblet d'Alviella, perhaps only nominally—is exactly of the same character. They cover, however, a narrower geographical ground, the new tour made in September, 1882, embracing only Northern Italy, and the interlocutors introduced—such as the economist Luzzatti, the statesmen Minghetti, Sella, and Visconti-Venosta, and the latter's father-in-law, the Marquis Carlo Alfieri, whom the traveller successively visited in their rural homes—being few in number. The rich variety of topics is the same, the writer's interest in things Italian and human as lively as ever.

M. de Laveleye enters Italy by the St. Gothard Tunnel. He duly admires this wonderful link uniting the South with the North, but "thoughts from behind the head" darken his spirit. Was not Veuillot right after all when he defined the Mont Cenis Tunnel as "a long, black hole, vomiting parcels from France into Italy, and from Italy into France"? Do the wonderful material achievements of our age promote the true happiness of mankind? "Everywhere the same cry is heard: The moral and intellectual level is sinking. . . . The fact is, the post, the railways, and the telegraph—not to speak of that new pest, the telephone—consume our existence. The intellectual worker equally with the manual laborer is overwhelmed by material inventions. He has relations with the whole world. Every mail brings piles of letters, books, and journals. . . . There remains no time for careful meditation or composition." This sombre beginning is fortunately followed by sunny glimpses, for our Belgian has a keen sense for the charms of southern climes, as well as for Italy's natural and artistic wealth and treasures. But the conflict between the man of sentiment and refined taste and the calculating economist goes on. Sometimes the natural sentiment of the man and the conviction of the free-trader agree in one condemnation. He learns that the little island of Sant' Elena, which rises from the lagoons of Venice, between the public gardens and the Lido, has been converted into an establishment for the construction of locomotives. The idea that the hideous smoke of boilers is going to cover with soot the white marbles of St. Mark's and the rose-colored marbles of the Palace of the Doges fills him with horror. Did Radetsky ever attempt anything so atrocious against the Pearl of the Adriatic? "Quod non fecerunt Barbari faciunt *protectionisti*," he bitterly laments. He enters Como, and exclaims: "O beautiful city, rich in monuments of white marble, O Como, what have they made of thee? An industrial town of the 'Black Country' like Birmingham or Manchester." From all sides clouds of black smoke rise from tall chimneys, spread over the lake, and tarnish its blue waters. The golden-tinted Cathedral will soon be thickly covered with greasy films. The peasant girls who but recently span the fibre of silkworms in the open air, in the shade of mulberry trees in paternal abodes, are now, like condemned culprits in prisons, huddled together in disease-breeding factories, created by protection. In the environs of Naples, too, women work in cotton factories, receiving a franc daily for twelve or fourteen hours of labor. Were they not happier when they gathered olives or grapes in the sight of the azure sea?

"Away with bucolics," his friend Luzzatti would tell him. "The golden age is past. The nations of our time must rise through labor and capital." Granted; but are there no better fields in Italy for the investment of the capital which protection, by securing exceptional profits through an indirect tax on the consumers of manufactures, allures into mills? Everything is still to be done to restore half of the kingdom to its pristine fertility. The interior of southern Italy, which was in antiquity blooming Magna Græcia, and of Sicily, the granary of ancient Rome, consists now of scorched plains, without grass or trees, yielding a crop every second or third year to a barbarous culture, which takes everything and gives nothing. The peasants live in market places, the proprietors in the large cities. The land is deserted by all. As the peasant deals with the soil, the proprietor deals with the peasant. The soil and its cultivators are equally despoiled. Except in sowing and harvesting time, no work can be found. Famine wages and brigandage are the consequence. Planting is needed above all—the planting of chestnut trees, acacias, fig trees, vines, etc., on hills and plains. Water could thus be restored to the rivulets, shade and freshness to the fields, abundance to the people. This agricultural renovation would require time and effort, but it would pay better than manufacturing industry, however fostered by protection, for which the main elements are wanting in Italy—iron and coal. The bounteous soil, if sufficiently irrigated, would yield two crops yearly. An abundant exchange of native products for foreign manufactures would revivify the merchant marine, now languishing.

And it is not the southern portions of the peninsula alone which distress you with misery's hideous aspect. The very neighborhood of Crespano, in Venetia, where his protectionist friend, Luzzatti, so hospitably receives and philosophically entertains M. de Laveleye, is haunted by a terrible disease which springs from lack of nourishment. And go where you may, you see dire traces of hunger on the visages of Italian rustics. Recent parliamentary "inchieste agrarie" have laid bare frightful depths of wretchedness. And yet the northern Italian peasant, at least, is certainly not indolent, and the country is so fertile. Whence the evil? "Excessive taxes, excessive rents—these are the deep sources of misery." And why excessive taxes? They are needed for a "grand foreign policy" and grand armaments, for gigantic ironclads, and the interest on a gigantic national debt. A whole district is made permanently wretched by the pitiless exaction of arrears of taxes, and the gain is a new monster gun. M. de Laveleye in vain preaches the necessity for Italy to abstain from ambitious external politics, alliances, and armaments, and in vain invokes the examples of Belgium, Switzerland, and the United States—which can hardly be said to be analogous. Minghetti expresses the general national sentiment when he tells him that a great nation cannot thus concentrate its activity on itself: "The youth's need of expansion, if left without great perspectives, becomes soured and corrupted, and changes into discontent." Minghetti and his visitor are more in accord in regard to the necessity of the Government's seriously facing the social questions and energetically endeavoring to diminish the sufferings of the disinherited classes. State socialism is now also advocated by Depretis, but Italian statesmen have not adopted its tenets from Bismarck. It can be traced back to Cavour in the early years of his manhood. Carlo Alfieri, who married Cavour's niece, speaks with exultation of the great statesman's intentions for the good of the people, and with religious fervor of the duty of making democracy a true realization of Christianity, whose "reign of God" means a reign of the poor: "The democracies of antiquity perished because they had iniquity for their base. Modern democracies will live if they borrow the idea of justice from true Christianity."

Country Cousins: Short Studies in the Natural History of the United States. By Ernest Ingersoll. Harper & Brothers. 1884. 8vo, pp. 252. Illustrated.

THIS book is made up of various articles, most of which have appeared in the magazines. The chapters have been revised, and are as handsomely illustrated and printed as originally in the pages of *Harper's*, the *Century*, the *Manhattan*, etc. They contain a great deal of information, put in a very popular style. The author is one of our brightest and most entertaining writers on his favorite subjects. Whatever he writes is pretty sure to be extensively read. In this book his topics have a wide range among the animals, and include talks on tree-chopping, reef-building, the Luray Caves, shell money of the Indians, etc. A large part of the matter has been compiled, but it is what is given from the author's own observations that has special interest for us at present. It is in dwelling upon his personal researches in the field that we find Mr. Ingersoll at his best and most enthusiastic. He is so full of vivacity and enthusiasm that one readily sympathizes with him.

What interferes most with our enjoyment of these pages is the evidence of carelessness so frequently met with. This is their most prominent fault. "Barnacles, too, in vast numbers, mussels, bryozoa, and forty forms of minute water animals cling to the half-submerged branches" (p. 152). Forty is definite enough, if it were accurate. In the account of the quail, its call is given as "Bob Bob White," which, however, is the song or crow. The call is best described by the syllables White-ee, White-ee. The male of

this bird is said (p. 178) to be "exceedingly watchful, and if a human being approaches the nest—after giving the alarm to his partners, who secretly withdraw from the nest—he flings himself upon the ground in front of the intruder, simulating lameness or injury, and seeking by every art to attract attention and pursuit, until he has beguiled the enemy far away from his home, when he seeks his own safety in swift flight." "They are so loath to use their wings that large numbers are said to perish in attempting to cross wide rivers and inlets" (p. 176). Authorities on the subject will not agree with the author. His use of the name massasauga indicates that he does not know the animal to which the name belongs. "When the sun shines, the chilly rattlesnake climbs upon the warm rocks or stretches leisurely in a dusty road; moccasin and massasauga creep from their 'tangled fens' upon hard banks or low-drooping limbs, along whose upper surface they balance their rugged folds; while the copperhead crowns the bowlder at the edge of the clearing with a brazen coil" (p. 91). Writing about rattles (p. 97), he says "the copperhead and massasauga have none at all, but only a horny tip to the tail." According to this, the massasauga would be neither a copperhead, a moccasin, nor a rattlesnake. The author mistakes in saying it has no rattles. On page 130 we are told that a starfish may be cut into a number of pieces, each of which becomes a new starfish; on page 30 the mocking-bird is said to lift a snake from the ground and beat it to death with his wings; and on page 91 we are, in all seriousness, asked to accept as proved the story of the retreat of young snakes into the stomach of the mother for temporary refuge. Of the sting-ray, including "*Dybastes*" (for *Dasybatus*), he says: "Lying flat on the bottom, he works his triangular flippers until he has washed away the sand from about the oyster he wishes to seize, if it is at all concealed, and then crushes it between his powerful jaws." The foregoing are a few of the instances that might be cited to show the tendency to which exception is taken. The frontispiece is named "Tree-Toads"; in the text these toads rightly become frogs, and but one remains a tree-frog.

Les Filles de John Bull. Par l'auteur de 'John Bull et son Île.' Paris: C. Lévy; New York: F. W. Christern.

WHATEVER popularity "Max O'Rell's" new book may, for a brief season, enjoy, it will owe to the reputation of its predecessor much more than to its own rather slender claims to attention. Its author's countrymen may, perhaps, find it instructive and amusing, but neither its matter nor its manner will commend it to the English or the American public. It tells them nothing which they have not read dozens of times in novels and essays, and its way of telling is, when not actually offensive, always threatening to become so. One is constantly reminded of Matthew Arnold's dictum concerning French lubricity. The author is always either saying or hinting things which nobody but a Frenchman would think of saying; and if the translation of the book is toned down to conciliate what its author no doubt considers the insular and narrow-minded prejudices of John Bull, it can only be done by materially reducing the bulk of the original. Not that reducing its bulk can be regarded as a calamity, for it is padded out with much matter that has no relevancy to the subject of the volume, and no other excuse for being printed except to swell the number of pages. It is inconceivable how a writer who has shown himself to possess so much of the national *esprit* could compose such silly and dreary fooling as chapter xx, describing a scene in Paradise, to say nothing of other passages which to other faults add the unpardonable one of vulgarity.

The Destiny of Man Viewed in the Light of his Origin. By John Fiske. Boston: Houghton, Mifflin & Co. 1884. 18mo, pp. 19.

GIVEN the origin of Man as a derivative being, as of a genus belonging to the Catarrhine family of apes, to ascertain his destiny: this is the problem to which our author addresses himself. It is the thesis upon which he addressed the famous Concord School of Philosophy, last summer, when the question of immortality was there under discussion; and his essay is now published in this little volume. He undertakes the solution of this problem from purely scientific and mainly evolutionary data. He insists that the Darwinian no less than Biblical doctrine implies that "on the earth there will never be higher creatures than man." And even from the place of this species in Nature, so greatly changed by the Copernican and the Darwinian hypotheses, as well as from the transference of natural selection in his case from the corporeal to the psychical life, he argues that "the perfecting of humanity is to be the glorious consummation of Nature's long and tedious work"; that "the universal struggle for existence, having succeeded in bringing forth that consummate product of creative energy, the human soul, has done its work and will presently cease"; that "the ape and the tiger in human nature will become extinct," so that the modern prophet, employing the methods of science, may again proclaim that "the kingdom of heaven is at hand"—all which is to be devoutly hoped for. Yet as this kingdom "cometh not with observation," it will hardly come with demonstration, of the scientific sort. So, while "we have here seen that the doctrine of evolution does not allow us to take the atheistic view of the position of Man," the author admits that "it is not likely that we shall ever succeed in making the immortality of the soul a matter of scientific demonstration." He is free to declare that "the more thoroughly we comprehend that process of evolution by which things have come to be what they are, the more we are likely to feel that to deny the everlasting persistence of the spiritual element in man is to rob the whole process of its meaning." So, to avoid "permanent intellectual confusion," he declares: "For my own part, therefore, I believe in the immortality of the soul, not in the sense in which I accept the demonstrable truths of science, but as a supreme act of faith in the reasonableness of God's work." In his eloquent peroration he even prophesies that "we may look forward to the time when, in the truest sense, the kingdoms of this world shall become the Kingdom of Christ, and He shall reign for ever and ever, king of kings and lord of lords."

Views and aspirations like these are not wanting in Mr. Fiske's more elaborate scientific-philosophical works; only they are here more pronounced, in congruity with the occasion. The wonder is, not at this climax of Christian hope, but as to how it can be legitimately attained from the underlying scientific data.

BOOKS OF THE WEEK.

Allardyce, P. "Stops," or How to Punctuate. Third Edition. Scribner & Welford.
Ayres, A. The Mentor. Funk & Wagnalls. $1.
Bright, Rev. M. Diary and Correspondence of Samuel Pepys. Dodd, Mead & Co. 10 vols. $15.
Bulfinch, T. The Age of Chivalry; or, Legends of King Arthur. Revised edition, edited by E. E. Hale. Roston: S. W. Tilton & Co. $2.50.
Burnett, P. H. Reasons Why We Should Believe in God, Love God, and Obey God. The Catholic Publication Society Company.
Bush, J. S. The Evidence of Faith. Boston: J. R. Osgood & Co. $2.
Davidson, J. M. The New Book of Kings. Boston: Roberts Brothers. $1.
Doctor Johnson: His Life, Works, and Table Talk. London: T. Fisher Unwin; New York: Scribner & Welford.
Fisher, S. S. Poems. Columbus, O.: G. L. Manchester. $1.
Foster, S. C. Wheel Songs: Poems of Bicycling. White, Stokes & Allen. $1.75.
Fowler, Prof. T. Progressive Morality. An Essay in Ethics. Macmillan & Co. $1.25.
French, N. S. Experimental Blanks for a Short Course in Elementary Chemistry. Boston: Harris & Rogers. 35 cents.
Friedmann, P. Anne Boleyn. A Chapter of English History. 2 vols. Macmillan & Co. $8.
Froude, J. A. Thomas Carlyle: a History of His Life in London. 1834-1881. Illustrated. In two volumes. Vol. 1. Harper & Brothers.
Fulton-Trueblood. Choice Readings from Standard and Popular Authors. Boston: Ginn, Heath & Co. $1.65.
Hamlen, G. Chats. Boston: Lee & Shepard. $1.
Hedge, F. H. Atheism in Philosophy, and Other Essays. Boston: Roberts Brothers. $2.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2.50.
HENRY HOLT & CO., New York.

DARK DAYS.
By the Author of
Called Back,
Hugh Conway (F. J. Fargus). 16mo. Leisure Hour Series, $1.00; Leisure Moment Series, 25 cents.

THIS NOVEL IS MORE INGENIOUS THAN, AND AS INTERESTING AS, 'CALLED BACK,' which is published in same series and at same prices. These are the only AUTHORIZED editions of Mr. Fargus's books.

HENRY HOLT & CO.,
New York.

The Most Magnificent volume of the year is undoubtedly
Orchids: the Royal Family of Plants.
With twenty-four illustrations in colors from nature (each 10x14 inches), by HARRIET STEWART MINER. Price, cloth, full gilt, $15.00; Turkey morocco, $25.00.
*** The illustrations are reproductions of some of the most celebrated and costly specimens of orchids, a family which, as is well known, was made the subject of close study by Darwin. This is the first attempt made on this continent to do justice to these regal flowers.
*** Sold by all booksellers, or sent, free of carriage to any address, on receipt of price by the publishers,
LEE & SHEPARD,
BOSTON.

Unmounted Photographs
OF ANCIENT AND MODERN WORKS OF ART,
Embracing reproductions of famous original paintings, sculpture, architecture, etc. Price, cabinet size, $1.50 per dozen. Send 6-cent stamp for new catalogue. 5,000 subjects.
SOULE PHOTOGRAPH CO.,
Publishers, 338 Washington Street, Boston, Mass.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 20, 1884.

The Week.

THE Cabinet-making for President Cleveland has begun, and is going on very actively. Most of the Democratic papers seem to agree cordially with the hope expressed by us that the Independents will get nothing, but, we suspect, in most cases for a different reason, viz.: that there are few enough offices already. Our doctrine is that party government means government by party, and that a party consists of men of like political opinions and like political antecedents, and not of men suddenly brought together for a brief period and on a special occasion. If there be any one thing more needed than another in American politics at this moment, it is the demonstration by actual experiment that there are two parties in the country, each capable of administering the Government, without help, in a safe, dignified, and orderly manner. If Mr. Cleveland wishes to make this demonstration, he will do it by and with Democrats, and we are perfectly satisfied that there is no Independent who seeks any reward for his share in electing him beyond the conduct of the Administration on business principles, the enforcement of the Civil-Service Law not in the letter only but in the spirit; and the remembrance, in all discretionary acts, that, as he himself has said, "public office is a public trust."

It must be said that newspaper discussion of the "claims" of various candidates for Cabinet positions, as soon as it becomes known that they are candidates, is just as inevitable as the claims themselves. There are really three different kinds of "claims" for Cabinet positions, which, in any discussion of the matter, ought to be carefully discriminated. First, there is the natural claim of the real party leaders, which is a tradition of the best days of American politics. A President, left entirely to himself, will naturally choose as his constitutional advisers the men of the highest standing in his own party. Any other course, on the narrowest view, converts them from friends into enemies, and on the broadest grounds it is for the public interest that the Government advisers should be the men who lead the party to which the Government has been confided. It was this principle which, down to the time of the war, led to the custom of inviting into the Cabinet the men who had been rival candidates before the nominating Convention. It was not because Seward had been beaten by Mr. Lincoln that he was asked to become his Secretary of State, but because Seward next to Lincoln was the most important man in the Republican party at the time. General Grant departed from this tradition, and made up his Cabinet not with a view to strengthening his party so much as with the idea that he was the head of a sort of despotism, in which places were to be given as the reward of personal allegiance, and often as a matter of caprice and favoritism. That the discussion in the Democratic press should all point to the selection of Mr. Bayard for some Cabinet position, is a very healthy sign that we are returning to our best political traditions.

Besides natural claims of this character there are "locality" claims of a much more doubtful sort. Those really rest in great measure on a desire to get hold of patronage. Under the spoils system a Cabinet position, say for Pennsylvania, meant just so many clerkships and consulships to be divided among Pennsylvania politicians; and a Cabinet position was, in the distribution of patronage, of considerable importance, because the Cabinet officer was a sort of middle-man or broker between the Senators or "the delegation" and the President. It is evident that, with the spoils system at an end, these locality claims sink into insignificance. There is another sort of locality claim, however, which is of importance, and always must be under our electoral system—that which grows out of the necessity of strengthening a party in an important State on which Presidential elections turn. Such a State New York now is, and will continue for some time to be. The vote of New York is an enlightened vote, and the majority fluctuates from one side to the other. Under these circumstances the necessity of giving New York a place, and an important place, in the Cabinet has long been recognized. The considerations we have mentioned point to the selection of a Cabinet officer from New York who in the first place would understand New York public opinion, and not confound it with the opinion of Wall Street, on the one hand, or Tammany or any of the other Halls on the other. There are, fortunately, plenty of such enlightened Democrats to be found in this State. Finally, there are claims on the Presidency of a pecuniary nature, growing out of money contributed to his election, dinners given in his honor, railroad parades organized to "boom" him. In the event of Mr. Blaine's election, this last class would have been the only one that the publicist would have had to consider. But with Cleveland as President we can, fortunately, confine ourselves to the other two.

The social effects of the election of Cleveland will be important in Washington—all the more so since that city has become a sort of winter headquarters. We presume the social work of the Administration will be delegated as far as possible to experts, Governor Cleveland himself not being a man who has any interest in or taste for the consideration of those delicate matters of etiquette which in the White House have been for nearly a generation the stumbling-block of Presidents. Since the disappearance of the old Southern traditions, the Presidents who have succeeded best in these matters are those who have treated society as a thing apart, like the pig-iron or railroad business, or like music, and have left it as far as possible to those who had made it a specialty. This was the reason, for example, that General Grant succeeded so well, and so much better than his successor, Mr. Hayes. The social trouble with the former was chiefly that he brought people to Washington, and made them conspicuous in society, whose standard of life was essentially different from that of most people who make up society. Many otherwise not fastidious people felt that they "must draw the line at thieves." This line really has to be drawn in a great capital for purposes of comfort. It might be supposed that the distinction between peculation in office and robbery of other kinds would suffice to enable ladies and gentlemen to meet habitual peculators on a friendly footing at dinners and parties; but the trouble is that feeling about peculation runs too high nowadays.

The following remarkable and damaging charge against the editor of the *Tribune* was published in the editorial columns of the *Times* of Sunday:

"The forgery of election returns, and the falsification of statements showing the results of elections, are offences so grave that the laws of this State make them punishable in certain cases by imprisonment at hard labor for a term not exceeding five years. Whether this statute properly covers the case of a newspaper which forges and falsifies election returns, is a question which, we believe, has never been taken to the courts. We presume that no one would take the trouble to institute proceedings, either civil or criminal, against such a concern as the New York *Tribune*, whose editor, assisted by another person, has repeatedly and grossly forged and falsified election returns from various counties in the State of New York during the past two weeks."

No answer whatever to this is made by the *Tribune*, but we find in the *Times* of Monday a repetition of the charge, with an intimation that it may be brought to the consideration of the Grand Jury. Few newspapers would care to remain quiet for any length of time under a charge of that character, and we do not see how the *Tribune*, in view of its surprising course since the election, can afford to do it. There was certainly something very queer about its figures. They were unlike any which any other newspaper received, and were so saturated with what the *Tribune* was fond of calling the "fluctuating" character of the returns, that they would not even foot up right.

The *Herald*, in its turn, asks some questions which are reasonable and justifiable, and of public importance, and which we think the *Tribune* ought to answer:

First—Whether it is not true that the *Tribune* had, on the Thursday night after election, precisely the same election returns which the *Herald*, *Times*, *World*, and *Sun* had and published?

Second—Whether these returns, which gave the State to Cleveland, and which stand substantially unimpeached to-day, were or were not deliberately and skilfully altered in the *Tribune* office, so as to show a Blaine plurality of 1,366?

Third—Whether these altered returns were or were not spread over the country by the help of the Associated Press the same night, conveying to anxious Blaine men everywhere the false assurance that their candidate was elected, when, in fact, the true returns showed his defeat, as Mr. Jay Gould, not taken in by cooked returns, hastened to acknowledge on Friday morning?

Fourth—Whether certain persons in Mr. Blaine's interest did not telegraph from here, urging prominent Blaine journals in all parts of the country to stand by the *Tribune's* false returns and claim the election for Blaine?

Fifth—Whether Mr. Blaine, having been notified by his committee here that Cleveland had carried New York and Indiana, did not instruct the Committee to claim everything and assert Blaine's election?

Sixth—Whether it was not precisely by the preparation and circulation of such cooked returns, and the cry to "claim everything" sent out by Zachariah Chandler, that the fraud of 1876 was begun?

That the loss, confusion, and annoyance caused by the continued "claiming" of Blaine and his agents during the ten days following the election were very great, nobody will deny. But that, though an important consideration, is secondary to the consideration whether all this was not done in order to lay the foundation for subsequent proceedings of a fraudulent character, looking either to the election of Blaine in spite of the figures, by some sort of proceedings before the courts, or before Congress, or to the carrying out of some gambling transaction either on the Stock Exchange or in the betting rooms. In either case, we think the whole matter merits inquiry, either at the hands of the State Legislature or of Congress. One particular branch of it, the persistence of the *Tribune* in claiming Blaine's election on the strength of calculations of which no one outside its own office knew or could discover the source, might, we presume, be examined by the Grand Jury in this city, and we should think it not unlikely that the editor of the *Tribune* would welcome such an examination himself, for the sake of his own reputation. Section 435 of the Penal Code of this State makes "knowingly circulating any false statement, rumor, or intelligence," for the purpose of affecting the price of stocks or bonds or bullion, or any merchandise or commodity, punishable by "a fine of not more than $5,000, or by imprisonment for not more than five years, or both." Of course all the *Tribune* would have to do in order to escape all penal consequences would be to show that it published and continued to publish its accounts of Blaine's victory in good faith, and on evidence sufficient to deceive a man of ordinary intelligence. We presume the inquisition, if set on foot, would also reach some of the officers of the Associated Press, whose course worked far more mischief than that of any newspaper, because, as purely professional news-gatherers, they are supposed to be free from partisanship, and because until this year they have never undertaken the work of footing up returns and announcing to the public who was elected.

Mr. Blaine's estimate of the Independent vote does not agree with that of the Chairman of the National Committee, Mr. Jones, who places it at 40,000. Mr. Jones says it is a mistake to try to elect a "great man President," because he has his "rivals, his writings, his past debates." In other words, Mr. Blaine had too much record. That was the cause of his defeat. The fact that he came so near success in this State is not an evidence of his strength with the people, but rather an evidence of the great ingenuity and ability with which his campaign was conducted. He laid all sorts of plans, and they were so well laid that they came very near succeeding. They showed, however, that the ablest and most unscrupulous politician that the country has ever produced was not able to overcome the obstacle of his own bad record. Burchard helped, the Independents helped, the Stalwarts helped, and the Prohibitionists helped, but the real force which defeated Blaine was Blaine himself. He had created during his twenty years of public life a public distrust too deep to be overcome by even the most formidable combination of political wiles, money, and treachery ever organized in this country.

Now that it is all over, we should like to ask the respectable merchants of this city who gave their votes to Grant for Mayor in return for Tammany votes for Blaine, what they think of themselves. Many of them did this thing and made no disguise of it. Their excuse was that it was necessary to save the country from free trade, and that if free trade came, their business would be ruined. All through the dry-goods district this argument was used, and thousands of votes were given to Grant as a result of it. Admitting, though it is not true, that the election of Cleveland will bring free trade and consequent business injury to these merchants, what did their action really amount to? For private business reasons they did everything in their power to deliver the city over to a gang of thieves. To make a continuation of their own profits sure, they were willing that the whole city should have the burden of heavy taxation due to the plundering of its treasury for "political purposes." Was that patriotic conduct? They see now that Cleveland is elected, and that there is no danger of free trade. The United States Senate has a Republican majority so large that it is not likely to pass into Democratic control during Cleveland's Administration. If a free-trade bill were to pass the House, therefore, it could not get through the Senate. Suppose that the votes of these merchants had elected John Kelly's candidate, as well as Cleveland, how would they feel now?

Mr. Theodore Roosevelt is fast getting rid of the remarkable reputation—remarkable for so young a man—which he acquired by two years of hard and useful work in Albany. In fact, we have rarely known any one to get rid of so much in so short a time, for he only began to unload in July last. He amused both his friends and enemies here during the latter days of the canvass, by the liberality with which he showered certificates of good character and promise of "support" on candidates for all sorts of city offices, after he himself had failed to get a nomination. Within a few days he has been interviewed at St. Paul, on his way to his ranch, when he explained, with fulness and certainty, the causes of Blaine's defeat, warned Cleveland against "the blatant folly" of putting Conkling into his Cabinet, certified to the "honesty" of the givers of the Delmonico dinner, and went so far as to say that he was "inclined to give the New York Independents, or a majority of them, credit for conscientiousness," but refused to certify that they were "very valuable" to the Republican party. Those who defeated his friend and prototype, Mr. Cabot Lodge, in Massachusetts, he distinctly pronounces not "conscientious." This is all very sad as well as ludicrous, but is explicable enough. It was not unnatural for Mr. Roosevelt, on receiving so much praise as he did for his industry, persistence, and moral pluck, to conclude that people prized him also for his wisdom, or, in other words, thought him a political philosopher. But this was a mistake. Nobody expected a gentleman twenty-six years old to be, after two years of public life, anything in the nature of a sage. What is disappointing people now is not that Mr. Roosevelt is not a great thinker or observer, but that he has not more faith in honesty, and does not know how to wait and keep silent.

The formal decision made on Tuesday by the Metropolitan Bank to retire from business has been inevitable for several months. Public confidence in the bank was so completely destroyed by the discovery of the methods which its President, George I. Seney, had employed, that even his retirement and the election of an irreproachable man to be his successor had no effect to restore it. Its shares dropped from $150 to $25, and business could not be induced to return to it. The depositors will be paid in full, but the stockholders will lose heavily for their confidence in Mr. Seney, it being estimated that they will not be able to realize more than $25 a share. This disastrous outcome will be a solemn warning to all people to be shy of financial institutions which mingle loud professions of piety with their system of management. Mr. Seney was a "liberal giver" to all sorts of religious enterprises, and while he was designing and executing the most daring railway speculations with one hand, he was building churches and chapels and nourishing theological seminaries with the other. When his right hand discovered what his left hand was doing, there was a great crash, in which the Methodist religion and the stockholders of the Metropolitan Bank were both badly damaged.

The Catering Company has failed, as every one who ever ate its dinners knew it must, because its catering was badly done. The theory on which the company was conducted appeared to be, that, for the sake of getting rid of their cooks, families would submit to any fraud, no matter how gross, upon their palates. There was no doubt something in this idea, but it was pushed too far. Food was purchased of that nondescript variety which to some tastes suggests veal, to others chicken, and to others no particular species of animal, and then further disguised in a greasy fluid of a dark-brown color served at a lukewarm temperature. Fish was treated, as the artists say, in the same way. Pieces of that universal nameless fish which is found in the waters of all restaurants, but which is never seen alive or whole, were sent round caked in a rich coating of bread-crumbs, though in this case the object was not to disguise but to furnish a flavor. Soups were furnished also, but the soup was open to the same objections that ordinary cook-soup is, and what these are, we certainly need not mention. On the whole, the dinner, though one which no cook not specially trained for the work could possibly have produced, was, in some respects, worse than the sort of dinner that the cook in her savage state prepares without training or knowledge of any kind.

Another point which the Catering Company overlooked was, that a dinner needs to be served hot. The company pretended to have a service of fleet messengers, partly a hot-cart service, and, for houses near by, a running-boy service. How the hot-cart service worked we do not know, but we have been informed that the boy-service was imperfect, owing to the practice which prevailed among the boys of sitting down and "resting" while on their routes. In the winter a dinner put down in the snow while the messenger rests, is certain to come in less hot than it should be, and a dinner originally bad, which is first cooled off in the snow and then heated over again in the family kitchen, is hardly a dinner which many people want. The fact that few people wanted such dinners as the Catering Company furnished is no doubt the secret of its failure.

We trust that the Pope may soon find time to inquire into the results of Mgr. Capel's mission here, and especially into the "Hopkins-Capel controversy," which appears to be an inter-prelatic conflict of a very ferocious and also mysterious nature. It seems that on October 31, the Rev. J. H. Hopkins received from Mgr. Capel, to whom he refers by the very inappropriate title of "domestic prelate," a telegram as follows: "To Rev. J. H. Hopkins: Notwithstanding my letter, your article is being sold without correcting false statement. I must insist on a suspension of sale till corrected, or hold you responsible for damages. Mgr. Capel." In answer to this, Mr. Hopkins refused to suspend the sale of his article, and he now calls Mgr. Capel's attention to the fact that the latter is bound by his telegram to commence proceedings at law for damages. He adds, "Why don't you do it? I am ready. You do not flinch from your own proposal already, do you?" He predicts, at the same time, that if the action is brought "the great American public will have more than one hearty laugh." The *Herald*, with unconscious irony, declares that it cannot give up any more space to the dispute, because it "properly belongs to the religious press."

Stocks still continue to do better than was expected of them, notwithstanding the election of Cleveland. All the dividend-paying stocks seem to have improved since the talk of a contest has died out. The United States would be a strange country if the prospect of settled, decent government did not make both the moneyed and laboring classes feel more secure. The best of it is that we are sure that any improvement made now will "come to stay." There will be no fictitious inflation, based on the capture of the Presidency by a gang of stock-jobbers, and the prospect that they would set to work to stimulate a revival of trade by sheer "bull" magnetism.

John Bright has written a letter about free trade which may be made the basis for a stirring campaign document for Blaine in 1888. He says that since the adoption of free trade by England the price of food and hours of labor have diminished, while wages have been doubled, and that, although trade in England is momentarily depressed, the depression is far greater in protectionist countries like Russia, France, and America. He thinks, and we publish the fact boldly, that "the recent overthrow of the party of protection and monopoly in America may prove to be a great blessing, and when England and America have embraced the policy of free industry the whole fabric of monopoly throughout the world will totter to its downfall." Our advice to the *Tribune* is to publish this frightful prediction in black letters in all parts of its columns, and to announce at once by cable the rumored fitting out by the dreaded Cobden Club in England of an armed expedition for the closing of all the manufactories and iron furnaces in America. This would be much more stirring "news" than the attempt to show that the "old Rebel yell" is ringing through every State in the South, and that every negro there is in mortal terror of being put back into slavery.

Some rather trivial stories about Cardinal Newman's career as a tutor at Oxford sixty years ago have made their appearance in the lately published memoirs of Lord Malmesbury, representing him as having been a sort of butt to the undergraduates, and the victim of many practical jokes. The Cardinal has thought it worth while to correct some of them and contradict others, in a letter to the London *Daily News*. He mentions in it the striking and instructive fact that these unruly undergraduates were at that time compelled by the college rules to take the sacrament regularly, just as they are now compelled by American colleges to attend prayers every morning. One of the young men, knowing what he did know of his companions, was so shocked by this that he wrote a pamphlet to protest against it, and was answered on the other side by one of the tutors. Dr. Newman adds, "My own similar remonstrance in 1826-7 had the same unsuccessful issue." There is, however, really no more impropriety in compelling an irreverent young man to take the communion, no matter what he thinks or feels about it, than to attend daily public prayers. The former is undoubtedly more shocking in its external aspect, but both are acts of worship, and to anybody who remembers what religious people consider worship to be, there can be no difference worth mention between compulsory performance in one case and in the other. Compulsory communion has long been given up in England both for young and old, and people look back on it now with horror, as they will here, we have no doubt, before long, in American colleges, on compulsory prayer, by mocking or sleepy youths.

Dress reform has led to the introduction of a new garment, which a reformer writing to the *Pall Mall Gazette* says "has been worn in Paris and London." It is said to "closely follow the shape of the body," and to be "to a petticoat what a glove with fingers is to a baby's mitten." It is made of soft merino, "suitable for wearing next to the skin"; but then it is also made "as a second garment, and worn over the first one," and, as we understand it, a third garment, "either divided or not," goes over these two, making the costume perhaps better adapted to high than low latitudes, for the writer adds, "these three garments are all that is necessary." As to the divided skirt, "which is the natural outcome of the combination," there is said to be no difficulty in so adapting it to the changing fashions of the day as to make it "identical in appearance with the ordinary skirt." This is not the true reform spirit, however. The real dress reformer wants something which not only is different, but looks different, from anything ever worn.

A telegram from St. Petersburg announces the occupation by Russian troops of Kungrad, an important town in northern Khiva, on the ground of repeated violations by the Khan of the treaty of 1873, and of his ordinary misrule. It is added that the Khan's proved incapacity as a ruler will render it necessary to pension him and place the Khanate under Russian administration. This is, in fact, a final winding up of his unfortunate relations with the Empire of the White Czar, which Seid Mohammed has repeatedly asked of the conquerors, since his defeat by General Kauffmann in 1873, which left him a powerless and helpless vassal, with all the responsibilities and anxieties of nominal independence. Regard for England, and the convenience of leaving the greater part of the trouble with the Tekkes to the Asiatic Prince, induced Russia to delay this consummation. Both considerations have lost their importance. All the divisions of the Tekke Turkomans are now, since the recent submission of the Merv oasis, under the direct sway of the Czar; and England, engaged and perplexed as she is by her difficulties in Africa, is certainly not in a mood to protest against Russian doings in Central Asia, which cannot be construed as, though they may help to pave the way for, a further advance toward India. The formal annexation of the Khanate of Khiva has long been deemed only a question of time, and whether the Russian Government proclaims it now or later is, in fact, perfectly indifferent, from an international point of view. Similar is the case with Bokhara, but this Khanate has the advantage of not being completely enveloped by Russian possessions, and of being of greater interest to both Russia and England by bordering on the northern dependencies of Afghanistan. Ere long—such is the inexorable geographical law which shapes the destinies of what was formerly Independent Turkestan—the last of the Khans will have "to go." No anti-Russian power can be durably propped up north of the Hindoo-Koosh.

The probabilities are that there is no foundation for the rumors of General Gordon's death. On the 25th of August he was safe and well and full of fight, but Wolseley evidently feels the need of haste. The Nile cataracts are said to be proving more of an obstacle to his advance than he anticipated, but all the stories about his expedition are colored by politics. The Tories like to imagine him surrounded by insurmountable difficulties, and accordingly lengthen and deepen the cataracts whenever it seems as if he was getting on too well. To have him and Gladstone do another clever thing would be hard to bear.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 12, to TUESDAY, Nov. 18, 1884, inclusive.]

DOMESTIC.

THE election of Governor Cleveland to the Presidency has been finally admitted by all. The canvass of the vote of New York State confirmed the unofficial figures heretofore printed by the Independent and Democratic press of this city. The last county to complete its canvass was New York. The tedious work proceeded monotonously until Saturday afternoon, when it was practically completed, giving a plurality for the lowest Cleveland Elector, Mr. Ottendorfer, of 43,064. Mr. Ottendorfer ran behind the rest of his ticket at least 100 votes. Cleveland's plurality in the State, on Ottendorfer's vote, is 1,105. There are some few corrections in the city returns yet to be made, which will not materially affect the result. On Sunday the Blaine organs throughout the land conceded Mr. Cleveland's election.

Joseph D. Weeks, Treasurer of the National Republican Committee, telegraphed on Friday to A. M. Clapp, in Washington: "We are by no means hopeless. We have gained 351 over Associated Press figures in this city. We believe the honest vote of this State was given to Mr. Blaine. Will you assist us in showing this?"

The vote of Boston shows that Cleveland ran 7,670 ahead of his ticket in that city.

The vote of Maine complete, excepting ten small towns or plantations, gives Mr. Blaine a plurality of 20,060.

There was a jollification meeting in Tammany Hall on Friday night over the result of the recent election. Ex-Judge Tappan presided and introduced Samuel J. Randall, who spoke of the responsibilities which now rest upon the Democratic party. He was followed by S. S. Cox, who received a boisterous welcome. Then there were cries for John Kelly, whose rising was greeted with uproars of applause. He declared that Tammany had supported Cleveland faithfully, and made an angry attack upon William R. Grace.

A great Democratic celebration was held in Washington on Thursday night. Six thousand men were in the procession. Among the houses illuminated was Mr. Blaine's, on Dupont Circle, which is occupied by Mr. Z. L. Leiter, who is a strong Cleveland man. A torch-bearer was shot and seriously injured by a negro, who was arrested.

The Charleston (S. C.) *News* published on Monday the views of Governor Thompson and twenty-four Democratic County Chairmen in that State as to the effect of Cleveland's election on the political and industrial condition of the South. They say that the election of Cleveland means more money and less politics in South Carolina; that there will be a general revival of industries; that manufactures will be stimulated and developed by the application of additional capital; that the working people will be better paid; that the price of farm lands and of real estate generally will advance; that there will be for the whole people, without distinction of condition or class, an era of political and industrial progress.

It was reported from Rome on Thursday that United States Minister W. W. Astor had resigned his position as soon as he received news of the election of Governor Cleveland. The report was emphatically denied at the State Department in Washington.

A meeting of the Independent Republican Committee of One Hundred of Brooklyn was held on Thursday night in the assembly room of the Academy of Music, in that city. The chair was occupied by Henry W. Maxwell, who said the only question was whether the Committee should dissolve or continue the work. He thought it should remain as a balance of power between the two parties. The Rev. Henry Ward Beecher said he was in favor of the Committee continuing its work. In local matters he was a Republican, he said, but on national questions he proposed to be a Democrat. The Independents had defeated Mr. Blaine and elected Cleveland. It now remained for them to support him if his Administration proved as good as was expected of him. Every man who had helped to elect Cleveland was bound to support him until he forfeited support. A committee of twenty-five was appointed to devise a plan for permanent organization.

The annual report of Second Assistant Postmaster-General Lyman shows that at the close of the last fiscal year more star service was in operation than indicated by an average for the five years next preceding, and performed at a diminished cost. For the year ending June 30 the transportation covered 81,109,052 miles, at a cost of $5,089,941, an average of 6.28 cents per mile; for the five years preceding, the service covered 75,960,055 miles, at a cost of $6,194,820, an average of 8.18 cents per mile.

The annual report of the Commissioner of Pensions for the fiscal year ended June 30, 1884, shows that there were at the close of the year 322,756 pensioners, classified as follows: 218,956 army invalids, 75,836 army widows, minor children, and dependent relatives, 2,616 navy invalids, 1,938 navy widows, minor children, and dependent relatives, 3,898 survivors of the war of 1812, and 19,512 widows of those who served in that war. There were added to the roll during the year the names of 34,192 pensioners, and the names of 1,221 whose pensions had been previously dropped were restored to the roll, making an aggregate of 35,413 pensions added during the year. The aggregate of pensions paid was $34,456,600.

Commodore J. G. Walker, Chief of the Bureau of Navigation, Navy Department, in his annual report to the Secretary of the Navy, recommends an appropriation of $130,000 to provide the best and safest apparatus for navigating, better appliances for lighting ships, and the necessary professional information, without which, he says, it cannot be expected that the officers and men of the navy will keep pace with the changes which are constantly taking place. An appropriation is earnestly urged for new buildings for the Naval Observatory because of the dilapidated condition and unhealthy and improper location of the present buildings.

A petition signed by a number of the most prominent physicians in New York was on Thursday presented to Secretary McCullough, suggesting to him the necessity for immediate action in regard to the importation of old rags through European ports, by which the introduction of Asiatic cholera was made possible. On Saturday the Secretary issued an order prohibiting the importation of old rags after November 20.

The one-hundredth anniversary of the consecration of Bishop Samuel Seabury, the first Bishop of the Protestant Episcopal Church of the United States of America, was commemorated by a service in Trinity Church, in this city, on Friday, attended by many of the clergy of the diocese. It was also celebrated at Hartford, Conn., and St. Paul's Cathedral, London.

The historic monument to commemorate the battle of Monmouth was unveiled at Freehold, N. J., on Thursday with imposing ceremonies.

The remains of John C. Calhoun were on Thursday placed in a granite sarcophagus erected on the site of his old tomb at Charleston, S. C., by the State.

Walter N. Thayer, President of the Workingmen's State Association, has finally accepted the position of Chief Clerk of the Bureau of Labor Statistics of this State, in place of David Healy, resigned.

Attorney-General O'Brien, of this State, has given an opinion that "as the law makes it 'unlawful for any savings bank, directly or indirectly,' to receive from any depositor a sum in excess of $3,000, I am inclined to the opinion that when accumulated interest, by being added to the principal, would increase such principal to a sum greater than $3,000, such addition would be within the prohibition of the statute and unlawful."

The old grading system was abolished at a meeting of the Princeton College Trustees on Thursday, and a system has been adopted which divides the classes into six groups, the first and second of which shall be designated at graduation *magna cum laude* and *cum laude*. Moses Taylor Pyne, of this city, a member of the class of '77, was elected a trustee.

In the first intercollegiate championship football game at Cambridge, Mass., on Saturday, Princeton College defeated Harvard by a score of 36 points to 6.

The double-team record was beaten on Thursday afternoon at the New York Driving Club Park, Isidor Cohnfield's Maxey Cobb and Neta Medium being driven by John Murphy a mile in 2:15¾. The best previous record was 2:16¼.

A shock of earthquake was felt about 7:50 o'clock on Wednesday night in Hopkinton, Hillsborough, Bradford, Warner, and Concord, N. H. It was felt on Thursday morning in Essex County, Ontario.

An express train on the Houston and Texas Central Railway was hurled into the Brazos River, near Hempstead, on Friday morning. Twelve persons were killed and twenty injured. The train was wrecked by tramps.

The Rev. Henry S. Williamson, Rector of St. Paul's Episcopal Church in Trenton, N. J., committed suicide on Thursday by shooting himself. He was a son of ex-Chancellor Williamson, of New Jersey, was graduated at Princeton College in 1879, and was highly esteemed in society and in the church.

William A. Duncan, who was reëlected to Congress in the Nineteenth (Penn.) District on November 4, died at his residence in Gettysburg, on Friday, at the age of forty-eight. He was a Democrat.

George W. Jones, one of the most prominent of Southern Democrats, died in Fayetteville, Tenn., on Friday. Mr. Jones was a delegate to the "Peace Congress" in Washington in 1861. His eighteen years in Congress earned for him the title of "The Watchdog of the Treasury." He served in the Confederate Congress one term, declining a reëlection. He was also a member of the State Constitutional Convention of 1870. Mr. Jones was a warm personal friend of Samuel J. Tilden.

Eli K. Price, the well-known lawyer, died at his home in Philadelphia on Saturday morning in his eighty-eighth year. He was the author of a memoir of his parents, of a legal work, 'Limitations of Actions in Pennsylvania,' and of 'The Family as an Element of Government.'

FOREIGN.

The Franchise Bill passed its first reading in the House of Lords on Thursday.

The Conservative leaders of the House of Lords met at the Marquis of Salisbury's residence at noon on Monday. The Duke of Argyll was at the same time in conference with Mr. Gladstone and Earl Spencer in Downing Street.

Mr. Gladstone, in the House of Commons on Monday evening, said: "The Government desire to pass the Franchise Bill without delay. They cannot enter into any understanding with the Opposition unless they receive an adequate assurance that the bill will be passed this autumn. In that case the Government are ready to make the main provisions or draft of their Redistribution Bill the subject of friendly communication, or they stand ready to introduce the bill into the House of Commons forthwith, and prosecute it with all possible speed. They will make it a vital question with the Government to see that the bill be carried early next year." On Tuesday the Conservatives of both Houses held a meeting and agreed to pass the Franchise Bill, provided the Government would immediately produce a Redistribution Bill satisfactory to both parties. Later in the

day the House of Lords passed the bill through its second reading without division. An effort will be made to postpone the committee stage of the bill for a fortnight.

The London *Daily News* asserts that there will be no dissolution of Parliament this year.

In the House of Commons on Thursday evening the Marquis of Hartington, the Secretary of State for War, read a telegram from General Gordon, dated August 26, as follows: "Khartum—Provisions five months—Shall send Stewart, French, English, Consuls relieve Dongola after destroying Berber." The Marquis of Hartington then moved the question upon the appropriations of $3,375,000 for army and $250,000 for naval expenses incurred in sending a force to Bechuana, and said that the Government did not intend to diminish the available forces for the protection of Natal and Zululand. The bill appropriating $5,000,000 for the expenses of the Nile expedition was passed by a vote of 73 yeas to 17 nays.

Prime Minister Ferry communicated despatches to the French Cabinet on Thursday morning from which it appeared that General Gordon had been shot dead while passing from Khartum to Berber. The British Government knew nothing of the report, and believed it to be a revival of old and exploded rumors. On the same day a Government clerk from Khartum arrived at Alexandria. He said that General Gordon had made frequent attacks upon the Mahdi's forces, and created fearful havoc among them. The Mahdi, he said, had ordered his troops not to kill General Gordon if they had the opportunity, but to take him prisoner that he might be used as a hostage to secure the surrender of Arabi Pasha.

A despatch from Cairo to Reuter's Telegram Company on Saturday said that a letter from General Gordon had been received by Gen. Lord Wolseley, which was dated Khartum, November 4. This letter states that the steamer which bore Colonels Stewart and Power and M. Herbin, the French Consul, and some Greeks left Khartum September 10. Messrs. Hansel and Leonides are safe at Khartum. General Gordon had received letters through Major Kitchener from his sister, from Sir Samuel Baker, and from Mr. Henry M. Stanley. Doubt is expressed in London as to the possibility of the letter having been dated November 4. It is thought that it must have left Khartum on October 4.

General Gordon's latest letter also says his position at Khartum is very secure and that his troops are in excellent spirits. He adds that the Mahdi regularly receives European newspapers, from which he learns the movements of the British troops in Egypt. Orders were received at Cairo on Monday to forward reinforcements up the Nile with great despatch. It is thought that the situation at Dongola is becoming serious.

A despatch from Dongola on Wednesday said that Major Wortley and four attendants had ridden across the desert by way of Selimah. They reported that it is impossible for a hostile force to use this route to cut the English off from their base. Any force which should attempt to pass from Kordofan to upper Egypt would be obliged to strike the Nile at Dongola. Dongola is thus the strategical gate to Egypt, and whoever controls this possesses the key to the situation. It is reported that the loyalty of the Mudir of Dongola is questionable.

Reports from up the Nile show that the Canadian boatmen are experiencing more difficulty in getting the boats up the cataracts than they had anticipated. The muddiness of the water prevents them from seeing the rocks.

A despatch from the Mudir of Dongola on Thursday said that a man who had just reached there from Khartum reported that the Mahdi had established himself at Umderman, on the western bank of the White Nile, a few miles from Khartum, the Egyptian soldiers stationed there being compelled to retreat to Khartum. The Mudir asked for more ammunition.

Mr. George J. Shaw-Lefevre, at present Commissioner of Works and Buildings, has been appointed to succeed the late Mr. Henry Fawcett as Postmaster-General. Mr. Shaw-Lefevre was Postmaster-General *ad interim* in 1882. The appointment of Mr. Thomas Shaw, announced last week, was only temporary.

Lord Dufferin sailed on Wednesday for India to assume his official duties as Viceroy.

The death of Sir George St. Patrick Lawrence is announced. He was a British Lieutenant-General (retired), who had greatly distinguished himself in India, and was 79 years of age.

Australian advices state that the British Commodore of the Australian station, in accordance with instructions, had proceeded to New Guinea, and on November 6 had, with great ceremony, proclaimed a British protectorate over a part of that island. The protectorate covers the southern coast eastward of the one hundred and forty-first meridian of east longitude, and includes the islands adjacent to Southern New Guinea. Settlement in the protectorate will not be permitted at present.

Louisa Devey writes to the London *Standard* that, in consequence of the legal injunction preventing the publication of Lord Lytton's letters to his wife, she will be compelled to rely on other and not less forcible evidence to vindicate Lady Lytton.

Mr. Matthew Arnold is about to resign his position as Inspector of Schools, for the purpose of making an extended tour in America.

At the opening of the Congo Conference in Berlin on Saturday, Prince Bismarck delivered a short speech to the delegates, which was pacific in tone and moderate in character, evidently giving general satisfaction. He alluded in general terms to the "high, beneficent, and pacific aims which the Conference had before it. It had for its object the solution of three main questions: First, free navigation, with freedom of trade, on the Congo River; secondly, free navigation of the Niger River; thirdly, formalities of valid annexation of territory to be observed in future on the continent of Africa. This constituted the positive aim of the Conference. Negatively, the Conference would not concern itself with the present questions of sovereignty." The Chancellor, in conclusion, said he hoped that the labors of the Conference would result in a further increase of peace and good will among nations. Sir Edward Malet, the British commissioner, in replying to the opening speech, echoed the sentiments expressed by Prince Bismarck and accepted the three points proposed as the basis for discussion, with the following reservation: "England," he said, "was quite willing to see the principles of free navigation and the like extended to the Niger, but nevertheless she expected that the surveillance over the exercise of these principles should not be made the business of an international body. That was the duty and privilege of England, as she was the chief, if not the sole, proprietary power on the lower Niger." Prince Bismarck was elected President. It was agreed that the proceedings should be kept secret. The Conference will probably last several weeks.

Portugal has drawn up a memorandum to be submitted to the Conference, insisting on her right to the Congo, and urging that Portuguese treasure and blood had been freely spent to maintain order on the Congo for the benefit of the commerce of all nations.

Despatches received at Shanghai on Saturday reported the capture of Tamsui by the French. The Shanghai correspondent of the London *Times* telegraphed that he had learned from a European source, dated Haiphong, October 30, that the Anamite auxiliaries of the French army had beheaded 500 Chinese prisoners at Kep.

The most recent Chinese advices state that the reported capture of Tamsui by the French is untrue. Admiral Courbet is awaiting the arrival of reinforcements.

The Foo-Choo correspondent of the *Times* telegraphed on Wednesday that the situation there is unchanged. The stoppage of business by the hostilities is causing widespread distress among the lower classes of the Chinese. The tea season is finished, and consequently the loss to Europeans is less than to the natives. The Chinese Government is demanding more money, being unable to meet its expenses, but the natives are unwilling to contribute to its support. Chinese soldiers are arriving in large numbers. There are frequent disputes between the soldiers and the people.

The situation of the French in Tonquin is daily becoming more perilous. The outposts are subject to constant attacks, and great difficulty is experienced in procuring provisions in the territory between Hanoi and Sontay, and daily skirmishes take place. The health of the troops at Bacninh is bad, and numbers of the men are unfit for service.

It was reported on Wednesday that the Court at Pekin had ordered the despatch of Chinese troops to Tonquin to be suspended.

The official report of the French harvest returns for the year shows the following yield: Wheat, 111,141,845 hectolitres, against 103,753,426 hectolitres in 1883; rye, 25,487,587 hectolitres, against 24,842,602 hectolitres in 1883.

The cholera alarm in Paris was much increased on Wednesday. From midnight to noon there were twenty-eight deaths. Two soldiers of the guard at the Élysée Palace were seized with the disease, and one died almost instantly. These cases created a deep sensation. There were eighty-one deaths on Wednesday. The flight of people from Paris on Thursday was great, though there was no panic. Earnest efforts are making to put the city in a good sanitary condition. Deaths have occurred at the outlying villages of Aubervilliers, Clichy, Boulogne, and Pantin.

The epidemic shows little, if any, effect upon the pleasure-seeking proclivities of the people. The theatres and other places of amusement are well filled every night. It is known that the deadly disease has made large ravages among the soldiers of the garrison, but the military officials publish no returns, and refuse all information. The West End is still healthy, but is comparatively deserted. Most of the residents of that quarter have preferred to place themselves at a safe distance from possible infection.

There were 44 deaths from cholera in Paris on Sunday. That night there was a heavy frost, and on Monday the death-rate decreased to 36, and 20 up to Tuesday noon.

MM. Vivenot and Cherpin, French Senators, died on Saturday.

Dr. Stoecker, the court preacher at Berlin, and the well-known anti-Semitic agitator, has been returned to the Reichstag.

The death of Alfred Edmund Brehm, the celebrated German traveller and naturalist, is announced. He was born at Reuthendorf, in Saxe-Weimar, February 21, 1829. Mr. Brehm was the author of numerous works on natural history, the most important of which was his 'Illustrirtes Thierleben,' in six volumes, which has passed through several editions and been translated into various languages.

The immigration returns for October show 11,718 arrivals in Canada, of whom 7,618 were settlers and 4,100 passengers going through Canada to the United States. The total arrivals since January 1 were 138,386, of whom 80,510 were settlers and 57,876 passengers through to the United States.

Peace has been restored in Cundinamarca and Santander, United States of Colombia, owing to the active intervention of the Federal Government. This interference disgusts many of the upholders of "state rights." The town of Guaduas, captured by the rebels, who subsequently laid down their arms, was the scene of many atrocities. A picket of twenty-five men who had defended the schoolhouse for five hours, were slaughtered after surrendering.

THE INDEPENDENT ORGANIZATION.

We are glad to see that both in this and other States steps are being taken to maintain the organizations through which the Independent vote was brought out at the late election. The importance of this vote was made more than ever manifest by the closeness of the struggle between the two great parties in nearly all the Northern States at the late election. But this closeness is not a new thing. It was displayed almost as strikingly in 1876 and in 1880 as this year. We do not propose to discuss here its causes, but the fact is that the two great parties are nearly equal in strength, and show a very striking tendency to remain so. This of itself gives the Independents an importance in the political field out of all proportion to their numbers. It shows, in other words, that a small minority of the voters even in two or three States may have it in their power, if well organized, to determine every four years which of the two great parties shall administer the Government; and if this power be exercised with judgment and moderation, it will undoubtedly increase from year to year by accessions from the thoughtful men of both sides.

The experiment of starting third tickets shortly before the election, as a means of correcting the manners and excesses of the party in power, has not been successful enough to warrant the belief that it will be persisted in to any great extent hereafter. Moreover, the result of the late election shows, we think, that "conscience voting" and abstention, if practised on a large scale, constitute positive public danger. As we ventured to point out in these columns once or twice during the canvass, the ballot is a trust, to be used, not in enabling people to free their minds on any subject, or in expressing their reverence for some estimable person of their acquaintance, but in providing the country with a government. It is, therefore, every man's duty to make his vote tell in this direction to the utmost of his ability, by voting for a candidate who has some chance of being elected, so as to make the majority of such candidate, if he gets a majority, as large as possible, and thus put the result beyond doubt. People who satisfy some whimsy by not voting, or vote for some fancy candidate who is not in the running, help to bring about the close contests between the two real candidates, of which we have just been witnessing an example, and which ought to fill every man and woman in the country with alarm. Any one in this State who voted for Butler, or stayed at home on election day because neither Blaine nor Cleveland was his ideal ruler of a great nation, ought to have felt almost guilty of treason, when he heard that the award of the Presidency was dependent on a few hundred votes either way, which hundreds of politicians would have been glad to buy at any price, and which constituted a temptation such as even good men might well find it difficult to resist. In fact, we think it is no exaggeration to say that there is something awful in the announcement that the Presidency of the United States can be had by figuring five hundred or a thousand votes out of existence; and any one who, by throwing away his vote or not voting, has helped to bring about such a situation, may well consider himself a bad and faithless citizen. In fact, if the late election has taught us anything, it is that, under our system of government as it is now worked, the first duty of every man on election day is to do his utmost to make the result he desires decisive. He has no more business to stay at home because he does not like the candidates, than to skulk in action, if a soldier, because he does not admire his commander or disapproves of his strategy.

The more avowed Independents we have, therefore, the safer we shall be. They will constitute in peace a most useful corps of observers and critics, and, when the day of battle comes, a reinforcement for the better cause, which will decide the fortunes of the day beyond question or cavil. Let us add, too, that the history of the Republican party shows very emphatically the need of making the transfer of power from one party to another easier than it has been. There is a great deal of sound philosophy in the demand for a "change," simply as change. No country can get the full benefit of party government if a change of administration is looked on as little short of a revolution, and something therefore only to be resorted to in the last extremity. No party should be allowed to stay in power long enough to begin to look on itself as the Government, and to treat criticism of it as disloyalty to the country. As soon as signs of this state of mind begin to appear, the party ought to be expelled, for they are sure to be signs of corruption as well, and the expulsion ought to be as simple and easy a process as the assembling of a new Congress. With a reformed civil service, possessing a stable tenure for the subordinate offices, and a powerful body of Independents, ready to give the strength to whichever side promised most for the cause of good government, it would be a perfectly easy process, and the unreasoning party fealty on which the vultures of politics batten, would rapidly diminish. People who vote a party ticket because their fathers voted it or because they have voted it for a quarter of a century, are as much out of place in a free state as trial by battle or strict entails. Hereditary voters are just as absurd an anomaly as hereditary legislators. Government is business, and a very serious business too, and it requires each year to be transacted on the facts of that year, like every other business. In it, as in commerce, no man or party is to be trusted in 1884 on account of what his credit was in 1864, but on account of what it is to-day. Nor does it do to treat an old tramp who has cheated all his friends, and taken to drink, with the respect and confidence which were bestowed on him in his youth, when clean, sober, industrious, energetic, and full of promise.

"TEARS—IDLE TEARS."

We are glad to learn from the *Tribune* that it considers that there were on the Republican side in the late campaign "too many bands and banners, too much coal-oil and excitement, in proportion to the amount of quiet work for the education of the people by the circulation of capable journals, by the distribution of documents, and by missionary effort in school districts." We are also much pleased by the admission that

> "When the Republican party came into being nearly thirty years ago, it gained all its success by patient and earnest appeal to the public intelligence. The peculiar feature of its work was the extraordinary number of school-district meetings, in which the question at issue was thoroughly and repeatedly explained to the voters."

This suggestion also, as to the way in which the party should be managed hereafter, has marks of wisdom about it—tardy wisdom, to be sure, but still wisdom:

> "If the Republican party is to make sure its success at any future time, it needs a change in its methods, and particularly a change in the organization by which campaign work is conducted. It ought to establish, not four years hence, nor two years hence, but now, permanent clubs devoted to the discussion of public questions, and particularly of the tariff question, to the circulation of documents and papers and the education of the people, to the establishment of regular and frequent meetings where public questions may be discussed, not merely by orators brought from elsewhere, but by the people themselves."

As you are now apparently in a reasonable, if not a penitent mood, Esteemed Contemporary, we shall take the liberty of reminding you that for the state of things you deplore, you more than any other one person in the community are to blame. As early as the 7th of April last, when you first began to be active in your boom for Blaine, we remarked to you, with great sweetness, that "it was the duty of all those who do not wish to see the Republican party burdened during the canvass next summer with the hopeless task of whitewashing him, to set forth briefly, now that his boom is becoming so lively, the charges which he will have to answer before he can be elected to the Presidency. It would be lamentable indeed, and certainly disastrous, if the task prescribed for Republican journalists by the Convention should be not the discussion of great questions of public policy, like the tariff, or the civil service, or the railroads, or the currency, but laborious examinations of Mr. James G. Blaine's railroad transactions."

If you had taken a look at that time into the files of the Chicago *Tribune* and Cincinnati *Commercial* and Cincinnati *Gazette*, and indeed nearly all the leading Republican newspapers of 1876 and 1880, during the two former Blaine booms, you would have found precisely the same predictions as to the effect of Blaine's nomination on the canvass. They said with one voice that if he were nominated the summer would be passed not in "the discussion of public questions," but in the discussion of James Gillespie Blaine's rather unsavory private affairs. But you were then proud and haughty, and would not listen to reason. You were sure, no matter what any one said, that when the time came you could get the American people to dismiss your candidate's private affairs wholly from its mind, to treat the character of a candidate for the Presidency as of no consequence, and to pass the summer listening to your lectures on the tariff, and the Cobden Club, and chastity.

Well, you know now perfectly well why your unfortunate managers did not do any "quiet work for the education of the people,"

and why there was little or no "missionary effort in school-district meetings," and why so much money was spent on brass bands, costly banners, and uniformed companies, and so little in "the circulation of documents and papers and the education of the people." The reason was that you failed at the very outset to give the canvass the direction you desired, and that the one subject which the people wished to hear discussed was, from the first, one you dared not discuss. You could not send your orators to the school-district meetings because you knew that what the audiences wanted to hear was an "honorable construction" of the Mulligan letters, and could not be put off, therefore, with accounts of the machinations of the Cobden Club, and with your views about the relative importance of the virtues. They wanted an answer from Blaine to the charges of lying and cheating, and neither you nor he had an answer to give. You were, in other words—both of you—dumb on the main question of the day.

The brass bands, the costly banners, and the uniformed companies were, therefore, not your mistake, but your necessity. You did not spend your money on them because you thought them effective, but because they were the best things within your reach. Your lucubrations on chastity also were, for campaign purposes, about as valuable as the sound of a large trombone. They made no impression on any human mind, but they concealed your embarrassment. The ministers whom you summoned to your aid did not help you, they only covered themselves with shame and ridicule; for what is more shameful and ridiculous than a teacher of morals apologizing for an impenitent liar and deceiver of twenty years' standing, and recommending a great people to give him their greatest trust?

Yes, Esteemed One, it was a wretched and disgraceful canvass, and you, more than any one, helped to make it so. We see you are beginning to be ashamed of it. We hope all your unfortunate coadjutors all over the country, who have, during the past summer, been bringing so much discredit on themselves and on their calling, share your penitence, and are determined, as you seem to be, that nothing of the kind shall ever happen again. Whenever madness overtakes political managers, whenever they forget, in their eagerness for spoils, the great interests of public morality, it is not the business of journalists to become a pack of beagles in their service, and hunt down the game for them. As conventions are now composed and managed, the best defence against digraceful nominations is to be found in the certainty that great newspapers will not support them, will not lie for them, or pervert, or suppress, or evade for them, or do anything whatever to postpone the destruction which, as long as voters have consciences, is sure in the long run to overtake them.

THE PROSPECTS OF CIVIL-SERVICE REFORM.

Mr. Dorman B. Eaton has been interviewed at considerable length as to the prospects of civil-service reform under the new Democratic Administration, and on the whole takes a very favorable view of it. But he does not believe that the new rules will be enforced "with such enlarging breadth of application, and such moral support from the party in power, as would have been the case had President Arthur been reëlected, and probably had Mr. Blaine succeeded." Mr. Eaton's fears are, in the first place, based on a misuse of the term "party in power." This term is constantly used in this country in the English sense, as meaning the party which controls the legislature and initiates all legislation, when what is really meant is simply the party which has possession of the Administration. As a matter of fact, there will be no "party in power" at Washington in the former sense when Mr. Cleveland enters the White House. The Democrats will have possession of the chief executive office and of the House, but the Senate will be Republican. Neither party, therefore, can carry out any policy needing legislation without the aid of the other. The Democrats have by the election gained nothing whatever in the way of lawmaking. What they have gained is the power of administering the laws, and when estimating the prospects of civil-service reform, what we have to consider is rather the character of the chief officer than the character of the party which stands or is supposed to stand behind him.

As regards the attitude of the two parties respectively toward this reform, we think it may be best described by saying that its best friends have been the Democratic leaders and the Republican rank and file, its worst foes the Republican leaders and the Democratic rank and file. The trouble with the Republican party for the last fourteen years has been that, although it was overflowing with virtue and intelligence, it never could bring them to bear on the administration of the Government. Both meandered copiously through the press and the platform, but the men of action at Washington made merry over them. In nothing was this barrenness of Republican goodness more strikingly displayed than in the dealings of the chief men with civil-service reform. President Grant, as soon as he became a politician, treated it with open contempt. Blaine, when Speaker, took pains, in the formation of the Committees which were to deal with it, to break it down and make it ridiculous. The leading Republicans of both houses, in fact, down to 1882, spoke of it and its advocates with scorn or pity. President Hayes, after going into office as its champion *par excellence*, committed or permitted the most shameful violations of it. President Arthur gave it no real countenance till the whirlwind which overwhelmed his candidate in this State in 1882, enabled a Democratic Senator to push through the present legislation on the subject. Almost as soon as it was passed he began to exhibit the most flagrant disregard of its principles with regard to offices not actually covered by its provisions. Of what happened during President Garfield's and Blaine's short reign we do not need to speak. There never was less civil-service reform at the White House than during this brief period. Blaine's use of his newly-acquired patronage, in particular, furnished examples of nearly everything but reform. Indeed, one of the most striking facts of our recent history is the gradual and almost complete failure of the morality and moral energy of the Republican party to act on the Administration—the natural result, let us add, of a long tenure of office not dependent on good behavior.

Now let us see what the contribution of the Democratic leaders to the work of reform has been. In considering it we have to bear in mind that they have been suffering for twenty years from an abuse which in any country and under any system of appointment would rouse bitter discontent—we mean the filling of vacancies in the public service, even the judgeships, from one party exclusively. This has been an outrageous abuse, which the Democrats have borne with a good temper that no party anywhere has ever before displayed. The present Civil-Service Act, which virtually keeps in office all competent Republican incumbents, was introduced and pushed through by a Democratic Senator at the cost of his popularity in his own State, and had, we believe, the support of all his leading colleagues, and was voted for by a majority of Democrats in both houses. The Civil-Service Act of this State, which on some points is more stringent than the Federal Act, was passed by a Democratic Legislature, and was at once put in force, and has been administered with good faith and efficiency by a Democratic Governor.

The option, given by the Act of 1883, of adopting civil-service principles in cities, was used by the Mayors of three Democratic cities, New York, Brooklyn, and Buffalo, but not by the Mayor of a single Republican city. True, Mayor Low was a Republican, but he was elected by Democratic votes.

Finally, the Democratic party in New York took the management of the State prisons out of politics. A Democratic Governor, Tilden, appointed a trained prison superintendent to manage them. A Republican Governor, Cornell, displaced him and appointed a trained politician to run them.

In view of these facts, we do not well see why Mr. Eaton should feel less hopeful about the cause, under present circumstances, than he would have felt if Mr. Arthur had been reëlected or Mr. Blaine elected. In truth we can, in view of Blaine's career, hardly conceive of a more impressive declaration of indifference to the reform on the part of the people than Blaine's election would have been, and we know of no public man who would more joyfully have taken advantage of it than he. As Mr. Eaton observes, nearly every leading Democrat, "Bayard, Pendleton, Lamar, Garland, Carlisle, Randall, Cox, Morrison, Tucker, Hewitt, Willis, and others, have spoken and voted for the Civil-Service Act, and will stand by the new President in its support." Can anybody mention eleven men of similar standing in the Republican party of whom the same may be said?

VITROLLES AND THE BOURBON RESTORATION.*

Paris, November 5, 1884.

The third volume of the memoirs of the Baron de Vitrolles is not inferior in interest to the first

* See the *Nation*, Nos. 973, 975.

two volumes. It opens at Vincennes. The old castle brought to mind the young Duc d'Enghien. Vitrolles had known of him, had seen him in all the bloom of youth; it was there that the last representative of a great race had been taken by the gendarmes of Savary and shot in the night, after a mock trial. The Governor of Vincennes was General Daumesnil, *à la jambe de bois*. He received Vitrolles politely, and took him in person to his cell in the donjon. The fate of the Duc d'Enghien was before Vitrolles. He was left alone, without any news. After a few days the papers were sent to him; he learned that he was excepted from the general amnesty given by Napoleon, and waited quietly for events: he was preparing for death, and looked through the bars of his prison on the sky and on the country, as if every day would be his last. After twenty days' detention a personage unknown to him came to Vincennes and took him to Paris, to the military prison of the Abbaye; there he was lodged in a cell, with a policeman who did not leave him by day or night. He received there the visit of his daughter Amélie, and learned that his wife had gone to Ghent, and that negotiations were going on for his exchange for Princess Eliza, the sister of Napoleon. Mme. de Vitrolles was now in Paris, moving heaven and earth for her husband. Queen Hortense tried to say a word to Napoleon in favor of Vitrolles. "What does he want—to be shot?" was all his answer.

After a while Vitrolles had more comfortable quarters, and, in order to calm his anxiety, he could find no better means than to learn Russian—not an easy task, as the Russian grammar gives 120 declensions, and conjugations without number. "Six weeks afterward," he says, "I dined at the table of the Emperor Alexander, next to Count Nesselrode. I told him of this recreation of my captivity, and, in order to show him an *échantillon* of my knowledge, I began to recite to him the famous letter of King Philip to Aristotle, in a language of which I had never heard a word. It was laughable and he laughed heartily. I pronounced, he said, like a baby of two or three years."

One morning, Madame de Vitrolles entered the prison and gave her husband the first confused news of Waterloo. Bonaparte was back in Paris. He had gone to the Élysée, had taken a bath, and called for the ministers—among them, Fouché, the Minister of Police. Bonaparte consented to abdicate; the Chambers accepted his abdication, without mentioning the condition which he had made, the accession of Napoleon II. They named a provisory government, composed of the Duc de Vicence, Carnot, General Grenier, and Quinette, and presided over by Fouché. The Duke of Otranto became in reality the master of the situation; he sent for Madame de Vitrolles and told her: "I must absolutely see your husband. I will await him to-morrow morning at seven o'clock." Vitrolles emerged again from darkness to light; he was *l'homme de Roi*, and he had to negotiate with *l'homme de la Révolution*. He had hardly left his prison when Marshal Gouvion-St.-Cyr came to assure him of his devotion to the King, as did also General Dessoles. He made all his preparations to go to Ghent, and the next morning, at seven, he was with Fouché. "Go and visit the King," said the arch-intriguer; "tell him that we are working in his service, and though we shall not walk very straight, we shall reach him in the end. At present we must go through Napoleon II., and probably afterwards through the Duc d'Orléans; but finally we shall get to him." "I could not," says Vitrolles, "believe my own ears: 'What,' said I, impetuously, 'this is where you are? You do not think this unhappy crown of France has been dragged enough in the mud, and you want to place it on other heads?—and what heads!'" The conversation continued in this familiar and almost cynical vein. Vitrolles, instead of going to Ghent, offered to remain in Paris. "Ah," said Fouché, "that is an idea. The poor little royalists of Paris will be enchanted. You will be for them like the white flag floating in the Place Vendôme. At any rate, your head will be on the same hook as mine, and I must tell you that mine is well threatened. All the fanatics of the army, the Flahauts, the Exelmans, have sworn to do me an ill turn." He offered him fifty passports, as many as he liked, to use them as he pleased, and told him he would see him two or three times a day.

Fouché understood perfectly that Napoleon had become impossible. All he wanted was to make conditions, this time with the Bourbons—to make his weight felt; and Vitrolles was an excellent instrument in his hands. So Vitrolles remained in Paris, and his first object was to have the King proclaimed before the entrance of the Allies. It was not an easy task. The Chamber elected during the Hundred Days had very democratic tendencies; the House of Peers was timid. Fouché alone understood the necessities of the occasion, but the other members of the Provisional Government did not agree with him. Fortunately, the Allied Sovereigns were determined to accept no other candidate to the throne of France than Louis XVIII.: Wellington had been very explicit on this point after Waterloo. But there was a great disposition to leave a part to the Conventional and regicide Fouché in this second restoration of the legitimate King. It was thought to be the only way of reconciling the Bourbons with their subjects, and the Monarchy with the Revolution. So Fouché was obliged to help the King, and the King to help Fouché. Vitrolles relates with the most minute details the negotiations which finally brought about this extraordinary union.

Meanwhile the Allied troops had occupied Paris, and the National Guard, commanded by Marshal Masséna, was on duty with the foreigners, and kept the tricolor cockade. The Chamber was closed by a few National Guards, by order of Fouché; and Louis XVIII. arrived from Belgium with the slowness which belonged to his character, and which he thought to be a part of his dignity. On his way he composed a Cabinet, placing Talleyrand in the Foreign Office, and giving the other places to M. Pasquier, M. Louis, the Duc de Feltre, Marshal Macdonald, and M. Beugnot. Several ministries were kept purposely vacant; the great favorite of the King, M. de Blacas, was obliged to leave him at Tournai, and was sent as Ambassador to Rome. Beugnot went to make a visit to the favorite, when this decision became known. "I do not pity you, sir," he said to him, "but I pity the King. How isolated he will be when you are away from him." "Ah, my poor Beugnot," said Blacas, "you don't know what is the friendship of a King; I am sure that in a month he will be consoled." Here M. Beugnot laughed when he told the story. "He was mistaken," he added; "he was mistaken by twenty-seven days. After three days, not a thought was left for the man who had so long enjoyed his favor."

Vitrolles saw the King for the first time on his return at the Château d'Arnonville. He was received with open arms by the Comte d'Artois and the Duc de Berry, and when he arrived before the King, he says: "I seized his hand, which I wished to kiss; he would not let me, and kissed me himself on both my cheeks. Tears, true tears, were in his eyes. He ended by saying: 'Happy are those who have suffered, for the Kingdom of Heaven is reserved for them.'" This promised nothing for the kingdom of earth. On leaving the King's Cabinet, Vitrolles met the Duke of Wellington, who accosted him at once in his laconic way: "Well, it seems to me that all our questions are reduced to two: Fouché and the tricolor cockade." After a little conversation, the tricolor cockade was given up and Fouché was kept. The purest Legitimists swore by him at the time; he was regarded as a saviour. The King did not share in the general enthusiasm, but nevertheless accepted the necessity of Fouché. He sent the day afterwards for Vitrolles, and, "'Do you know,' he said, 'that Prince Talleyrand and the Duke of Wellington have just left for Neuilly, where they will have a conference with the Duke of Otranto?' 'Yes, Sire, Talleyrand has just told me.' 'Do you know what instructions I have given them?' 'No, Sire.' 'Well, I told them: Go to Neuilly. You will see the Duke of Otranto. Do all you think good for my service, only spare me, and remember that this is my virginity.'" Fouché had said to Vitrolles that he hoped to be allowed to remain in France without being molested. Vitrolles thought that it was unwise and improper to give a place in the Cabinet to a regicide, but Talleyrand insisted, and on the 9th of July the King signed the nomination of a Cabinet in which Talleyrand kept the Foreign Affairs and Fouché was made Minister of Police.

The minister of the general police in these times had under him a prefect of police, and this place was given to a then obscure lawyer, M. Decazes, of Libourne. The young and handsome Gascon soon ingratiated himself with the King, whom he saw every day; he was not long in finding out that the King had only accepted Talleyrand and Fouché as a necessity of the times, and he began to undermine their influence. When Talleyrand became aware of a secret hostility between Fouché and Decazes, he thought that the time had come to throw Fouché overboard. As for himself, he thought that his tenure of office could not be threatened; he had really been the heart and soul of all the political movements during the Hundred Days. The American mission was offered to Fouché as a compensation; he refused it, and asked for Dresden, and offered his resignation as Minister of Police. The new Chamber was very royalist in its sentiments, and it was thought that the Cabinet could not appear before it with Fouché. Talleyrand went to see the King, and told him with much solemnity that the position of the ministry was becoming difficult at the moment when arrangements for a new treaty of peace with the Allies were beginning. Europe would not be as generous as in 1814; the nations and the armies claimed compensations. There was some talk of an alteration of the frontiers. Europe would have guarantees for the future; this terrible negotiation was beginning with a new Chamber, ignorant of public affairs. "As for us," said Talleyrand, "we could not face such a difficult situation if your Majesty did not give us a formal support. If this could not be, we would ask the King this very day to choose new councillors." Talleyrand meant nothing but a change in the Cabinet. He was ready to sacrifice Fouché, and in order to establish his influence, he had spoken more peremptorily than usual. He did not quite understand Louis XVIII. His language had offended the King, who remained silent for a few moments, looking at the ceiling of the room. "Well," said he, finally, with the greatest tranquillity, "I will take a new Cabinet." Talleyrand bowed, and retired.

Louis XVIII. kept Vitrolles by him, as a sort of Secretary of the King as well as of the Cabinet. The Duc de Richelieu was charged with the mission of forming a new administration. He had spent all the period of the emigration in Russia. To those who told Louis XVIII. that he was unknown, he answered, "Major a longinquo reverentia." The current bon-mot of the time was that M. de Richelieu was the man of France who

best knew the Crimea. We shall see what became of Vitrolles under this new administration.

Correspondence.

WOMEN AND POLITICS.

To the Editor of The Nation:

Sir: Is this an impartial sheet after all? Can it hit the mark so often in the centre, and again fall so wide of it? I should think once was enough to quote what some silly woman in the *Woman's Journal* used as a defence for Blaine. Does the *Nation* think the best ability and profoundest thought of womankind are represented in this woman's organ? I, for one, have long ceased to subscribe for it; I outgrew it in my swaddling-clothes, so to speak. It seems, from your article on the first page of the issue of November 6, that you have fully measured the thinking minds of women, on politics—and find them wanting. This is too bad! I can recall as many women as men who have turned from their party as now represented by Blaineism, and done noble work for Cleveland—unbaffled by the reports and some evidence that his chastity was at fault. These women have as fully measured and sifted the two men, and what they promise to the nation, as the Independent masculine minds. Perhaps such women have not done their full duty in not speaking through the press during the campaign. Many of us are accustomed to read and think much; but writing with force is an art acquired only with much practice, and if our work and duties lie in other fields, we will not write unless it is forced upon us, and then we do not show our full strength as independent thinkers.

The men, divines and business men, who well know the trust placed in the hands of a Speaker in the House, are quite on a par with—or even below—the woman or women who see their way to thought and estimation of a man through Senator Hoar and Edwin D. Mead, when they say, as I have heard several avow, that they have read all the Mulligan letters, and are unable to detect anything derogatory to Blaine as "an honest, upright man in every particular." It is to be devoutly hoped that this campaign will teach both men and women a lasting lesson, and strengthen "their powers of analysis and comparison in the fields both of logic and ethics."

A Pupil of The Nation.

Dover, N. H., November 10, 1884.

MR. BLAINE'S PECULIAR CANVASS.

To the Editor of The Nation:

Sir: In the course of his somewhat elaborate address in Boston on the night before the election, Mr. Blaine made this statement:

"I have never apologized or explained why I took what many closest friends regarded as an extraordinary step, in going before the public as a Presidential candidate somewhat more frequently and extensively than has been the habit of those chosen candidates of the great parties. But I here say now that I did it—and I desire to put this on record—because the peculiar character of the canvass was the personal justification of it."

If you will permit me to say so, it seems to me that you ought to further Mr. Blaine's desire and "put this on record"—as a striking final illustration of the insincere and pretentious character of his candidacy. We have here his own word for it that he entered upon his extensive tour in order to defend himself against "personal" attacks. How did he go about it? Charged with having trafficked in legislative influence, Mr. Blaine went up and down the country to tell the people that the tariff has tripled the national wealth in twenty years. Confronted with his Monroe Doctrine bluster, he gave extracts from the statistics of agriculture, interlarded with flattering bits of local history or reminiscence. Charged with crookedness in the Landreau business, he asked his hearers if they wanted all the mills to shut down. Reminded of his surplus-revenue letter, he spoke of possible Democratic success as leading to "an overturning and great organic changes in the Government." Asked to reconcile his letters to Bundy and Denison, he playfully told the striking miners of the Hocking Valley that "they must expect 'a streak of lean with a streak of fat.'"

Permit me to subscribe myself,

A Bolting Republican.

Michigan, November 8, 1884.

ONE PHASE OF THE OUTLOOK.

To the Editor of The Nation:

Sir: *Harper's Weekly* is no doubt right in saying that the ultimate effects of Cleveland's election cannot yet be foreseen—so multitudinous and diverse are the interests through which these effects will ramify. But it seems to me impossible not to feel that its effects on the future of the Republican party depend in no minor degree on the course of the Republican leaders and the Republican press during the next six, or at most twelve, months. Among the many "lessons of the election" is not this an obvious one, that the American people are ready to smooth out and iron down "the bloody shirt," do it up with care and camphor, and put it away in the back closet of party politics? Not that the nation's heart for one moment throbs less true to the Union or the cause of universal freedom than it did twelve, sixteen, or twenty years ago, but simply that the plain, practical men who make up (as may they long continue to make up) the great mass of our voters, have come to regard the settlement of the war issues as safe beyond the possibility of undoing; and, further, to require of political parties that their aspirations and endeavors "fall in" with the soul of Capt. John Brown, and keep marching on.

That this, at any rate, is the attitude of mind in which most Independent Republicans find themselves, the morning after victory, is, I think, very certain. They are satisfied that in no shape whatever is the principle of secession any more an issue in American politics than the "peculiar institution" is a factor in American industry or a problem in American sociology. With all their heart they believe in progress—a movement straightforward, that is, and not round and round in a circle, like the wheelings of a hunted ostrich, or the wanderings of some lost wretch in a snowstorm. They have their convictions, and the "courage of them" too. Nobody crusades more vigorously than they. But it is against the living hordes of despoiling infidels that they demand to be led, not against those elder evaporated infidels, the mummies of the Pharaohs.

In forecasting the future of the Republican party no one can with reason shut his eyes to two things. One is that for the party to forfeit permanently the confidence of its "Independent" element would be a fatal blow to its every prospect of recovered ascendancy. The other is that the influential and steadily increasing class of voters in question can never be rallied around the ghost of a dead past. They will, as heretofore, fight in the front rank, but they will insist on being placed face to face with existing verities, real issues, living questions. The party that leaves them the most free, and gives them the best opportunity for working out what they believe to be their own and the country's salvation, is the party they will support, the party which their decisive vote will place or maintain in power.

Will that party be the Republican? Will its doctors of the law and Talmud-wise scribes be able to discern the signs of the times? Is it capable of "rising on stepping-stones of its dead self to higher things"? I, for one, shall await the unfolding of its plans and policy in the new sphere of "the opposition" with solicitous interest.

Meanwhile, what shall we say to the Mumbo-Jumbos of journalism in New York, in Chicago, in Cincinnati, who are still loudly mouthing "the Solid South" and "the Rebel yell," as though these outworn catch phrases embodied the profoundest and the saintliest of human wisdom, instead of being, in their *present* application, little better than mere gibberish? This much at least: "Such veteran Nimrods in the field of politics as you are, ought to show more skill. You should better know the habits of your game. They are too old birds, these Independents, to be caught with chaff from a thrice-beaten sheaf, or frightened by a scarecrow rigged out in their own discarded feathers." E. Hannaford.

St. Louis, Mo., November 15, 1884.

MR. EVARTS'S BARRATRY OR CHAMPERTY.

To the Editor of The Nation:

Sir: The London *Law Times* of June 21, referring to the condition of the legal profession in England, says:

"The circular from the Attorney-General asking the bar for increased support to the Barristers' Benevolent Association ought to receive a hearty response from those who have means. But the fact is, very few barristers have means. The number of those who earn a decent living appears every year to diminish, and at the present moment it may be safely said that the dearth of new business is unprecedented. On the other hand, the number of distressed members increases."

It is well known that the same condition of thing prevails in America, and it is impossible not to perceive how the steady diminution of legitimate business—and the constant increase in the number of those annually admitted to the bar—tend to stimulate unwarranted and unworthy litigation, and to lower the tone of the profession. Under this pernicious influence, not a few hitherto respectable lawyers seem to have forgotten that the catalogue of crime includes the offence known as barratry, and have turned their attention to spying out grievances—real or imaginary—which they kindly take up "on spec,' after the fashion of Dodson & Fogg.

The Hon. William M. Evarts can scarcely be numbered among the "distressed members" of the American bar, nor can the suspicion be entertained that the demoralization to which I have alluded extends to one of its reputed leaders; but in his connection with the legal measures which have been advised or threatened in New York to aid in counting Cleveland out and Blaine in, he certainly appears oblivious to the offence of barratry. This offence is defined to be "the frequent exciting and stirring up suits and quarrels, either in the courts or in the country, as by taking and keeping possession of lands in controversy, or by spreading false rumors whereby discord and disquiet may grow among neighbors." If this offence is worthy of prohibition and punishment by the law when the subject is a mere private right, and the contestants are individuals only, how much more richly does it merit condemnation and punishment when the stake is empire, and half the nation is arrayed on each side.

No one can be convicted of a single act of barratry. The charge and the proof must be that the accused is a *common barrator*. It seems that three distinct acts must be shown to make out

the offence, and as, up to this date, Mr. Evarts scores only *two*—namely, the successful attack upon Tilden in 1876, and the threatened attack upon Cleveland in 1884—he is not chargeable with barratry.

But there is another offence, known as champerty, or "the maintenance of another in his suit on condition to have part of the thing in dispute," which is not so difficult of proof generally, and as to which Mr. Evarts's record is by no means clear. When he accepted the position of Secretary of State, as the result of his maintenance of the anomalous proceedings under which Mr. Hayes's seat as President was obtained, most unbiassed persons thought, and many of his admirers feared, he could not escape the taint of suspicion; and when he embarked in the scheme of Mr. Blaine and Mr. Elkins to defeat again the popular will as expressed by the ballot-box, he gave confirmation alike to the opinion of his political foes and the fears of his friends, that he had lent himself to the doctrine that in politics bargain and corruption are neither punishable nor reprehensible.

But, however this may be according to the popular standard, Mr. Evarts should know that in the eyes of that part of the country to which his position as a leader of the American bar should cause him to turn for vindication, the stain upon his reputation is one which not all the waters of Lethe can wash out.

Yours respectfully,

JAMES A. PEARCE.

CHESTERTOWN, MD., November 15, 1884.

Notes.

DR. O. W. HOLMES will open a "New Portfolio" in the *Atlantic* for the coming year—a series of papers whose contents are not otherwise indicated than by the title just quoted.

"Trajan," a serial story cut off untimely by the cessation of the *Manhattan*, will be published in book form, complete, by Cassell & Co.

Mr. Edmund Gosse, who has recently succeeded Mr. Leslie Stephen in the Clark Lectureship on English Literature at Cambridge, is about to visit this country to deliver a course of Lowell lectures in Boston on Tuesdays and Fridays of the first, second, and third weeks in December. The title of the course will be "From Shakspere to Pope," and the subject of it may broadly be said to be the rise and development of the classical school of English poetry in the seventeenth century. It will be divided into the following lectures: 1. Poetry at the death of Shakspere. 2. Waller and Sacharissa. 3. The Exiles. 4. Davenant and Cowley. 5. The Reaction. 6. The Restoration. The same course will be delivered in January at Johns Hopkins University; and a shorter course on "Gray and the Recent History of His Writings," a subject to which Mr. Gosse has recently been giving special attention, has also been prepared by him for the Baltimore audience.

Stenographic notes of Sir William Thomson's eighteen lectures on "Molecular Dynamics," delivered last month at the Johns Hopkins University, have been reproduced (with additions subsequently made by the lecturer) by the Papyrograph Plate Process, and will be issued in a limited edition by the Publication Agency of the University. A special bibliography is included. The form is 4to, pp. 350.

We noticed early in the present year a suggestive article in the *Overland Monthly*, by Mr. John Johnson, on "Rudimentary Society Among Boys," drawn from his own experience as an instructor in the McDonogh (Md.) Institute. Mr. Johnson followed up the first by a second article, on "Judicial Procedure among Boys," and has now elaborated both so as to take a place in the second series of the Johns Hopkins University Studies in Historical and Political Science. Boys furnish so many evidences of an inchoate civilization that it cannot be said that Dr. Adams has admitted a merely curious or irrelevant contribution to the series which he edits. The December issue, on "Land Laws of Mining Camps," by Charles Howard Shinn, will complete the present series of Studies. A third is already announced, with contents relating to local and municipal government, State and national institutions, and American economic history.

So considerable has been the inquiry for Mr. Rowland Hazard's address before the Washington County (R. I.) Agricultural Society, since our brief account of it, that he has been led to reprint it in pamphlet form (Providence). His subject was the tariff, especially in its relation to the woollen industry, in its broadest sense, and his point of view that of a manufacturer who is supposed to be "protected." It marks the distortion of the reasoning faculty which sixty years of protectionism has produced, that this discourse was objected to as out of place ("in bad taste") on the special occasion for which it was prepared—as if farmers had nothing to do with the tariff, or as if the subject belonged exclusively to the domain of party politics. The statistics which Mr. Hazard presents deserve the widest attention.

We can now do little more than acknowledge the receipt of the second number of the American series of papers of the Archæological Institute of America, namely, Mr. A. F. Bandelier's report of his archæological tour in Mexico in 1881. It is mainly occupied with the account of researches about Cholula and Mitla. It is little creditable to our country that such researches as are here recorded are perforce limited by the means at the disposal of the Institute, when so much money is wasted in the satisfaction of national vanity with no definite purpose or intelligence to guide it. The report contains numerous illustrations, mostly photographic, and suggests that there is now no reason for any scientific explorer not being a good photographer. The negatives of these illustrations, with two or three exceptions of the carved monuments at Mexico, even making allowance for the heliotype falling off from the original, must have been very defective.

We have before us a prospectus of the Anglo-American Baconian Society, dated October, 1884, which shows that the promoters of it are not given up to the sole object of inquiring whether Shakspere's plays were not written by Francis Bacon. The platform, which is tentative still, is broad enough to take in any one who has a remote interest in the English "philosopher, lawyer, essayist, and poet."

Mr. Edward Roth's 'Complete Index to Littell's Living Age' (Philadelphia, 1135 Pine Street) has now reached No. 5 of Volume I—*Marie Thérèse–Andrew Murray.*

The Manchester (Eng.) *Quarterly* for October devotes some twenty-five pages to the bibliography of the town for 1883. Mr. W. E. A. Axon's article on "Byron's Influence on English Literature" may also be called bibliographical as well as critical; and in the former category may further be placed Mr. Richard Bagot's tribute to H. K. Browne ("Phiz"), which is illustrated by several facsimiles of Browne's designs for Dickens's works, one being engraved by Mr. Bagot himself.

Some time ago we reported that an exhibition of loaned books would be held at the University of California, Berkeley. This actually took place in the last week in May, and now we receive a catalogue of it. The 470 numbers are introduced by MSS., No. 1 being a Siamese ballad, No. 25 Bret Harte's "Heathen Chinee," No. 27 Seyppel's "Schlau, Schläuer, am Schläusten" (by courtesy classed as a manuscript, as are some other printed works relating to the art of illumination, miniatures, etc.). The next department is of Block Printing, where the only genuine specimens are Oriental. The number of Incunabula exhibited was considerable and the works interesting; Sebastian Brandt leading off in order, though not earliest in date. The subsequent arrangement is by countries, Mr. Hubert H. Bancroft lending from his remarkable collection four works printed in Mexico before 1572. Book Illustration and Binding were well exhibited. Several indexes complete this valuable record of a very creditable display.

The 'Biblioteca Dantesca Scartazziniana-Ferrucciana,' issued by Hoepli, in Milan (New York: Westermann), as No. 21 of his antiquarian catalogues, embraces 1,149 numbers. Though a priced catalogue, it has an intrinsic value to the Dante student.

Mr. Christern sends us the prospectus of the official publication of Botticelli's designs for Dante's 'Divine Comedy,' under the auspices of the Royal Museum at Berlin and the special direction of Friedrich Lippmann. These designs, partly sketched in metal alone, partly executed also with the pen, and one being washed in, were, together with the Dante codex on the reverse of whose text pages they occurred, the spoils of the Hamilton collection; and to make them public is an act of great generosity on the part of the Prussian authorities. They are eighty-three in number. The paper employed in the reproduction will imitate the original parchment. The plates will be issued in three lots, beginning with the present month, and a brief explanatory letter-press will accompany the completed series.

Stormonth's English Dictionary, in its Franklin Square dress, reaches the word *Person* with Part 14.

A selection from the translations by Sir Theodore Martin and Edgar A. Bowring of Heine's 'Book of Songs' (White, Stokes & Allen) does not, of course, mean the best that could be made. Still, one may be glad to own this little volume. No date is attached to the preface, but the reader of it will divine that "recently" does not refer to the immediate past, else the failure to make use of the just published Memoirs of Heine for the biographical sketch would be inexcusable.

White, Stokes & Allen have developed the old-fashioned Christmas card into four thin quarto silk-fringed volumes containing each a series of poems and of illustrations, the latter printed in excellent chromo-lithography—"A Bunch of Roses," "From Moor to Glen," "Pansies and Orchids," and "Roses and Forget-Me-Nots"—and collectively known as "The Flower Song Series." Each contains eight to twelve poems and four illustrations, besides the illuminated cover, of which that to "From Moor to Glen" has the most successful reproduction of autumn leaves we have yet seen.

We have from Houghton, Mifflin & Co., Boston, four new calendars—a Longfellow, a Holmes, a Whittier, and an Emerson—each displaying a fairly good chromo portrait of the poet to whom it is dedicated, with the usual decorative surroundings. A bevy of pretty girls, not in the usual garb even of the Athens of America, are crowning the silvered head of the Autocrat with roses; Emerson is brooded over by the shadow of the pine, Longfellow is attended by the genius of Poetry with a laurel wreath, and Whittier is placed between Maud Muller and Mabel Martin.

Prang & Co. dip into the animal creation for the subjects of their Christmas cards, and the bear, the owl, the cat, the turtle, and the hare furnish the subject-matter. Three singing damsels give a "joyous Christmas" in the same package.

A pamphlet entitled "The Azoic System and its Proposed Subdivisions," by J. D. Whitney and M. E. Wadsworth, recently published by the Cambridge Museum of Comparative Zoölogy as one of its bulletins, purports to give the views entertained up to this time by American and Canadian geologists with regard to the oldest, and consequently most obscure, of the geological formations, generally known as the Archæan. This is done partly by actual quotations—in general, short and fragmentary—and partly by summarized statements of the authors of the pamphlets. The names quoted comprise all the most well-known geologists of the country, and their views upon this subject are shown to be, with surprising uniformity, valueless, if not actually inconsistent and absurd. The views of the authors of the pamphlets, on the other hand, though not very clearly stated here, are shown to be the only true ones, but seem to have been singularly ignored by the rest of their confrères. This is evidently wrong, and it is to be hoped that the labors of these gentlemen, in correcting the errors of the rest of the geological world, will in time receive their merited recognition and reward.

In the double number, 112, 113, of the *Zeitschrift* of the Berlin Geographical Society (Dietrich Reimer) is a large-scale colored map of the island of Mindanao, with the administrative and ethnographical divisions appropriately designated, the accompanying article on this comparatively little-known island being by F. Blumentritt. The geography of the Loo-Choo (Liu-Chiu) Islands, between Formosa and Japan, is discussed with the aid of Japanese sources by F. George Müller-Beeck, and illustrated by a chart drawn from the British Admiralty series. The *Verhandlungen* of the same society (No. 6, 7, of vol. xi) contains a discourse on the rise of the Mahdi, by R. Buchta, who suggests that Gordon has been overrated by his own countrymen.

Science for November 14 gives a useful map (after Wyld) of the seat of war in the Sudan, as an accompaniment, however, rather to the paper on the "Navigation of the Nile," by Mr. Charles P. Stone, than to that on "A Mussulman Propaganda" (the Brotherhood of the Senusians), by Mr. W. H. Dall.

An entertaining article in the *Revue Suisse*, on the origin of family names, concludes with a prophecy. Families are continually dying out—at least in the male line. Inevitably family names must die with them. The common names will of course remain—all the branches of the family cannot die; but the rarer names will disappear. We shall be reduced to a dead level of Smith, Jones, Dubois, Martin, Legros, Legras, Leblond, Lenoir. It is an inexpressibly dreary idea, that of living in a world composed of Jones, Brown, and Robinson. But fortunately it is not to be feared. M. de Verdilhac is a false prophet. Convenience alone, if no other reason, would compel some of the too numerous Smiths or the Joneses to take other names. The family appellations that had died out would come into use again, just as a title in the English peerage may be taken up again and again by different families when the attainder of the sovereign or of nature has for the time being left no one to bear it.

—We very much regret the publication, on p. 419 of our last issue, of a criticism on No. 13 of the Professional Papers of the Signal Service, the injustice of which has since been made evident to us. While we do not impugn the good-faith of the reviewer, we cannot account for the errors both of fact and of judgment to which he committed himself and us.

—In the collection of American poetry put together by the late C. Fiske Harris, one of the departments which cost the least money, and which in some respects possesses the greatest value, was that devoted to the fugitive song-books of the war and of the successive Presidential campaigns. Little pamphlets like these are almost as difficult to rescue from destruction as the vagrant broadside, and we trust those to whom the collection is now confided will continue to pay special attention to this department, for the benefit of the future historian of American manners, to whom the "Plumed Knight Blaine and Logan Campaign Songster"—if haply such a work may exist—will furnish information to be sought elsewhere in vain. We trust, also, that there is some collector devoting himself to the gathering of the curiosities of the successive campaigns—badges, medals, canes, caricatures, circulars, pamphlets, broadsides, "posters," and "documents" of all sorts. To this collector we recommend two of the most original outbreaks of American newspaper humor with which we are acquainted. There is an absurd phrase, now, for a little space, familiar in men's mouths as household words, which permits a man to declare in his joy that he will "paint the town red." On Saturday, November 8, the joyful editor of the *Evening News* of Norfolk, Va., proceeded to "paint the *News* red," by issuing it on paper of a painfully brilliant crimson. The same idea seems to have struck the editor of the Whitehall (N. Y.) *Times*, who sent forth his paper of Wednesday, November 12, also "painted red," but this time by means of red ink and white paper, a combination more merciful to the eyes than that of the Virginian editor. Both papers are freely emblazoned with the crowing cock of triumph. To these should be added the recent issue of the New York *Tribune* containing the "Star-Spangled Banner" as a pæan of victory.

— In the current number of the *Revue de Belgique* we find a forcibly written review of Belgian history under the enigmatical title of "L'Inconnu." From the writer's point of view, Belgian history begins in 1788, when the country awoke from a sleep of centuries to defeat the reforms of its Austrian sovereign. The intended changes were well meant, and would have had, in the ordinary course of things, a beneficial effect. As, however, the Low Countries were so soon to be overrun, and for so long a time held, by the French, the efforts of Joseph II. in the direction of administrative reform would, in any event, have proved useless. But the revolution of 1788 is none the less important as illustrative of the spirit and tendency of Belgian history, and the point to be noted is that though the nobility and clergy, whose privileges were diminished in favor of the Government and, incidentally, of the people, were the only parties aggrieved, the revolution was due to the "unknown element," whose existence was previously unsuspected. 1830 was, substantially, a repetition of 1788, the Government measures which formed the occasion or excuse for the rising being in themselves advantageous. Both movements were, so to say, a convulsive stretching of the limbs of the body politic, produced far more by the internal need of expansion than from any pressure or irritation from without. They were leaps in the dark, the objects finally attained, at least in the second instance, being by no means definitely aimed at. The point here made is that great political movements in Belgium proceed from "the unknown"; that they are as little foreseen or understood by natives as by foreigners; that they are neither Catholic nor anti-Catholic, neither French nor Flemish, neither high nor low in their origin, but universal, the product of a national instinct which, diverse as are the sections of the population, unites them all.

— But it is very strange that with comparative freedom for centuries, and positive liberty for three generations, the Belgian people should be, politically speaking, so undeveloped that it is incapable of understanding, much less of advocating or supporting, any political programme. All it can do is to treat the party in power as responsible for whatever evils it is conscious of, though the remedy may be worse than the disease. What, asks our author, was the cause of the present eruption of this volcanic people? To him, the answer is easy, but its correctness is yet to be proved. It is that the Belgians have become conscious of their want of national dignity and the decay of their prosperity. Since 1830 they have been treated by Europe, not as owners of their country, but as mere tenants at will. This has destroyed or prevented the growth of independence of thought as well as of freedom of action.

"Not to go back further than twenty years, there is not another people, large or small, which has not been engaged in some manly and invigorating enterprise. Despite their losses and sacrifices, other nations have developed, have grown stronger, while we, who have had no misfortunes, run no risks, have seen our national position crumble away beneath our feet. . . . While we dared not move for fear of attracting our neighbors' attention, Russia, Hungary, America, the La Plata States, have ruined our farmers, Holland has killed our commerce, England and Germany our metal industry, France our manufacture of articles of luxury."

Unfortunate as is the immediate result, the present disturbed state, the writer thinks, is to be hailed as a necessary preliminary of progress.

— Two successive numbers of the *Revue Critique* have contained articles on its Oriental editor, Stanislas Guyard, who has just died, at the age of thirty-eight—as Renan says, speaking in the name of the College of France, "the youngest, the most promising, the most loved among us." "Love of the public good," Renan says afterward, "the abstract sentiment of duty, formed the only motives of his life. Alas, he was too perfect, and when one has arrived at that extreme degree of disinterestedness, the earth no longer has hold enough upon one; one is too ready, at the least sign, to leave it. A hunger for work possessed him; it destroyed for him the possibility of repose. When he thought of so many fine things that were still to be done, when he saw the harvest so good and the reapers so few, he was seized with a sort of fever, he undertook the work of ten men. Fatigue soon brought insomnia and the loss of power to labor; for him incapacity to labor was death." Guyard's thoughts were directed to the field in which he so distinguished himself by the circumstances of his boyhood, part of which was passed in Russia. His father was one of the teachers in a house where young Persian gentlemen were educated. Guyard learned both languages, and the two elements in the latter, Aryan and Semitic, so excited his curiosity that he learned Sanskrit and Arabic. With such a set of tools, and with great curiosity and indefatigable perseverance, a man may go far in philology. His tastes led him into investigations of little interest to the general public—Arabic irregular plurals, for instance, or the Sufic theory of predestination and free-will—and he had not Renan's attractive style. But to Oriental scholars his papers are invaluable. His treatise on Arabic metres, in which his strong taste for music was of the greatest assistance, is the standard work on the subject. Of late years he gave his chief attention to Assyriology. In the great dispute between the Accadians and the anti-Accadians, to which we have several times alluded, in which MM. Oppert and Halévy are the chief opponents, he at first was a believer in Accad, but soon changed his opinion. James Darmesteter has taken his post as Oriental editor of the *Revue Critique;* but the cause of the elevation of France by learning will not so easily find one to replace Guyard. His loss is equalled only by that of Charles Graux.

—We have received (Paris: Hachette) the second volume of Reinach's 'Manuel de Philologie Classique,' which ends the work. This volume is a complete appendix, admirably arranged, to the first volume—a mass of references and notes on all subjects or publications connected with classical philology and archæology, which, in its compactness, thoroughness, and orderliness, is a monument of scientific erudition. There is lacking in the reference, so far as we can discover, no article in any journal even in part devoted to the science with which the manual deals: English, German, French, Italian, American, Russian, Greek, Swiss, and Scandinavian journals are brought under contribution; nothing seems so insignificant as to escape the encyclopædic eye of the author. An extract from the preface will show the spirit in which he has undertaken his work; only a prolonged study can discover the measure of his success:

"I have desired to place within reach of everybody, condensed in a few pages, the fruit of many years of work, in the hope that those who may come after me will profit by my labor and save themselves a part of the toil which the composition of this Manual has cost me. Now that my work is done, I may in truth say with the poet, 'This book is the whole of my youth'; but I cannot say with him, 'I have composed it almost without intending it.' For seven years I have read no book or scientific review without asking myself what profit I could draw from my reading, either for the completion of the Manual or for the determination of some uncertain conclusions; and in this uninterrupted pursuit of documents over the vast field of philology, the consciousness of the services which I might render has alone preserved me from discouragement and fatigue."

The entire preface is an essay on archæological study which no student can read without feeling his blood quickened by the passionate devotion to science which breathes through it, or without recognizing the profound humility before science of the truly scientific mind, fitly expressed in the author's own words: "When a philologue decides to give in its integrity to the public the entire storehouse of the facts which he has collected under difficulties, he may without regret add to this gratuity the sacrifice of his *amour propre*." In M. Reinach's case, any such sacrifice will surely be bread cast upon the waters.

—It was a great triumph for Mrs. Stowe when her 'Uncle Tom's Cabin' was translated into some two dozen languages. It was, perhaps, as great a triumph for Baldassare Castiglione's 'Il Cortigiano' to be translated into half-a-dozen. Applying to the duties of courtiers the same treatment that a long line of writers, beginning with Thomas Aquinas and ending with Machiavel, and embracing Colonna, Occleve, Pontanus, Beroaldus, and Elyot, had applied to princes, but adding a portraiture of aulic manners which naturally introduced a popular satire, it attained a great vogue, and must have had a very considerable influence. Within twenty years of its publication in 1528 it was reprinted ten times, and as many editions have been issued since. Besides this it undoubtedly gave rise to Girolamo Sessa's 'Il Cortigiano,' written in 1534, and imitated in the Spanish prelate Antonio de Guevara's 'Menosprecio de la Corte y Alabanza de la Aldea' (1591), which went through half-a-dozen editions and was translated into Italian, French, German, and English. Besides which there were several other works of less note on the same theme, the 'De Aula' of Guillelmus Insulanus, for instance. Among the other imitations of Castiglione was the 'Dworzanin Polski,' that is, the 'Polish Courtier,' of Lukasz Górnicki, which has just been described in a book on Górnicki by R. Löwenfeld (Breslau, Koebner). The 'Polish Courtier,' it appears, is not a translation, but a very free imitation; the characters are true Polish gentlemen, and their manners and habits of thought are exactly depicted, so that it is a trustworthy and entertaining picture of the times.

CARLYLE IN LONDON.

Thomas Carlyle: a History of His Life in London. 1834-1881. By James Anthony Froude, M.A. Two volumes in one. Charles Scribner's Sons. 1884.

The Same. [Illustrated.] Harper & Bros.

In Carlyle's 'Reminiscences,' his wife's correspondence, the Carlyle-Emerson correspondence, and in Mr. Froude's biography, we have altogether as complete a picture of a literary life as that which has been preserved for us in the case of any of the writers of our century. We might add, most of the literary men of other centuries; for, with one exception, we recall no man of the first distinction whose memorials have been so thoroughly and unsparingly turned over to the public. Boswell was, however, more successful in his task than Mr. Froude has proved, for he succeeded, if somewhat at his own expense, in making his master loved and admired. Mr. Froude has an unfortunate facility for making us dislike himself and Carlyle at the same time. This is no doubt in part due to his extraordinary want of tact in bringing in, for no purpose that can be clearly made out, the hard life led by Carlyle's wife—the facts showing the boorish inconsiderateness with which she was treated by him, and in these volumes the temporary estrangement between the two caused by the behavior of another woman. So far does Mr. Froude carry his researches in the domestic field, that he is able to tell us now that toward the end of her life Mrs. Carlyle almost came to think that her husband's affection was totally gone, though he kindly adds that the misunderstanding on this subject was cleared up afterward by Carlyle's improved behavior. By dragging in all the details of Carlyle's domestic life, Mr. Froude has succeeded in making an interesting book; but the interest is in part that of a tragedy, in which we sympathize with the victim, Mrs. Carlyle.

Mr. Froude, to meet the criticisms brought out by the previous Carlyle publication, has attempted to do what is extremely difficult in the case of a teacher like Carlyle, to construct a theory of his philosophy. Intellectually, he professed no creed of any kind. Religion he had none, and yet he attacked all the prevailing creeds of his time. Political economy he denounced much as a mediæval priest might have denounced astronomy; radicalism and democracy he thought to be shams, and "mothers of dead dogs." Utilitarianism was so repulsive to him that his loathing for it severed him completely from one of his earliest friends. Philanthropy, reform, progress, he made constant fun of. What was his own view of life? What was the secret that he thought he had found, and was always preaching to his contemporaries? Mr. Froude says:

"To the Scotch people and to the Puritan part of the English, the Jewish history contained a faithful account of the dealings of God with man in all countries and in all ages. As long as men kept God's commandments it was well with them; when they forgot God's commandments and followed after wealth and enjoyment, the wrath of God fell upon them. Commerce, manufactures, intellectual enlightenment, political liberty, outward pretences of religiosity, all that modern nations mean when they speak of wealth and progress and improvement, were but Moloch or Astarte in a new disguise, and now as then it was impossible to serve God and Baal. In some form or other retribution would come, wherever the hearts of men were set on material prosperity.

"To this simple creed Carlyle adhered as the central principle of all his thoughts. The outward shell of it had broken. He had ceased to believe in miracles and supernatural interpositions. But to him the natural was the supernatural, and the tales of signs and wonders had risen out of the efforts of men to realize the deepest of truths to themselves. The Jewish history was the symbol of all history. All nations in all ages were under the same dispensation. We did not come into the world with rights which we were entitled to claim, but with duties which we were ordered to do. Rights men had none, save to be governed justly. Duties waited for them everywhere. Their business was to find what those duties were and faithfully fulfil them. So and only so the commonwealth could prosper; only so would they be working in harmony with nature; only so would nature answer them with peace and happiness. Of forms of government, 'that which was best administered was best.' Any form would answer where there was justice between man and man. Constitutions, Bills of Rights, and such like were no substitutes for justice, and could not further justice till men were themselves just. They must *seek first* God's kingdom, they must be loyally obedient to the law which was written in their consciences; or, though miracles had ceased, or had never been, there were forces in the universe terrible as the thunders of Sinai or Assyrian armies, which would bring them to their senses or else destroy them. The French Revolution was the last and most signal example of 'God's revenge.' The world was not made that the rich might enjoy themselves while the poor toiled and suffered. On such terms society itself was not allowed to exist. The film of habit on which it rested would burst through, and hunger and fury would rise up and bring to judgment the unhappy ones whose business it had been to guide and govern, and had not guided and had not governed."

In other words, Carlyle was at heart a Scotch Calvinist, thoroughly filled with the spirit of the Old Testament, and feeling a strong "call" upon him to summon erring man back to God. A great deal of the old Hebraistic fervor he undoubtedly had, but if he had confined himself to preaching what Mr. Froude sets down as his simple creed, he would have had few hearers. He resembled all true prophets in another way, that he felt the mundane order of things to be wrong. It was God against the world (inspired by the devil), and he was God's man. It is curious how he always assumes that he is inspired; that he has a message to deliver; that he has something to say to the world which is of the last importance to "get uttered," and how when it comes out it always appears to involve the assumption that the world and civilization, as they exist, are entirely wrong. This idea, which has come down to us through the Scripture, is still a living superstition in the East, where saviours and redeemers are still continually expected, and not only expected but appearing, ready to upset the existing order and bring in a reign of universal truth. Carlyle and Emerson both had a natural tendency towards indulgence in this superstition. In Emerson it predisposed him to a mild optimism, in Carlyle to a ferocious pessimism which included in its contempt even the philosophy of his friend and fellow-seer.

If this be a correct and fair view of Carlyle, he was a curious species of Hebraistic survival in the midst of Western society. He was not in any sense a Christian. Not only had he no belief in Christianity as a religious scheme, but Christian ethics did not interest him in the least. Love your neighbor as yourself, do as you would be done by, make your guiding motives in life unselfish—these were not maxims that he cared anything about. The "justice" that he thought people entitled to was a sort of hangman's justice; and the "duties" that he continually preached were duties owed by man, not to his fellow-man, but to God. The reason he fastened upon the French Revolution as a significant historical epoch was that he considered the downfall of the French monarchy as a marked instance of "God's revenge," that is, of direct interposition and punishment of the wicked—exactly the notion of a temporal providence that runs through the whole of the Old Testament; and it is curious to notice that toward the end of his life we find him ex-

pressing some dissatisfaction with the Almighty for not having done anything of importance in the same way since.

Thoroughly Calvinistic was Carlyle's state of self-torment, which in his letters and journals he is continually bringing forward as the matter of the most interest to his correspondents or to posterity. He "wrestled" in secret with the powers of evil, much as one of his Scotch ancestors might have done, except that as he had no definite religious creed, his task was not, as theirs would have been, to save his soul from eternal damnation. His pictures of his own mental agony are rather those of a soul already lost, and doomed to a kind of death in life. Consequently these torments come to nothing, yield us nothing in reading about them, except a curious kind of distress, and a curiosity which is never satisfied.

There is certainly nothing more beautiful in the teachings of the Christian Church, nor in the lives of the best men and women who have made the name of Christian memorable, than the discovery that the secret of happiness is unselfishness, and that an altruistic motive in human relations is the key to the performance of duty to God. It may be, as some people contend, that this motive could never have been made so powerful in the Christian world, if it had not been that immortality had been promised as an offset to earthly self-abnegation; and those who believe this might certainly find a powerful argument in their favor in Carlyle's life, for he never clearly believed in immortality, and there is little or no sign of altruism in his writings: "justice" is with him, as we have said, but another name for punishment. So we find him shocking the tender heart of Margaret Fuller, accustomed to life in a country where democracy and social equality had begun to give men almost a feminine belief in self-sacrifice, and alienating Mill, who, if brought up without any religion, imbibed the Christian spirit with that of the age in which he lived.

Carlyle's love of Truth was evidently in great part hatred of the world around him. Nothing could show this more clearly than his estimate of his contemporaries, his friends and acquaintances. To take a few instances at random from these volumes, Mill he found to be a "stunted" man, Leigh Hunt "dwarfed and dislocated into the merest imbecility," Babbage "eminently unpleasant to me, with his frog mouth and viper eyes, with his hide-bound wooden irony, and the acridest egotism looking through it," Mérimée a "wooden pedant," Coleridge "a weak, diffusive, weltering, ineffectual man," Macaulay "essentially irremediable" and "commonplace"—"all that was in him gone to the tongue." This gallery of Carlyle portraits of contemporaries might be increased indefinitely. Is it Truth which makes the letters and journals from which they are taken such entertaining reading? If all our means of knowledge about these men were gone except such as is contained in the Carlyle publications, what an extraordinary idea should we have of them. Not a word to show that he appreciated what they really were or had done—nothing like intelligent criticism; simply the expression of the cordial dislike of a literary man not yet at the top of the tree to those above him—envy, hatred, and malice masquerading in the guise of Truth.

But it was with things and opinions exactly as it was with persons. Carlyle hated cordially any belief and opinion with which he came in contact. What he hated most of all was science and the scientific way of looking at things. He also hated and despised art, apparently because he heard great numbers of people talking about it, for he was as ignorant of it as a Zulu. He invented, in order that he might administer a sounder drubbing to the political economists, a theory that there was a positive antagonism between political economy and Christianity, which the injudicious Mr. Froude thus formulizes: "Christianity tells us that we are not to care for the things of the earth; political economy is concerned with nothing else. Christianity says that the desire to make money is the root of all evil; political economy says that the more each man struggles to 'make money,' the better for the commonwealth." This, to be sure, is the translation of Carlyle by Mr. Froude, not his original language; but it must represent with some fairness the fundamental delusion which pervaded all his writing about the "dismal science." He hated political economy because he thought it a rival system to his own. There is nothing to show that he really knew, any better than Mr. Froude does, what political economy is; but there is something very *naïf* about the ignorance which has led to a condensation of Adam Smith in the above grotesque form.

There is no doubt that in his early life Carlyle sounded a sort of trumpet-call to battle, which seemed to rouse the world from the lethargy in which it was sunk. Truth is undoubtedly the battle-cry of our day and generation in science, in art, in criticism, in politics, even in religion. The first question asked of any inherited belief and any inherited institution is, How far is it true, how far does it rest on fact, or superstition, or prejudice? We should not forget, in the repulsion from him caused by Mr. Froude's unfortunate publications, that though we now cannot quite understand how it was, Carlyle's message, when it was first delivered, went to men's hearts and consciences, and roused them to lives of thought and action which were much finer than his own.

AN ANTIQUARIAN STOREHOUSE.

The Gentleman's Magazine Library: being a Classified Collection of the Chief Contents of the *Gentleman's Magazine* from 1731 to 1868. Edited by George Lawrence Gomme, F.S.A., Vol. I. Manners and Customs. Vol. II. Dialect Proverbs and Word-lore. Boston: Houghton, Mifflin & Co. 1884.

THERE is no heap from which a "find," of more or less worth, may not be hoped; and all the more when the heap is made up of the outpourings, through a monthly magazine, for nearly a hundred and fifty years, of thinking, and asking, and doubting, and objecting, and suggesting, by a good many men able to read and write, and eager to read and write before the world. The minds of men, mostly, as we must all confess—even the minds of men who read and write for the world—are pretty humdrum, some of them pretty stupid; but, on the other hand, there are, of course, some clever minds among so many. Taking them altogether, clever, stupid, humdrum, there must be, out of their best in a century and a half, a good deal of entertainment, and a good deal of information, and at least a little fun. From the *Gentleman's Magazine*, in England, which had a great many years of very uniform life, and a life of its own sort, such a gathering is now in the making; of which two taking-looking volumes have already come out under the name given at the head of this article. Gibbon it was, at Lausanne, who first, after the magazine had been going on for two generations, proposed the publishing of a collection from it of articles of general interest. Twenty years afterwards something of this sort was tried; but in the shape of selections, not of a "collection," as here.

The constituency of writers and readers belonging to the *Gentleman's Magazine* have been widely scattered over England (with Wales) and over Scotland, and even Ireland. Among them have been university-men, squires, parsons in country and city, porers in books; busy men snatching at a little refreshment, between-whiles, from their work; sharp-set, nag-riding old searchers; plodders on foot, in leggings, with crab-tree cudgels; and idle, and busy-idle men, by whom the great amount of random, aimless, or loosely-aimed reading is done, and who now and then hit something. Here are descriptions of places and peoples; old and odd ways of life, and worship, and marriage, and burial, and speech; fairs and frolickings; queer signs of inns; names made strangely the worse or the better in getting out of old time into new, or in getting through from outlandish speech into homely English; dialects lasting on with a wondrous tang in them of Saxon or Norse. Here are bits of history, too, sometimes thrust up sharply, and accounts of books not often or easily seen.

We can readily see the scurrying and scouring over a steadfast kingdom, like Great Britain, which changes only very slowly and unwillingly; we can see the slow-browsing country-folk suddenly possessed by a thought, or a doubt, or a wanting to know, as by a gadfly, and uttering their question, as soon as may be, by help of Mr. Urban's magazine; we can see the pen scratching upon paper to give to so many readers some new thing which the writers have just found out, or to answer some question, or to question some other's answer. Sometimes we have the satisfaction of onlookers, in seeing questions and answers go straight to the target's eye, well-barbed, and stick. Sometimes here, as in other compendious exhibitions of human nature, as in railway ticket-offices, or the like, answers are patient and respectful; sometimes uncommon-wise and sententious; sometimes snappish and scornful. Sometimes those who undertake, in a self-satisfied way, to settle things, show themselves to know absurdly less than the first starters of a question. The stock, of all kinds, in the *Gentleman's Magazine*, thrown in by willing hands, in all these years, is large.

Philology, which is only just coming of age, of course appears, in the volumes before us, as in its teens or under; but men are here with good guesses and sensible thoughts, and sometimes a pretty good eye will catch for itself the gleam of a bit of intelligence in the midst of a reading in Old English, or some provincial dialect. (Take as an example of this, in simple shape, on page 160 of Volume I., "Zif him luste"—*if it please him.* The initial *z* is for *y*—as in "zemen" for yeomen. Now read *g* for *y*—for they are among the interchangeables, and the Scotch show us the very thing, in their "gif" or "gin"—and we have an easy etymology for our little conjunction "if." Give that it please him, or gin that it please him, is simply *grant that it please him*, or, *granted that it please him.*) The English of 500 years ago is a thorough treat, as we find it here in a good, large bit of a treatise on hunting.

By the plan of this book, the articles, from all the dates, which bear upon any one subject, are brought together. Paul Gemsege (Dr. Samuel Pegge, twisted) who, as an antiquarian ought, lived to be himself an antiquity and stretched his one life nearly through the seventeenth century, from end to end, may, with an article written at the time of the Scotch Rebellion, "in the Forty-five," meet Flora McDonald's son, John, or another, writing in the first quarter of this century, and Professor J. B. Mayor, whom we know for his classical and archaic work, writing in our time. We readers, coming into the assemblage of writers, from 1731 to 1868, find ourselves in what is a narrow circle, indeed, but is one of the concentric circles of the "Everlasting Now." It is as if we were all no further away from each other than is stem from stern of one small deck. So, the queerest or the hatefullest old customs suddenly caught sight of by a man of George

Second's time (and that lump of bad swine's-flesh gave name to our time, as well as English time, once) comes up also under our eyes as freshly as a "Portogee man-o'-war," or a tumbling porpoise, or the ugly fin of a man-eating shark, at sea.

And the customs so seen are sometimes very queer indeed, or very shocking. Thus the tenure of land is a tolerably serious matter wherever land can be held; but sometimes men have made as great nonsense as they could out of the way of holding it. Did ever the title of a manor so oddly dangle at the end of a whip-lash, and that in a church, during divine service, as at Thong-Caistor, in Lincolnshire? There, the deputy of the lord of the manor of Broughton comes, *on Palm Sunday*, armed with a new cart-whip; snaps this thrice in the church-porch; carries it on his shoulder up the aisle to the seat of the lord of the manor, and, during the reading of the Second Lesson, kneeling on a special hassock in front of the lectern, holds it, with a purse of thirty silver pennies dangling at the lash's end, over the head of the minister reading. At last, after divine service is over, he leaves whip and purse at the manor-house. And is there a country, besides England, where priest and people would tolerate a custom so utterly inconsistent with the dignity of their worship, to say nothing of the dignity of Him whom they worship?

At St. Briaval's, in Gloucestershire, on Whitsunday, of all days in the year, "several basketsful of bread and cheese, cut into small squares of an inch each, are brought into the church; and immediately after divine service is ended the church-wardens or some other persons take them into the galleries, whence their contents are thrown among the congregation, who have a grand scramble for them in the body of the church. This occasions as great a tumult and uproar as the amusements of a village wake." To this unseemly practice is attached a much more important title than to the tomfoolery above described, inasmuch as it secures a considerable benefit to a whole class. By the keeping up of this noisy and half-riotous distribution, once a year, the poor of this and another parish are kept in the right of cutting and carrying away the wood from 3,000 acres of coppice land. The bread and cheese are bought by a contribution of a penny apiece from the householders; and whether these join with the poor in the scramble, and whether they snatch and keep, we are not told. One who should see this practice with eyes informed only by the sense common to his race, might think that this bread and cheese could be as well scrambled for on the highway or the village common or moor, out of sight or hearing from the church, as in that building carefully set apart and hallowed for worship.

Another custom, and a yet more marked example of the persistency of the English, is one which the city of London carefully observes, *for land that it does not hold!* This is yearly to be seen in the Court of the Exchequer in London, after a proclamation in these words as they stand in the Lord Treasurer's Remembrancer: "O yes, O yes, O yes! Tenants of a piece of waste ground in the County of Salop, come forth and do your service." Upon this summons the Senior Alderman steps forth and, like a doughty wight, wields a new bill-hook, and with it cleaves in twain a willow-wand. This "service," by which a bit of land in this case is *not* held, is called a "service of serjeanty." It looks as if it had come in place of that by which, in Henry Third's time, one Nicholas de Mora paid for some land in Mora or More, in the County of Salop, and, at some time later, one Walter de Aldeham, and later, again, the Knights of St. John of Jerusalem, held the same land by the same service, which was then done as follows: Nicholas, or Walter, or a knight representing the Order of Hospitallers (Knights of St. John), or whoever was the tenant at the time, paid at the Exchequer two knives and a hazel-rod of rent. The hazel-rod was of a year's growth and of a cubit's length, and the knives were one good and the other "very bad." The blade of the "very bad" knife was not of the stuff to go through the wand, but with the other the tenant, at a stroke, cut it in two in the middle. The Aldermen of the city of London are, for the most part, men that by downright doing have made their town the foremost in the world, and their way has been to leave little to chance, where they could make sure. They have brought in one effective bill-hook instead of the two knives, the bad and the good; but in throwing away the old tool, they have thrown into the offal-pit of our good old English words its name, "thwittle," the "whittle" of Macaulay's Lay. We use this latter word only as a verb. In this case the London Aldermen have no land that they know of where this estate is said to be, and no town-clerk that they ever had could find that they ever had any such land. They are, therefore, year after year, solemnly doing this "service" almost, as it would seem, for the fun of it. The Lord Treasurer of England (no one less) and the Barons of the Exchequer must be present, to see it done, on "the morrow of St. Michael"; and, at the first or second time of seeing, if they let themselves put two or three things together, must think it a piece of excellent fooling. It would be a pretty thing to see and show just where is the difference in national characteristic between the Russians, finding out, one hundred and fifty years after, that they had forgotten to take off a sentinel set for a few nights to walk before the bed-room-door of one of the Czar's visitors, and the English, keeping up this practice for no other reason than that it has come down without any reason for its ever having begun.

An old custom at Oxford brings down with it, from a good many hundred years back, a strange historical surrounding. On St. Scholastica's Day the Mayor and sixty-two townsmen, specially chosen, offer yearly at St. Mary's Church sixty-three pence, in memory of the barbarous murder of sixty-three "innocent scholars" by the townsmen, in the reign of Edward Third. Another custom, at Newcastle-on-Tyne, is an odd reminder. The corporation of that town are bound to entertain the Judges of Assize, and protect them to Carlisle. A pleasant substitute for their "protection," and a fair equivalent, the judges now receive, in the shape of a golden twenty-shilling piece of Charles the First, "*to buy a dagger.*"

"Eton Montem" is known, to most of us Americans who know anything about it, from Miss Edgeworth; but who that had not read beyond Miss Edgeworth would guess that the whole thing—the choosing, the going in procession, and all—is, as this book says, only the leavings of the old ceremonies and observances of that strange efflorescence of the Church before the Reformation, the "Boy Bishop"? In the public schools and among the choristers of the cathedrals and the collegiate churches, it was customary for the boys yearly, on St. Nicholas's Day, to choose one of their number a bishop. Thus, in the statutes of St. Paul's School, in London, of date 1518 (Knight's 'Life of Colet'), we find the following provision by Dean Colet, the founder: "All these children shall, every Childermas Daye, come to Paule's Churche and hear the Childe Bishop sermon; and after be at the hygh masse, and each of them offer a 1 *d.* to the Childe Bishop, and with them the Maisters and Surveayors of the Scole." From the statute "De Episcopo Choristarum" of Salisbury Cathedral it appears that this puny prelate held his office till the close of Childermas (Holy Innocents)—about one month. He was by no means a mere name of a thing. He made a visitation of his little diocese, wearing mitre, bearing crozier, and attended by the other boys as his prebendaries. On the eve of Childermas he made a solemn procession, in this order: Dean and Canons, Chaplains, Boy Bishop and his [Boy] Prebendaries—Canons residentiary bearing incense and Book, minor canons in copes, bearing tapers—choristers, at each side. On Childermas Day in procession he entered the choir at the west door; the dean and canons took the lowest place; the chaplains, the middle; the scholars, with their bishop, the last and highest; he went through the whole office, except celebration of the sacrament of the altar; fumigated the altar and image of the Trinity, and gave the Benediction. The St. Paul's Boy Bishop delivered a sermon. In some places this little functionary had revenues; at Cambrai he had the bestowal of any prebend that fell in during his term, and generally bestowed it *upon his preceptor*—a reversal of nepotism which would commonly do little harm and would not give much offence.

It is comfortable to know that, strange as this practice was, the whole observance was conducted with remarkable decency, propriety, and even solemnity; very differently from that of the Lord of Misrule, chosen likewise yearly, in great houses. "Mysteries" and "Miracle-plays" held a large place of their own long ago in England; and as late as the sixth year of Queen Bess's time there remained these properties in St. Swithin's Church, and elsewhere in London after the acting of "Tobit": "First, hell-mouth with a nether chap. Item, a prison, with a covering. Item, Sarah's chambre. Item, a great idol with a club. Item, a tomb with a covering. Item, the city of Jerusalem, with towers and pinnacles. . . . Item, Old Tobye's house," and a good deal more, taking in "a firmament, with a fiery cloud and a double cloud." So the Church, in that day, fed its children and kept up with the times, according to the best of its notion.

Among specimens of dialect the 'Exmoor Courtship,' and the 'Exmoor Scolding,' and the Letter from the Shetland Islands, are worth the studying by any man who has skill in such things, and worth the working through by any one who has but a smattering of them.

There is an account here of London Pageants, Royal Progresses, Lord Mayor's Shows, 'Barring-out,' as a genuine custom, recognized by masters, as well as scholars, in an important English school. In short, there is a great deal more in these two volumes than we can touch; but we hope to leave with the reader a long taste for more. We will sharpen it a little further by these truly Irish specimens of a wedding, in which the ground is well cleared of the elder generation to make way for a new race. In the County of Kilkenny, a farmer's son, being refused a neighbor's daughter, twelve years old, ran off with her; but, the girl having been brought back and married to a lad of fourteen, the former lover, with a party of armed men, besieged the rival's house, got the father-in-law killed, and several of the besiegers wounded to death—all, so far, with perfect success. After all, however, he lost the bride. In another case, in Killaloe, on a convenient Sunday, 114 years ago, Edmund Herbert's house was broken into by sixteen or seventeen ruffians, because he was counted rich and had an only daughter; the girl was carried off, and the father left dying, and the mother "languishing in a most deplorable condition." A little Iricism will be seen in the treatment of father-in-law and mother-in-law, respectively, that whereas in most nations the latter is said to be the object of special animosity,

these warlike wooers made sure of the father's going to some other world, at whatever cost.

And now for a little bit of criticism. We find some things, of absolutely no worth to tolerably-well-informed readers, taking to themselves a good deal of room; and we find a good many misprintings, in Greek, Latin, French, Spanish, and English, indiscriminately, of which some hurt the sense; the text might have been greatly retrenched, to good purpose, and the proofs ought to have been read more carefully. The indexes, though not perfect, are good; the Editor's Notes add much to the books. The second volume is less open to fault-finding than the first; the coming volumes are of good promise. We heartily wish the work success.

RECENT NOVELS.

Doctor Sevier. By George W. Cable. Boston: James R. Osgood & Co.

A Yankee School Teacher in Virginia. A Tale of the Old Dominion in the Transition State. By Lydia Wood Baldwin. Funk & Wagnalls.

Between the Heather and the Northern Sea. By M. Linskill. Harper's Franklin Square Library.

Judith Shakespeare. By William Black. Harper & Brothers.

Tales of Three Cities. By Henry James. Boston: James R. Osgood & Co.

It must be owned that even those who greatly admired Mr. Cable's earlier work have found 'Doctor Sevier' slightly wearisome. The story fails to take the closest hold upon us, sometimes because the scale is too wide, and sometimes for the very opposite reason, that the execution is too minute. The manifold life of New Orleans, the miseries of hospital and prison, an experience of yellow fever, the breaking out of the war, the marching of troops both from New Orleans and New York, a whole romance of the border in an escape through the lines, the surrender of New Orleans itself—would be rather too much for five hundred pages, even if there were some adequate plan of composition; but Mr. Cable can devote ten pages to an unsuccessful hunt for lodgings, and a whole paragraph to a gesture. The annalist or the chronicler requires a very different faculty from that which can arrange a single group to present the one situation of a short story. Only the greatest novelists have had both.

The book begins where most novels end. Doctor Sevier, a physician now in the full tide of success, has lost, many years before, his young wife, and now lives, in the midst of good fortune, a solitary life—"a lonely man, with frowning good intentions." A professional call makes known to him John Richling, a young man, a stranger, struggling for a foothold in the great city; but he is blessed with a perfect wife, for whom he has given up fortune, home, and friends. The two men are thus set as contrasts to each other, and so remain to the end. All Richling's efforts are useless, and the pair come to such straits that he at last sends the wife home to her mother. The war intervenes, and she returns to him only an hour or two before his death, worn out by the sufferings of his poverty. "What are the uses of all this hardship?" he asks, as his last hope fails. It must be confessed Doctor Sevier's reply has rather the sound of a formulary: "Only just here, very lately, I've learned to call the meekest, lovingest One that ever trod our earth, Master; and it's been your life, my dear fellow, that has taught me"—while the dissertation that follows, to prove that "the poor are a godsend to the rich," must have fallen coldly on the ears of a dying man. It was the author's evident intention to present a type of courage and patience in the most sordid and hopeless conditions of life. "Why is light given to a man whose way is hid, and whom God hath hedged in?" Gallantly to fight a losing battle is high heroism; but to win full sympathy, the barriers must not be of one's own making: the battle must be a duty imposed, not a quarrel of one's own seeking. Mr. Cable has not supplied sufficient motive for Richling's life to make him the hero that he would; for, except to romantic youth for whom love is enough, filial piety has claims, and a wilful marriage is deliberate selfishness. There is also a grave difficulty about Doctor Sevier's position. We are to believe that the loneliness of his personal life is made all the sadder by the worldly honor and prosperity which surround him. How comes it, then, that he is never able, with all his friends, to find any employment for Richling? Given the friends and the philanthropic soul, something ought to have come of them.

Turning to the *mise-en-scène*, there is less of characteristic New Orleans, its perpetual charm and fascination, than one would expect. The reason may be not merely that the fortunes of the Richlings led only into wretched places, but certain things can be done only once. And so far as mere description goes, Mr. Cable's earlier stories have covered the ground. It is, however, an omission so marked and curious that the negro should have been left out, that it could only have been of deliberate purpose. We had almost said he never once appears, yet in those later years of the fifties, the rich, soft voice, the mellow laugh, was as all-pervading in New Orleans as the sunshine. We are far from saying we wish he had been put in—another dialect would have been quite too much—but there is a blank in the picture. This matter of dialect (a more exact word is wanting) has been carried to excess. As if Irish, German, and Creole of two or three varieties were not enough, there is the lisping English of a clergyman. The temptation offered by the opportunity of working in a new field is, of course, a strong one, but even a novelty tires. It is possible that much of the grievance felt by the Creoles in regard to Mr. Cable's work is due to this one cause. Any one with much experience of people has learned that very odd pronunciation is entirely compatible with a refined intonation. From long habit grotesque spelling suggests only vulgarity, and it is late to make new associations in that respect. The Creoles may not have marked intellectual traits, but they are socially much cultivated, and possess a singular delicacy and refinement. There are those who will recall how much they were reminded of them when the high-class Japanese first made their appearance in this country.

It is not strange that the pronounced opinion of the book as to the war should have brought out protests, that no man in such a matter has the right to speak for any one but himself. To say to the North, "Your cause was just," would be impossible to many men who do believe that the end, as it came, was, after all, best, and who would not bring back the old order. Mr. Cable may have confused the practical acceptance of the result, the feeling of relief from a burden, with a logical conviction as to right or wrong. There are eloquent pages, graphic chapters, pages of drollery or of pathos that only a master-hand could write. More than one of the episodes which here but delay rather than aid the main action, are worthy a name and a place of their own. It is not time yet for general inferences. A man ought to try different kinds of work, and if it proves that Mr. Cable is not so successful upon this larger canvas, the way is open to him to return to the plans and methods which won him fame.

The sayings and doings of a dozen negro families with nothing novel or individual in their characters can only be trite and tedious. The field has been worked till it is exhausted for the ordinary story-teller. The same is true of the stories of the fallen fortunes of the old masters, and of the adventures of the pretty schoolmistresses who in the end marry the one heir to whom anything is left. This, be it understood, is not said of life itself—that is endless in its opportunities—but of so much of it as has been taken for stock-in-trade for the lower levels of fiction. The tale of a 'Yankee School Teacher in Virginia' is especially absurd and perverting. It is easy to believe in the sweet wisdom, the gentle power, of Marion Stone, but the idea of her loving a man like Percy Darnell is revolting. We know him but from two incidents in his life: the one is a piece of horrible brutality, the other shows him a mixture of the braggart and the coward. At last he is desperately wounded by the shot of an outraged negro, and, of course, according to this kind of story, Marion, who has all along scorned him as she ought, comes to his sick-bed as to an accepted and recognized lover. Such extravagant *non-sequiturs* will probably always survive in fiction, but we hope never again to find anything so hideous as the reply Darnell makes to her when she volunteers to him the confession that her heart is entirely his.

The negro speech which fills the chief part of the book is good as an imitation, but it is not the genuine article. There were peculiarities about the real speech in the old time of great significance as distinct results of slavery. Their existence and their gradual disappearance (if they do disappear) will be alike important to the student of language as the reflection of life, but these counterfeit specimens will puzzle him. Obviously the peculiarities might show themselves in the avoidance of words quite as markedly as in the adoption of them. Before the war, the word slave was not in use among the whites in the South, and certainly never was heard from the negroes themselves. It would be interesting to know whether the negroes have now changed in this respect. So early as 1870, the Aunt Mollys and Uncle Cæsars would have talked of "the dark time" and "the bad time," and of "dwelling in the land of bondage," but hardly, as Miss Baldwin makes them, about "the slave time" and "the slave folk."

'Between the Heather and the Northern Sea' would be an agreeable story, rather after Mrs. Oliphant's manner, were it not for the exaggeration and improbability of the character which represents the evil element in the little group. A woman of beauty, position, and fortune loves, without return, a young artist. As time passes, an engagement is made with a neighbor, and broken. After the lapse of almost twenty years the artist, still unconscious of her love, reappears with his daughter, with whom the neighbor now falls in love. To pursue the latter with threats of suit for breach of promise, to tantalize the poverty-stricken artist with orders for pictures, and then to break his heart by a scornful rejection of them, make up the pleasing revenge which Miss Richmond enjoys; yet she disappears upon the last page yielding to the offer of a baronet who knows all, "and the knowledge does but lend a depth to his tenderness." This author, like Miss Baldwin, has learned just so much of construction as to know that there must be contrasts or struggles put into a story to make it dramatic, but there is the same lack of experience to draw from, and the same want of intuition as to probability. It is a great part of the inspiration of genius to know what one does not know, and to let it alone.

So sweet and gracious a figure as 'Judith Shakespeare' would be sure of a welcome even if presented by an unknown hand in the pages of *Harper's Magazine*. It was well imagined of

Mr. Black to choose her as the centre of a sketch of English country life in the early seventeenth century—call it pastoral or idyl, as one pleases. If it was somewhat hazardous to put a story so close in place and time to 'Kenilworth,' he has chosen a side of the life so different as not to provoke comparison with Scott. There is not the strength or the vividness of his own earlier work, but he has balanced character and circumstance more justly than of late. The smooth-flowing Avon, the wide white skies, the sunny rose-filled garden make fit place for his pretty maids, but they do not overweight the story, as his west-coast landscapes had grown to do.

The 'Tales of Three Cities,' now gathered together from the *Century*, show Mr. James at his best. It is a pity that they will perhaps be fully appreciated only by an inner circle of readers. It can hardly be expected in these days of abundant sunflower decorations, of chromos (in books as well as pictures), that the labor of the cunning worker in ivory, or of the lapidary, will find wide recognition. An English reviewer not long since congratulated his readers on finding a novel in which the matter was worth more than the manner, intending a sharp side-thrust at people who devote elaborate workmanship to brief and simple subjects. It is as much as to say, If you only have a big enough canvas and deep enough pots of color, it makes no difference how you put the color on. We do not mean to ask of the fresco-painter the touch of the miniaturist, but the one is as bound to reach the standard of perfection in his own line as the other. The reviewer, so far from rejoicing in the superiority of the matter over the manner of the novel, should say, What might not this novel be if the manner *had been* equal to the matter? Mr. James can wait to be understood, but meanwhile it is a downright loss to many persons to bar themselves from the pleasure they might have, by two or three perfectly gratuitous assumptions for which they are indebted to their own carelessness, or to the narrowness of superficial criticism. It was an early mistake, that need not have been so perversely clung to, that in certain sketches Mr. James intended types. In fact, their great merit lay in the very precise and delicate drawing of distinct individuals. It was pure wilfulness on the part of the public that set them up as types.

In the tales before us there should be noted, as a piece of literary form, the unswerving steadiness with which "the point of view" is kept. It is rarely made the purely personal one of the author himself, to whom all things may be known, but, having chosen the pair of eyes through which to look upon the world, he gives us with scrupulous fidelity what those eyes see. The book affords many happy instances of Mr. James's special faculty of description. It is reminiscent rather than creative. It gives not so much the scene itself as the thought and sentiment wakened by it; so that, through memory and association, it touches us more closely than any mere word-painting could. Granted that this form of description will not speak to the stranger, it is a finer force that can throw into new light and perspective the familiar ways in which we walk. This bit has a double felicity coming from a woman: "this clean-swept sky, whose depths of blue air do very well, doubtless, for the floor of heaven, but are quite too far away for the ceiling of earth. The sky over here seems part of the world at large; in Europe it's part of the particular place." This contrast between "over here" and "in Europe" has brought Mr. James some hard words from those who understand "loyal" as meaning to be blind and deaf to any comparisons. But the fact is, we are all the time making comparisons. He has only given them voice. Moreover, if we were not making comparisons, we ought to be. How does all this new life and character look by the side of the old? How does this young, vigorous, untrammelled life, with all its imperfections and all its hopes, comport itself brought face to face with the old? If we do not care to know it, we ought to. To put one's self outside of one's own surroundings (*Entfremdung*, the Germans call it), in order to judge of them, is a positive duty; and as a means thereto, the pictures of fiction are not to be slighted.

"The New England Winter" will be pronounced the best of the three sketches—outside of Boston, where they may not approve of a young impressionist "with a great deal of eye," who, within that honored precinct—

> "felt at moments that he was in a city of women, in a country of women. . . . The talk, the social life, were so completely in the hands of the ladies, the masculine note was so subordinate, that on certain occasions he could have believed himself (putting the brightness aside) in a country stricken by a war, where the men had all gone to the army, or in a seaport half depopulated by the absence of its vessels."

We have before alluded to the coincidence between the conclusions of Mr. Grant White in 'The Fate of Mansfield Humphreys' and of Mr. James in 'Lady Barberina.' The inferences that might be made therefrom would take us too far; we only pause to say that the pages sparkle with delicate points, and the figures of the heroine and her American husband stand out like clear-cut cameos. Romance and realism, after all, may go hand in hand in fiction; for what could be more romantic than to set "the heir of all the ages" to woo "a daughter of the Crusaders," and what more realistic than thus to confront him with "the problem of domesticating one's wife"?

ILLUSTRATED BOOKS.—II.

A Sentimental Journey through France and Italy. Illustrations by Maurice Leloir. Philadelphia: J. B. Lippincott & Co.

Nature's Serial Story. By E. P. Roe. Illustrated by W. Hamilton Gibson and F. Dielman. Harper & Bros.

Some Modern Etchings. Original Plates by S. G. McCutcheon and Others. Text by J. R. W. Hitchcock. White, Stokes & Allen.

THE *édition de luxe* of Sterne's 'Sentimental Journey,' clearly a labor of love on the part of the artist, is one of the most noteworthy revivals of an English classic which publishing enterprise has given us. It contains 220 illustrations in the text and twelve full-page compositions, the former, in our opinion, maintaining the pictorial supremacy. The tricksy fantasy of a side-thought comments and illuminates the text when the more studied and orthodox full-page illustration falls into formality and redundancy, merely repeating in a pictorial version the passage of the story it relates to, and makes only an echo whose greatest virtue is that it shall be an exact echo. The head-pieces, initials of chapters, and tail-pieces are, on the whole, the work of greatest merit, of an infinite fancy, graceful, drawn as no one can draw today but Frenchmen, and as very few even of them can. The head-piece to the memoirs of Sterne, a trophy of travel, is an admirable example of pictorial commentary, and the tiny head of Sterne himself, peeping out of the window of the *désobligeant* as he drives away, could hardly be bettered as a vivacious portrait of the author. As an example of the illustrator's powers the tail-piece on page 2 may be referred to especially, as showing how terse his humor and how subtle his drawing of the figure. The tail-piece on p. 54 is another of those bits of figure drawing that strike the key on which the best of French design is pitched—a man waiting, and another looking out at the doorway and clearly calling an attendant. The head-piece of "The Wig," of "Paris," p. 108, and the tail-pieces at pp. 80, 153, 148, and 180 are lessons in subtle and refined drawing and illustration. These and the vignettes seem to be an admirable reproduction by "process." The full-page drawings are photogravures. The typography of the 'Sentimental Journey' is in the best style.

Prominent for its illustrations, among the holiday books, is 'Nature's Serial Story,' a too prosy and preachy romance, which has appeared in *Harper's Monthly* during the parting year. One is led to suspect that it was designed mainly with a view to furnishing opportunity for illustration, and of these the naturalistic head and tail-pieces are certainly *chefs d'œuvre* of wood-cutting and natural history. We must except, as design, what seems to us a sheer absurdity—an eagle frozen up alive, which in so essentially unimaginative a novel seems a little Oriental. The cuts on pages xvii and 329 are *tours de force* in their way, quite worthy an art museum; and children who love flowers and birds and snow will take a rapturous delight in the minor illustrations, such as those on pages x, xiii, 18, 30, 65, 67, 94, 116, 121, 261, 311, etc., etc. Of the larger cuts the landscapes are the best, the figure subjects falling too completely into the spirit of the story, and posing all through.

The fashion of etching and the rage for etchings have, as we remarked last year, overrun all perception of the true aim and special excellences of the art. It has got to be a fad, and virtues are attributed to it which have more relation to the tricks of brushwork and palette-knife than they have to true art. Dodges of biting in and mannerisms of the needle are no compensation for genuine power of drawing and noble execution, and of these latter qualities there is very little in the etchings which flood the market. We cannot agree with Mr. Hitchcock, in his preface to 'Some Modern Etchings,' that "the recognition earned by American painter-etchers in English societies and exhibitions, and to some extent on the Continent, not only entitles them to pride in their present achievements, but is full of promise as to their future rank in comparison with etchers of other nationalities." The self-complacency that gives birth to the slovenly work which most of the American etching is, does not contribute to progress, and the quality of the work is in general not such as to promise high excellence in the future. It is impossible to point out in this series of etchings more than two or three instances of genuine devotion to form, and to the sound principle that the leading lines shall absolutely dominate all other work on a plate. The only peculiar advantage in etching is that an artist can render in his own way, and with his peculiar subtlety, the most delicate meaning of his forms. Textures, etc., are better given by other styles of engraving; and if the etcher is not a thorough draughtsman, his work may be superficially attractive and meretriciously refined, yet will not have the solid merit and true refinement of great art.

The trivial quality of most of the work of last year's exhibition finds its expression in this portfolio. Most of the etchings are really not worth perpetuating, and only one is really fine, or in any way distinguished from the amateur work in this country, of which there is by far too much. We refer to the portrait of Rembrandt by Mr. King, which is a solid, genuine piece of work, and does really give promise of great excellence beyond its present attainment. The "Driving Sheep" of Mr. Monks is not worthy his reputation, while the "Clarionet Player," "A Tramp," and "Never Too Late to Mend" (based on a stupid joke) are trivialities hardly worth putting in pen and ink. "An Old Master at Last" is a flimsy bit of caricature, the "Evening Star" has no delicacy of drawing or etching, and the

"Ponte San Trinità" is flimsier than Pennell's etchings generally are, and libels the noble quality of Florentine architecture, with its tumble-down tower of the Palazzo Vecchio. We cannot congratulate the publishers on the collection.

CHILDREN'S BOOKS.—III.

THERE is to be no lack of fairy-tale collections this year. The 'Last Fairy Tales,' by Édouard Laboulaye (Harper & Bros.), are for the most part the same as in the English edition we had occasion to notice the other day. Here, however, we have an authorized translation by Miss Booth, free from the unscholarly disfigurements of its predecessor. The volume contains all the tales for children not embraced in Laboulaye's 'Fairy Book' published some years ago by the Messrs. Harper. They are borrowed from many European nations, and have both the literary and the ethical stamp which their compiler knew how to impress upon them. These qualities and the profuse illustrations must recommend the book to parents and children alike.

Mrs. Kate Freiligrath Kroeker would seem from her name to have an inherited capacity for translating the work of a poet, and this she has done, in spite of some grammatical slips, with delightful ease and freedom in her selection called 'Fairy Tales from Brentano' (London: T. Fisher Unwin; New York: Scribner & Welford). The extravagant invention and absurd surprises of these stories are simply irresistible, while in the descriptions of nature and in allegorical passages which old heads will take pleasure in unfolding to young ones, there is a peculiar poetic quality of a high order. This is visible in a story not essentially original ("Ninny Noddy"), as in those which are. Mrs. Kroeker, by the way, having noted in her preface that Brentano "was the first to introduce the Loreley into literature," might have given a line to the relation between "Sir Skip-and-a-Jump" and the Mephistophelean song in 'Faust'—

> "Es war einmal ein König,
> Der hatt' einen grossen Floh," etc.

The illustrations, from pen-and-ink drawings by Mr. F. Carruthers Gould, have the vital merit of being humorous, though a little crude in execution.

Mrs. Burton Harrison's 'Old-Fashioned Fairy Book' (Scribners) serves up the old properties in a skilful manner, tempering with a modern farcical admixture the high seasoning of ogres, witches, monsters, and cruelty demanded by her home auditors—the only begetters of this volume. Brief prose abstracts of certain metrical romances of the Middle Ages are added to the author's own inventions. Parents will find Mrs. Harrison's Introduction a charming piece of writing. Miss Emmet's illustrations are in the main very clever, and the grace of some could not easily be surpassed. There is a pleasing little landscape in the head-piece on p. 144.

A nondescript performance is Mrs. Molesworth's moralizing 'Christmas-Tree Land' (Macmillan). If not an allegory it is at least a mystery, and we doubt if it will satisfy children in spite of many interesting characters and situations, and the author's customary descriptive power. She is always refined in feeling and in style, and her English would be exceptionally good if she were more scrupulous in the use of *shall* and *will*. "Settledly," too, on p. 66, is a queer adverb.

Mary P. W. Smith, in 'Jolly Good Times,' has given us a charming book in her records of 'The Browns' (Roberts Bros.). Unusual grace and vivacity mark the style, while every incident seems accurately natural. The baby's talk and amusements, the boy's roughness, the children's squabbles, are all delineated with amusing life likeness, while the lessons of forbearance, kindness, obedience, independence, weave themselves into the narrative as they do in real experience of wholesome family life, and not in a forced or didactic way. The Browns are supposed to have their home in Cincinnati, and the "local coloring," including some account of the devastations of the flooded Ohio, is not without interest.

A wise-looking brown owl, with a golden moon for background, symbolically decorates a little volume by G. Hamlin, called 'Chats' (Lee & Shepard). The 'Chats' are really little sermons or lectures, incorporated in pleasant, sprightly talks, with sometimes a chapter that is scarcely anything but an essay, and occasionally a story or fantasy to vary the seriousness. The wisdom inculcated is of various kinds, hygienic, social, moral, educational, etc.; and our young folks need it all, and would be the better for reading so sensible a little book. Once in a while the author's opinions seem too positive in regard to trifles, but in general every dictum is admirable. The chapter, for example, called "Brain or Stomach," abounds in common sense. "Judging in Haste," "Preparing to be Old," "She Would be a Poetess," are the titles of some of the topics discussed. The book has been written in a very earnest spirit, and cannot fail to do good.

'Flaxie Growing Up' is the sixth of the Flaxie Frizzle Stories (Lee & Shepard). It is a pretty little book and pleasantly written, though the incidents savor considerably of the story-teller's regular stock-in-trade. Flaxie, as here depicted, is not so charming as Sophie May's younger heroines. Miss Pike's *vision*, though of course not meant to be understood literally, might easily puzzle or mislead children, and is in bad taste from any point of view.

From the same publishers comes 'Pretty Lucy Merwyn,' by Mary Lakeman. The sad dedication would almost disarm criticism, and yet we cannot help feeling that the story is a very sketchy one, not sufficiently filled in, and not informed with any very vital interest. Still, the domestic pictures are pleasing, the conversation sensible, the moral instruction good—notably in the chapter treating of Lucy's visiting the "highways and byways"—while the love passages are so very sedate and unexciting that the most rigid objector could not consider them as unfitting the book to be read by the young girls for whom it is designed.

Occasionally, perhaps, the story of a mischievous and "funny" child can be so written that it passes, like some high comedies, into a region of absurdity with which moral rules seem to have nothing to do. A. G. Plympton, in 'The Mary Jane Papers' (White, Stokes & Allen), has not succeeded in producing this effect, and has failed even in the less difficult task of making the moral lessons *tell*. Mary Jane, who is herself the narrator, is undeniably smart, and the record of her misdeeds is very amusing; but she is pert, disagreeable, and unfeeling, and her occasional touches of compunction and sober afterthought do not suffice to raise the general tone of the book from one of depressing and vulgar heartlessness. Nevertheless, some of the chapters have been endorsed by *St. Nicholas*, where they previously appeared.

'The French Prisoners,' by Edward Bertz (Macmillan), though a story of the Franco-Prussian war, is not a stirring tale of battle-fields. On the contrary, while the great events of the war are alluded to, the main interest attaches to the life of some French prisoners in a fortified town of Germany, and in especial to the friendship between one of their number and three German youths attending school in the same place. The author aims to teach something higher than what is commonly called patriotism, and to make it clear that a far nobler thing than military achievement is the promotion of "peace and good-will to men." The book is essentially Christian, not only in dogma and form of words, but in expression of that spirit of peace and love which is the root idea of Christianity. The chapter telling of the vengeance wreaked on Krakel would have seemed more in accordance with the rest of the book had it contained some condemnation of that vengeance. On the other hand, Lamain, the young Frenchman, would awaken more lively interest if he had been described as more of a soldier and less of a saint. The style of the book is not of the best, but the substance should secure it a place in every Sunday-school library.

Mr. Samuel Adams Drake's part in the showy book, 'Our Great Benefactors' (Boston: Roberts Bros.), is certainly the *bulk* of it. It contains too much, like the generality of his works; and if we may judge from his 'New England Legends,' his own hand is to be seen, in the chapters now under consideration, wherever we come upon an excess of commonplace moralizing. Mr. Parton's 'Captains of Industry' is much to be preferred to this compilation. The portraits, as a whole, are irredeemably bad, often libellous in the highest degree. The best-known personages suffer equally with the least-known; Lincoln, for example, is disguised almost beyond recognition. The money wasted on these and on the so-called "emblematic embellishments" would have secured excellent copies of the best existing likenesses.

The foreign origin of the pretty colored plates in 'Pictures of Other Folks at Home' (Boston: Estes & Lauriat) is tolerably clear. Each shows the map of a European country, its flag, arms, specimen postage stamp, with other designs, clustered about the figure of a young patriot, boy or girl. The text consists of rhymed letters home from a party of tourists—geography taught in doggerel of not a very high order. More spirited, and of better rhythm, are the geographical verses in 'Natural History Plays, Dialogues, and Recitations,' by Louisa P. Hopkins (Boston: Lee & Shepard). But the Muse has a hard time of it in the natural-history portion, as in the "reading-lesson" on the Fur Seal of Alaska, of which we subjoin the sixth stanza:

> "The monsters storm the islands,
> Settle volcanic highlands;—
> Six-hundred pounders plucky—
> Growling in echoing thunders,
> Tusked, elephantine wonders,
> Beach-masters, Holluschucke."

There are several "movement-plays," like "In the Sea," in which the coral leads off by declaring:

> "I'm a happy polyp,
> Floating up and down."

And the title, narrow as it is, covers memorial verses to Lincoln and Garfield, an Easter Day hymn, and an Ode to Science.

The hero of 'Perseverance Island' (Lee & Shepard) is wrecked upon a desert island in the South Pacific, saving nothing but his clothes, a few nails, a bit of rope, an anchor, some garden seeds, and three books, the most important being a 'Compendium of Useful Arts and Sciences.' Having passed four years of his life in a machine shop, he is able from these scanty resources to make a fire, distil sea-water, and forge a knife and spear from his anchor. Then having discovered an iron mine and some saltpetre, he manufactures gunpowder, makes bricks, builds a smelting house and blast furnace, and turns out excellent Bessemer steel. After this it is but a simple matter for him, with the aid of his 'Compendium,' to construct tools, including a planing machine and lathe, to make guns and cannon, to build a saw-mill, a submarine boat the motive power of which is furnished by two goats, a steam yacht, and finally a flying-machine. It is perhaps a necessary characteristic of this "nineteenth-century Crusoe" that he is possessed with a feverish desire for riches, which he satisfies in

discovering a bed of pearl oysters, a pirate's sunken treasure, and a gold mine. The design of the author (Mr. Douglas Frazar), to prove "the limitless ingenuity" of man, was a good one, and had he kept within the bounds of reason and probability he would have made a more successful book. As it is, the interest is lost and the patience is overtaxed in the attempt to understand the details of his various inventions.

Mr. Alfred St. Johnston, who, in his 'Camping among Cannibals,' has already related many of his interesting experiences in the South Seas, has recently adapted some of his material to youthful readers in a story called 'Charlie Asgarde' (Macmillan & Co.). It is a narrative of the adventures of two young Englishmen who, on a voyage to New Zealand, are shipwrecked and cast away upon an island of the Fiji group. It is a good story, and although touching upon the horrors of cannibalism, is pleasantly told. The hero, in fact, has the decided advantage over some of his countrymen in playing an active rather than a passive part at a cannibal feast.

Selected Prose Writings of John Milton. With an introductory essay by Ernest Myers. [The Parchment Library.] D. Appleton & Co. 1884.

Mr. Myers, in his brief introduction to this book of selections, remarks that Milton's prose is interesting to posterity because of his poetry, rather than on its own account. This is in a measure true; yet it seems more true than it is because Milton's poetry is so overshadowing in its height. It counts against Milton that the practical activity of his mind was directed almost exclusively to politico-theological subjects, and that in dealing with them he employed the apparatus of the folio-learning that is now decayed. The modern political spirit was yet too young; the alliance of ancient English ideas with secular philosophy, instead of Hebrew history, was yet too far in the future, for his disquisitions on the principles of liberty in church, state, and marriage to become a part of living political philosophy. The works of Bolingbroke, for example, are nearer to us in matter as well as in style; and the difference in the associations called up by the two names marks how far behind us we have left both Milton's topics and his method of treating them. But Milton's prose is read much more than Bolingbroke's. There is a loftiness in its strain, an eloquence which fuses all that reluctant ore of learning, everywhere the large language of a liberal mind; and passages of such supreme beauty and luminous truth, disclosing so noble and fine a spirit, are so frequent that the reader passes over the antiquated residuum as easily as over Plato's discussions of the squares and roots.

The greatest charm attaches to the autobiographic passages, in which he speaks either directly of himself, his purposes and experience, or indirectly, by his exaltation of poetry and the office of poet. Most of these are well known now, being as they are among the most refined and elevated single sentences and paragraphs in English, and will be found here imbedded in their original slag. But apart from the amplitude of phrase and glow of spirit that still kindle and bear on the reader, though he only half apprehends what all the pother of prelatry is about, there are only fragments of universal truth to enrich his mind. No great poet, indeed, has been so unfortunate as Milton in the limitations that the topics and the temper of the times put upon his prose writings. It is extraordinary that any of them, conceived and executed in the style they were, survive at all. Nothing but the unrelaxing hold he kept on spiritual things in the flood and rush of all that was most temporary and perishable, enabled him to make his tracts a part of literature. They do belong to literature in their own right, and would have earned the distinction had he never written more than that prophecy of his great poem when, at the beginning of these controversies, he promised it to men if they would wait. His prose, however, can no more be represented by selections than Assyrian libraries by a brick or two. Instead of making his writings convenient and handy, it would be more fit, ideally, to put all of them into a large folio of the old sort, so that he can go, as he ought, on the same shelf with St. Basil and St. Augustine. To see this dainty volume, and remember it is Milton, gives one the impression of looking through a microscope.

Trade Unions. By William Trant. Scribner & Welford.

This little book is based upon an essay for which the author received the £50 prize offered at the Trade-Unions Congress. The author evidently is or has been a workingman, and we have found his book interesting, not so much for what it tells us about trade unions—for it is rather disappointing in that respect—as for the unconsciously-drawn picture of the intellectual and moral forces that have created the movement. The historical purpose of the author is constantly defeated by his polemical ardor; he sets out to describe trade unions, and has the greatest difficulty in getting beyond denunciation of employers. This would be amusing were it not too true an indication of the spirit of English workingmen, a spirit that has been developed by struggles as desperate as those that have been waged with iron and blood. The partiality of the law to employers, and the arrogance developed among masters by the institutions of an aristocratical society, have aroused the working classes to a sense of their rights and their wrongs, and the time has almost come when the contest will be settled in their favor. Happily, it is evident that when that time shall have come the bitter feeling that now animates the men will disappear; for no one can read this book without being struck with the capacity for rational discussion that it shows to be prevalent among the members of the unions. The safety of a democracy is said to lie in the education of the people, and the discussions and decisions that trade unions encourage and require are a practical education of the most admirable kind. The intelligence displayed in the action of these bodies, as now constituted in England, is certainly of a high order. We should be glad to see evidence of a corresponding degree of intelligence in the proceedings of similar societies in this country, but at present we fear they are much behind those of Great Britain. So far as this book is concerned, we may say that whoever reads it will be likely to derive encouragement as to the future: to feel that if the workingmen of England are what they seem to be, the government of that country will be safe in their hands.

BOOKS OF THE WEEK.

Adams, W. T. Our Little Ones at Home and in School. Boston: Estes & Lauriat. $1.75.
Alcott, Louisa M. Spinning-Wheel Stories. Boston: Roberts Brothers. $1.25.
Alice, Grand Duchess of Hesse, Princess of Great Britain and Ireland. Biographical Sketch and Letters. G. P. Putnam's Sons. $2.25.
Allen, Prof. A. V. G. The Continuity of Christian Thought: a Study of Modern Theology in the Light of its History. Boston: Houghton, Mifflin & Co. $2.
Allmond, Prof. M. B. Estelle, an Idyl of Old Virginia, and Other Poems. Louisville: John P. Morton & Co. 75 cents.
Altgeld, J. P. Our Penal Machinery and its Victims. Chicago: Jansen, McClurg & Co. 50 cents.
Armstrong, Fanny L. The Children of the Bible. Fowler & Wells Company. $1.
Bandelier, A. F. Report of an Archæological Tour in Mexico in 1881. Boston: Cupples, Upham & Co.
Baxter, R. S. J. Meditations for Every Day in the Year; Collected from Different Writers. Benziger Brothers. $2.
Berlioz, Hector. Autobiography. Macmillan & Co. 2 vols. $6.
Bertz, E. The French Prisoners. A Story for Boys. Macmillan & Co. $1.50.
Bellamy, C. J. The Way Out. Suggestions for Social Reform. G. P. Putnam's Sons. $1.
Bishop, W. H. Choy Susan, and Other Stories. Boston: Houghton, Mifflin & Co. $1.25.
Botta, Anna C. Lynch. Handbook of Universal Literature. Revised and brought down to 1885. Boston: Houghton, Mifflin & Co. $2.
Braddon, M. E. The Mistletoe Bough. Harper's Franklin Square Library. 20 cents.
Butterworth, H. Poems for Christmas, Easter, and New Year's. Boston: Estes & Lauriat. $4.
Butterworth, H. Zigzag Journeys. Acadia and New France. Illustrated. Boston: Estes & Lauriat. $1.75.
Cable, G. W. The Creoles of Louisiana. Charles Scribner's Sons. $3.50.
Champney, Lizzie W. Three Vassar Girls in South America. Illustrated. Boston: Estes & Lauriat. $1.50.
Chatterbox. 1884. Boston: Estes & Lauriat. $1.25.
Choate, J. B. Elements of English Speech. D. Appleton & Co.
Clark, Mrs. S. R. Graham. The Triple "E." Boston: D. Lothrop & Co. 25 cents.
Clark, W. P. The Indian Sign Language. With Explanatory Notes. Philadelphia: L. R. Hamersly & Co. $3.50.
Conway, H. Dark Days. Henry Holt & Co. $1.
Cowan, S. K. A Broken Silence: Some Stray Songs. Marcus Ward & Co.
Crawford, F. M. An American Politician. A Novel. Boston: Houghton, Mifflin & Co. $1.25.
Dodge, Mary Mapes. Baby World. Stories, Rhymes, and Pictures for Little Folks. Compiled from *St. Nicholas*. The Century Co.
Drake, S. A. Our Great Benefactors. Boston: Roberts Bros. $3.50.
Early England, from the Earliest Times to the Accession of Henry II. Boston School Supply Co.
Footman, Rev. H. Reasonable Apprehensions and Reassuring Hints. James Pott & Co. 50 cents.
Prohl, H. Where is Heaven? Philadelphia: Lutheran Publication Society.
Garden of the Heart. Boston: Estes & Lauriat. $1.25.
Gardiner, R. B. The Admission Registers of St. Paul's School, from 1748 to 1876. London: George Bell & Sons.
Harper's Young People. 1884. Harper & Brothers.
Harrison, Mrs. Burton. The Old-Fashioned Fairy Book. Illustrated. Charles Scribner's Sons. $2.
Hawthorne, J. Nathaniel Hawthorne and His Wife. A Biography. In 2 volumes.
Hoey, Mrs. Cashel. The Lover's Creed: a Novel. Harper's Franklin Square Library. 20 cents.
Holden, H. A. The Œconomicus of Xenophon. Macmillan & Co. $1.60.
Holmes, O. W. Illustrated Poems. Boston: Houghton, Mifflin & Co. $5.
Hoppin, J. M. Pastoral Theology. Funk & Wagnalls. $2.50.
Irving, Fannie Belle. Six Girls: a Home Story for Girls. Illustrated. Boston: Estes & Lauriat. $1.50.
Jackson, Helen. Ramona. A Story. Boston: Roberts Brothers. $1.50.
Kirby, E. N. Vocal and Action-Language. Culture and Expression. Boston: Lee & Shepard. $1.25.
Klein, Dr. E. Micro-Organisms and Disease. An Introduction into the Study of Specific Micro-Organisms. Illustrated. Macmillan & Co. $1.
Kouns, N. C. Dorcas, the Daughter of Faustina. Illustrated. Fords, Howard & Hulbert. $1.25.
Kroeker, Kate F. Fairy Tales from Brentano. London: T. Fisher Unwin: New York: Scribner & Welford.
Laboulaye, E. Last Fairy Tales. Translated by Mary L. Booth. Illustrated. Harper & Brothers.
Labberton, R. H. An Historical Atlas. A Chronological Series of Maps at Successive Periods from the Dawn of History to the Present Day. Enlarged Edition. Townsend MacCoun. $1.50.
Lakeman, Mary. Pretty Lucy Merwyn. Boston: Lee & Shepard. $1.25.
Larcom, Lucy. Poetical Works. Boston: Houghton, Mifflin & Co. $2.
Lee, Vernon. Ottilie: An Eighteenth Century Idyl. Scribner & Welford.
Lee, J. H. W. T. Lucreti Cari de Rerum Natura. Libri I.-III. Macmillan & Co. $1.10.
Leavitt, J. McD. Reasons for Faith in the Nineteenth Century. James Pott & Co. $1.
Lewis, Dr. E. J. The American Sportsman. New ed. Philadelphia: J. B. Lippincott & Co. $2.50.
Lotze, H. Outlines of Metaphysic. Edited by Prof. G. T. Ladd. Boston: Ginn, Heath & Co. $1.
Luckes, Eva E. Lectures on General Nursing. Scribner & Welford.
Magazine of Art. Vol. VII. Cassell & Co. $5.
Martin and Bowring. Heine's Book of Songs. White, Stokes & Allen. $1.
May, Sophie. Flaxie Growing Up. Boston: Lee & Shepard. 75 cents.
McCosh, Pres. J. A Criticism of the Critical Philosophy. Charles Scribner's Sons.
Middle England: From the Accession of Henry II. to the Death of Elizabeth. Boston School Supply Co.
Mill, J. S. Principles of Political Economy. A Text-Book for Colleges. D. Appleton & Co.
Miner, H. American Dramatic Directory, for the Season of 1884-'85. Wolf & Palmer Dramatic Publishing Co. $1.
Modern England: From the Accession of James I. to the Present Time. Boston School Supply Co.
Molesworth, Mrs. Christmas-Tree Land. Macmillan & Co. $1.25.

Muloch-Craik, D. An Unsentimental Journey through Cornwall. Macmillan & Co. $4.
Murdock, J. E. Analytic Elocution. Van Antwerp, Bragg & Co. $1.
Nelson, H. L. John Rantoul. Boston: J. R. Osgood & Co. $1.50.
On a Margin. Fords, Howard & Hulbert. $1.25.
O'Reil, M. John Bull's Daughters. Richard A. Saalfield. 50 cents.
Otis, J. Left Behind; or, Ten Days a Newsboy. Illustrated. Harper & Brothers.
Parkman, F. France and England in North America. A Series of Historical Narratives. 2 vols. Boston: Little, Brown & Co.
Phelps, Elizabeth Stuart. Songs of the Silent World, and Other Poems. Boston: Houghton, Mifflin & Co. $1.25.
Picard, G. H. A Matter of Taste: a Novel. White, Stokes & Allen. $1.
Picture-Book of Domestic Animals. With illustrations in colors and plain. George Routledge & Sons. $1.75.
Picture-Book of Wild Animals. With illustrations in colors and plain. George Routledge & Sons. $1.75.
Pictures of Other Folks at Home. Boston: Estes & Lauriat. $1.
Pidgeon, D. Old-World Questions and New-World Answers. Scribner & Welford.
Plympton, A. G. The Mary Jane Papers: a Book for Girls. Illustrated. White, Stokes & Allen. $1.
Porter, Admiral. Allan Dare and Robert le Diable. Part 4. D. Appleton & Co.

Ponce de Leon, N. Diccionario Tecnológico Inglés-Español. Part 9. Head—Lamp. N. Ponce de Leon, 40 Broadway. 50 cents.
Richards, Dr. J. D. Catholic Christianity and Modern Unbelief. Benziger Brothers. $1.
Reid, S. J. Sketch of the Life and Times of the Rev. Sydney Smith, Based on Family Documents and the Recollections of Personal friends. Illustrated. Harper & Brothers.
Reid, T. W. Gladys Fane: a Story of Two Lives. Fourth edition. Scribner & Welford.
Rideing, W. H. Young Folks' History of London. Boston: Estes & Lauriat. $1.50.
Roe, E. P. Nature's Serial Story. Illustrated. Harper & Brothers.
Rubaiyát of Omar Khayyám. With drawings by Elihu Vedder. Boston: Houghton Mifflin & Co. $25.
Russell, W. C. Jack's Courtship: a Sailor's Yarn of Love and Shipwreck. Harper & Brothers.
Scott, Sir W. The Lay of the Last Minstrel. Favorite Illustrated Edition. Thomas Y. Crowell & Co. $2.50.
Selections from Robert Browning's Poetical Works, in 2 Vols. Also Selections, in 2 Vols., from Mrs. Browning's Poems. Macmillan & Co. 4 vols. $5.
Smedley, F. E. Harry Coverdale's Courtship and Marriage, and What Came of it. Philadelphia: T. B. Peterson & Brothers. 75 cents.
Smith, Mary P. W. The Browns. Boston: Roberts Bros. $1.
Some Modern Etchings. White, Stokes, & Allen. $12.50.
Spyri, J. Heidi: Her Years of Wandering and Learning. A Story for Children. Boston: Cupples, Upham & Co. $2.
St. Nicholas: An Illustrated Magazine for Young Folks. In 2 parts. November, 1883, to October, 1884. The Century Co.
Sterne, L. A Sentimental Journey through France and Italy. Illustrations by Maurice Leloir. Philadelphia: J. B. Lippincott & Co. $10.
Stories from English History. Boston School Supply Co.
Stormonth's English Dictionary. Parts 11-13: Mint-Person. Harper's Franklin Square Library. 25 cents each.
Symonds, J. A. Wine, Women, and Song. Mediæval Latin Students' Songs. Now First Translated into English Verse. Scribner & Welford.
Temple, Bishop. The Relations between Religion and Science. Oxford Lectures. Macmillan & Co. $1.50.
The Century: Illustrated Monthly Magazine. November, 1883, to October, 1884. Two volumes. The Century Co.
The Life of the Buddha, and the Early History of His Order. Boston: J. R. Osgood & Co. $3.
The Good Things of *Life*. White, Stokes & Allen. $2.
Thompson, D. G. A System of Psychology. 2 vols. London: Longmans, Green & Co.
Trumbull, Gen. M. M. The American Lesson of the Free-Trade Struggle in England. Chicago: Schumm & Simpson.
Truman, B. C. The Field of Honor: a Complete and Comprehensive History of Duelling. Fords, Howard & Hulbert. $2.
Tupper, F. A. Moonshine. A Story of the Reconstruction Period. Boston: Cupples, Upham & Co. $1.
Tytler, Sarah. Beauty and the Beast: a Novel. Harper's Franklin Square Library. 20 cents.
"Wanderer." Fair Diana. With Illustrations. By G. Bowers. Scribner & Welford.
Wellhausen, J. Skizzen und Vorarbeiten. Erstes Heft. Berlin: Georg Reimer; New York: B. Westermann & Co.
Which? Protection, Free-Trade, or Revenue Reform. A Collection of the Best Articles on Both Sides of the Issue, from Eminent Political Economists and Statesmen. Hartford: Park Publishing Co.
Wigan, G. The Electrician's Pocket-Book. Translated from the French of Hospitalier. Cassell & Co. $2.

Fine Arts.

THE AUTUMN EXHIBITIONS.

The Academy autumn exhibition is scarcely a variation from the usual type of the spring exhibition except that while the general character is not higher, there are no notably good pictures to give it point. The only work which a cursory examination discovers with the really uncompromising purpose that might be a panacea for the prevailing dulness of our art is No. 272, "Fleur-de-lis," by Luther Knight—a most sincere and pertinacious study of flowers; but even this is marred by the careless way in which the leaves are painted. No. 293, "Angling," by Leon Moran, is a well-painted study of nature, if not as elaborate as might profitably be; excellent in general feeling for color and composition, and so good as to make the critic wonder why the artist did not care to make it better. "The Little Mermaid," by Mr. Church, is in the vein of his fantastic creation, but if it shows anything of his present tendencies, it is that he is growing careless of good execution even in his suggestive vein. "The Interrupted Game," by C. Y. Turner, is a very successful device for relieving portraiture of its *pose plastique*, if it were ever really important that it should be so relieved. "A Gray Morning," by Mr. Rehn, a marine, has a fresh and breezy quality, and the shimmer on the breaking wave of the sky reflection is well rendered. Mr. Bunce's Venices are intolerably indifferent to all good qualities of drawing or execution, and growing more and more leathern in color. The two of this year go beyond all endurance in a lazy affectation of a masterly method, of which the artist has never laid any foundation of study or hand-training—it is neither truth nor good falsehood. We shall return to the few mediocrities in the collection later.

The exhibition, at the gallery of the American Art Association, of works from the Salon only proves that the standard of the Salon is no higher than that of the Academy of Design, and is for all the world like an average Academy exhibition, with the absolute rubbish mostly left out. No. 35, "Old Willows at Poligny," is, however, as bad, all things considered, as anything in the Academy last spring. No. 103, "The Shipwreck," is poor enough for any bad collection, and "The Toilet," 225, is bad in every sense of the word—crude in color, leathery in quality, ugly as composition, and ill drawn.

There are a few things worth further study, but the general effect of the collection is so depressing that it must be a work of courage and charity to sift it as the need is. It shows clearly, what has been our conviction for a long time, that the influence of French art is utterly disastrous to ours, and that most of the men who remain in Paris long gather all the vices and none of the strength of the French school—they caricature its *chic* and boldness of execution, and never attain the vigor and finesse of drawing of the best men; they adopt the license and forget the discipline. With half-a-dozen exceptions, the young American painters at Paris are simply overpowered and debauched by the mere surface qualities of French painting, and do not show signs of having seen any of its virtues.

THE WATTS EXHIBITION.—I.

In that analysis of all art on which alone can be founded sound and comprehensive criticism, we must separate, and weigh apart, the various powers and sympathies whose combination makes the artist. There is no such thing as an abstract standard of excellence for the artist, any more than there is for the poet: the horizon varies—the man is dominant in one, the musician, the inspiration, in another. One is supreme brush-master, like Velasquez; another the mighty moulder, like Michael Angelo, and another the idealist, like Raphael; and therein is the sound application of the maxim, *De gustibus nil disputandum* for the world at large. Not this one, nor that, was the greatest artist, except to one who regarded his peculiar power as more wonderful because more completely foreign to him, the judge. To an ancient Greek, for instance, a Donatello might have been no surprise, but a Titian most certainly would have been a revelation. One critic remains always overcome by the method which is to another the simplest matter in art. One whose sense of color is imperfect may be quite insensible to qualities which stir to rapture a finer eye or more largely educated. And compared with any really great artist, the best critic is ill-educated and poorly qualified to pronounce on the supreme attainments of the art. The work of a painter like Watts, whose greatness no one can dispute, although critics may differ as to the grounds of the claim to greatness, and whose intellectual power is clear to the least competent judge of ancient and pure art, compels a certain modesty of opinion and a definite recognition of what art critics in general are too little disposed to grant—*i. e.*, the right of a great artist to make his own language and impose the standard by which he shall be judged. A master in art does not accept the measuring-stick of the student—he imposes his own; and it needs no profound education to see that Watts's work is magisterial, and of that kind which in time creates a standard by which alone it can be rated. Like it or dislike it, one may, but the like or dislike will be a matter of education or constitutional competence, or both combined; but so far as it embodies certain views of the artist which are personal or not yet admitted among the canons of criticism, we are compelled to confess that, as indisputable master of his means of expression, the language of art, he is more likely to know what is the adequate expression of his ideal and the comparative value of the ideal itself, than any other man not equally master of the art.

And the proof of Watts's magistry is, to the most commonplace critical ability, evident in his portraits. There is a reported saying of Titian that all art was contained in a bunch of grapes, and in one sense all art may be said to be in a simpler subject, for a rose or a pomegranate which Titian would have painted would have betrayed all his technical powers as did Giotto's O all his drawing. But a portrait shows not only all an artist's art, but all his intellectual power; and we believe it to be a rule without exception that the truest artists as well as the ablest painters of any age were the best portraitists. Watts's art is to us new (*i. e.*, as far as an art whose fundamental character is the same as that of the great Venetians can be said to be new), and so antipodal in all technical and ideal qualities to that which has been the chief pabulum of the American art student so long—the modern French painting—that it will be a great revolution in taste to learn to accept it as what it really is, higher in aim, nobler in its sphere, and really of a stronger quality of workmanship than any modern painting, except the pictures of Millet. Those who are not prepared to accept this judgment will do well to devote their study for a time to the portraits of the collection now visible at the Metropolitan Museum of Art, leaving in abeyance any opinion on the more elaborate works until they have seen how, in every sense of the word, Mr. Watts responds to the demands made of a great portrait painter, *the* portraitist of his day. The portraits are unequal, some less fortunate than others in the subject, and others betraying the varying physical powers of the painter, whose uncertain health has probably interfered with his work in more ways than one. In the most successful of the examples shown in this collection, such as those of Burne-Jones, Leslie Stephen, Mill, the Duke of Argyll, and Calderon, we are quite of the opinion that the present epoch of art has no other work to show which can be claimed to equal it. Not only are these revelations of character of the subtlest touch, which indeed it needs personal acquaintance fully to appreciate, but they are, as technique, of a *maestria* which the best French work does not approach. Compare, for instance, the portrait in the next gallery, by one of the greatest of living French portraitists, Bonnat, with its aggressive realism and melodramatic rendering of character, with that of Burne-Jones, by Watts, luminous and splendid in color, subdued in its relief, and dignified as a head of Titian, which it more resembles than does any other modern work. It is, indeed, painted substantially on Titian's method, with pure color over a modelled monochromatic under-painting. Look into the execution—large, vigorous, firm in touch, and yet light-handed—no uncertainty or timidity anywhere, with every modulation of tint as pure and transparent as water-color; with some experience in painting one can follow its method down to the under-painting. But take again the portrait of Leslie Stephen, painted in a single sitting, a rapid, certain execution such as no other modern has ever been able to combine with the quality of color here given. It is such an *allaprima* as we have not had since the great Dutch painters.

The painting of the brown beard with a thin, transparent tint rapidly brushed over a white ground, showing the canvas for all its lights, is a piece of execution not in the least ostentatious, but which Rembrandt might have been content with—it is as unaffected as though it had been the painter's signature, and as free. It is not only the highest quality of execution that this portrait gives us, but almost the highest quality of color (the highest being reserved for such painting as that in the Burne-Jones, where the method is more elaborate and adequate); with realization of character of which one can only say that it is, with all its rapidity, quite equal to the more studiously painted—*i. e.*, so far as we are competent to judge, from long acquaintance with both originals. It is that absolute portraiture which embraces the complete individuality. The head of Motley, again, is a rendering of character that haunts one; the strangely searching eyes follow you around the room like a ghost-inhabited canvas. As a study of methods we have never had such a lesson in this country, for there is no prescription in it. It shows the results of many years' researches into the secrets of the *métier*, and if some are more successful in the completed result than others, it is impossible that it should be otherwise, because even in the hands of a master all methods are not alike good. If Mr. Watts had never painted anything but his portraits, we must have given him a position among the greatest painters of all nations and times.

CONCERT AND OPERA.

On Saturday evening the first concert of the Philharmonic Society was given at the Academy of Music. The subscription tickets for these concerts are treasures which only death or a change of residence can induce any one to part with, so that there is very little "floating population"; the large audience remaining almost as unchanging as the musicians and their conductor. The programmes, also, are characterized by a conservative spirit as a rule, although new works are by no means ignored. On this occasion there were two—Brahms's third symphony and Dvořák's Husitska overture. Both were heard a few weeks ago at the first Novelty Concert in Steinway Hall; but, whereas the Dvořák improves on acquaintance, the same cannot be said of the Brahms. Indeed, if this symphony is to be accepted as evidence, Brahms has said his last word in music. Thirty-one years ago the world was surprised by a manifesto from the critical pen of Schumann, who broke a ten years' silence to herald the advent of a new genius destined to grant us "wonderful peeps into the mysteries of the spiritual world." Schumann had good ground on which to base his enthusiastic prophecies; for Brahms's early compositions (especially in the department of chamber music) are characterized by sustained power and remarkable originality of rhythm and harmony. But, contrary to the almost universal rule, as he grew older his creative powers seemed to weaken, and now, in his fifty-first year, his imagination has apparently run dry in a desert of commonplace. His first and second symphonies, although lacking clearness, brilliancy of color, and directness of statement, nevertheless contained valuable ideas that were ably worked up. The third symphony is a dreary waste of sound, aimless and void of form. It does, indeed, follow the regular symphonic ruts, but there is a higher kind of form which consists in the natural development of great ideas; and this kind of unity is of course out of the question in a work which contains no ideas at all. The nearest approaches are a few bars in the first movement, curiously suggestive of the chorus of sirens in "Tannhäuser"; and the opening bars of the second movement, the whole of which for all the world sounds like a set of variations on a certain popular melody in Herold's "Zampa." Two merits the symphony has: it is very short and not abstruse—so far, indeed, from abstruseness that it sounds like kindergarten music, with not a single melodic fragment, harmonic progression, or instrumental device that has not been used a hundred times before. We say all this without a tinge of prejudice, in mere sorrowing wonder. Schubert, Mozart, and even Rubinstein have written symphonies much below their own general level, but nothing to compare with Brahms's third. The directors of the Philharmonic cannot be blamed for producing this work, because it is their duty to give a fair hearing to every new work by a prominent composer; but the faint applause with which the audience damned it (as in Boston, too), clearly implied the hope that it may never again be honored with a place on a Philharmonic programme. A superb performance of Beethoven's magnificent seventh symphony at the other end of the programme merely served to emphasize these critical observations. Between the two symphonies came two vocal selections and the Dvořák overture. Mme. Fursch-Madi scored an immense success with Rubinstein's Scena and Aria, "E dunque ver," and a romance from Massenet's "Hérodiade." The Husitska overture is one of the latest works of the Bohemian composer, whose fame has grown as rapidly as it deserved to do since his discovery a few years ago. Dvořák having been asked last summer to write a piece for the opening of the Bohemian Theatre in Prague, took this occasion to make an orchestral sketch of the wars of the Hussites. The leading theme consists of a real Hussite hymn, and is developed by the composer into a graphic, turbulent battle scene of which Liszt himself might be proud.

A number of circumstances combined on Monday evening to make the opening performance of the Metropolitan opera season one of the most brilliant and successful events on record in our amusement annals. The auditorium having been redecorated, all the boxes were filled with ladies whose gratified looks seemed to imply that the new and darker background no longer harmonized with only a few dress-colors and styles of beauty, but favored all alike. All the other parts of the house were crowded as on no occasion last year, except perhaps the first night; and the effect of the performance on this audience is best indicated by the statement that not a dozen persons, apparently, left the house before the very last note had been sung.

When Dr. Damrosch, a few months ago, suddenly departed for Europe, fears were entertained by those best informed that he would not be able to secure a good company at such a late hour. But the promise of American salaries, and the love of making new conquests for their native music which seems to be common to all German singers, overcame these difficulties; and it must be admitted that Dr. Damrosch has brought over a remarkably good company. This was proved incontestably last evening, although some of the best artists were held in reserve. Frau Krauss, whose voice is clear, sympathetic, and expressive, interpreted the fine rôle of *Elizabeth* in a manner which showed at once why the audiences in the Italian cities visited by Neumann's Nibelung Company received her with so much enthusiasm. Fräulein Slach, who appears as *Venus*, has a pure, resonant voice, and acted her part with becoming fervor. A specially favorable impression was made by Herr Robinson, who not only has a baritone organ that any Italian might envy, but who sings in the broad style and with the tenderness and warmth peculiar to the best German singers. The rôle of *Wolfram*, which in ordinary performances seems insignificant, became in his hands one of the most important ones in the opera. Herr Kögel has a sonorous bass voice, which was heard to advantage in the part of the *Landgrave*. Herr Schott, the tenor, proved a disappointment in the first act. His voice was husky, and he seemed to be afraid to emit his tones. But as the play went on, he became better and better, until in the famous narrative in the third act he revealed himself an artist of the highest type. Not only was the quality of his voice satisfactory here, but every tone reflected the meaning of the word to which it is wedded, and his acting was so passionate and realistic that the entire audience watched him with breathless interest.

Of almost all the singers it must be said that there were moments when they slightly deviated from the pitch; but these momentary flaws were soon forgotten in the general excellence of their work and in the manner of their coöperation. Such a harmonious ensemble, indeed, has seldom, if ever, been heard in this country, and certainly never in a Wagner opera. The orchestra, we need not say, was vastly superior to last year's, or to any operatic orchestra we have ever had here. Most of the chorus singers knew their parts as well as the principals, since they had sung them scores of times in Germany; and few have any idea what a relief it is to a critic to be able to listen to such chorus singing without dreading every moment a vocal chaos or an utter collapse. Nor did the audience fail to notice these differences, for their applause was not bestowed on the soloists alone, but assumed the form of a great ovation after the overture and such ensemble numbers as the stirring march and chorus in the second act. There was hardly any disturbing conversation, and every attempt in this direction was quickly suppressed. The audience had evidently not come for the mere purpose of hearing a few dainty solos, but with the serious intention of devouring the whole score—skin, bones, and all. And it was very instructive to notice how much the play itself seemed to interest everybody. Herr Hock is an admirable stage manager, and the conscientious manner in which he had attended to every detail, so as to make the scenery and pageantry harmonize with the music, is worthy of all praise. Those who had neglected to provide themselves with text-books soon noticed that something worth knowing was going on on the stage, and presently the whole parquet was engaged in reading librettos. No one can peruse the text of "Tannhäuser" without becoming convinced that Wagner was a genuine poet and dramatist quite as much as he was a musician; and as the artists in Dr. Damrosch's company are for the most part quite as good actors as they are singers, they are well qualified to demonstrate this fact.

Dr. Damrosch received a warm greeting when he made his first appearance, and he was also recalled with the vocalists after the first and last acts. He had his forces well in hand throughout the evening. Of course, no one could have expected all those innumerable nuances and shades of expression that one hears in a German opera-house, where all the forces have cooperated for years and years; but in its general results—in the harmonious ensemble of music, action, and scenery, soloists, chorus, and orchestra—Monday evening's performance of "Tannhäuser" was as far above the performances of Wagner operas we have been accustomed to in New York as a Delmonico dinner is superior to a free lunch in a Bowery saloon.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 27, 1884.

The Week.

It would have been difficult for Mr. Blaine to make a more unbecoming and unseasonable acknowledgment of his defeat than he made on Tuesday week in his speech at Augusta, but it was very characteristic. He has always held the "Solid South" in reserve to get him out of trouble. When charges were first made against him, he answered them by suggesting that they emanated from the Solid South, but he has nevertheless always held that it was no harm for the South to be solid, if it was solid for James G. Blaine. In his letter of acceptance, when he expected, with the aid of Elkins and Mahone, to get the vote of one Southern State, if not more, he declared with much effusion, that he saw—

"that the elements which separated them [North and South] are fast disappearing. Prejudices have yielded and are yielding, while a growing cordiality warms the Southern and the Northern heart alike. Can any one doubt that between the sections confidence and esteem are to-day more marked than at any period in the sixty years preceding the election of President Lincoln? . . . If there be occasional and violent outbreaks in the South against this peaceful progress, the public opinion of the country regards them as exceptional, and hopefully trusts that each will prove the last."

After the October election in West Virginia, however, had gone against him, in spite of Elkins's "finance," his view of the matter underwent a sudden change, and he declared that the citizens of New York and Indiana (two doubtful States)—

"fully comprehend what it means to trust the national credit, the national finances, the national pensioning, the protective system, and the great interests which are in the control of the national Government to the Old South, with its bitterness, its unreconciled temper, its narrowness of vision, its hostility to all Northern interests, its constant longing to revive an impossible past, its absolute incapacity to measure the sweeping magnitude of our great future."

Now, of course, he feels worse than ever about the South and its future. We recall these utterances of this remarkable demagogue, not for the purpose of exposing his inconsistency, because he is no longer worth exposure, or even for the purpose of illustrating the remarkable good fortune of the country in escaping four years of him, with his varied powers of mischief and his restless activity, in the Presidential chair. His remarks are worth notice mainly because they are an appeal to what is perhaps the most formidable prejudice among Republicans with which the friends of good government have of late years had to contend, and that by which Republican corruptionists have most profited. We mean the belief that while everything else in the country has changed wonderfully during the last twenty-five years, the South has not changed at all, and is still the same old South, with the same hopes, fears, interests, and powers as that which revolted after Lincoln's election.

Mr. Bruce, the ex-Senator from Mississippi, and probably the leading colored man at the South, who was the temporary Chairman of the Republican Convention at Chicago, speaks in terms of the strongest condemnation of Mr. Blaine's late Augusta speech. So does Mr. Pinchback, the most prominent colored Republican in Louisiana. In fact, except three or four of the Blaine editors at the North, whose reason has apparently, but we hope only temporarily, been shaken by their defeat, there appears to be no organ of opinion, white or colored, which does not reprobate the sentiments of the speech. We believe it has sufficed to console tens of thousands of Blaine's supporters over his overthrow, and, in fact, give it even to them the air of a narrow escape. George C. Gorham himself has not a good word for the orator.

The alarm among the negroes of the South lest they should lose their civil rights and be remanded into slavery, as a consequence of the election of a Democratic President, is both melancholy and amusing. It is not a bad illustration of the difficulties the Southern whites have to contend with, in working the machinery of civilized governments in company with a large body of voters who are so ignorant, as these poor negroes, as to the nature of the laws under which they live. But what are we to think of the Northern politicians who, aware of their ignorance, tried to turn it to account by telling them lies which they knew would fill them with terror, and perhaps break up their homes and interrupt their industry? And are the negroes, all things considered, much more gullible than the Northern white men who have swallowed the story that a Democratic President would lower the tariff and repudiate the national debt while paying that of the defunct Confederacy and pensioning the Rebel soldiers? Was there ever anything more absurd produced at a negro meeting than Blaine's account at Augusta the other day of the way Cleveland's election would affect wages? This is how it is, in the great economist's own words:

"With the Southern Democracy triumphant in their States and in the nation, the negro will be compelled to work for just such wages as the whites may decree; wages which will amount, as did the supplies of the slaves, to a bare subsistence, equal in cash, perhaps, to thirty-five cents per day, if averaged over the entire South. The white laborer in the North will soon feel the distinctive effect of this upon his own wages. The Republicans have clearly seen, from the earliest days of reconstruction, that wages in the South must be raised to a just recompense of the laborer, or wages in the North ruinously lowered, and the party have steadily worked for the former result. The reverse influence will now be set in motion, and that condition of affairs produced which, years ago, Mr. Lincoln warned the free laboring men of the North will prove hostile to their independence, and will inevitably lead to a ruinous reduction of wages. A mere difference in the color of the skin will not suffice to maintain an entirely different standard of wages in contiguous and adjacent States, and the voluntary will be compelled to yield to the involuntary."

Passing over without comment the suggestion that the Southern Democracy have not been "triumphant in their States" until now—which is thoroughly Blaineish in its trickiness—it will be seen that as soon as they hear of Cleveland's election the Southern legislatures are to fix "thirty-five cents a day" as a man's wages, and compel the blacks to work for it, and no black is to be permitted to take more from any employer. This is not the whole nor the worst of it, however. As soon as Northern employers hear of this, they are to cut down the wages of the white laborers—he does not mention to what point, but say to fifty cents a day—and the white laborers are to accept it, the condition of the labor market to the contrary notwithstanding. Now consider that the white man who produced this stuff is a leading Northern politician of great prominence, and that he addressed it as "a good point" to an intelligent Caucasian audience, and then let us ask ourselves whether the negroes who think they are now to be enslaved are so very stupid and ignorant after all. Is there anything funnier often produced at the "Lime-Kiln Club"?

We have again to recommend rest and quiet to Mr. Murat Halstead, of the Cincinnati *Commercial Gazette*, as we have had to do more than once before. One day last week he announced that "the Solid South and the European city of New York and its surroundings had usurped the Government," apparently being of opinion that although those places had the legal right to vote, it was only to vote for Blaine. On another day he declared that Cleveland's election was "a calamity and a shame, and was only possible through an impudent and bloody fraud." Sleep, prolonged sleep, is the only remedy for this condition of the male brain. It does for it what tears do for the female brain. After sleep there should be some recreation into which the original cause of the trouble does not enter.

The *Sun* has an article called "Not Wanted as Yet," in which it pretends to state the "position" of civil-service reformers, and says: "They hold that, outside of the great and the unimportant offices, and some subordinate places where the service rendered is of a confidential nature, Republican Federal office-holders who are not dishonest or incompetent, and who have not been conspicuous in electioneering, should be retained by a Democratic administration; in fact, should be retained as long as they live." This is not true at all. The position of civil-service reformers is that the civil-service law now on the statute book shall be enforced. If the *Sun* thinks it ought to be repealed, let it come out and say so, and see whether it can get people to agree with it.

That the Blaine men were unprepared for the outburst of popular indignation called forth by the "claiming" is to be ascribed in some cases to sheer fanaticism, which seems to have struck many Republicans with utter blindness and made them ready for almost anything to escape a Democratic Administration. In other cases it was due to absolute certainty about the result—a certainty so great that nothing but a final official count could shake it. We doubt if there has ever been

an election at which one party was so sure of winning as Blaine's supporters were at this last one. They had chosen their bedrooms in the White House, distributed the places in the Cabinet and the foreign missions, had their "cock-a-doodle articles" ready in the newspaper offices, and were preparing for four years of such money-making as never was seen. When they were called on to give it all up in a single night, therefore, they were not able to respond, and were ready for any figuring or intriguing that would save them from the pit even for a few days. The danger passed over rapidly, thanks to the New York election laws and the warning of 1876, but it will not do to have it recur.

Mr. Jones, the Chairman of the Republican National Committee, has been explaining the extraordinary "claiming" of that body during the week following the election, and particularly the extraordinary proclamation of Thursday, November 6, in which they announced positively "the triumphant election of Blaine and Logan," adding that Blaine "had carried every Northern State except New Jersey and Connecticut," and that Virginia "seemed" to have given a Republican majority; that there was a "strong probability" that West Virginia had done the same thing, and that "other Southern States" were "in doubt." They also announced that in New York "attempts to tamper with the returns had already been detected," that there "was no ground for doubt that the honest vote of this State had been given to the Republican candidates." Then followed this remarkable insinuation: "Though the defeated candidate for the Presidency is at the head of the election machinery in this State, the Democratic party, which has notoriously been the party of fraud in elections for years, will not be permitted to thwart the will of the people." This was, of course, a suggestion that Governor Cleveland was a member of the State Board of Canvassers (an untruth), and would with that Board make arrangements to falsify the returns and count himself in. After making this suggestion, the proclamation repeated that "the Republican candidates had been honestly elected beyond question." Nothing more positive in the way of assertion was ever put forward by any body of responsible men. Mr. Jones signed it as Chairman. The Republicans throughout the country naturally supposed that he would not as a respectable man sign such a manifesto without having some very distinct support for it in the way of proof, and both Republicans and Democrats looked on it as a sign that we were going to pass the winter in the throes and anxieties of a disputed election, with its accompanying paralysis of trade. The effect on business and on the public mind was, in fact, for the moment most alarming, and in a few days more would have been disastrous. Cleveland's supporters were preparing to resist an attempt to repeat Zach Chandler's fortunate experiment in 1876.

Mr. Jones has now been asked the meaning of this most mischievous, not to say criminal performance, and this is what he says to the reporter of the Pittsburgh *Commercial Gazette*:

"We depended upon the Associated Press for our figures. They were much better than figures from individuals. They had all the facilities for getting full and accurate returns. We might have received an estimate from one man from Allegheny County, for instance, who would say the county would give 18,000 plurality. That was his opinion only. Another one would say he thought it would be 15,000, and another, probably, 20,000. The Associated Press got the most accurate and unbiassed estimates, and these were then carefully compiled by a competent man, Mr. Somerville. The results of these compilations were then sent out and you got them in Pittsburgh just as soon as we did. We had nothing at all to do with the figures further than to receive them. All stories that we doctored them or influenced their compilation in any way, are without any foundation whatever.'

Now Mr. Somerville has nothing to do with the Associated Press. He is the Manager of a department of the Western Union Telegraph Company. He accounts for Mr. Jones's assertion by saying, that the Western Union "allowed a certain discount on all election matter brought over its wires for the use of the bulletins, which were sold to committees, clubs, and individuals to assist in paying the extraordinary expense of keeping some 12,000 extra offices open on election night. As he (Mr. Somerville) made the arrangements with many of these committees, and as they were informed that the bulletins were a copy of those prepared by the Associated Press, this would account for Mr. Chairman Jones's confounding him with the compilation of the returns." Mr. Somerville adds that he has had experience in compiling election returns, having been for eight years manager of the American and National Press Association. It would appear from this that Chairman Jones had no positive knowledge either as to the correctness of his information or the source whence it emanated. He did not even know who the person was who made up the estimates on which he based his incendiary and mendacious manifesto, issued forty-eight hours after the election, and, therefore, had not the smallest guarantee of their correctness.

Mr. Edwin D. Mead, of Boston, first made himself known to the world at large by a pamphlet showing that Blaine was an honest man, which was remarkable mainly as being the only elaborate defence of him which appeared. Mr. Mead is naturally much grieved by what has happened, and fills two columns and a half of the Boston *Transcript* with sorrow and other sensations. The saddest thing in the letter is the announcement that the "Independent movement in this campaign has seemed to him (Mr. Mead) a most unwise, unwarranted, and unhappy movement." We would, in our turn, observe that we think Mr. Mead's dabbling in politics is also most unwise, unwarranted, and unhappy. We have been unable to discover in his contributions to the literature of the campaign the slightest sign of either natural or acquired fitness for political discussion, and we advise him to drop it hereafter. We observe that he "considers the New York *Evening Post* responsible for three-fourths of the poison which has been diffused into the mind of the country." We are glad to hear this, but we warn him that "the poison" is still on tap, and will always be found ready for such political rogues as venture out of their holes.

The question whether the Cobden Club forwarded $1,250,000 to this country to promote the election of Governor Cleveland seems still undecided. The Boston *Herald* says the story is a lie, which implies, as every moralist knows, not merely that it is untrue, but that the person circulating it—in this instance the Indianapolis *Journal*—knows it to be untrue. The Boston *Journal*, however, comes to the rescue of its Western namesake, and declares "frankly" that it "has no reason to disbelieve" the story. On the contrary, it believes that British capitalists "contributed money to promote Democratic success," first, because the London *Telegraph* estimated that the Morrison bill, "if it had become a law, would have been worth $500,000,000 *a year* to British manufacturers"; second, because the London *Times* recently said that "the Cobden Club had raised $2,200,000 to extend the doctrine of free trade in other countries, principally in the United States"; and added the pregnant remark that the Cobden Club "cannot rest while the United States is unsubdued." Finally,

"three manufacturers who have been abroad the past season, report that they found manufacturers in England and Scotland paying assessments to a central committee to be used to affect the election in the United States. One of these is a leading manufacturer in Maine, whose word cannot be doubted; another is a manufacturer in New York, who told what he saw in this line to ex-Speaker Sheard of the New York Assembly. If the *Herald* desires to consult the Maine manufacturer, we think we can furnish it the name."

We do not know what the *Herald* will think about it, but we should ourselves hardly care to follow up any line of evidence suggested by a paper capable of publishing the above. Probably the feeling aroused in most people's minds by the perusal of it is one of curiosity to know how such an article gets into print. The explanation is really quite simple. The cause of revenue reform and enlightened views as to freedom of trade has made such headway since the war, that it is almost impossible for the two or three dyed-in-the-wool protection newspapers to find men to write protection articles. The new generation of newspaper men are almost without exception revenue reformers, and in many cases the ringing protection articles nowadays are written by journalists who do not believe one word they say, and merely throw into shape what they are ordered to write. In others some of the older generation are called in—men of the sort whose minds work like that of Blaine. Most of these, however, are dead or retired from journalism. The result is that most of the protection editorials produced nowadays simply cause roars of laughter among all educated people, and this is the reason why so little discussion of the "issue" with the protectionists is possible. Imagine discussing whether the Cobden Club intends to "subdue" the United States, or whether the leading British manufacturers were "found" by a man from Maine in the act of paying "assessments" to be sent over to Dan Manning's Committee. What is the difference between all this and the idea thrown out by the "funny man" of the *Times*, that the Cobden Club money is usually got through the Custom-house on the person of Mr. John Bigelow, whose periodical trips to Europe are thus explained?

The failure of the *Dolphin* on her trial trip has again attracted attention to the condition of the navy. It is evident that there is some-

thing wrong about it, and the great point is to find out where the trouble is. Admiral Porter declares, in his report on the subject, that the Government has not spent quite as many millions in failing to get a navy as is popularly supposed, and what he says is reassuring, as far as it goes. It is, of course, far pleasanter for any country to know that it only wastes $10,000,000 when it was generally believed to have wasted $20,000,000, but all this does not get us a navy. Perhaps it would be better for us not to have a navy. Certainly, it would be better not to try to have a navy than to spend several millions a year on it and not get one. What the navy needs now is an unsparing investigation. We do not believe a Democratic Secretary could do a better thing than devote himself for the first year of his term to investigation solely, without any attempt at construction. Why did the *Dolphin* break down? Why was the *Tallapoosa* run down? Why are the plans for the *Chicago* so severely criticised by competent authorities?

The *Herald* had a despatch on Saturday which shows strikingly the difficulties in the way of amelioration of the tariff by commercial treaties:

"It is said at the Treasury Department that if the proposed reciprocity treaty with Spain is put into operation, it will diminish our customs revenue about $40,000,000 annually, and dispose of the revenue-reform issue for many years to come. Of the $92,000,000 worth of sugar and molasses imported the last fiscal year, two-thirds of the amount was from Cuba and Porto Rico, while nearly all the manufactured tobacco imported comes from Cuba. It is expected the Louisiana Senators will naturally oppose the treaty, unless some provision is made to compensate the sugar planters of that State for the privileges given the Cubans."

That is to say, the treaty has really to obtain the consent not only of the two governments, but of the sugar Senators, who will insist on "compensation." This brings up a very clear view of the way the whole tariff is regarded at Washington—that is, as a question of private interest, to be settled not by considerations of public advantage, but by a series of "deals" between the sugar men, the pig-iron men, the wool men, and so on.

The indictment of Sullivan and Greenfield will, if pressed to a trial, result in bringing up some very interesting questions of criminal law. They had a direct authorization by the Supreme Court to have a trial of skill under the Marquis of Queensberry's rules, in four rounds of three minutes each. They were to go on unless the exhibition degenerated into a fight, when it was to be at once stopped. But any trial of skill under the Queensberry rules is a fight, a fact which could be proved by plenty of expert evidence. The view taken by the law is, however, apparently that no one can tell in advance what it is going to be, and that it does not become a fight until one party or the other hits "too hard." But if one man hits another too hard, has not the latter the right to hit back in self-defence as hard as he pleases? If this view is sound, the question is, Who hit too hard first? He only can be proved to have had a criminal intent. The other man must have kept entirely within the law. We commend these views to the attention of Colonel Spencer, who is, we believe, "of counsel" in the case.

There is nothing more strange about a Bostonian than his attachment to antiquated features of municipal government, and especially his love of Aldermen. Everybody in Boston admits that the city is badly governed; and as it is governed in the old-fashioned way, handed down from the middle ages to our time, by Aldermen, it might be supposed that, as it grew worse and worse, the old love would die out. In New York it has died out so completely that no one would think of intrusting the control of city government to Aldermen any more than he would to bunco-steerers or confidence men. But the Bostonians still cling to the delusion that Aldermen can be improved. This they tried to effect last spring—it will hardly be believed out of Boston—by getting a law passed for their election by districts instead of on a general ticket. This, they said, would bring into the "city legislature" the citizens most fitted by character, intelligence, and position for the post. The experiment has been tried, and, according to the Boston *Herald*, the result was what any one might have foreseen. The candidates for the Board this year are, on the whole, rather worse than the old set:

"The same old candidates have been trotted out again; men who are no doubt well enough in their way, but who are certainly no better than the average of men who have been elected to the Board for the last four or five years. This applies to the districts from which a great improvement was hoped for; but, when we come to the districts from which improvements were not expected, there is nothing in the outlook which suggests the possibility of disappointment. The names brought forward are in many instances those of men who could by no possibility be elected if they were nominated on a general ticket, and, therefore, from present appearances, there is every reason to suppose that, so far as the Board of Aldermen is concerned, the election next month will result in giving us a body in which the better part of the members will be no better than they were before, while the poorer part will be a great deal worse than on previous occasions."

The British "Fair-Traders" have again been encouraged by a Conservative triumph in the county election in Warwickshire to lift up their voices. The leading spokesman this time is Lord Dunraven, an Irish peer, better known thus far as a contributor of graceful sporting articles to magazines than as an economist. He has, however, been shrewd enough to select Mr. John Bright as his antagonist, and that veteran is not likely to bother himself by discussing with him. In truth, the fair-trade movement has never roused the free-traders into any serious controversy, partly because the fair-traders are generally few in number, and mostly persons of a cranky turn, and partly because they have never been able to agree on a remedy. Their work would be simple if the depression prevailing in England were confined to one department of industry, but it prevails in manufactures and shipping as well as in agriculture. Consequently, when anybody proposes to tax foreign food products he is met by the mechanics and artisans of the great towns with the cry that he proposes to aggravate their distress by increasing the cost of the necessaries of life. If, on the other hand, he proposes to tax foreign manufactures, he is met with the knock-down argument that there are hardly any foreign manufactures to tax, as only about 10 per cent. of the imports consist of such manufactures, the remainder being chiefly corn, flour, cotton, sugar, wool, lumber, and tea, or, in other words, either food or raw materials. In fact, the increase in British imports since 1873 has been almost wholly in food. In nothing else has the foreigner been increasing his competition in the home market. There is, therefore, no way of coming to the aid of the farmer through the tariff, without putting a further burden on every other species of industry, and no way of coming to the relief of the manufacturer or shipowner through the tariff at all, because there is practically no foreign competition to protect him against.

The truth is, that in the last forty years English industry, and the English industrial temper, if we may use the phrase, have so completely adapted themselves to the free-trade régime that it would now be much more difficult to introduce even a small scrap of the protective system than it would be to introduce suddenly absolute free trade in this country after twenty-five years of very high tariff. The habit of relying on the Government or expecting aid from the Government in hard times has died out among all classes of the English industrial population. Most of the fair-trade orators are men with no business, living on land-rent or consols, or social speculators infected a little with the newer forms of socialism. When times of depression come, as come they must under all systems, nearly all business people in England make up their minds to get out of the trouble by their own exertions. English shipping is now in a very bad way, but the cause is well known. Too many ships have been built for the work that is to be done, and everybody acknowledges it. There is, therefore, no talk of restoring the navigation laws or paying shipowners out of the Treasury to enable them to run ships at a profit. Shipowners simply stop building and wait for business to grow up to the capacity of their fleets. The farmers are adopting the same wise course. Finding that they can no longer compete with foreign countries in growing cereals, they are giving it up, and taking to producing meat, milk, fruit, and vegetables, things of which the prices have not been and apparently are not likely to be lowered by foreign competition.

The much-talked-of "compromise" between Mr. Gladstone and the House of Lords seems to be at last reaching a consummation. Both parties have now been heard from. The Franchise Bill, Mr. Gladstone says, is to be passed by the Lords, after receiving a "friendly communication" as to the nature of the Redistribution Bill, and Lord Salisbury says this is as much as could reasonably be expected. The extreme Radicals, who have already taken up the "second chamber" question with great vigor, are not likely to be satisfied with this, however, and they are already warning the Conservatives that Mr. Gladstone is a very moderate man indeed, too moderate by half for the times, and that after he goes, "privileged" people will have much to occupy their thoughts. It is not likely, in fact, that the question of reforming the House of Lords will now be allowed to drop.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 19. to TUESDAY, Nov. 25, 1884, inclusive.]

DOMESTIC.

THE New York State Board of Canvassers on Friday announced the official vote of the State for Presidential electors as follows:

Highest Democratic elector (Priest).....	563,154
Highest Republican elector (Carson)	562,005
Democratic plurality.....	1,149
Lowest Democratic elector (Ottendorfer).	563,048
Lowest Republican elector (Harris).....	561,971
Democratic plurality	1,077
Highest Prohibition elector (Miller).....	25,006
Lowest Prohibition elector (Ellsworth)....	24,948
Highest Butler elector (O'Donnell)	17,004
Lowest Butler elector (Campbell)	16,751

The total vote in this State on the constitutional amendment limiting city indebtedness was: For, 493,638; against, 10,304.

There was a contest in Chicago over the election in the Sixth District to the Illinois State Senate. The complexion of the Legislature on joint ballot depended on the result, and the consequent election of a United States Senator. Leman (Rep.) and Brand (Dem.) were the contestants. The one was elected according to the police returns, and the other according to the returns made to the Board of Canvassers. A recount of the vote on Tuesday showed that Brand (Dem.) had the full majority claimed for him. This ensures the defeat of Logan for United States Senator.

Official returns from all but one county and two precincts of another county in Washington Territory give Armstrong (Rep.) a majority of 9 for delegate to Congress. The county to be heard from gave Brents (Rep.), in 1882, a majority of 20. There will be a contest over the result.

Roscoe Conkling was asked whether he was a candidate for election to the United States Senate (by a coalition of Democrats and Stalwarts), and replied: "I thank you for your solicitude, but I know of no inducement that could draw me nearer to politics than my profession calls me."

Mr. Whitelaw Reid says he is not a candidate for United States Senator from New York.

Governor Bourn, of Rhode Island, has appointed William P. Sheffield, of Newport, to the United States Senate, to succeed the late Senator Anthony, until the reassembling of the Legislature in the January session.

The McCormick Electoral Board Bill, recently passed by the Virginia Legislature, was vetoed on Friday by Governor Cameron. The bill provides for the election by the Legislature of county and city boards, to be invested with the power of appointing all Registrars and Judges of Election, the effect of which action is to place the whole election machinery of the State in the hands of the party in power in the Legislature. The Governor objects to the bill mainly on the ground that it is partisan legislation.

Governor Cleveland, in speaking on Thursday of the fears of some of the Southern negroes about the effect of the Democratic victory, said: "There need be no fear that either the Democratic party or its newly-elected Administration proposes to oppress or enslave any part of our population, or to destroy the business interests of the country. We hope, on the other hand, to do something to benefit the people. It seems to me that our efforts in that direction would be aided if mischievous croakings and dark imaginings should give place to an earnest endeavor to inspire confidence, and to make universal a cheerful hope for the future."

A great meeting was held in the Brooklyn Rink on Thursday night to celebrate the Democratic victory. The Vice-President-elect, Mr. Hendricks, made an address in which he said: "I believe I am as earnestly a Democrat, according to the doctrine of Jefferson and Jackson as almost any man, but to-night, here in New York, adjoining Connecticut and Massachusetts, it does give me pleasure to say that we owe much of this success to the Independent Republicans. It is a hard thing to tell how strong are the bonds that hold partisans together; but in this day the leaders, the brightest scholars, and the patriots have stepped out from the ranks, and taken hold of the Democratic banner for the time being as their symbol, and have helped rescue the country from the rings and cabals. My brother Democrats, let you and me see to it that in the coming days we shall drive none of these men back into their old ranks by our misconduct."

President Arthur has authorized a friend to say that if any effort should be made to carry out the scheme, alleged to have been devised by Senator Don Cameron, to keep Republican office-holders in power for four years after March 4 by means of reappointments and the Tenure of Office Act, he (the President) would not be a party to any such scheme. He indicated that he should not make any appointments to office before the expiration of his term except in case of vacancy. Senator Cameron denies the authorship of the scheme.

The annual report of Admiral David D. Porter has been submitted to the Secretary of the Navy. Admiral Porter says there is a general impression throughout the country that a very large amount of money (over three hundred million dollars) has been spent on the navy since the war without anything to show for it, and this impression has hindered the advance of the navy. It must be remembered, he says, that after the war and up to 1869, a large sum of money was drawn from the Treasury to pay war debts as well as to provide for the maintenance of the navy; and it was not until 1869 that the navy settled down to run on a reasonable annual appropriation for its maintenance. During this time bills to the amount of $190,000,000 in round numbers had to be paid for work contracted for during the height of the war, while $80,000,000 was refunded into the Treasury. When it is considered, he says, that all the naval appropriations since 1869 were simply for the maintenance of the navy, with the exception of about $5,000,000 for new cruisers, the amount expended will be found to be nothing more than reasonable. Since 1869 the average annual expenditure has been about $16,000,000. He makes a plea for a new navy built after the most approved methods.

The Treasury Department was notified on Saturday morning by the Commissioner of Pensions that $10,000,000 more will be required for the payment of pensions during the present fiscal year. Seven millions have already been paid on this account during the current quarter. This total of $17,000,000 is between $5,000,000 and $7,000,000 above the estimate of the amount required, and it is probable that Secretary McCulloch will in consequence decide not to issue a call for bonds at present.

During the week the depression of trade manifested itself in a number of instances. The North Chicago Rolling Mills were shut down on Friday, throwing about 1,800 men out of employment. A number of Pittsburgh firms have notified their hands of a 10 per cent. reduction of wages. Several New England mills have taken similar action.

The wages of 5,000 employees in the ingrain carpet mills of Philadelphia were reduced from 16 to 20 per cent., beginning on Thursday. They went out on a strike.

Judge Utt, of the Circuit Court at Dubuque, Iowa, rendered a decision on Thursday under the new prohibition law, in favor of the liquor men. Nineteen saloon-keepers were sued by the Citizens' League, which asked the Court for an injunction to close the saloons as criminal nuisances under the new law. Judge Utt sustains the demurrer of the defendants on the ground that his court, being one of equity, has no jurisdiction over a criminal case, and on the general ground that it is unconstitutional to deprive a man of his property. An appeal will be taken.

The Rev. Thomas R. Bacon, pastor of the Dwight Place Congregational Church in New Haven, who resigned last spring and reconsidered his resignation, has resigned again. There was much feeling caused by Mr. Bacon's taking strong ground against Blaine in the recent campaign.

Michael H. De Young, proprietor of the San Francisco *Chronicle*, was shot on Wednesday by Adolph Spreckels, son of Claus Spreckels, the Hawaiian sugar monopolist. The affair grew out of a long-continued series of attacks made by the *Chronicle* on Claus Spreckels in connection with the Hawaiian reciprocity treaty, the Hawaiian Steamship Company, and the Hawaiian Commercial Company, in all of which Spreckels was interested. De Young is in a critical condition, but the chances favor his recovery.

A slight shock of earthquake was felt in Concord, N. H., on Sunday morning at half-past 12, followed sixteen minutes later by a very heavy one, lasting several seconds, during which large buildings were shaken. The second shock was accompanied by a heavy rumbling noise, which was sufficiently loud to awaken people from their slumbers. The shocks were also felt in other parts of the State and in Massachusetts.

A great storm prevailed throughout New England and New York on Sunday night and Monday. There was considerable damage to shipping along the coast.

The Harvard-Yale championship foot-ball game at New Haven on Saturday resulted in a great victory for Yale by a score of 6 goals and 4 touchdowns (52 points) to 0.

FOREIGN.

In the House of Commons on Friday afternoon the motion of Mr. Labouchere, advanced Liberal, to reform the House of Lords, was rejected by a vote of 145 to 74. A coalition between the extreme Radicals and the Parnellites in the House of Commons threatens the Liberals with a large defection. The "Lords' Abolition League" is arranging for a demonstration to protest against any compromise with the House of Lords.

On Monday it was announced that Mr. Gladstone and the Marquis of Salisbury had arrived at a definite agreement upon the Redistribution Bill. The Marquis of Salisbury will call a meeting of the Conservative leaders to consider it. In the House of Commons Mr. Gladstone gave notice that he hoped to introduce the Redistribution Bill next Monday, and move its second reading the following Thursday. The debate upon the second reading of the bill is expected to be short. Parliament will adjourn about December 12. The Income Tax Bill passed its third reading on Monday.

Mr. Gladstone's compromise on the Franchise Bill (the terms of which are not yet accurately known) is exciting the indignation of the Radicals. The rumors of dissensions in the Cabinet are not, however, considered worthy of credence.

Having rejected Lord Northbrook's Egyptian financial scheme, the British Cabinet on Tuesday night sent new proposals to the Powers interested. It is said they are as follows: First—An offer to raise a loan of £5,000,000, to be guaranteed by England. Second—An issue of £5,000,000 preferred stock, with Egyptian security. Third—A reduction of the interest on the *dette publique* to ½ per cent.

The election to fill the vacancy in the House of Commons occasioned by the death of Postmaster-General Henry Fawcett took place on Wednesday at Hackney, with the following result: Professor Stuart, Liberal and free-trader, received 14,540 votes; Mr. McAllister, Conservative and fair-trader, 8,534. Majority for Professor Stuart, 6,006.

Lord Dunraven has published a reply to the letter of John Bright, in which he states, in contradiction of Mr. Bright, that wages have risen more in America than in England, that

American workingmen are much better off, and that tens of thousands of English artisans are thus attracted to America. Lord Dunraven also states that the trade of Russia, France, and America during the last seven years has been rapidly extending, while the trade of England has been declining. Mr. Bright, says Lord Dunraven, says that the party of protection and monopoly in America has been overthrown; but Mr. Bright has supported the Republican party by tongue and pen since 1861, and now, in the first moment of its misfortune and humiliation, he has nothing but contemptuous epithets for that party, forgetful that the Democrats of America are as much pledged to protection as the Republicans.

The action brought by Mr. Frank Mantell Adams, a London barrister, against Mr. Bernard Coleridge, a son of Lord Chief-Justice Coleridge, for libel, came on for trial in London on Friday. Mr. Adams, who conducted his own case, stated in his opening speech that he was engaged to a daughter of Judge Coleridge. The Judge objected to him for a son-in-law, and induced his son Bernard to write a letter to his daughter libelling him (Adams). The young lady turned the letter over to her betrothed. This action of hers led to her expulsion from her father's house and the expunging of her name from her father's will. The defendant entered the plea that the letter was a privileged communication. The case was submitted to the jury, who, after some deliberation, brought in a verdict for the plaintiff of £3,000. The judge overruled this verdict and gave a verdict for Coleridge with costs.

The suit for breach of promise brought by Miss Fortescue, the actress, against Lord Garmoyle, oldest son of Earl Cairns, was begun in London on Thursday. The defence admitted the breach of promise, and consented to a verdict of £10,000. Lord Garmoyle's counsel also announced that not the slightest imputation rested on Miss Fortescue's character. She had conducted herself as a highly modest and high-minded English gentlewoman. The compromise was accepted.

The Rev. Abraham Hume, D.C.L., is dead at the age of sixty-nine. He was educated at the Royal Belfast College, Glasgow University, and Trinity College, Dublin, at all of which institutions he carried off honors. He was made a vicar of a parish at Liverpool in 1847, and while thus occupied devoted a great deal of care and attention to the moral and spiritual condition of the city. From these researches appeared in 1858 a résumé of his diary under the signature of "A Lancashire Incumbent," which largely contributed to the overthrow of the general opinion of the indolence of the clergy of England. He became noted as a compiler of religious statistics, and also as an antiquarian. His best-known works, other than those already cited, are: 'The Learned Societies and Printing Clubs of the United Kingdom,' 'Sir Hugh, of Lincoln,' 'Philosophy of Geographical Names,' various pamphlets in defence of the Established Church, and the 'Results of the Irish Census, with a Special Reference to the Church of Ireland,' which appeared in 1864.

The German Reichstag was opened on Thursday with the usual formalities. The Imperial speech called attention to the satisfactory progress which the work of social reform had made, and announced that bills would be introduced extending the system of Workingmen's Accident Insurance and Savings Banks. Another bill will be brought forward sanctioning the Imperial contributions toward the expenses of admitting Bremen into the Zollverein. Another will grant a subsidy to the Colonial Steamship Company. In connection with this a communication will be laid before the Reichstag concerning the settlements which have been placed under the Imperial protection, and concerning the negotiations which are now proceeding in regard to them. The speech further stated that it was necessary to create new sources of revenue. The great depression in the sugar industry rendered an increase of tax on beet sugar difficult. The Emperor was received with great enthusiasm by the Reichstag.

The German Social Democrats have issued a manifesto announcing a programme of fierce opposition to Prince Bismarck. Their first move in the Reichstag will be for the abolition of the Socialist Law.

At the Congo Conference on Wednesday a programme of proposals was presented on behalf of the German Government, for which the sanction of the Conference was asked. The programme was referred to a committee composed of the delegates of Germany, France, England, America, Spain, Belgium, and Portugal. Baron de Courcel, the French Ambassador, presides over the deliberations of the Committee which will decide the questions of the frontiers claimed by the various States. The meetings of the Committee are attended by assistants and experts, and a week will be consumed in the discussion of the matters to be brought before it.

At the meeting of the Conference on Wednesday the delegate from Portugal read a memorandum insisting upon Portugal's right to the Congo, when John A. Kasson, the American delegate, replied, pointing out somewhat sarcastically that Mr. Henry M. Stanley, in all his long journeys on the Lower Congo, had been unable to discover any signs of such Portuguese dominion or civilizing influences as were now claimed. He had, in fact, said Mr. Kasson, found everything and everybody but Portuguese.

The text of Germany's proposals regarding the Congo is substantially as follows: "The delegates of fifteen States, including America, have agreed to the following declaration: In the regions forming the basin of the Congo and its tributaries, the limits of which the Conference will fix, there shall be perfectly free trade for all nations. Commodities shall be imported and exported free of duty, except such as shall be necessary in the interest of general trade. The Powers exercising sovereign rights in the Congo regions are forbidden to allow monopolies or favors of any kind in regard to trade. Foreigners are to enjoy, without distinction, the same treatment and the same rights as citizens of a sovereign state. All the Powers exercising sovereign rights shall bind themselves to coöperate in the endeavor to suppress slavery, and to promote the work of missions and all institutions which tend to the civilization of the natives."

Mr. Stanley, having been appointed a technical delegate for America, made a noteworthy speech, on Friday, to the Committee of the Conference, in behalf of America. He explained with remarkable clearness, cogency, and force the views which he entertains regarding the difference between the geographical and the commercial basin of the Congo. The two conceptions, he insisted, were by no means identical. It would be absurd to accept the geographical basin of the Congo merely, as the subject for their discussion and regulation, because the rapids rendered the Congo impracticable as an exclusive trade route to the upper river. The commercial conception of the Congo basin must be adopted. This conception implied a great stretch of the Western littoral, comprised all the centre of Africa, and extended even to the eastern coast.

The definition of the Congo Basin was adopted by the Committee on Monday. It is virtually as recommended by Henry M. Stanley on November 21, comprising all the centre of Africa and the western littoral, extending from the river Loge on the south to Sette, close to the French Gaboon frontier, on the north. It will be submitted to the whole Conference in a few days.

The British force now in Egypt numbers 16,000 men, including 9,000 troops south of Assuan. There are only two regiments remaining in Cairo. The leaving of such a small garrison there is thought to be unwise.

A despatch from Dongola on Wednesday said: "The Nile is falling rapidly. Large nuggars are consequently unable to pass the cataracts, and will possibly return. The expedition will be deferred until the next rising of the river."

The latest messenger who has arrived at Cairo says that Khartum was illuminated upon the tidings reaching there that the British expedition under General Wolseley was on the way for their relief. Everybody in Khartum reveres General Gordon, and his orders are implicitly obeyed. He also says that the Mahdi's position is eighteen hours' march from Khartum. Disease is making great ravages among his followers, fully 100 of whom are dying daily. The Sheikh Morgana, with a large force of followers, has arrived at a point midway between Kassala and Berber. His purpose is to lend assistance to General Gordon.

Complete official returns of the cholera in the province of Naples show that there were 14,037 cases and 7,576 deaths, of which number 12,402 cases and 6,629 deaths were in the city of Naples.

The cholera epidemic is dying out in Paris.

The French Chamber of Deputies on Friday took up M. Clémenceau's resolution demanding the publication of the minutes of the Tonquin Credit Committee. Prime Minister Ferry declared that the publication of the minutes asked for at this juncture would be prejudicial to the best interests of France, and would place France in a position of inferiority toward a crafty enemy. If the resolution were adopted, he declared his purpose to resign. The resolution was thereupon rejected by a vote of 283 to 212. It is reported that the Chinese Government offers France 75,000,000f. in settlement of the latter's claims, and that France demands 1,250,000,000f.

China has reopened the whole Tonquin question, and, it is said, will ask for English mediation.

Admiral Courbet telegraphed on Saturday from Kelung that a detachment of 400 French troops had destroyed the Chinese fort and other works on the road between Kelung and Tamsui.

Prince Krapotkine has completed his work on 'Nihilism in North Russia.' His health has recently improved, and he has worked several hours daily in the Clairvaux Prison.

M. Steiglitz, the Russian millionaire who recently died, bequeathed 6,000,000 rubles (about $4,620,000) to Madame Menter, the celebrated pianist.

The treaty of commercial reciprocity between the United States and Spain for Cuba and Porto Rico just concluded is said to be the most complete reciprocity treaty ever negotiated by our Government, embracing not only the exchange of products, but also special shipping privileges for the vessels of the two nations, abolishing all tonnage and consular fees on vessels and cargoes, and making all other fees the same as for the national vessels engaged in the coasting trade. It also contains special privileges for commercial travellers, reforms in the Cuban customs regulations concerning fines and the responsibility of vessels for errors when fraud has not been proved, and a stipulation against the imposition of new export taxes.

There has been considerable uproar in the City of Mexico on account of the discussion by the Mexican Congress of the bill on the conversion of the English debt. This bill contains a clause authorizing the issue of new bonds in the sum of $13,000,000 for the payment of commissions to those who manipulated the arrangement, in addition to the payment of the bondholders. The people *en masse* and a large minority in Congress protested energetically against this clause. There were several mobs on the streets. The Congress finally postponed all action on the question until after the inauguration of General Diaz as President. The people have great confidence in him, and quiet has been restored.

THE INDEPENDENTS AND THE CABINET.

A PROMINENT Massachusetts Mugwump, who cannot, however, be suspected of pleading his own cause, writes to us as follows:

"I want to enter a protest against your article in the issue for Monday, November 17, beginning 'The Cabinet-making for President Cleveland has begun.' I cannot for a moment assent to the fundamental principle of this paragraph. I believe in America alone is this singular self-abnegation in politics considered wise. In England, certainly, if Mr. Gladstone or Lord Palmerston organize a Cabinet, he is very careful to introduce into it every element that will lend it strength. He seeks to combine enough force to make a working ministry. A working ministry means, as I understand it, a ministry in which a variety of interests are represented. In this country, on the other hand, it seems to be supposed that there is some political virtue in a self-abnegation which would turn the country over to a partisan Cabinet, organized on the narrowest possible basis. This, I take it, is what you suggest. It seems to me that this is pure political sentimentalism. It is not politics and it is not business. If the Independents brought about the change of administration which has just taken place (and you know perfectly well we did bring it about), we are not only bound to accept our share of the responsibility for the change, but to do what in us lies to make the change a public benefit. For us, then, having done this work, quietly to withdraw, and say that now we will leave some one else to produce results from it, is not a political course which commends itself to me. I do not believe it commends itself to you."

We believe there is no country, governed by party, in which a division of the offices of the Government among men who only come together for the single purpose of overthrowing the previous ministry, is viewed with less favor than in England, or in which examples of it have been rarer. The repugnance excited by the North-Fox coalition, after the fall of the Shelburne Ministry, has not diminished but grown in the century which has since elapsed. The English public still exacts that Cabinets shall be composed of men who have been accustomed to think together, and to some extent, at least, act together, on the leading lines of public policy. No British minister in the present century has ventured to make up a Cabinet in the manner described or suggested by our correspondent—neither Canning, nor Peel, nor Palmerston, nor Russell, nor Derby, nor Disraeli, nor Gladstone. No minister tries to have "interests," in the ordinary sense of that term, represented in his Cabinet, but every minister tries to have the various shades of opinion in his own party represented in it. In Gladstone's Cabinet to-day, for instance, there are Old Whigs and Moderate Liberals and Radicals, but they are all Liberals, and have been for years working on Liberal lines. Their views differ in degree, but not in kind. Some have been travelling fast, and some slow, but all have been travelling in the same direction. Nobody has been admitted to it simply because he thought Lord Beaconsfield was a humbug, or worked for his overthrow. Lord Derby may seem to be an exception to this rule, but Lord Derby did not enter the Liberal Cabinet until he had been for two years giving the Liberals his public support, and had made what might fairly be called a formal public repudiation of his Tory principles.

Mr. Hayes's selection of Mr. Schurz for a seat in his Cabinet in 1877, as representing the more radical reforming wing of his own party, was in strict accordance with the English practice. It was an almost exact parallel to Gladstone's offer of a seat to Chamberlain, who had, when out of office, between 1868 and 1874, been a bitter opponent of the Whig element in the Cabinet, but who represented, as no one else did, the radical democracy of the Liberal party. On the other hand, Mr. Hayes's selection of Mr. Key, as the representative of something wholly outside the Republican party, was, though well meant, a failure. Mr. Key lost all representation as soon as he began to represent, and retained his seat during the whole four years solely by his own weight, which was not great, without having contributed in the smallest degree to fulfil the object of his Cabinet existence, viz., the bringing of the South and the North nearer to each other.

We grant that harmony is not so necessary in the American Cabinet as in the English one, because the work of the American Cabinet officer is more purely executive, and he is never called upon to explain or defend in public the action of his own colleagues or of the President. But still some harmony is necessary in order to insure anything like party responsibility. It must be taken for granted, if we are to have even a semblance of political morality in administration, that each officer approves in a general way of the policy of the Executive within the field of its discretion, and is willing to defend it if called on, and is convinced of the good faith and good intentions of his colleagues. We know how much has been done under the Republican rule, and particularly in General Grant's time, to break down this wholesome tradition, and make each member of the Cabinet a unit, who can hold office in perfect indifference to the aberrations, whether mental or moral, of the President or his colleagues. But we think one of the things which reformers should now aim at is the enforcement of the idea of Cabinet solidarity as the best guarantee of party responsibility—the idea, that is to say, that no man should stay in the Cabinet one minute longer than he approves of the principles and practices both of the President and the heads of the other departments. It is only in this way that the theory of Cabinet representation can be of the slight estuse to the public, or that the distribution of Cabinet offices can be prevented from becoming simply a division of spoils among the President's personal adherents.

Into a Cabinet of this sort no honorable and self-respecting man will, we think, enter without reasonable assurance—such assurance, in fact, as can only come from long experience—that he and his colleagues have the same habits of thought about public affairs, and cherish the same political ideals. The colleagues, in short, should be men with whom he has been accustomed to agree, if not to act. It is not enough that their ends are the same; the means by which they seek to accomplish these ends should also be like if not identical.

If all this be true—and we think both reason and experience justify us in thinking that it is—it will be very hard to justify a claim of the Independents to seat one of their number at Mr. Cleveland's council board. The Independent alliance with the Democrats was something absolutely novel in American politics. It was not a coalition; it was simply coöperation for one well-defined object, the defeat of Blaine through the only available instrumentality, the election of Cleveland. It was undertaken with the clear and often expressed understanding that there was to be perfect freedom to separate after the common end had been attained. The Independents had distinct funds, speakers, and documents. They owed the Democrats nothing and meant to owe them nothing. What is still more to the purpose, many of the most prominent Independent orators and workers were fresh, when the movement began, from bitter denunciations of the Democratic party, both as regarded its methods and its aims. They cannot now, in consequence of anything that has occurred, accept, without serious detriment in the public eye, any position which would imply that they had already begun to trust it implicitly, and had not meant what they said when inveighing against it on the platform. Not one can do this without suggesting in the strongest way to the popular mind a bargain or "deal" of some kind, intended to convert the Independents into apologists of the Administration.

Moreover, it must not be forgotten by those who cling to the idea that they should be represented in the Cabinet, that the canvass has clearly shown not only that the Independents dictated the nomination of Cleveland, but that they elected him. They will, therefore, if he is the kind of man they suppose him to be, be represented in the new Cabinet by the President himself. He is their man. He is to them not a Democrat, but one of themselves, chosen for a certain work, and if he fails them in this character, his bestowal of a Cabinet office on one of their own number would simply be a piece of bitter mockery.

We believe the accession of the Democrats to power to be an immense gain for the country, because it will break up the malignant Republican superstition that this is a government of one party, and that Americans who do not belong to that party are public enemies, or "traitors and rebels." We believe, too, that Democratic administration is very likely to be purer and more efficient, and is most unlikely to be less so, than Republican administration. But while saying all this, we confess we do not know much more than this about the Democratic party. It has a score or so of first-rate men, as far as natural capacity and personal integrity go, among its leaders, but they are, to all intents and purposes, untried men. "Pressure" is the great disease of their party, and they have not in twenty-five years been exposed to pressure. How will they stand it? We do not know, and, we make bold to say, no more does any other Independent or Mugwump in the country. Moreover, Independents, if we know anything of them, are, not simply Independents, but Progressives. They are not satisfied that the working of American institutions has been carried to the highest point of perfection. They see much room for reform in various fields, and they mean to get it, if they can, by the use of such means as God and nature have put into their hands. Are the Democrats the men to give it to them? Is there, for instance, a real motive sympathy with the reform in the civil service among them? We do not know. When we

hear poor Mr. Hendricks maundering forth his ancient qualms about competitive examinations and "schoolmaster tests," we wonder how many more of them there are who have not opened their aged eyes sufficiently to see that they are living under "new skies and amid a strange vegetation." One thing is certain—there is enough that is novel or uncertain about Democratic rule to forbid every Independent from formally casting in his fortunes with the party at present. "Wait and see" should, in our opinion, be the Mugwumps' motto. We have no doubt that if Cleveland's administration proves to be what we expect confidently that it will be, it will produce immense political disintegration, and result in new combinations of which the most far-seeing at present cannot detect more than the faintest outlines. The Democratic party at the South will probably go to pieces under it. The Republican party at the North could for similar reasons hardly survive its success. But these things are all in the future, and the part of wisdom for the Independents is in the meantime to commit themselves to nothing unreservedly except the cause of good government.

"ROOM FOR ALL OF THEM."

Mr. Pendleton, who introduced the Civil-Service Law, speaking of the office-seekers recently, is said to have observed that there was "room for all of them"; that there were, outside the offices governed by the present civil-service rules, some 80,000 places "waiting to be filled under the old appointment system." We doubt very much whether Mr. Pendleton used language of this sort, but it is as well to ask what the fact is which makes such reports worth circulating.

The bulk of the offices "waiting to be filled" under the old spoils system are post-offices—what are described in the Revised Statutes as post-offices "of the fourth and fifth class." By U. S. R. S., Sec. 3820, it is provided that "postmasters of the fourth and fifth class shall be appointed and may be removed by the Postmaster-General," and all others "shall be appointed and may be removed by the President, by and with the advice and consent of the Senate, and shall hold their offices for four years unless sooner removed or suspended according to law." Now, according to the official Postal Guide for 1884, there are 46,155 postmasters of the fourth class alone in the service. The Civil-Service Commissioners in their first report reckon 14,000 as the number of places which are covered by the law. There appear to be no very accurate statistics as to the entire number of persons in the civil service; but leaving out the Presidential post-offices (2,279), the "laborers and workmen," estimated by the Civil-Service Commissioners (First Annual Report, page 16) to comprise "a large proportion" of the whole, the 4,017 in the Railway Mail Service, the Diplomatic and Consular Service, etc., the bulk of the spoils are now to be found in the Post-office Department. But it will be seen that the President himself has nothing to do directly with these offices. They are filled by the Postmaster-General, and the disposition of the new Administration with regard to civil-service reform in general will be shown very much by the kind of man who is intrusted with this patronage. That there will have to be sweeping changes, especially in the South, we have no doubt. The postmasters throughout the Southern States have been encouraged ever since the war to consider themselves political agents of the dominant party, for the purpose of distributing sound doctrine, and looking after the delegations to the nominating conventions. Few if any of them have been selected because they served their localities well, or were wanted by those whom they served, or were known to the Department to be good administrative officers, and this although their duties are purely clerical, and require merely a knowledge of reading, and writing, and arithmetic. Everybody knows what scandals politics in the Post-office has produced at the North, and how the Star-route frauds were rendered possible by "expedition," which would never have been allowed by any department honestly managed, through the "pressure" of eminent Senators and Congressmen. We see what it is, too, in the pending post-election squabble between Hatton and Clarkson, growing out of the charge that Hatton, primarily a Republican editor, and incidentally Postmaster-General, made New York go for Cleveland by preventing the clerks in the Post-office from voting. In the South almost every postmaster is a part of the machinery for carrying elections, and in the interest of decent administration there must be a thorough overhauling of the service. An enormous pressure will be brought to bear on Cleveland, to put in a Postmaster-General who will make a clean sweep of these offices, and fill them with Democratic instead of Republican politicians. Under these circumstances everything will depend on the man whom he selects for the place. It will be quite impossible for him to avoid making a choice between the old system and the new in filling this place. If he chooses a man determined to make the Post-office an efficient non-political administrative machine, he will put in some one who will fill the vacancies on precisely the principles of the Civil-Service Law; if he wants simply to find "room for all of them," then he will do something very different.

With regard to the Presidential post-offices—that is, the offices filled by the President, with the advice and consent of the Senate—there is something for Congress to do, and the matter will, we trust, be brought up as soon as that body meets. By the section of the Revised Statutes that we have quoted they hold their offices for four years. They ought to hold, as every administrative officer ought to hold and once did hold, during good behavior. The four years' term, which has been gradually applied to district-attorneys (U.S.R.S. Sec.769), some territorial judicial officers (Sec. 1864), surveyors-general (Sec. 2217), registers and receivers (Sec. 2244), collectors, naval officers, and surveyors (Sec. 2613), and Presidential postmasters (Sec. 3830), by acts of Congress passed between 1820 and 1872, is simply a device for giving a little patronage to the party in power at the end of every four years. No reason has ever been given why such officials should not hold by a permanent tenure, and at the last session of Congress an attempt was made to repeal the above sections. The bill was defeated in the House by a vote of 99 to 146. It was, of course, defeated by Democratic votes (although it was introduced by Mr. Mutchler, a Democrat, on behalf of the Civil-Service Reform Committee), no doubt under the stupid idea that it was merely a scheme to keep Republican officials in place. Now that they have the civil service in their own hands, the Democrats will perhaps be able to see the matter in a different light.

BLAINE AS A REPUBLICAN MISTAKE.

The full official figures have now come to hand from Iowa, and we have received official figures for the whole of Wisconsin save four counties, from which we have sufficiently accurate estimates to give us the total vote of the State for Blaine and Cleveland in round numbers. We place the figures from these States in a table of seventeen Northern States. In examining the footings of pluralities it should be remembered that Cleveland's pluralities in Connecticut, New Jersey, Indiana, and New York are to be added to Blaine's loss from Garfield in order to get the accurate net loss:

	1880.		1884.		PLURALITIES	
	Garfield.	Hancock.	Blaine.	Cleveland.	Garfield.	Blaine.
Conn.....	67,071	64,415	65,923	67,199	2,656	.....

Totals...	3190191	2684810	3322240	2989650	507,991	357,275

No more striking illustration of Blaine's weakness as a candidate has been furnished than is to be found in these returns from Iowa and Wisconsin. In pluralities in these two States alone he has lost nearly 75,000 of what Garfield received, making his total loss in the seventeen States about 175,000. In Iowa, he has gained over Garfield's total vote about 13,000, while Cleveland has gained over Hancock's over 71,000. In Wisconsin, Blaine's gain over Garfield is about 16,000, while Cleveland has gained over Hancock fully 32,000. These are remarkable figures, and show how completely Blaine failed to poll anything like his share of the increased vote. The same fact is brought out with equal force in the grand totals of the seventeen States. In these States, Blaine has gained over Garfield only 132,049 votes, while Cleveland has gained over Hancock 304,840.

Nothing reveals Blaine's weakness with his party more clearly than this failure to poll the Republican share of the increased vote. The amount of this vote varies considerably in different quadrennial elections. The total vote in 1876 was 1,995,000 greater than in 1872. The increase between 1876 and 1880 was much less, being only 793,000. The natural growth this year ought to have been

at least a million, and of this amount a strong Republican candidate ought to have received in the Northern States fully one-half. Yet, in the seventeen States from which we have received figures, Blaine has run only 132,000 ahead of Garfield, while Cleveland is more than twice as much ahead of Hancock.

The returns from New York State are very significant. Between 1872 and 1876 the growth was nearly 186,000. Between 1876 and 1880 it was nearly 90,000. Between 1880 and this year the returns indicate that it has been about 60,000. Hayes gained over 48,000 votes on Grant's total; Garfield gained over 66,000 on Hayes's total; but Blaine has lost on Garfield's total in the State outside this city 2,000 votes, and has by the sole aid of Democratic treachery in this city made a net gain of barely 6,000 on the total vote of the State. That is, of the increased vote of 60,000, Blaine has secured only one-tenth. Cleveland, on the contrary, has secured nearly 30,000, or one-half. The rest of it went to St. John and Butler.

There has been a great deal of cheap talk about Cleveland losing the confidence of the people of his own State, because his majority of 192,000 in 1882 was cut down to a plurality of 1,100 in 1884. One simple fact disposes of this assertion. Cleveland's total vote when he ran for Governor and had his great majority was 535,318. His total vote this year is 563,169. *He has held his vote of two years ago and has polled 27,851 votes more. He has polled 28,658 more votes than Hancock had, and 42,220 more than Tilden had.* What gave him his great majority in 1882 was the refusal of thousands of Republicans to vote for Folger.

The talk of Blaine and his supporters is all based upon a misrepresentation of the case. He was defeated because he did not get votes enough, and he did not get votes enough because he was not unanimously supported by his own party. Our main point against his nomination, aside from his personal unfitness, was that he could not be elected. His advocates said he could, that the party was unanimous, with the exception of a few insignificant Independents, and that he would draw Democratic votes enough to more than counterbalance that loss. It has been shown by the election that the size of the Independent defection was absurdly underestimated, and that in all parts of the country, except Pennsylvania, Kansas, Minnesota, and Ohio, Blaine did not poll anything like the full Republican vote. Now that he has been defeated, his disappointed advocates are trying to impeach the loyalty of the American people, by charging a majority of them with the responsibility of a defeat which is nothing more nor less than the inevitable outcome of bad party management. Anybody but a Blaine man ought to have known six months ago as well as now, that there are Republicans enough in the country for one successful party, but not enough for two.

THE STATE OF THE COPPER INDUSTRY.

In the long list of protected industries there are probably very few that have gone through so many phases—apparently all that they can be subject to—as the mining and smelting of copper and copper ores. Under the cover of a high duty a pernicious system grew up, by which consumers in this country were made to pay a high price, the producers keeping the home market up to the highest notch by selling abroad at a sacrifice any excess over home requirements. In this policy they met no opposition from manufacturers, who were themselves protected, and whose only anxiety was that the cost of the raw material should be the same to all, the price of the manufactured articles being ruled by a combination. This led to the system of pool sales of copper to large manufacturers and to dealers, the latter doling out to small manufacturers at a fair profit, while the mining companies pledged themselves to keep out of the market during the term of the contract over which deliveries were spread. This is a matter of history. It has undoubtedly proved a "good thing" to some of the mining companies and to the manufacturers and dealers, but it may well be questioned whether it has not led to an enormous waste of money in the opening of unproductive Lake Superior mines.

Previous to 1882 the copper trade was ruled in the most despotic manner by the lake companies, among which the Calumet and Hecla Company, by its exceptional position, had the undisputed leadership. Secure in their position, the lake companies looked with disdain upon the efforts made in other parts of the country to develop copper mines, and it was only in the spring of 1883, when all the old methods had failed to maintain prices, that they began to appreciate the fact that their absolute power was gone forever. How completely and how rapidly the development of the Western mines changed the conditions affecting the industry, may be gathered readily from the following statistics of production. In 1880, the output of copper in the United States was estimated at 27,000 net tons, of which the lake companies contributed 22,204 tons, or 82 per cent. of the total. In 1881, the figures were respectively 32,000 and 24,363 net tons, and 76 per cent. In 1882, they stood 40,912 and 25,439 tons, and 62 per cent., and in 1883, 58,000 and 30,000 net tons, and 52 per cent. This year, according to estimates made on the basis of the known output of a large number of mines for ten months, the production is likely to be 70,000 net tons, of which the Lake Superior districts will furnish about 34,000 net tons of ingot, or less than 50 per cent. In spite of the fact, therefore, that during these five years the production of the lake mines increased from 22,000 to 34,000 tons of copper, or 55 per cent., their proportion of the aggregate in the whole country has dropped from 82 to 50 per cent.

This enormous increase in the yield of our mines is due to a variety of causes, among which the attention directed to the mining of that metal in the Rocky Mountains may be insisted upon as the leading one. Beginning with the developments in Arizona, there are a number of large mines like the Copper Queen, Old Dominion, Arizona, United Verde, and Detroit, working oxidized high-grade ores, which in the aggregate, with a number of smaller concerns, do not make less than 12,000 tons. Arizona has, however, been outstripped now by far by a small group of mines near Butte City, Montana, whose production will this year reach, if it does not surpass, 20,000 tons, the principal concerns being the Anaconda, Montana, Parrot, Bell, Gagnon, and others. Some of the ores carry highly remunerative quantities of silver, while others are too low in that precious metal to admit of its being extracted with profit. Besides this, copper in smaller quantities is turned out in New Mexico, California, Nevada, Utah, Colorado, Wyoming, aud Missouri, the output of the Atlantic States having dwindled to an insignificant figure.

Lake Superior turns out ingot from native ores unequalled in quality the world over. Arizona produces almost exclusively metal carrying from 92 to 98 per cent. of copper obtained by a single fusion. Montana ships high-grade ores carrying from 25 to 40 per cent. of copper and matte, a furnace product carrying from 55 to 65 per cent. of metal, and in some cases from 40 to 60 ounces of silver to the ton.

The effect of this enormous increase in the production has been a rapid lowering in the prices not alone at home, but also abroad, where the arrival of large quantities of ore, matte, black copper, and ingot has effectually defeated any attempts to lift prices. It has forced our copper producers to become exporters of copper in every form, from the ore to the ingot, and has put them into the position of competing fiercely in the open markets of the world with all the great copper-producing countries in Europe, Africa, South America, and Australia, which thus far have supplied them. Coming as the copper does from so many sources in this country, with so many and such varied interests involved, the days of combinations to hold up our home markets permanently above those of the outside world have ceased. The managers of the leading concerns in this country fully understand what a fierce battle they are engaged in with the accumulated wealth of the copper aristocracy of Chili, the giant pyrites companies of Spain, and the rich mines of the Cape and Australia. They, as well as their foreign competitors, are increasing output, and are practising every economy to reduce general expenses and cost. They appreciate the fact that their metal will not fetch more here or elsewhere than the price regulated by the supply and demand. The duty on copper has become a dead letter.

There was a time when Baltimore and Boston rivalled Swansea as smelters and refiners of foreign raw material. There are now at Baltimore and in this harbor smelting works which in equipment and in intelligent management are fully competent to bid for business against their English rivals. They could and they would smelt foreign ores and refine foreign metal if a benevolent Government did not exact from them the payment of a duty on the metal in the ore they import, retaining 10 per cent. of the amount if it is reëxported under the drawback clauses. As it is, our smelters on the Atlantic Coast are prevented from doing this business because years ago our copper-miners believed that they needed protection. To a certain extent the past is hurting them now, since our smelters could probably work the American miner's ore or refine his metal cheaper if they treated larger amounts by adding foreign business to their own.

But the principal grievance of the miners—or that part of them who are hardened protectionists from long habit—is that so little is done for them by the manufacturers of copper to increase the consumption at home. The rolling-mills, which have a nice little combination of their own, are secured against foreign competition by a duty, and add to the price of the raw copper a sum estimated at double the cost of the process of manufacture. Secure against foreign invasion, and guarding by a compact against free competition at home, they prefer to make a large profit on a small turnover to extending the market by the inducement of lower prices. Thus far the copper-miners have borne the brunt of the battle. It is time that the manufacturers should take a hand. Thousands of tons of American copper are now annually going to English workshops to be distributed all over the world in the form of manufactured goods. With their splendid plants, their taste, their ingenuity, and with a cheap and excellent raw material at their disposal, it may well be asked why our copper-

manufacturers in the Naugatuck Valley cannot do the work as well and as cheaply as their foreign rivals. Their apathy can only be explained by the demoralization growing out of a long period of protection. Their lack of enterprise suggests the idea that the only means of stimulating their sagacity is to take off the duty. The copper-miners of the United States will certainly not give them any aid in efforts to oppose a reduction, and the time may soon come when they will express themselves sharply on the duty on coal, iron, steel, machinery, and explosives. A few years hence those who once uneasily bore the attacks of free-traders may be found swelling the ranks of their former assailants.

MÉNAGIANA.

AMONG the many examples that next to the immortality of personal fame is the immortality given by friendship, even by only friendly companionship and association, may be counted Ménage, whom Mme. de Sévigné, in one of her letters—to *himself*, we must confess—called "le plus bel esprit de mon temps." He was her early preceptor, her continual lover, and her constant friend; he was an habitué of the Hôtel de Rambouillet; a friend of Mlle. de Scudéry and Pellisson; of Montaigne's "fille d'alliance," Mlle. de Gournay; of M. de Saumaise (Salmasius); of Huet, the learned Bishop of Avranches; of "the incomparable hermit of the Charente," Balzac, styled by Sainte-Beuve "the great *épistolier* of France," of that day; and he was a familiar protégé of Cardinal de Retz.

But he was not merely the recipient of these friendships and many more—he had something to give in return; and if we cannot but picture him as a small, dry, pedantic figure, moving only in the background, nevertheless he was a part of the various groups of those great days. And the interest of those days lies in the groups as much as in individuals. The brilliancy with which the seventeenth century in France shines upon us comes chiefly from the marvellous agglomeration of luminaries. It is the Milky Way of literature: there are only three or four stars of the first magnitude. Yet we are too dazzled to make accurate distinctions when we hear, for instance, from Mme. de Sévigné, of Corneille, Molière, and Boileau, in succession, reading aloud to Cardinal de Retz their own works in manuscript. He was ill, and "We are trying to amuse him," says Mme. de Sévigné. It is to be hoped they succeeded!

Ménage may have been among the audience; he was present when Molière read three acts of "Tartuffe" to M. de Mommor. But in after years he can hardly have been on terms of easy meeting with either Molière or Boileau, for they both bestowed on him severe literary blows—Molière holding him up to ridicule, in the character of *Vadius*, in "Les Femmes Savantes," and Boileau, in his fourth Satire, jeering at the "grimauds" who met together "chez Ménage." "Il me donne en passant une atteinte légère," says *Vadius;* but an "atteinte légère" from Boileau was of considerable weight.

Ménage was born in the same year with La Rochefoucauld and St. Évremond, 1613, and died in 1692—one, three, and four years, respectively, before Mme. de La Fayette, La Fontaine, and Mme. de Sévigné. These dates and names cover almost all that we need to know about him, if it be added that the catalogue of his works has twenty-five titles of printed volumes and thirteen of manuscripts. Many of them are in Latin, and, besides poems, they are chiefly observations on poetry or on language. For some years Ménage occupied himself with the study of Diogenes Laertius, and in 1690 he published a 'History of Female Philosophers,' of whom he had found sixty! Sainte-Beuve says of him that he wrote "epigrams in every tongue; Greek, Latin, Italian madrigals on all sorts of beauties more or less metaphorical and allegorical"; and apparently thought him unworthy of much attention. But a little volume, bearing the date 1694—not written by him, yet *his*—is of considerable interest. It is 'Ménagiana; or the bons-mots, the critical, historical, moral, and learned thoughts of M. Ménage, collected by his friends.' It lies before us with its pleasant old print and spelling and brown covers, and some extracts from it may be found entertaining. The bons-mots are not very brilliant, and the thoughts are not very profound, but some of the remarks have that inexpressible charm of familiarity with persons and moments that have become famous, which only an "old" book can possess.

Open the volume here and you read:

"I was at the first representation of 'Les Précieuses Ridicules' of Molière at the Petit-Bourbon [November 18, 1659]. Mademoiselle de Rambouillet was there, Madame de Grignan, all the Hôtel Rambouillet, M. Chapelain, and several others of my acquaintance. . . . As we came out from the play, taking M. Chapelain by the hand, 'Sir,' I said to him, . . . 'we must burn what we have adored, and adore what we have burned.' This came to pass as I had predicted, and from this very first representation there was a revulsion of feeling against a nonsensical and labored style."

The authenticity of this anecdote has been called in question, but its presence in this volume shows, at least, that even if it be not true, the friends of Ménage believed it might have been true. It seems an unkindness of fortune that in return for this just appreciation and ready humility on the part of the scholar, Molière thirteen years later should have produced *Vadius*. It is said that Ménage pretended not to recognize himself in that character, and never ceased to applaud the great satirist.

We turn to another page, and find Ménage in the carriage of Cardinal de Retz, passing with him over the Pont Neuf, and he tells us, making merry against himself, how he put his head out of the window "as if to see what o'clock it was. The Cardinal said to me, 'That is *ad honores*': it was true, for I am near-sighted." Again, he is at the Hôtel Rambouillet at a time when new spots had been seen on the sun. "M. de Voiture came in. Mlle. de Rambouillet said to him, 'What news, sir?' 'Mademoiselle,' he answered, 'there is much scandal about the sun.'" And a page or two earlier Ménage is gossiping about a little bit of gallantry on the part of M. de Voiture to Mlle. de Rambouillet, and her mode of receiving it. Trivial enough all this is, but entertainingly photographic.

Mme. de Sévigné's name recurs frequently, and often with some word of hers which would not need her name to suggest her. "I took Mme. de Sévigné one day to M. le Premier Président de Bellièvre, whom she wished to interest in a cause of hers. She met him with an easy air, and after the courtesies were over she spoke to him of her law-suit. But as she perceived that she was embarrassed in her phrascology, she said to him, 'Indeed, sir, I know the air well, but I don't know the words.'" Of another of her gayeties the point is untranslatable, but it is too characteristic in the original to be passed over. "Mme. de Sévigné inquiring about my health, I said to her, 'Madame, I am *enrhumé*.' '*Je la suis aussi*,' she answered. 'It seems to me, madame, that, according to the rules of our language, it would be proper to say *Je le suis*.' 'You may say it if you like,' she returned, 'but I should feel as if I had a beard growing.'"

"Our language," "the rules of our language," and its mere words were of delightful importance to Ménage. Queen Christina of Sweden said of him, apropos of his work on the 'Origins of the French Language,' "M. Ménage desires to know not only where a word comes from but where it is going to." This volume is full of curious and interesting indications and expressions of such taste. For instance: "When I first came to Paris [he was from Angers], there were only a dozen persons here who wrote French sensibly; now, everybody writes well. M. de Balzac was too pompous. M. de Voiture had too sprightly a style, that of M. Costar was too affected; the style of M. d'Ablancourt alone was of good usage." And he constantly goes into greater details, and into verbal criticisms, some of which sound oddly enough now. "I wrote somewhere *vingt-et-un cheval*. This form has been condemned by the French Academy, and every one in the army assures me that they say *vingt-et-un chevaux*. We must yield to usage, but it is only in this connection that the plural is employed instead of the singular. It is an oddity of our language."

There is an account of his first interview with M. de Balzac, whom he considered "the restorer, or rather the author, of our language in its present state," and of a discussion with him and several other "savans," on prose and verse, "when each one tried to show what he knew, and to speak well. For quite otherwise than now there was care taken then to speak correctly, and not to commit faults in general conversation." When the others had left them, "'Now that we are alone,' said he [Balzac], 'let us talk freely and without fear of committing solecisms.' This word struck me as an excellent one, and I communicated it to several persons. I told it to the Chevalier de Méré, who has repeated it in his letters as having heard it from M. de Balzac." What an impression we receive of consideration and care about language—of petty and elaborate art in speech!

Nevertheless, it is certain that mere words mean manners, and this is here illustrated:

"M. du Périer showed me a very well expressed letter [from a lady] which was signed 'your very humble and very obedient servant.' I told him that was not suitable, that it was not a proper style for a lady. He took the part of the lady, and I opposed him. The next day I received a note from Mlle. de Scudéry, which was signed 'your very humble servant.' This surprised me, and I showed the note to M. du Périer. I received another two days later with the same form, which I also showed him. M. du Périer went to see Mlle. de Scudéry, and told her of our discussion. 'It is true,' she said, 'we would not have expressed ourselves so formerly; but ladies were prouder and more reserved than they are now.'"

It must have been, apparently, later than this that Mme. de Sévigné wrote to Ménage:

"Such as I have been and such as I am, I shall never forget your true and solid friendship, and I shall be all my life the most grateful, as the oldest, of your very humble servants.

"LA MARQUISE DE SÉVIGNÉ."

She may, perhaps, escape criticism by professing herself to be only one of many; but even the stately Mme. de Rambouillet says to M. Godeau, the Bishop of Grasse, "You may be sure I shall be, as long as I live, sir, your very humble servant, Catherine de Vivonne." Poor Ménage, whose "surprise" is so agreeable—it is a pity he could not call them both to account!

This M. Godeau, before he became a bishop, was known at the Hôtel de Rambouillet, because of his small stature, as the "Nain de Julie" (Mlle. de Rambouillet), which gives him the opportunity for a graceful little turn in a letter to Ménage, in which, recalling himself to his memory, and begging him to take pity on him in the solitude of his bishopric, where he hears no word of literature, save when echo may repeat what he murmurs to himself, he adds: "And remember neither my cross nor my mitre, but only Julie's

dwarf, who, whenever he can be of service to you, will be a giant."

It is evident that Ménage was not only received but sought by the world of his day, and that we may echo seriously the irony of Molière, and say of him:

"Il peut tenir son coin parmi les beaux esprits."

ENGLAND.—THE STRUGGLE OVER THE FRANCHISE BILL.

LONDON, November 13.

PARLIAMENT, whose meeting on the 23d of October may have passed almost unheeded in America, amid the excitement of a Presidential election, has not belied its character as a place where nothing happens in the way intended or expected. It was convoked specially to pass the Franchise Bill, and the Queen's speech accordingly contained few references to any other topic, and no promises of other legislation. It was hoped that this would secure a short debate on the Address to the Throne, which is always voted in reply to the speech. However, it is permissible to introduce any subject whatever by way of amendment to the Address, and accordingly discussions took place on South African affairs, on the depressed state of trade and agriculture, on the noisy meeting at Birmingham, and on various Irish matters—discussions which occupied a whole fortnight, although they did not really clear anything up or otherwise serve the country. On the other hand, the Franchise Bill, once reached, was despatched with unexpected rapidity. Two nights' debate were given to the second reading, half a night to committee, another half night to third reading. It has now gone to the House of Lords, there to await its fate. What that fate is will be decided, for the present, before these lines reach you. But the situation as it now stands is so peculiar as to need some explanation. Even here, it is only those who have watched it carefully that understand it.

The Tory party opposed the extension of the borough franchise to counties up till the month of March last, when the present bill was introduced. They then announced that they accepted that extension in principle, but insisted that it should be accompanied by a reallotment of seats. Our electoral system is based on the separation of urban districts from rural districts, and they argued that if you admit a vast number of new voters in the rural districts, they must receive at the same time their corresponding number of new seats, else the urban population will have an unfair advantage over the rural. Already the urban population—that is to say, the commercial and manufacturing population—has got all the borough seats. The lowering of the franchise in counties will introduce, especially in the mining and manufacturing counties, such as Yorkshire, Lancashire, Northumberland, a mass of new voters, really urban in character, who will swamp the agricultural voters. Thus the balance between town and country, between manufactures and agriculture, will be destroyed. These were the reasonings advanced last summer in both Houses. They have since been repeated on hundreds of platforms, and they are now put forward as a ground why the House of Lords should refuse to pass the bill until a Redistribution Bill is also sent up to them, ready to be passed at the same time.

The Government replies that it is no less eager for redistribution, and will pass a bill for the purpose at the earliest possible moment, but that it cannot attempt to do so till the Franchise Bill has become law, else the dangers which the Redistribution Bill may encounter from obstruction or open opposition would prove fatal to the Franchise Bill also. To insure the passing of the former, it is necessary first to pass the latter; the latter gives the leverage needed to work the former through, because the House of Commons, many of whose members have little love for a bill which will extinguish their constituencies, will try to avoid redistribution unless driven to it by the fact that the Franchise Bill is already law. Hence Mr. Gladstone declines to produce his second bill until he has at least a binding assurance that the first is safe.

This refusal fills the Opposition with distrust. Some think that he will find means of evading his promised Redistribution Bill, and will dissolve Parliament as soon as the new voters have been placed on the register. Others, acquitting him of these deceitful designs, hold that he seeks to dictate such a scheme of redistribution as will strengthen his own party, and that he will compel its acceptance by the threat of dissolving on the new franchise. Hence they renew the demand for the production of the Government scheme. The Government answer that they will produce their scheme if the Opposition will either promise to pass the Franchise Bill forthwith, or will, by indicating what kind of redistribution scheme they desire, enable a scheme to be framed likely to command general assent and speedy success. But this the Opposition leaders will not do. It is not, they say, the business of an Opposition to propose, but to criticise. We must retain our freedom. Give us your bill; we will then tell you whether we like it, and if we do like it the House of Lords shall pass both measures immediately.

This is the point at which the game now stands. It may seem that there is little dividing the parties, little to prevent an amicable solution of the problem. Why should not the Lords pass the Franchise Bill, since the Government are so deeply pledged to deal with redistribution that an evasion would brand them with turpitude, and since the outlines (general outlines, no doubt) they have given of their scheme contain nothing which the Tories have found dangerous? Why, on the other hand, should not the Opposition break their reserve and tell the country what sort of a scheme they want? There is a point at which suspicion, though it is usually the law of political strife, becomes unreasonable and likely to damage the reputation of those who carry it to excess.

It is not, however, mere distrust, still less mere punctilio, which has so far prevented the two parties from coming to a pacific arrangement. Both are playing with a view to the next general election. If the Franchise Bill were once passed, the Liberals would have their choice of either dissolving before Redistribution was settled, which would be an advantage to them, or of compelling the Opposition to agree to proposals which otherwise it would warmly resist, because they would benefit the urban interest. In either case the Government would have scored a victory over the Opposition and the Peers, and would go to the country with the prestige of that victory. By continuing to resist the Franchise Bill, the House of Lords can compel a general election on the present franchise, and the Tories believe that such an election, held within the next few months, would result in their favor. Why should they forego this advantage? It is one they feel fairly entitled to. Lord Beaconsfield's Government was driven from office mainly on issues of foreign and colonial policy. The Tories hold that the foreign and colonial policy of the present Government, which even Liberals cannot call successful, has been a far grosser failure than that of Lord Beaconsfield. Is all this to be condoned, and a general election deferred for more than a year, for the sake of dealing with a question which the Government, as the Tories believe, have raised only for the sake of distracting attention from their administrative blunders? The real object of the Opposition is, therefore, to force a dissolution at the earliest possible moment, while that of the Liberals is, if possible, to delay it, but, failing that, to make it turn on domestic issues, and to use the odium which the House of Lords has excited for the purpose of discrediting the whole Tory party.

In this state of matters it is natural that the slightest indications of the tendencies of the constituencies should be eagerly caught at. Elections to fill seats becoming accidentally vacant supply such indications. A fortnight ago there was a vacancy in Scarborough, a seaside resort on the coast of Yorkshire, which has also a considerable fishing population. It was expected that the Liberals would be beaten, for their candidate was not a strong man, the fishing folk complained of the way in which the Ministry had dealt with some local fishery question, and it was believed (with good reason) that a Redistribution Bill would deprive the town of one of its two seats in Parliament. Notwithstanding all this, the Liberals triumphed. The Opposition were discouraged: the prospect of a settlement of the Parliamentary deadlock visibly improved. A week later there was an election in North Warwickshire. The late member, the Mr. Leigh whose death while hunting in the Big Horn Mountains of Wyoming your newspapers recently announced, had been a Liberal. However, the Tories carried the seat by a large majority. The news came on the Parliamentary Tories like sunshine on rain-beaten flowers. Their spirits revived into defiance. On Friday, the 7th, the debate in the House of Commons had been pacific: everybody thought a settlement was certain. On Monday, the 10th (the result of the election was declared on the Saturday), the harsh notes of war were again heard, and a settlement seemed further off than ever. Strange chain of causes and effects that threatens England with a constitutional crisis, a change of government, a reconstruction of the House of Lords, because a youthful hunter has stepped too near the edge of a precipice in the Rocky Mountains!

Another election is now pending in Hackney, one of the most populous divisions of London, but the Liberal majority has long been so large there that the issue is not doubtful, and may not much affect the temper of the two parties. For the moment the sky is dark; but a week remains during which negotiations may be carried on between the Government and the Opposition leaders, and during which the sentiment of the country can tell upon Lord Salisbury and his supporters in the House of Lords. There is much hesitation in the Tory ranks. The more moderate men, including more than a half of the Opposition members in both Houses, shrink from precipitating a conflict which might involve a tempestuous agitation during the winter, and shake the foundations of the House of Lords. They do not quite trust the honor of the Ministry, but they think that terms might surely be found which would secure the passage of a fair Redistribution Bill. Four-fifths of the Ministerialists in the House of Commons, and of course all the Ministerialists in the House of Lords, are possessed by similar sentiments. There is, indeed, a section of the Liberal party, small in the House of Commons, but numerous outside, which pants for a conflict. It thinks it sees its opportunity of destroying the hereditary House, and strains in the leash to spring upon the enemy. Mr. Gladstone is, however, strong enough to hold it back, not only through his unquestioned control of the party, but from the circumstances of the position, which would leave the opponents of a pacific settlement approved by the leaders in a hopelessly small minority. He has shown great skill and tact through the whole course of the struggle, resisting the tempta-

tion to threaten the Lords and to launch his rhetorical thunders against the Opposition leaders. This is partly policy, because it is, no doubt, his interest to get the two bills through the present Parliament at any price. But it also springs from the real alarm with which the prospect of a campaign against the House of Lords fills him. He is seventy-five years of age—too old, as he often declares, to undertake new questions; he has learned from his long experience the difficulty and danger of introducing changes in such an ancient and complicated piece of machinery as the British Constitution: he feels that if the House of Lords has to be reformed, a violent popular agitation gives little prospect that the reform will be wisely done. He is, therefore, extremely anxious to avert any conflict, and disposed to make any concession which would not place the Franchise Bill at the mercy of the Lords. That would, indeed, be not compromise, but surrender.

It is less easy to forecast the conduct of the other statesman on whose volition this weighty issue hangs. Lord Salisbury has hitherto held high and confident language. He has insisted on the dangers of passing the Franchise Bill unaccompanied by that reallotment of seats which would prevent it from working injustice. He has led the Peers into a position from which neither they nor he can retreat without some discredit. He is courageous, and does not fear the extinction of the House, for it would restore him to the House of Commons. But he is one of those who, though they walk boldly to the brink, hesitate before they jump off. The boldest general must study the temper of his soldiers: if he finds them depressed, he may do well to accept any fair conditions of retreat. There is unquestionably some depression, some apprehension, among the Tory Peers. Many hold that it will lead to an open defection if Lord Salisbury persists. This seems unlikely. But it may induce him to pause and permit the passage of the Franchise Bill as the price for having a milder scheme of redistribution than the Liberal majority would otherwise compel. Y.

THE LATE MR. FAWCETT.

LONDON, November 12.

THE death of Mr. Fawcett, Postmaster-General in Mr. Gladstone's Government, and Professor of Political Economy at Cambridge, is an event that moves men's regret beyond the bounds of England. On the continent of Europe much sympathetic interest had been felt in the man who, hopelessly blinded in early manhood, had lost neither his energy nor his hopefulness, but devoted himself all the more strenuously both to study and to practical life, until an ample success rewarded his efforts. There are doubtless many in America who have watched his career with no less friendliness, and who will join in the genuine sorrow which his loss causes in his own country.

That career is an admirable illustration of the truth that in life—literary and scientific life almost as much as practical life—force of character counts for more than pure intellectual capacity. Mr. Fawcett was not a man of brilliant natural gifts. He had little originality of mind. His interests were not very wide, and seemed scarcely to extend beyond politics and economics, including in the latter agricultural questions. He certainly seemed to have little care for history or natural science or the higher forms of literature. He did not sparkle in conversation, did not bring out recondite facts from his memory, did not present novel points of view. Neither was he eloquent. His speaking was clear, direct, forcible, leaving no doubt as to his meaning and object, and putting both facts and arguments in a way which was telling from its very obviousness. But there was no charm of manner or delivery, nor any other grace of diction than an excellent purity in the English. His literary style had the same merits, but also the same limitations. The language was lucid, the arrangement good, the ideas just. You read with pleasure, because you felt yourself in the hands of a man who thoroughly understood his subject and instructed you; but the light had little warmth, and seemed to shine with equable monotony on every part. There was even in his way of applying economic doctrines to practical problems a touch of what people called pedantry, but which might be better described as an extreme rigidity, a disposition to see only the blacks and whites of a question, and not to appreciate the subtler considerations which come in, and must be allowed to modify the broader conclusions of economic science. The same tendency appeared in his political conduct, making him occasionally censure measures which, though theoretically open to objection, were deemed by the great majority of his party to be unavoidable under the exigencies of the moment, and likely to avert greater evils. This did not arise (as it often does) from bitterness or vanity, for he was wholly free from both faults; it was, if a defect, an intellectual and not a moral defect.

His strength lay in the singular force of his will, coupled with a certain practical clearness of vision. He had a perfectly distinct notion of what he wanted to make of his life, a resolute concentration of all his powers upon the objects which he set before himself, an unshaken constancy in pursuing those objects in the teeth of all difficulties and disappointments. His first attempts to get into Parliament without the help either of money or local connections were thought absurd, and would have been publicly ridiculed but for the sympathy which his blindness excited. He took his failures in the most good-humored way, telling his friends that he meant to persevere because he was certain to succeed in the long run; and this very self-confidence, which had nothing boastful about it, soon made the tide turn in his favor. His courage was not merely that of a combative and ambitious nature, but that of a man who, having full faith in abstract principles, is so convinced that his principles are right as to be willing to incur unpopularity for their sake. Hence he quickly forced people to listen to him. They recognized that he was speaking because he believed; and, though he was a keen party man, he won the credit of being independent of party, because on two or three important occasions he had ventured to stand almost alone in differing from his leaders. The concentration I have spoken of enabled him always to turn the full force of his mind on any topic he took up. It was worth to him more than a deeper insight or a larger knowledge is to men of less vigorous character; it made men feel that he never spoke or wrote without having something to say which, whether or not it was novel, was certain to be clearly thought, clearly put, and honestly held. The same gift made him, without any preliminary training, a successful administrator of the great department which was intrusted to him. He threw himself heartily into its duties, was often the first of the upper staff to arrive in the morning at the office, and, notwithstanding the great loss of time caused by his having to listen to letters or documents, instead of glancing through them as other men did, he seemed to keep the business of the Post-office thoroughly in hand, answered every question regarding it which was put to him in the House of Commons promptly and with full knowledge, and introduced several important improvements in the conduct of its work.

It is the rule in England for subordinate members of the Ministry not to speak in the House of Commons except upon the business of their own department; and this rule had prevented his voice from being often heard since he entered Mr. Gladstone's Government in 1880. But he must have soon entered the Cabinet, and obtained thereby a freer field of Parliamentary action. His influence would have been valuable, for he was respected by all sections of opinion: by the Radicals, in whose ranks he had long served; by the moderate Liberals, who felt that there was nothing hot or revolutionary about him; by the Tories, who recognized his fairness of mind and willingness to listen to opponents, and had begun to contrast his strict adherence to economic orthodoxy with the loose and reckless language held by some of the advanced Liberals. Apart, however, from his Parliamentary position, he was a most valuable influence in the country. The working classes thoroughly trusted him, for he had, even before he entered politics, shown his interest in questions affecting their welfare, and they perceived the genuine popular fibre in his nature, the desire to benefit them, the superiority to social lures. There was, perhaps, nobody in England, except Mr. Gladstone himself, whose advice they would have been so willing to take, believing it to be absolutely honest and straightforward. Now Mr. Fawcett's position was that of an economist of the straitest sect. He was utterly opposed not merely to protection in any form, and to that ghost of protection which has begun to walk in the twilight of politics under the names of Fair Trade or Reciprocity, but to legislative interferences with adult labor, with the dwellings of the poor, even with the sale of liquor. All these and other similar departures from the principle of free contract seemed to him contrary to sound doctrine, and likely to end by injuring those they are intended to benefit. He said so frankly, and the workingmen listened, not convinced, but not displeased, moved to some extent, and forced to admit that there must be two sides to the question when so true a friend was found differing from them. It was almost as much to their honor that they never wavered in their trust and affection toward him, as to his that he never condescended to prophesy smooth things to them. The English masses have given few more hopeful signs of their capacity for self-government than in their disposition to prefer men of intellectual power and uprightness to flatterers and mob orators. We have, however, very few men of equal intellectual power who had established a title to respect equal to Mr. Fawcett's, and it is this which makes his death a serious public misfortune. Should mischievous proposals for the helping of trade or manufactures by bounties or protective tariff, for the relaxation of the latterly strict administration of the poor law, for requiring the State to find work or houses for the laboring classes, ever become, as they may become, popular with the unthinking, the want of a man who had the ear of the workingmen and the power of stating his views in a broad and simple way, will be sadly felt.

In private life Mr. Fawcett was, notwithstanding his infirmity, widely known and liked. Although very industrious, he had the air of not appearing busy, and was always at the service of a friend who sought his aid or advice. His natural bonhomie served also to correct the rigidity of his economic doctrines, and made people see that they were not due to any want of kindliness and sympathy. He retained the fondness for the country, for rural walks and rides, and the sport of angling, which he had formed when a boy in his native Wiltshire. There was, indeed, no question which seemed to lie so near his heart as

the preservation of commons and open spaces for the recreation and enjoyment of the people; nor had any one in England done more (very few so much) to bring this question to the front, and save common lands, village greens, patches of forest, etc., from being enclosed. It was touching to see his enjoyment of a ride or walk through a bit of rough country. The charms of the English common, as we see it in Surrey, for instance—its elastic sward, its clumps of fern and yellow gorse, the wild-flowers, and thickets of birch, oak, or hazel—gave as much enjoyment to the blind man as to the most romantic of his companions. It was mainly owing to his efforts that the New Forest, which the Government of the day had proposed to enclose, paying off the commoners, and cutting down the noble old trees, was saved to the nation, and ordered to remain forever open to wayfarers.

His career was of a type which has become more frequent in England of late years, though still infrequent: the man who advances himself without fortune, without aristocratic connections, without any such extraordinary gifts as a party desires to secure, by the mere force of ability and perseverance. The English Universities, with their fellowships and their close connection with the literary and political world of London, make such a career easier than it could otherwise be in a country which cares so little as England does for pure intellectual distinction. Mr. Fawcett was sensible that he owed much to his University, and was gratefully attached to it. But his was a nature which would have won its way to eminence by some other road if that road had been closed, seeming always to be stimulated by unexpected obstacles to more vigorous efforts. Y.

Correspondence.

WHAT IS "LYING"?

To the Editor of The Nation:

Sir: In your issue of November 13, you allude to the "claiming" of States for Blaine after election day as "something unprecedented," as a "lying like clock-work" at a time when "lies are absolutely useless," the result of the momentum of having been "lying steadily for three months."

Turning, for instance, to your files of the 23d of October, you will find in a leading editorial this statement:

"We have the most indubitable evidence in our possession that there are Independent Republicans enough in the State [New York] who are committed against Blaine, to reverse Garfield's majority of 21,000 and give Cleveland a much greater one. There is evidence equally indubitable that this majority will be greatly swelled," etc.

In the light of the returns after election day, was this statement, which was not the expression of an opinion, nor the pretence of "claiming," but the unequivocal assertion of a fact, true? If not, was the *Nation* guilty of "lying"?

Inasmuch as during the recent campaign you have made an unprecedentedly free use of the terms "lying," "liars," "prevaricating," "mendacious," and similar epithets, some of us who have been constant readers of your paper many years are interested in knowing your definition of these now familiar household words, and whether the "lying" has been all on one side.

G. H. N.

Milwaukee, November 17, 1884.

[Mr. James D. Warren, Chairman of the Republican State Committee, has said since election, in his newspaper, the Buffalo *Commercial Advertiser*, that the Independent vote for Cleveland in New York and Brooklyn alone was 25,000. This, as our correspondent will admit, was sufficient "to reverse Garfield's majority of 21,000 and give Cleveland a much greater one." Mr. Jones, Chairman of the National Republican Committee, has, since election, admitted in an interview that there were at least 40,000 Independent votes cast for Cleveland in this State. "Clint" Wheeler, one of President Arthur's friends, and an entirely competent authority, puts the number at 60,000. These are all Republican authorities, and they more than sustain our assertion of October 23. The returns confirm it with equal clearness. Cleveland's total vote in the State is nearly 28,000 greater than that of 1882, when he had 192,000 majority. Blaine is behind Garfield in the State at large, and would have lost the State by a very large majority had not Tammany given him at least 20,000 votes—a contingency of which our prediction naturally took no account.

As for "lying," our definition of it remains unchanged. Publishing altered despatches for true ones, and making them the basis of claims known to be unfounded, are examples of it.—Ed. Nation.]

SOME "OUTRAGES" THAT WERE NOT SOUTHERN.

To the Editor of The Nation:

Sir: Some developments in this section since the election seem designed to convince the Independents that they have not labored in vain. This, you will remember, is the banner Republican county, and this whole region is the political antithesis to the "Solid South." Here the party might be expected to bring forth its most characteristic fruit. This town is the seat of the only college in Northern New York—the St. Lawrence University. Like all similar institutions, it has been a dispenser of the type of economic ideas and political principles which develop the genus Independent. The Presidents of the College and of the Divinity School, together with several Professors in the College, were not original Blaine men; and though they took no active part in the canvass, it became known at length that neither the persuasions of the party lash, nor the gentle urgency of the private circular mailed to clergymen and to ladies, had warmed their feelings toward the man from Maine. They were given to understand in many ways that their attitude was resented by the party leaders, but it was not until after the election that direct efforts were made to punish them for the crime of a conscientious vote.

Mr. P. T. Barnum, it was understood, had made provision in his will for a bequest to the University, and it was known that he was an earnest and influential supporter of Mr. Blaine. These two facts entered the heads of certain zealots of the party here, and proved too much for them. They concocted an anonymous letter to Mr. Barnum, acquainting him with the shocking fact that the "heresy of free trade" is taught in St. Lawrence University, and pointing out to him the Presidents and Professors who must be unfit for their positions because they had voted for "a man of Cleveland's stamp." The letter concluded by asking Mr. Barnum "whether money earned honestly is well invested in such an institution, while such men shape its morals." The letter was sent from Canton to Bridgeport, November 6. Mr. Barnum promptly enclosed the document to Doctor Atwood, of the Divinity School, expressing, in a letter sent soon after, his opinion of the author in characteristically plain and vigorous Saxon. The letter has since been published in the local papers.

Of course the exposure puts an end to the scheme to punish these men for their vote and to rob the University of endowment. Mr. Barnum is "too good a democrat to find fault with any man for voting as he sincerely thinks is for the best interests of the country," and too honorable a man to be influenced by such despicable methods. But the letter, in the handwriting of a leading citizen of this town, is a flagrant instance of Republican intolerance, and an alarming indication of political depravity. Similar acts of party vengeance have marked the short period since it became known that Cleveland was elected. Indeed, it began to look as if all those who could not be frightened into voting for Blaine were to be summarily punished for voting against him, by making them feel the stroke of party revenge, where that was possible, or by pursuing them into professional and private life. Can there be any question with just men that a party which has come to think itself the owner of the consciences of its members, and entitled by a sort of divine right "to rule as long and as badly as it likes," needs a little space for repentance? St. Lawrence.

Canton, N. Y., November 20, 1884.

FEARS—IDLE FEARS.

To the Editor of The Nation:

Sir: A gentleman residing in Colorado, who is a graduate of one of the oldest and best of the Eastern colleges, writing me just before the conclusion of the official count in New York, says:

"No, the issue of this campaign has not come home to you with the force it has to me, or you would not have gone off after the delusive phantom of reform held before the people by the Democratic party in this canvass. We have, after great trouble, secured the erection of a copper smelter here. If Cleveland is seated and the House is free trade, it will never start up. Not one in ten mines in this State, now productive, will be worth ten cents in that event's happening. This is not a matter of theory with us, it is a solemn fact."

The following has been going the rounds of the Western press the last few days:

"The talk of Democratic success has had a terrible effect on the colored people. Men, women, and children of this race seem to fear that, with the election of Cleveland, will come the days of slavery again. In the cotton fields the negroes work in a listless way, and all seem to fear their days of freedom have been numbered. At a point fifty miles south of here the negroes are much excited. They assembled in a body Wednesday night and discussed the situation. Many favored an exodus into some one of the Northern Republican States. Few negroes will tell whom they belonged to before the war, as they believe that an admission of that kind would result in their being sent to their original owners."

Now, in the matter of getting happiness out of this life, how much advantage has this dejected graduate over these frightened freedmen? It would seem that the latter will give the statesmen less trouble than the former.

Imperterritus.

Missouri, November 20.

To the Editor of The Nation:

Sir: Since the official announcement of Cleveland's election and the defeat of Republicanism, two negroes in Farmville, Va., believing that they were to be put back into slavery, went to their old masters and asked that they might be allowed to go back to their old homes. One of these belonged in slavery times to Dr. W. H. H. Thackston, a prominent citizen and the Mayor of Farmville. A day or two ago this old man went to Doctor Thackston and said: "Well, Mars William, as I'se got to go back into slavery, I want to go back to you. I'd rather live with you than

anybody else." His old master soon convinced him that he had been deceived.

There are two things shown by this, both of which have been well known in the South before, but which it seems were not well known in other parts of the country. The first is, that the Republicans here have been lying to the negroes ever since they have had the right to vote. The standing argument used by the carpet-baggers and scallawags to make the poor, ignorant negroes vote the Republican ticket, was that if the Democrats came into power they would be put back into slavery. And the second is, the lack of foundation for the innumerable lies told by Northern people in regard to the cruelty of slave-owners. Had these men been cruelly treated by their masters, think you they would have gone to *them* and asked to be taken back, when they had been told they were to be put back into slavery?

Let those who think there is any ill-feeling among the negroes toward their old masters note this well. W. S. C.

HAMPDEN SIDNEY, VA., November 18, 1884.

[The fact stated by our correspondent is interesting, and to his first deduction Mr. Blaine's recent speech at Augusta certainly gives plausibility. Two proverbs affect the validity of the second deduction: "One swallow does not make a summer"; and "Rather bear those ills we have than fly to others that we know not of"—a consideration to which the slave likely to change masters was always painfully alive. —ED. NATION.]

MORE ABOUT JUDGE TOURGÉE'S FIGURES.

TO THE EDITOR OF THE NATION:

SIR: In No. 1010 you print a letter showing conclusively the untrustworthiness of Judge Tourgée's conclusions as to the relative growth of the two races in the South. As supplementary to that letter I wish to say that I know from personal observation that the Census of 1870 was a mere farce in one part of the South. That census was taken in South Carolina, at least, largely by ignorant and incompetent persons—some of them recently emancipated. I know a census enumerator of 1880 who had the territory enumerated in 1870 by one of this class, and who found numbers of families that had never heard of a census-taker. It is needless to say that families thus neglected were generally colored, owing to the well-known fact that many of the negro farm laborers have their huts in the woods. Comparatively few of them live on the public roads, and many of their houses are reached only by obscure roads in the forest. In the township I speak of, the population of 1870 was found to be somewhat above 600 as returned by the freedman; in 1880 it was found to be 1,300. In another township, enumerated in 1880 by an acquaintance of mine, the increase was so enormous that it was selected by the Census Bureau for reënumeration. The special enumerator sent down from Washington found the population to be almost a hundred larger than my friend had returned it.

Judge Tourgée's figures would be gloomy enough if they were proved reliable; but the hasty conclusion drawn from them by the eloquent judge is wholly fallacious.

W. C. DREHER.

ROANOKE COLLEGE, SALEM, VA., November 20, 1884.

A SNAKE STORY.

TO THE EDITOR OF THE NATION:

SIR: In a review of Mr. Ernest Ingersoll's 'Country Cousins' in last week's issue of your paper, the critic classes among evidences of carelessness the author's acceptance as proved of "the story of the retreat of young snakes into the stomach of the mother for temporary refuge." Now it is quite possible that the author speaks from actual observation, as the verification of this "story" would be by no means difficult to any dweller in the country.

In 1868 or 1869 my father and I visited Dryden Lake, in Tompkins County, N. Y., for the purpose of fishing, at a time when laborers were engaged in constructing the bed and bridges of the Southern Central Railroad at that point. On a root projecting over the water we observed a very large and remarkably thick-set water-snake apparently asleep in the sun. A couple of Irish laborers whose attention we called to the circumstance killed the "dhirty baste," and, either out of race hatred or curiosity, proceeded to dissect its carcass. Before we left them I saw them rip from its interior five little water snakes, and when we returned a few hours later we were informed that in all thirteen young were taken from that one snake. Whether they were in the *stomach* of the mother or not I cannot say, for the ripping was done with sticks and not very skilfully or carefully, but they were certainly all found alive within the hide of their corpulent parent.—Very respectfully, P. L. BURLINGAME.

[It was probably in cases like the above that the "story" originated. The reviewer has had similar experiences, and has preserved specimens containing the little ones. The latter are not in the stomach but in the oviducts, where, in some species, the eggs are hatched shortly before the birth of the young.—ED. NATION.]

Notes.

A VERY comely volume has been made from the reports of the Science Association meetings, English and American, held this fall in Montreal and Philadelphia, as given in *Science* (Cambridge, Mass., *Science* Co.).

A work entitled 'The Divorce Question,' by the Rev. Samuel W. Dike, well known for the study he has bestowed on this social problem, is in the press of Funk & Wagnalls, who will also publish 'Edwin Arnold as Poetizer and as Paganizer,' by Prof. W. C. Wilkinson.

'Myths in Medicine and Old-Time Doctors,' by Dr. Alfred C. Garratt (G. P. Putnam's Sons) is a sketchy but not very thorough history of medicine, interspersed with irrelevant paragraphs, as, for instance, a eulogium upon the Bible (p. 58), the description of a sultana's dress (p. 77), and ten pages from 'The Talisman,' where a few sentences would suffice. These and such lapses, among others, as 'Abracadaba' (p. 44), 'Montague' (p. 76 and repeatedly) for Lady Mary Wortley Montagu, 'Acromatic' (p. 84), the definition "Biology—the science of the mind" (p. 30), indicate carelessness in preparation and in thought. Much of the book is occupied with quotations about alchemy, but apparently without a fair appreciation of its mystical import, without a separation of the moral from the physical, and with a confusion of facts and figures that not only shows the writer is not an adept, but that he probably has never heard of white magic. The volume leads up, by somewhat unequal steps, to an analysis of homœopathy in the last chapter, which is its only valuable portion, and for which the rest appears to have been prepared. It discusses infinitesimal doses from an arithmetical standpoint, and gives (p. 193) a page of figures in explanation of a sixth dilution and the 1,000,000,000,000 drops it represents.

The 'American Dramatic Directory' is a volume, compiled by Mr. Harry Miner, which contains lists of the various places of amusement in the country, together with a variety of information concerning hotels, newspapers, etc. The arrangement is alphabetical, and the facts collected are likely to be of much value to "professional" persons, although of comparatively little interest to anybody else.

The taste for American literature on the other side of the Atlantic seems to be growing. The Glasgow *Weekly Citizen*, an eight-page paper mainly made up of extracts from books and magazines, presents its readers each week with several columns of stories and sketches from *Harper*, the *Century*, and other American magazines; and last month it began to reprint in weekly instalments Mrs. Harris's new novel, 'Phœbe.'

In "Oddities of Animal Character," a short article reprinted from the *Spectator* in the December *Popular Science Monthly*, we recognize an old friend, which appeared under the title of "A Positivist Pigeon," in the *Spectator* of August 30 of this year. Such changes of titles are always misleading and ought never to be made. It should also be considered necessary to give the date of the magazine in which the reprinted article first appeared.

Two bound volumes round out the *Century's* year from November, 1883, to the present month. Two much-talked-of novels, the 'Bread-Winners' and 'Dr. Sevier,' are partly contained in them, along with Henry James's 'Tales of Three Cities.' Professor Langley's papers on the sun, Edward Eggleston's on colonial history, and W. J. Stillman's "On the Track of Ulysses," are also noteworthy. Biography has been well cared for as usual, and here are to be found specimens of the best that America contributes to the world's portrait gallery, and this, in the domain of wood-cutting, means best of all. The very list of the principal ones shows what a rich return this feature alone is to the subscriber to the magazine: the Queens of England and of Rumania, Chambord, the Comte de Paris, Plon-Plon; Moltke, Sheridan, and Sherman; John Bright, Sam Houston, Chief Joseph, Peter Cooper, Littré, members of the French Academy, Rosa Bonheur, Austin Dobson, Sidney Lanier, Modjeska, Dante.

It is not so easy to summarize the contents of *St. Nicholas*, which also closes its two volumes (or two parts of vol. xi) at this time. A glance at the table shows how many literary men and women who commonly write for their contemporaries, have also a juvenile side to them, and do not disdain to amuse and edify the rising generation.

Much the same may be said of *Harper's Young People* for 1884, which nevertheless has a very distinct physiognomy. One remarks that while the infant reader is not neglected, at least pictorially, his older brother and sister are rather regarded by the literary purveyor for this periodical. The form and bulk of the bound volume are very imposing.

With the current (December) number of the *United Service* the magazine passes from the hands of L. R. Hamersly & Co., Philadelphia, and will hereafter be published by T. H. S. Hamersly, in this city. The late publishers announce their intention to issue an eclectic quarterly review addressed to the same audience as the *United Service's*.

In the *American Naturalist* for December an inconclusive article by Mr. J. C. Branner, on "Rock Inscriptions in Brazil," comes first in order, with diagrams showing the inscriptions. Mr. Branner remarks in a footnote that the circumstances under which he found the remains of extinct mammals in this region (the interior of the province of Pernambuco), led him to believe

that their extermination was caused by long droughts over great areas. We may mention also a tentative article on the relation of color to flavor in fruits and vegetables.

More of the Hakka (love) songs are given in the *China Review* for July and August; but they fall below the first instalment in poetic quality. John Chalmers, LL.D., contributes a Chinese version of "A man's a man for a' that," which we commend to the persecutors of John Chinaman on the Pacific Coast. In the Notes and Queries we read, among several comments on Mr. Griffis's work on Corea, that nothing can be clearer from a perusal of it than that Corean civilization is almost purely that of the ancient Chinese.

White, Stokes & Allen send us the George MacDonald Calendar for 1885, with daily quotations from this writer's fiction and poetry.

Harrison Weir's 'Every Day in the Country' (Orange Judd Co.) is not creditable to the carefulness of the English makers of the book. Neither the full-page color prints nor the process cuts in the margins do justice to the original designs. The natural-history signs and entries are, of course, for English and not American latitudes. But the blank pages will serve in any clime.

Of special interest to physicists is a recent "Astronomical Paper" issued from the office of the American Ephemeris. It is a supplement to Delaunay's Lunar Theory, by Mr. George W. Hill, and discusses the lunar perturbations which are produced by the figure of the earth. In order to obtain the numerical value of a constant factor which enters into the expressions for these perturbations, the author has availed himself of all the reliable determinations of the force of gravity at different points on the earth's surface, and then incidentally deduces a new expression for the length of the seconds pendulum. The formula which is thus derived consists of twelve terms, which depend not only upon functions of the latitude, but also upon functions of longitude as well. It is interesting to notice that the observations are quite as well represented by means of this new formula as by the older formulas whose terms depended upon the latitude alone.

After a long interruption in its publication—if this expression be allowable—a new number of the clandestine organ of the Russian Nihilists, the *Narodnaya Volya* (*Will of the People*) has been put in circulation. It is dated October 12, but most of the articles are of much earlier date, and the whole shows the effects of late disorganization, caused by persecution and betrayal. The Executive Committee of the party, however, declares the greatest difficulties to have been overcome, and the revolutionary work resumed with vigor and discipline. The recent disasters are in great part attributed to the denunciations of Degayeff, who, when arrested, saved his life and freedom by revealing important secrets, and volunteering to unearth more, but subsequently returned to his revolutionary associations and vindicated his former faith by slaying his employer, Colonel Sudeikin, the chief of the St. Petersburg gendarmerie, after which he disappeared.

Next month Frinzine, Klein & Co., Paris, will publish a curious volume, by Victor Champier, on 'Les Anciens Almanachs Illustrés,' with fifty separate plates in black and white and colored. The almanacs thus exemplified belong to the fifteenth to nineteenth centuries, and have a considerable artistic interest from the calendar and other designs which accompany them, and which will now be reproduced. The text deals with a new subject and will have a special bibliographical value.

The *Revue Critique* points out a gross instance of plagiarism. Dr. Ludwig Meyer's 'Tibur, eine römische Studie,' is a literal translation of Gaston Boissier's 'La Villa d'Hadrian,' with no change except the title, and no addition except the motto and a notice that "The right of translation is reserved"! There is, however, one omission—the name of the original author.

A very bad word has been coined to signify the person who takes care of an electrical motor. As an engine-driver is an engineer, so the tender of a motor has been called a motorneer. The sound is sufficiently objectionable, but that is not the worst feature of the new word. Its coiner did not notice that the second *n* in engineer belongs to engine, and that the suffix is not neer but eer. Motoreer is the analogous form; and if a new word is necessary, it is to be hoped that this form will be adopted.

M. Henri Weil has published a paper in the *Annuaire de l'Association pour l'Encouragement des Études Grecques*, in which he takes up the familiar Greek word for "poet," and robs it of the metaphysical aureole that hangs about it in the minds of many. The "poet" is not the 'maker,' in the sense of the 'creator,' but in the sense of the 'maker-up' or 'composer.' M. Weil is somewhat afraid that this will seem to be a return to Wolf, who says in his 'Prolegomena': "Ipsum hoc nomen poetæ, ignotum olim ἀοιδοῖς, vim habet operosioris laboris." So Horace says: "Operosa carmina fingo." But without subscribing to Wolf's views of the relation of popular to artistic poetry, M. Weil goes on to show that poetry was to the Greek not a creation but an imitation, and if the word ποιητής claimed for the art a higher merit than ἀοιδός or μουσοποιός, why was it prosaic? Why was it employed grudgingly and late in poetry? He then proceeds to examine the technical meaning of the word ποιεῖν and its compounds, and to show that it means 'composition' in contradistinction to 'execution,' 'delivery.' The narrowing of the term "poet" to verse is parallel with the narrowing of "composer" to music. The neat little essay is another illustration of the confiding way in which most statements are accepted by dictionary-makers, and other makers who are in no wise "poets."

—Under the title of "Poe's Legendary Years," Mr. G. E. Woodberry contributes to the December number of the *Atlantic* an acute analysis of the conflicting and contradictory stories with regard to Poe's early years, which have hitherto left so much of his youthful life in a condition of myth. This was due in great measure to the poet's own peculiar way of dealing with the facts of his biography. He had, as Mr. Woodberry says, a "habit of secrecy," but "on occasion he could make silence more sure by a misleading word." On the whole, there appear to have been more misleading words than silence, and the Poe legend grew finally into the following romantically substantial form, as given by Mr. Ingram, his English biographer: Toward the end of June, 1827, Poe left the United States for Europe, his destination being the scene of the Greco-Turkish war. He was absent about eighteen months, reached England, if not Greece, lived in London some time, formed the acquaintance of Leigh Hunt and Theodore Hook, and like them "lived by literary labor." Eventually he arrived at "a certain seaport in France," where he was drawn into a quarrel about a lady, in which he was wounded by his antagonist. Taken to his lodgings, he fell into a fever, and was there tenderly cared for by a Scotch lady of position, to whom he afterward wrote a beautiful poem called "Holy Eyes." Owing to the peculiarity of her position, she did not wish her name made known; and Poe, of course, was too much the gentleman to violate any promise once given to a lady. Perhaps the most interesting incident of his stay in France was the composition of a novel, describing his own adventures under the garb of fiction, which, to judge by the above indications, must have been a masterpiece. He brought the manuscript back to America, but a French version was published, and not unnaturally accredited to Eugene Sue. All this was a tissue of falsehood, the facts of Poe's early life having been really neither very romantic nor very creditable. He ran away from his friends, enlisted in the army, got into West Point, and was dismissed the service for neglect of duty; he deeply offended his benefactor, Mr. Allan, and was at one time reduced to absolute destitution. Such is the basis of fact for the remarkable Poe legend. The poet seems to have been incapable of telling the truth, and Mr. Woodberry apparently thinks that we may trace a connection between his poetry and his scapegrace career. He calls Poe's literary harvest a "black growth," and so perhaps it is; but it should also be said that the connection between character and literature is doubtful ground. If, for instance, we examine the lives of imaginative writers, Poe, De Quincey, Byron, Bulwer, Swift, Goldsmith—we take the names almost at random—what is the "lesson" which they teach? Is it not that we must avoid inquiring too minutely into a problem which we cannot fathom? We see the life on one side, a mass of inconsistency, or improvidence, or license; on the other we see a few memorable records of imaginative power. Was the imagination cultivated at the expense of the judgment, and the will, and the sense of truth? If so, is there an eternal antagonism between the moral qualities allied to genius and the qualities which make for happiness, or at any rate for order and decency? This theory was prevalent in the Byronic period; to go to the other extreme now, and to insist on judging works of imagination in the light of the author's life, would surely lead us into a perplexity of a new sort. Can we look forward to a time when the possession of a great fund of imagination and genius, in letters, or art, or music, will imply the probable possession of the virtues which make people esteemed and respected by their neighbors; of that prudence which breeds thrift and order, and that accuracy which loathes falsehood? When such a time comes, the literary class will inherit the earth—but it will be a different literary class from any hitherto known.

—As if to warn us that the December *Century* bears no resemblance to a holiday number, Mr. Edward Dowden takes us at once in the opening article to the now uncheerful land of the Irish. He makes a very entertaining sketch of Dublin, and an instructive one also, because, notwithstanding our neighborhood to Ireland in so many ways, that country is one of the least cultivated fields of travel. A more interesting contribution of this kind, however, is Mr. Baillie-Grohman's account of how he hunted the Rocky Mountain goat in the Bitter Root range, and in British Columbia, where he found the last of the free tribes of Indians whose pride it was never to have killed whites, and whose recent restriction to a reservation marks the end of a race-era. He gives considerable valuable information respecting the habits and the chase of the rare animal he was pursuing, and to those who are familiar with his picturesque books of travel it will seem unnecessary to say in addition that he weaves in a bright thread of personal adventure. The instalment of "The New Astronomy," with its examination of the energy of the sun, and its concluding speculation that the torrid regions may be reduced to industrial civilization and become again the centres of the world's life, because of the force stored up in the sun's rays and waiting only for its Fulton, Morse, or Edison, is a fine example of popular discussion of difficult topics,

Among the "Open Letters" is one in which Mr. Lathrop, on behalf of the Copyright League, shows that preparation is beginning for the winter campaign on that subject in Congress.

—The second in the series of articles upon the late war is "Fort Donelson," by General Lewis Wallace, who commanded a division in the battle. He has made an effort, successful in the main, to popularize the story, so that in his descriptions of the field, the hostile camps, and the incidents of the fight itself, the unmilitary reader may have no difficulty in following him. The result is a vivid piece of narrative with considerable local color and incident. As a history of the engagement, the point of difference from the currently accepted version is found in the fact that the movements on the right, where Wallace himself was, are made comparatively independent of orders from General Grant, and the preservation of advantages gained after the repulse of the effort of the Confederates to cut their way out, is represented as being in consequence of the writer's disobedience to Grant's order to retire and fortify a more remote line—a disobedience which was approved by his commander after the fact. The illustrations give beautiful views of the present aspect of the field from various points, and authentic portraits of Grant, Floyd, Pillow, Buckner, C. F. Smith, and McClernand. The frontispiece portrait of Grant is not only an admirable specimen of engraving on wood, but as a likeness of Grant the soldier is far more characteristic and strong than any other we remember to have seen.

—The *Century* illustrations for December are, on the whole, even better than the average of their issues. The Dublin city views are a great advance on anything we have seen of Mr. Pennell's, and show solid qualities of drawing and tone in addition to the sense of the pictorial in the choice of subject for which he was always noteworthy. The drawings by Mr. Innes are hardly worth the good engraving given to them, and the same may be said of "In the Laundry," after a pastel by Robert Blum, which may have been a triumph of pastel, but which in white and black is a rather weak example of *pose plastique*. The "Confederate Prisoners," from a photograph, is, in delicacy of cutting, equal to any work of the day we can recall. Of *Harper's*, the frontispiece, "The Boy Jesus in the Temple," is an admirable rendering of a most notable example of modern German art, and the Christmas article brings in names new to the American public, among which the best are Green's "Lord of Misrule," and Paget's "Yule Log." Abbey's illustrations to "She Stoops to Conquer" show a growing flimsiness which betrays the influence of an English reputation. Boughton's illustrations of "William Grobbins" are in quality and general effect a remarkable demonstration of the range of book illustration, and merit especial attention, as apparently the result of a new process, and the best of the kind that we have seen.

—In *Lippincott's* there is little noticeable except, perhaps, a rather ineffective discussion of the old conundrum, Why have we no American *Punch*? The pleasant recognition of Doyle's services in contributing to "the gayety of nations," which is the author's excuse for his own lucubrations on the old subject, nearly every one will join in with heartily; but when the reasons for the failure of "the colonial mind" (as the author is pleased to consider the American people) are assigned, the points made must be felt just as universally to be very dull. If, as he affirms, the tendency of our artists is too strongly against a superficial view of life to allow them to be contented with depicting the social surface merely, and if our humor does not deal with well-known and harmless foibles of our comrades, but, on the contrary, as he asserts, presents them to us as astonishing strangers, he has certainly discovered new general characteristics in our minor art and literature. In fact, it is obvious that his eyes have taken in too narrow a range. There is much delight in the simple outside of character and scene, and much shy, light humor, not of the newspaper paragraphists' kind, in our books and magazines. Then, after all, it may be questioned if we should be greatly depressed at not having a comic paper which leans on a past reputation. Should a group of men such as made *Punch* arise here, even our simpler social condition will offer sufficient material for their pleasantry and satire. It was not the genius of the English people, but a half-dozen clever men, that created the typical comic paper. The trouble is, that when "the American *Punch*" comes, it will not be recognized by the Anglomaniac who is continually asking when are we to have this or that imitation of something to be found at London clubs. He, and our author too, seem incapable of perceiving the modifying, the truly transforming, power of that patriotic adjective in the title. He might as well ask, When are we to be English fops and miners?

— We mentioned, a few weeks since, the reproduction in *Nord und Süd* of an article, by Mr. Carl Schurz, which had been published in the *North American Review* some months before. But this month the *North American* turns the tables on its German contemporaries by publishing a translation of Schliemann's article in *Unsere Zeit* for September. International journalism is none the less to be encouraged, since readers are not harmed, while writers are greatly benefited, inasmuch as they get a double price for their wares. The article is another of the evidences which the author seems urgent to afford of the utterly unscientific nature of his mind. It is partly historic, and here the Doctor mingles myth and genuine record in a fashion which opens the way to a demonstration of almost anything he may conjecture. A single instance out of many must suffice: "There is also a passage in Homer that seems to corroborate the hypothesis of the early destruction of Mycenæ, and to *contradict categorically* the stories borrowed by Diodorus and Pausanias from Ephorus. The passage, in Pope's translation, is as follows:

> "'At this the goddess rolled her radiant eyes,
> Then on the Thunderer fixed them, and replies:
> Three towns are Juno's on the Grecian plains,
> More dear than all the extended earth contains—
> Mycenæ, Argos, and the Spartan wall;
> These thou may'st raze, nor I forbid their fall:
> 'Tis not in me the vengeance to remove;
> The crime's sufficient that they share my love.
> Of power superior why should I complain?
> Resent I may, but must resent in vain.'"

On the strength of this display of petulancy on the part of Juno, Dr. Schliemann says: "It is obvious that Homer intended to point here to the *destruction of at least one of the three cities* that he names, and *Argos and Sparta not being destroyed* [?], the destroyed city could be no other than Mycenæ. . . . If so, this Homeric passage *gives us the surest proof* that Mycenæ, as well as Tiryns, was destroyed in a remote antiquity." Anything like scientific method is clearly hopeless in a mind which can reason in this way. From the remotest historical times Sparta had no wall, and not only does no tradition record the destruction of Mycenæ before 468 B. C., but there are remains of walls still to be seen at Mycenæ that must have been the work of an epoch not earlier than 500 B. C., and probably are much later. The conclusions drawn from his recent excavations at Tiryns are equally futile. Dr. Schliemann is absolutely incapable of making proper distinctions between the epochs of wall building; but as Proetus was the first mythical king of Tiryns, therefore the remains of a building found on the citadel are those of the palace of Proetus. There are, it seems, traces of a Byzantine church, but the very presence of bricks shows that the building did not belong to the Cyclopean epoch of Proetus, and the finding of a Doric capital in the ruins is still another proof.

— In these days of interest in "telepathy" and visionary appearances, not only of the dead but of the living, a passage in a letter from Lord Byron to Mr. Murray (of 1820) is worth noting. Murray had told him of a bet of 100 guineas made by some one who thought he had seen Byron in London the previous week, whereas the poet was in fact in Italy; and Byron in return tells Murray that in 1810 Sir Robert Peel, his (Byron's) "form-fellow" at Harrow, had believed that he met Byron in St. James's Street, not being aware at the moment that Byron was then in Turkey:

"A day or two afterward he pointed out to his brother a person on the opposite side of the way: 'There,' said he, 'is the man whom I took for Byron.' His brother instantly answered, 'Why, it *is* Byron, and no one else.' But this is not all: I was seen by somebody to *write down my name* among the enquirers after the King's health, then attacked by insanity. Now at this very period, as nearly as I could make out, I was ill of a strong fever at Patras. . . . If I had died there this would have been a new ghost story for you. . . . I suppose you will be of the opinion of Lucretius, who [denies the immortality of the soul but] asserts that from the 'flying off of the surfaces of bodies, these surfaces or cases, like the coats of an onion, are sometimes seen entire when they are separated from it, so that the shapes and shadows of both the dead and the living are frequently beheld.' But if they are, are their coats and waistcoats also seen? I do not disbelieve that we may be two by some unconscious process to a certain sign [*sic*], but which of these two I happen at present to be I leave you to decide. I only hope that *t'other me* behaves like a gemman. I wish you would get Peel asked how far I am accurate in my recollection of what he told me, for I don't like to say such things without authority. I am not sure that I was not *spoken with*, but this also you can ascertain."

— The studies in Italian literature by which Dr. Marcus Landau has been making a name for himself by his successive works since 1869 seem to have been turned into a new channel. The appearance of 'Rom, Wien, Neapel, während des Spanischen Erbfolge-Krieges' (Leipzig: Wilhelm Friedrich) may be regarded as the premonitory symptom of a very elaborate work on the history of Austria between the Thirty Years' War and the accession of the Empress Maria Theresa. On such a work Dr. Landau reports that he has for some years been engaged. In the course of his researches, however, he found that the relations of Italy to Austria were at once so intricate and so intimate that a satisfactory understanding of Austrian politics could only be reached after a somewhat elaborate study of the affairs of Naples and Rome. The resulting volume of 480 pp, 8vo, though issued as an introduction (or, as the author calls it, "Ein Beitrag zur Geschichte des Kampfes zwischen Papstthum und Kaiserthum"), is really an independent work, and deals with a struggle that has never before been adequately described. To the fierce contest which ended in the acquisition of Naples by the House of Austria, Giannone and Colletta give but a few pages; and even the great work of Belmonte rests exclusively upon Neapolitan sources of information. Landau has discovered at Vienna a vast amount of manuscript material, and upon this his narrative chiefly rests. That the story is worth telling, his pages are an abundant proof. He begins with an account of the terrible oppressions imposed upon Naples during the two hundred years before the revolution at the beginning of the eighteenth century. Though the city, during this period, enjoyed a certain autonomy, the exactions of the Spanish Government were enforced to the last extremity. Not only were all articles taxed, but the utmost

ingenuity was shown in devising means by which taxation could be increased. One of the great products, for example, was wine; and yet the several taxes upon all wine produced amounted to not less than 90 per cent. of its value. When, therefore, the last scion of the Spanish House of Hapsburg was so good as to die, it was not singular that the people turned to another Power for relief. But there were endless complications and difficulties. The city was dominated over by a proud and corrupt nobility. The Church was in possession of vast estates and of enormous wealth. The region thronged with banditti. All the forces of society were given up to intrigue. The Court of Rome was unalterably opposed to the Austrian claims. These were the elements with which the historian has to deal during the years between 1701 and the final conquest and treaty in 1709. The narrative is spirited, and, in a very un-German way, is broken up into short paragraphs and short sentences. There is not much philosophizing, and, perhaps it should be said, not a very deep insight into the relations involved; but the book brings to light a vast amount of new information.

—Ludvig Holberg's numerous and various productions, which have earned for him the title of "founder of modern Danish literature," contain some interesting bibliographical puzzles. One such—the question as to the real dates of production and publication of his 'Introduction to a Knowledge of the Laws of Nature and Nations'—has apparently been so difficult of solution that it has caused even the truthfulness of the great author to be questioned. Holberg's references to this book do not seem to correspond with one another, nor do they agree with the different dates upon the title-pages. In 1713, before setting out upon his extended European journey, he writes of this work as completed, but his autobiographical epistle of 1727, dealing with the time just after his return (1716), contains this sentence concerning the work: "Interea temporis aliud opusculum Danico Idiomate publici juris feci, sub titulo Introductionis Juris Naturæ & Gentium," from which one of his biographers infers that, notwithstanding the former assertion, the statement here quoted was made by Holberg to agree with the time of actual publication, and that the book was really produced while he was absent from home. But it is not probable that this work could have been written during a foot journey in Europe, for it is full of references, as the title explains, to Danish laws and proclamations which it would be next to impossible to cite out of Denmark; and, moreover, the date 1715 found upon both titles of most copies, and upon one of the title-pages of all copies, still remains unexplained.

—Mr. Henrik Jæger, favorably known for his studies in Scandinavian literary history, has, in the July-August number of *Nyt Tidsskrift*, explained away these seeming discrepancies by a careful examination of different copies of the work in question. The true title of the book is, in brief: 'Ludvig Holberg's Introduction til Naturens- og Folke-Rettens Kundskab. Trykt udi Kiöbenhavn Aar 1713.' This title is followed by the dedication to the King, both printed upon the same sheet; and then comes the preface to the reader, making twenty-four pages in all. There is also a title for part first, a single leaf, and having a slight change of words, beginning: 'Ludvig Holberg's Moralske Kierne,' and continuing as above, but dated 1715. After this follows the text with separate pagination and signatures. Upon examining the 1715 copies it is discovered that the first title of this issue is printed on an *inserted leaf*. Mr. Jæger deduces from these facts the explanation that the work was completed before 1713; that upon starting in 1714 Holberg delivered the MS. to the printer, who finished the printing of it in 1715, but could not then publish the work, because of the author's wish to add the royal dedication and the preface. On his return Holberg wrote and printed these and included a new title, dated 1716. The preface contains internal evidence that it was written later than the work itself, being very noticeably different in style—much lighter and more sprightly—a change so considerable, Mr. Jæger thinks, that it is only to be explained by the author's residence in Paris and contact with French elegance. Afterward the publisher, being discontented for some reason with the author's title—perhaps because the popular heading "Holberg's moral kernel" was removed, or because the publisher's own name was omitted—deliberately cut away the objectionable title-page and inserted his own, careless of the fact that the book thus became ante-dated. It will readily be seen that this explanation accords with the author's own references to the work.

—Both the rehearsal and concert of the Symphony Society on Friday and Saturday attracted a large audience. The programme included Beethoven's Eighth and Liszt's Dante Symphony, some Schubert and Schumann songs, and a Concertstück for violin by Dr. Damrosch. The Beethoven symphony causes surprise at every hearing by its serene Mozartean character, so different from the symphonies which preceded and followed it. Indeed, were not its date of composition well established, one would feel tempted to conjecture that it was written immediately after the First Symphony. It was well placed, however, at the head of this programme, as the Liszt symphony supplied a sufficient amount of the tragic element for one concert. The German songs were sung by Herr Staudigl, of the Metropolitan Opera-house, with admirable voice and accent and appropriate expression. It would be a great pleasure to hear this artist at some of our minor concerts, at which the German Lied is strangely neglected. Dr. Damrosch's concert-piece hardly betrays the modern tendency of its author's taste, and was perhaps written before this taste was matured. It contains some original bits of rhythm and instrumentation, but is on the whole less remarkable from a musical point of view than as affording the violinist opportunity to impress the public by various feats of agility. M. Musin played this selection with a clear tone and smooth bowing and execution, and was warmly applauded. In Liszt's Dante Symphony the first part, wild and turbulent, was played with great vigor and spirit, while in the later parts the same finish was not observable. Nor is the second half of the symphony nearly equal to the first. Why is this so? A pessimist might reply by quoting Schopenhauer: "Whence did Dante get his materials for his hell but out of this our actual world? And yet he succeeded in constructing a very respectable hell. But when he approached the task of describing heaven and its joys, he encountered insuperable difficulties, because this world contains no material whatever for such a thing."

THE LIFTING OF THE NEGRO.

Black and White: Land, Labor, and Politics in the South. By Thomas Fortune, editor of the New York *Globe*. Fords, Howard & Hulbert. 1884.

An Appeal to Cæsar. By Albion W. Tourgée. Fords, Howard & Hulbert. 1884.

THE question of political reorganization in the United States at the close of the civil war was, to say the least, one of extreme difficulty. The slaves having been emancipated by proclamation, there were two typical methods of treatment of the Southern States. One was to hold them in subordination as Territories, and to maintain peace and protect the negroes by main force, until it should appear safe to readmit them as States to equal political rights. This was the course most clearly in accordance with historical precedent, and there are very many persons in the United States who believe to this hour that the failure to adopt it opened a Pandora's box of innumerable woes. The trouble with this policy was that it was like holding a mad dog by the collar: you never can let him go. It involved a centralized rule by the Federal Government, and a military administration which would have sounded the death-knell of the political system that was founded in 1789 and has grown to be the cynosure of the world. The other policy was to disband the army, to restore the Southern States to the position which they held before the war, of coequal members of the Union, and, having armed the negro with that moral chassepot, the ballot, to leave him to take care of himself. This was taking the bull by the horns with a vengeance. It was, however, the only logical and consistent course under our political organization, and through much tribulation it was followed. Every student of politics must, and every citizen ought to, watch the result with intense interest. The failure of this experiment might not carry a condemnation of popular government, but success would bear enormous testimony in its favor. It is one of the beautiful effects of government by pure party majority in Congress that in this, as in many other respects, Government information is perfectly worthless. For ten years past it has been manipulated for the sole purpose of keeping the men who call themselves the leaders of the Republican party (*quantum mutatus ab illo*) in power. Whether a Democratic administration will throw any more real light upon the subject, time will reveal. As it is, trustworthy private information as to the condition of the South is of great importance.

On reading the first notes of Mr. Fortune's lamentation over the condition of the negro, we were inclined to take a despairing view, till we found that his real grievance is the condition of labor in general, and that he is nothing more nor less than a disciple of Mr. Henry George. That philanthropist might himself have written the following italicized sentence: "*The real grievance is the system which makes the landlord possible.*" We are reminded of a story of a gentleman returned from Europe who was asked by a friend if the extravagant praise of Italian sunsets was justified: "Yes, indeed. It is impossible to say too much." "But in what respect are they superior to the sunsets of New England?" "Oh, they are not at all superior." The chapters on "Land and Labor," "Civilization Degrades the Masses," and "The Land Problem" are a discussion of the labor question in Europe and New York just as much as in Louisiana, and the writer sums up in his concluding chapter: "As I have said elsewhere, the future struggle in the South will be not between white men and black men, but between capital and labor and between landlord and tenant." This testimony is not the less important that Mr. Fortune, as we gather, is himself a colored man, and has been a slave. Certainly the question of capital and labor is formidable enough, but it is, at any rate, a comfort to be told that we have only one complication to deal with instead of two.

Both Mr. Fortune and Judge Tourgée deny that the blacks are diminishing, either absolutely or relatively. The latter, indeed, gives elaborate statistical tables to establish the following propositions: that the negroes are increasing more rapidly than the whites of the South; that the whites are migrating from the older slave States

in much greater proportion than the blacks; that the number of white persons of foreign birth resident in the South is constantly decreasing; that the number of white persons of Northern birth who are migrating to these States is very much less than the number of white persons who are emigrating thence to the North. Hence he concludes, "that in the year 1900, or sixteen years hence, each of the States lying between Maryland and Texas will have a colored majority within its borders, and we shall have eight minor republics of the Union in which either the colored race will rule or a majority will be disfranchised." But we do not think that he has anywhere proved his point of the necessary *political* antagonism of the races, which is a very different thing from the social. On the contrary, it seems to us that Mr. Fortune's view is much the more reasonable and sensible:

"In the politics of the country the colored vote must be made as uncertain a quantity as the German and Irish vote. The color of their skin must cease to be an index to their political creed. Let every one read, listen, think, reform his own ideas of affairs in his own locality; let him be less interested in the continual wars of national politics than in the interests of his own town, and county, and State; let him make friends of the mammon of unrighteousness in his own neighborhood, so far as to take an intelligent part among his neighbors, white and black, and vote for the men and for the party that will do the best for him and for his race, and best conserve the interest of his vicinity. Let there be no aim of *solidifying* the colored vote; the massing of black means the massing of white by contrast. When the colored voters differ among themselves, and are to be found on *both sides* of local political contests, they will begin to find themselves of some political importance; their votes will be sought, and cast, *and counted*."

We have made this citation at length because it seems to us to contain the key to the situation. The series of events after the war typified by the word "Kuklux" was perfectly natural, and formed, perhaps, the lowest price that the negroes could have paid for the boon conferred upon them. But those events have diminished so much that an occurrence like the "Copiah massacre" has to be made the most of by bloody-shirt Republicans. Of course they say that quiet is the effect of the terrorism which prevails since the Federal troops were withdrawn, but that is just the point on which evidence is needed. Both Mr. Fortune and Judge Tourgée agree again that, considering the circumstances, the negroes have made great advances in material, moral, and religious development; and even if the Southern whites are as irreceptive of external ideas as Judge Tourgée maintains, material progress must command respect, and sooner or later white men must be found who will bid against each other for the colored vote, because, as we see constantly at the North, men may work together politically who have socially no sort of connection or intercourse.

There is another point on which both writers agree, and that is the danger of illiteracy, the necessity of common-school education, and the duty of the general Government to afford it. We wish to do a piece of justice, and frankly confess that we had a strong prejudice against Judge Tourgée as an embittered sufferer from dispelled illusions. This prejudice was not lessened by the appearance of the book, with its pea-green cover stamped in black and gold, and strongly suggestive of the effusions of Jules Verne, nor again by the opening sentimental account of an interview with President Garfield. We read on with a determined intellectual resistance to the foreshadowed proposal of national interference in State affairs. But when we came to his plan of national education, we would not deny its reasonable and statesmanlike character. It proceeds on the principle of the English Education Act, of payment by results. There is no question of handing over sums of money to the jobbery of State officials, nor again of Federal administration of school affairs in the States. It simply provides that sums shall be appropriated in proportion to the degree of illiteracy as given in the last Census, and dependent on the raising of an equal amount by the States themselves; and that whenever a State certificate is furnished that any school, whether white or black, has made a certain degree of progress, a Government check shall be forwarded to the teacher of that school. Such a measure would be a graceful and healing token of the readiness of the North to bear a portion of the burden for which it has a large share of responsibility, and a price which it could richly, and would no doubt cheerfully, afford to pay as insurance against a flood of future political troubles. There is little chance of such action by Congress, for the blind party struggles which prevented any action upon slavery till the question exploded in civil war, and which have since prevented any action upon the tariff, the silver coinage, the Indian question, and many others, rest like an incubus upon this question also. The only possible chance of success would be for the Secretary of the Interior, the selected officer of the President who alone represents the whole country, to bring before Congress in person a fully prepared measure, and to force debate upon it till the attention of the nation was aroused to the point of insisting upon immediate compliance. As we read Judge Tourgée's pathetic account of his frequent and continued appeals to Presidents and officials and committees of Congress, to editors of newspapers and magazines, and of his determination to make this passionate effort to arouse the attention of the country, we are moved, as knowing something of that kind of work, to say to him, Brother, be of good cheer. The seed that thou sowest it shall yet bear grain.

RECENT NOVELS.

The Amazon. By Carl Vosmaer. Translated by E. J. Irving. William S. Gottsberger.

Our Own Set. By Ossip Schubin. From the German by Clara Bell. William S. Gottsberger.

Fridolin's Mystical Marriage. By Adolf Wilbrandt. From the German by Clara Bell. William S. Gottsberger.

In Partnership: Studies in Story-Telling. By Brander Matthews and H. C. Bunner. Charles Scribner's Sons.

Stories by American Authors. Vols. V., VI., VII. Charles Scribner's Sons.

My Ducats and My Daughter. Harper's Franklin Square Library.

Haco, the Dreamer. By William Sime. Harper's Franklin Square Library.

'49; *The Gold-Seeker of the Sierras.* By Joaquin Miller. Funk & Wagnalls.

The Story of a Country Town. By E. W. Howe. Boston: James R. Osgood & Co.

The House on the Marsh. D. Appleton & Co.

Mademoiselle Blaisot. Par Mario Uchard. Paris: Calmann Lévy; New York: F. W. Christern.

Le Monde où Nous Sommes. Par Jacques Normand. Paris: Calmann Lévy; New York: F. W. Christern.

NEITHER in Ebers's interesting preface to Vosmaer's 'Amazon,' nor in the English translator's introductory note, is there any recognition of the obvious fact that the book is a more valuable contribution to art criticism than to fiction. By this we do not mean that the story is either tame or cold, but that the æsthetic interest overshadows the human. The opinions on art expressed by the modern Penthesileia and Achilles are very important weapons in the conflict between them, and nowhere but in Rome could their spiritual affinity have been so delicately developed; but, after all, we care more for their talk than for what came of it, more for the general scene than for the particular situations. The inferior characters, too, are more valuable for what they say than for what they are or do. The singularly inharmonious figure of the blighted Ada might be effaced advantageously, and we could well spare the heroine, Marciana's, specimen poems. We would have taken her possession of the divine breath on faith as we take the great paintings of Aisma, through whom the author's art convictions are expressed with lofty enthusiasm and serene judgment. Van Walborch dilates upon the grandeur, the peculiar value of Roman art; Askol, in the home of Michael Angelo, fights for the superiority of action in sculpture; but it is Aisma who proclaims that the Greeks alone have given to eternal beauty substance and form, have appreciated that humanity's highest aspect is in the moments of restraint or conquest of passions, and have expressed in every curve and outline the spirit's simple, sublime, almost godlike repose.

Rome furnishes the setting for the clever little novel from the German, 'Our Own Set.' Here history and art count for nothing, though the women of the exclusive Austrian circle do homage to the past by indiscriminate purchase of doubtful antiquities. The simple intrigue between Prince Nicki Sempaly and Zinka Sterzl, who is just a cut beneath her lover, runs on smoothly to a dramatic crisis, and the social distinction of his people has not lured the author to extravagance or distortion. The worst that can be said of them is, that their "addictions are to courses vain." For a novelist's self-made man Sterzl, the diplomat, is very agreeable; he is neither a prig nor a boor. His earnestness, strength, and loyalty make a fine contrast to the charming frivolity and moral cowardice of Sempaly. Beside these two, Count Truyn, whom the author means to rank first, is a vague and unsatisfactory person. He does nothing in particular, and cannot compete with his associates in characteristic comment, in saying good things. The story certainly deserves a better translation. Awkward constructions, confusion of pronouns, the frequent "and which" are irritating reminders that the entertainment is second-hand.

Such a production as 'Fridolin's Mystical Marriage' defies definition. It is too sketchy, too incomplete for a novel, too extravagant for comedy, too idealistic for farce. It is an extraordinary caprice, a series of intellectual harlequin tricks. The phenomenon which the muscular art-professor and uncommonly good-fellow, Fridolin, discovers in himself is that nature made him half feminine and half masculine. What one half longs for the other half loathes, and he is therefore obliged to be content with marriage with himself. He supports his theory by many ingenious arguments, and finds it very useful in embarrassments which are popularly supposed to arise from a too reckless inconstancy. The victim of his most notable experiment is a pretty, practical German maiden, and many of the situations in which she is placed are original and funny. She is the only commonplace person in a large company little less eccentric than Fridolin, and her trials cannot fail to amuse all who appreciate juggling with ideas.

Many volumes of good short stories have appeared within a year, but none so good as 'In Partnership,' by H. C. Bunner and Brander Matthews. They display a mastery of the theory and technique of story-telling. "The Documents in the Case" and "The Seven Conversations of

Dear Jones and Baby Van Rensselaer" are models of original conception, cunning suggestion, and that brilliant, effective execution which may convert even a poor subject into a respectable work of art. Mr. Matthews's "Rival Ghosts" is equally clever, and the experiences of Eliphalet Duncan with his wrangling hereditary and domiciliary spooks are unspeakably funny. His comedietta, "Playing a Part," turning on the transformation of an indifferent husband into a very jealous one, is swift, light, and graceful, but his "Venetian Glass" is a failure. It is an ambitious attempt,depending for success on the author's skill in throwing about his incident a most delicate veil of mystery, but failing through his crude, clumsy actualization. The last part is not only obscure and senseless in itself, but destroys the illusion surrounding that Venetian glass so fragile that it shivered and broke with the poisoned wine. What Hawthorne said of his 'Marble Faun' applies exactly to Mr. Matthews's treatment of his legend. When brought into the actual, living present, the idea loses its beauty and poetry, and becomes nothing better than a grotesque absurdity. Mr. Bunner, in his individual efforts, strikes a deeper and more tender chord. Though in "The Red Silk Handkerchief" he gives undue prominence to side issues, and though "A Letter and a Paragraph" is somewhat elaborate, yet in both he touches the pain and pathos of life with a poet's sympathy, reverence, and grace.

What we have said in praise of these stories applies equally to but three out of the eleven sketches in the fifth and sixth volumes of Scribner's "Short Stories." Only in "The Light Man," "The Tachypomp," and "The Denver Express," do we find any exceptional qualities. "The Light Man" is a very complete specimen of that cold-blooded tribe, addicted to brutal frankness in self-analysis, on which Mr. James has since expended so much minute observation and so many nice phrases. "The Tachypomp" is a sort of mathematical nightmare, cleverly devised and carried out, and as the climax in "The Denver Express" is reached, we feel an excitement quick as the rush of "No. 17" out of Pawnee Junction on to the vaguely known dangers lying ahead. Of the rest, "Yatil" is the best, though the style is too hard to make the incident impressive. "The End of New York" is neither keen, nor crisp, nor witty enough for a permanent place among political satires, and the remaining six are somewhat below the average level of magazine stories.

Volume vii has been less happily selected than its predecessors, or we have been over-sanguine as to the extent of the supply. "The Bishop's Vagabond" is the only one of distinction among the six. One of the remainder has not enough in it for more than an anecdote. The others are over-freighted. The synopsis or the condensation of a proper novel does not make a successful short story. The only good rule for the selection of material for a short story will always begin with: Take something that would not make a long one; other things thereafter as may be.

The novel with the irrelevant title 'My Ducats and My Daughter' does not lack variety of character and incident. Though the plot and situations are far from novel or ingenious, their development is not uninteresting. The story begins with a philanthropic capitalist's disastrous attempt to improve the condition of the workingman and found "the factory of the future." It turns with marked deliberation upon the benefit accruing to the son from one of the misguided father's acts of kindness. It follows this son through failure at college, failure in journalism, failure in love, and makes sudden prosperity the crucial test of character. It is rather a bold protest against the traditional efficacy of adversity and in the hero the author depicts successfully a nature which is commoner than moralists choose to believe.

As a tale of "university life," or, indeed, of life anywhere, 'Haco the Dreamer' has less meaning and less logical sequence than any we can at present recall. Beyond scraps of Scotch talk and references to the Lord Rector, there is no local color in the descriptions of the customs and traditions of Edinburgh University. Haco is most charitably surnamed the Dreamer: he is a moral coward, who permits himself to be blackmailed by a drunken bully; he is an unstable sentimentalist, and we are very much of his father's opinion that he was born without a cerebrum.

In '49; the Gold-Seeker of the Sierras,' Joaquin Miller undertakes to portray men who have "something of the savage splendor of nature about them," and clearly believes that he has done so. Shorn of his highly-imaginative diction, and judged coolly by the facts which he has narrated, "Old '49" and his companions are very miserable specimens of humanity. The poet of the Sierras has no more conception of the moral dignity and intelligent self-control which are necessary to make the creatures of his fancy the heroes he believes them to be, than he has of the strong, simple language in which all truly heroic tales are told. He has a great natural capacity for shirking the truth, or for what is still more exasperating—denying the truth of his facts by a false, sentimental interpretation of them. It is extremely probable that '49 and the disgusting Colonel Billy and the rest of them are truthful types of the original army of gold-seekers. They are more or less reckless adventurers, who, failing to find rocks and river-beds of solid gold, succumbed to the allurements of the faro table and the bar-room, drivelling in half-sober moments over a wife at home and a baby in a cradle. As for their being in freshness and vigor like to storm-blown pines, and in steadfastness comparable to eternal peaks, all that is, in this book, mere literary ornament. If they really had such qualities, Mr. Miller has done them great injustice; he must go to work at them again, rigidly repressing his passion for gaudy, set scenes, strained or overworked similes, inverted phrases, and burning adjectives. As his desire is to leave to posterity a true picture of the silent, much-enduring pioneer, already passed into history, he had better find out what was the truth, and then learn how to make it appear unequivocally.

He might study with profit a very remarkable Western novel, 'The Story of a Country Town.' If he should strike the mean between his own unsoundness and extravagance and Mr. Howe's realism and reserve, he would doubtless produce a work for which that posterity he is so much concerned about would be deeply grateful. But we fear that the pathos and quiet intensity of this story will have no attraction for one so wedded to high color and noisy brawls. The phase of life dealt with in 'The Story of a Country Town' is a very dreary one, and the suspense in which the reader is held is nothing if not agonizing. The few rays of light that penetrate the shadow are a pitiful makeshift for sunshine. But neither its merits nor its imperfections can be considered apart from the preface, in which the author tells how and why the book was written, and, without any of the pride that apes humility, expresses his dissatisfaction with his work. The weariness to which he refers has stamped itself in many chapters and separate paragraphs, while from his close identification with scenes and characters have resulted a powerful drama, and a singularly complete presentation not only of the actual life in the country town, but also of the spirit which makes that life the hard, barren, ugly thing it is. From the beginning he eschews picturesqueness and spectacle. His train of canvas-covered wagons is far removed from Mr. Miller's caravan of light traps poetically "rolling away in the wake of the setting sun." The people have none of the impetuous enthusiasm which in a Western atmosphere makes a millionaire or a ruffian or a ruffian-millionaire. They are dull and plain and common. They settle down in the bleak spot selected by their leader, the Rev. John Westlock. They give themselves over to hard, unremunerative labor, and to the discussion and observance of a religion of which the salient features are an avenging God and eternal hell. Out of these unpromising materials a terrible and impressive tragedy is logically and fearlessly developed. Though there is every temptation to pander to sentiment, to soften, palliate, excuse, the author has not swerved from what he felt to be the inevitable outcome of such characters as the Rev. John Westlock and Jo Erring subjected to such circumstances. By a bold and relentless yet infinitely tender delineation of Erring he has shown in a remarkable degree an apprehension of the meaning and dignity of tragedy.

Outside of the able conduct of the drama there are many indications of unusual talent for novel-writing. The author should turn his attention to a world where men are sometimes kind and women not always overworked, where poverty is often sweetened by love, and where the Rev. John Westlock's god is dead as are the gods of Greece. He should make the acquaintance of light-hearted mirth, and he would surely get away from the sound of that bell "high up in the steeple which rocked with every wind, and when there was a storm tolled with fitful and uncertain strokes as if the ghosts from the grave-lot had crawled up there and were counting the number to be buried in the coming year, keeping the people awake for miles around."

It is not unduly harsh to describe the coy narrator of 'The House on the Marsh' as an unqualified simpleton. We resent the partiality of fortune in providing such thrilling sensations for the pious *ingénue*, all the more because we feel her to be a hypocrite, crying aloud about the horrors of her situation and chuckling inwardly over the "perfectly delicious time" provided for her. Luck is with her from the start, for she is driven from the station to 'The House on the Marsh' by a stalwart, blonde British hero, who falls in love with her on the spot, and whispers weird warnings in her ear. Behind her, quietly reading letters, sits the newest thing in the way of a hero of romance, the master of the suspected house, a refined, magnetic burglar. By mentioning Mr. Rayner's vocation we are not prematurely disclosing the mystery. Every one but the guileless governess (the narrator) sees at once how he comes to be so lavish with his diamonds, and is morally sure that in his remote studio he is engaged in manufacturing "jimmies" and other tools of trade with whose names we are unfamiliar. Neither does this knowledge diminish Mr. Rayner's charm. He is the incarnation of that joyous simplicity attributed by Mr. Gilbert to the "enterprising burglar, tired burglin'," and he moreover appeals to the imagination as in some way akin to the great god Pan, evoking magic music from no violin made by mortal hands, but from the reeds and rushes encircling his malarial dwelling. By her faculty for self-mystification the governess takes literary rank with Mr. Harry Folker and his "How the doose *do* they get those cherries into the jelly?" But aside from her exasperating inanity and the transparency of the mystery, the romance is a very good one. The burglar's *aplomb* in trying situations is most distinguished, and he shows exemplary patience in the matter of experimen-

tal wife-murder. If the author's moral intention was to show how brutal instincts may be cultivated and lose none of their original vigor, and how crime may be elevated to a fine art, she has done uncommonly well. In some respects Mr. Wilkie Collins could hardly have done better, but he would have economized words, and of the silent serving-maid with fierce eyes and unscrupulous ears, he would have made a person to remember.

M. Mario Uchard is one of the little band of French novelists who remain faithful both to the *Revue des Deux Mondes* and to the principles of art which obtained when that review was in its prime. M. Octave Feuillet is perhaps the best known of them and the most popular, although M. Victor Cherbuliez lags not far behind. M. Uchard, although he can be *scabreux* when he will, has neither the exquisite literary skill of M. Feuillet nor his fondness for tainted subjects; nor has he the dexterity and neatness of Cherbuliez; but his story is like theirs in that it is rather a fairy tale than that convincing picture of real life which Mr. Henry James has just been telling us every good novel should try to be. The existence of the British machine for the making of novels is known to all American critics of fiction, and the French machine turns out nearly as much pattern-work. 'Mademoiselle Blaisot' is one of the latest of the French machine-made novels. It is of interest more for the evidence it gives of the tendencies of French fiction just now than for any merit of its story or of the telling. It proves that M. Uchard also has seen the signs of the times and has read the handwriting on the wall. In the first place, it is a clean story—a story the outline of the plot of which could be told in any young ladies' school. But side by side with the present tendency of French fiction to cleanliness, not to say goody-goodness, is a tendency toward science, toward the use of human documents. And M. Uchard, in good faith and with the best intentions, tries to mingle physiology with his psychology—both of them rather conventional, as is the custom of the novelists of the *Revue des Deux Mondes*. But it is not every man who can handle the human document, and M. Uchard would have done well to stick to his fairy tales, as his physiological investigations are unwholesome, indelicate, and highly comic.

M. Jacques Normand, besides being one of the most graceful of French writers of *vers de société*, is also the parent of several bright little comedies. He now comes forward as the author of a dozen or more lively short stories, grouped under the appropriate title of 'Le Monde où Nous Sommes' (singularly like, by the way, to the title of Mr. Oswald Crawfurd's 'World We Live In'). M. Normand writes like a man of the world, and even in his lightest pages the tone of good breeding is evident. He is a Frenchman, nay, more, a Parisian—and we know to what depths in literature Parisianism is capable of descending; but he is at all times a gentleman. His short stories are not as vigorously original as M. Jean Richepin's, or as saturated with *sel gaulois* as M. Guy de Maupassant's, or as simply poetic as M. François Coppée's, or as sharp with satiric humor as M. Ludovic Halévy's; but they have a charm and a cleverness of their own. There is marvellous *malice*—in the innocuous French sense of the word—in the account of the dream of "L'Immortel Blaisinet." For power and pathos we may point to "Monsieur Roumégas," while comedy abounds in "Le Carnet de Mariage," and in "Mère, Femme, Fille, ou Sœur." Those who remember Mr. Warner's amusing paper, in a recent *Harper's* Drawer, on the man who went on his wedding trip alone, may be interested in seeing a variant of the story here, called "Le Voyage de Fritz." The book is one which may be recommended to all who like French *esprit* and which no lady need be ashamed to have read.

THE CENSUS OF WEALTH.—II.

Tenth Census of the United States. Vol. VII.—Valuation, Taxation, and Public Indebtedness. Washington: Government Printing Office. 1884.

THE grouping of subjects in this volume suggests several lines of inquiry, for the successful prosecution of which it scarcely furnishes sufficient material. At first glance it might be supposed that, to calculate from the tables which it contains the proportion between the true value of all the property in the country and the gross amount annually paid as taxes, would be a mere problem in long division. A closer examination will show that this very important fact cannot be so easily discovered. Not only is the wealth of the country (as has already been pointed out) estimated on a very liberal scale, but none of the tables give the total amount of taxes levied or collected. The omission of the sums raised by Federal taxation is unimportant. Doubtless the report would be theoretically more complete if they were included; but as information concerning them is at all times accessible, and as it is distinctly stated that they are not comprised in the Census totals, their being left out ought not to mislead any one.

The statistics of taxation are, however, defective in respects much more likely to escape notice. The tables in the introductory discussion, and the principal tables I, II, and III, comprising pages 18 to 214, purport to set forth the "aggregate amount of taxes levied" during the Census year by State and local governments. This they do not do, and were not intended to do. The Census Bureau made an attempt to collect statistics of indirect taxation, but the "difficulty of obtaining definite returns on this point resulted in an abandonment of the scheme." As a consequence, in but two States, Pennsylvania and West Virginia, do indirect taxes figure in the aggregates. The carelessness and inaccuracy which have so often characterized the office work of the Bureau, and which have more than once rendered almost useless statistics procured at a great outlay of time, talent, and money, are here again conspicuous. In all the 197 pages taken up by these tables there is not a single distinct statement that the proceeds of indirect taxes have in forty-five out of forty-seven cases been deliberately excluded. The head-notes to the State tables, except those for West Virginia and Pennsylvania, say that the sums below represent the amounts for which poll taxes and direct ad-valorem taxes have been levied. The reader must find out for himself as best he can whether indirect taxes are omitted because it was not possible to determine their amount with any approach to precision, or because none are in fact imposed. The statement on page 16 that there has been by the State and local governments "a general abandonment of indirect taxes, licenses, etc.," may perhaps lead not a few into a belief in the latter and erroneous hypothesis, especially as in two of the States the proceeds of indirect taxation avowedly enter into the totals. Here and there through the volume are sentences and tables which, if carefully collated and compared, would probably induce the careful student to suppose that in some cases, at least, no notice had been taken of certain taxes which are actually levied; but whether this omission is deliberate and general, or merely accidental and occasional, he would have no means of knowing. The great majority of people turn to a Census report to learn results; they care very little for the methods by which they are obtained. Nine persons in every ten who may wish, for any reason, to know how much money is annually taken by the tax-gatherer, will accept as conclusive the Census figures as they appear upon their face, and will not spend some hours in a minute examination of all parts of the report. They will suppose, and they will have a right to suppose, that $312,750,721 was the sum total of all taxes levied during the Census year by the State and local governments, although, in fact, that amount is exclusive of the millions of dollars annually yielded by a form of taxation probably more or less employed in almost every State in the Union.

The failure to explain this defect in the tables is to be regretted, in the first place, because it is always unfortunate to have credit given to any assertions which tend to intensify the American inclination to suppose that nature, or luck, or Providence, or something, has made it unnecessary for us to watch public expenditure as closely as may be wise in other less happily situated lands; and, secondly, because it will lead to most erroneous impressions as to the relative burden of government in different States and cities. One State may impose few or no indirect taxes, and depend entirely upon its ad-valorem levy upon assessed property. Another may raise a large part of its revenue by license and stamp duties. According to the Census, the weight of taxation may be much heavier in the former than in the latter, although this may really take quite as large a sum from its people and in a way even more likely to impair their wealth-producing capacity. Then, too, since in 1870 indirect taxes were generally, if not always, included in the Census totals, a comparison of the amounts raised in any particular State in 1870 and in 1880 will be oftentimes very deceptive. Thus, for instance, the Ninth Census says that State taxation in Maryland in 1870 amounted to $1,781,252, and the Tenth Census tells us that in 1880 it was only $860,977, or not quite half so much. Apparently taxes were much lower in 1880 than they were ten years before. As a matter of fact this was not so. In 1870 the levy was .19 of 1 per cent., and in 1880, upon a somewhat increased assessment, it was .1875 of 1 per cent. The aggregate amount of direct taxes levied was in 1880 slightly greater than in 1870.

Indeed, it is very unsafe to base any comparisons at all, save, perhaps, those of a very general character, upon the data furnished by this volume, either as to wealth, taxation, or public indebtedness. In regard to the latter two, the Census Bureau was necessarily compelled to rely, for the most part, upon the returns made by the local officials. When it is remembered that there are probably almost as many different systems of State and municipal book-keeping as there are States and cities in the country, it will be only natural to suppose that even where officials are honestly anxious to report the facts as they are, their returns will be made up upon widely varying principles. It would doubtless be more charitable than wise to assume that city or State treasurers and auditors were always free from any wish to put the best face they could upon the financial condition of their city or State. But if a city official sits down to make up his return to the Census Office, and falls to wondering whether the rival town will not cut down its debt and screw up its resources to the utmost that the most liberal methods of calculation will possibly permit, it is highly probable that, even if his report be nothing but the truth, it will not be the whole truth.

For instance, in one of the larger cities of the country the tax rate in the Census year was 1.50 per cent., and it had not been less than 1.20 per cent. for fifteen years. The volume under review says that the levy was but 1.03 per cent. of the assessment. In the city spoken of there is rather more than the usual local sensitiveness to criticism, a feel-

ing which shows itself very clearly in the official statements of the public debt and sinking fund. On the 31st of December, 1879, the total indebtedness of the city was $35,320,168; and all resources which could be, upon any reasonable basis of calculation, included in the sinking fund, amounted to $17,091,155, leaving a net indebtedness of $18,229,013. The very officer from whose annual report the above figures were compiled informed the Census Bureau that the gross debt was $20,184,975, the sinking fund $19,330,259, and the net indebtedness $854,466. The Census authorities are not responsible for errors resulting from misrepresentations of this sort, which nevertheless destroy all the value of the tables and reports which are intended to show the relative rank of the States in the aggregate and in the per-capita amount of their State and local debt. Thus, according to the Census, the State in which the city spoken of is situated was in 1870 tenth in the aggregate amount of State and local indebtedness, and in 1880 had fallen to twenty-fourth. If the city debt had been estimated upon the same basis that it was in 1870, the rank of the State in the later year would have been eleventh. Its net indebtedness is said to have decreased in the decade some eighteen millions of dollars, or about 62 per cent. It probably increased, and certainly, on the most favorable showing, was not 5 per cent. less. In 1870 the State was sixth in per-capita indebtedness; in 1880, probably about ninth, although returned as twenty-seventh. It is said to be thirty-seventh in the per-capita amount of its city indebtedness; it must, in truth, have been about sixteenth. The true state of the finances of the city alluded to happens to be peculiarly within our knowledge; how many similar misstatements may have been made as to other places, we have no means of estimating.

As already pointed out, the tax tables of 1870 include some taxes of which no account was taken in 1880; on the other hand, there can be no question that the report for 1880 contains returns from a number of petty governments from which no statements were received in 1870. The taxation given in the volume before us was the amount levied and not the amount collected. In some sections of the country it is possible that a not inappreciable portion of the annual levy is never paid. On the whole, there would seem to be a strong likelihood that the Census indicates a greater rate of increase in taxation than was actually the case. It will, however, be neither uninteresting nor unprofitable to contrast the aggregate amount of taxation of all sorts in 1870 with that of 1880 as they are to be collected from the Census and the reports of the Secretary of the Treasury. In 1870 the total of Federal, State, and local taxation amounted to $566,222,635 in gold, and in 1880 to $623,282,190—an increase of $57,059,555, equivalent to a little more than 10 per cent. It will be worth while to go into the comparison something more closely, as is done in the following table:

Kind of Tax.	Amount.	
	1870.	1880.
Federal	$342,286,865	$310,531,469
State	54,310,692	52,112,199
County	62,047,976	69,606,571
Minor Civil Divisions	107,577,102	191,031,951
Total	$566,222,635	$623,282,190

Kind of Tax.	Increase.	Per Cent. of Increase.	Decrease.	Per Cent. of Decrease.
Federal			$31,755,396	9
State			2,198,493	4
County	$7,558,595	12		
Minor Civil Divisions	83,454,849	77		
Total	$57,059,555	10		

It must be borne in mind that in 1870 the methods of collecting information as to State taxation used by the Census Office were in all probability adequate to the purpose, but that as to county, and still more as to minor local governments, there is not much doubt that they were anything but perfect. There is therefore reason to suppose that the increase in the aggregate amount of local taxation was not so great as the above table would seem to show. After all allowances are made, however, it still remains true that in the municipalities and quasi-municipalities of the country the cost of government is increasing far more rapidly than either population or wealth. The war being over, not all the corruption of the Washington lobby, skilfully availing itself of the predilection of a large portion of the voters of the country for an economic system dependent upon the collection of high import duties, has been able to prevent a considerable reduction in the aggregate, and still more in the per-capita, amount of Federal taxation. A quickening of the public conscience, greater watchfulness of State proceedings, the considerable reduction in the aggregate of State indebtedness, and the stoppage of carpet-bag spoliation in the South, have kept State taxation from increasing during the decade. It has probably not been diminished, although from the above table it would seem that it had, as the amount of indirect taxes included in the total for 1870 is in all likelihood greater than the apparent reduction. The most alarming feature of the great increase in local taxation is, that, in spite of all the money thus taken from the people, the cities and towns of the country are becoming more and more deeply involved in debt. For reasons already indicated, it is probable that the real growth of local indebtedness has not been so great as the Census would indicate, yet, allowing for any possible margin of omissions in 1870, the rapidity with which that indebtedness increased during the decade is startling.

The table below will show the net public indebtedness of the country in 1870 and in 1880, in the aggregate and in detail. It will be noticed that county, township, school-district, and city debts are all classed together as local. No other treatment of the material was possible, though of course a more minute classification would have been desirable; for while in 1870, as in 1880, the county debts were separately returned, large parts of what in 1880 are given as the debts of the cities of New York and Philadelphia were ten years before charged to the counties of the same name. We were at first not a little puzzled to account for the very large apparent reduction of the aggregate of county indebtedness, and as there is no note explaining to what cause it is due, it is extremely probable that not a little misunderstanding will result.

Nature of Indebtedness.	Amount.	
	1870.	1880.
Federal	$2,231,169,956	$1,919,326,748
State	352,866,698	226,597,294
Local	515,810,060	821,486,447
Total	$3,199,846,714	$2,967,410,789

Nature of Indebtedness	Increase.	Per Cent. of Increase.	Decrease.	Per Cent. of Decrease.
Federal			$411,843,208	17
State			126,269,104	55
Local	$305,676,387	59		
Total			$232,435,925	7

We have taken to ourselves, and have been freely given by others, no small praise for the courage and persistency with which we have addressed ourselves to the payment of our national debt. We have voluntarily, and for the most part cheerfully, borne up under a heavy load of self-imposed taxation in order that the annual reports of the Secretary of the Treasury should bear witness to a large reduction in the sum total of the Federal liabilities. The Census now comes to tell us that the local governments of the country have borrowed three dollars for every four that the Federal has paid, and that although many of the States have honorably discharged a large part of their obligations and others have repudiated theirs, the aggregate of public indebtedness of all sorts was very little less in 1880 than it was ten years before. The problem of local government is fast becoming, or rather has already become, the most serious one with which our statesmen and legislators have to deal. Taxes and debt are increasing at a rate which foreshadows for half the cities of the land the bankruptcy which has already overtaken a few of the most reckless.

This is not the place to discuss the remedies. Purification of local politics will be one great step. It will not alone be sufficient, for it must be remembered that the same phenomenon of local taxation and indebtedness, increasing out of all proportion to the wealth of the community, exists where the spoils system has been long extinct. A writer in a recent number of the *Saturday Review* pointed out that while, since 1867, the efforts of successive Chancellors of the Exchequer have brought about a reduction of £43,000,000 in the debt of the United Kingdom, during the same period local indebtedness has grown from £33,000,000 to £120,000,000, an increase of £87,000,000, so that in fact the kingdom is more deeply in debt than it was seventeen years ago. That there, as here, the augmentation of local liabilities is not to be attributed to any hesitancy on the part of the local boards to impose the necessary taxes, makes the outlook all the more gloomy. Along with the growth in indebtedness there has been an increase of 70 per cent. in the aggregate amount of rates levied, although the ratable value is but 39 per cent. greater than it was. Perhaps here and across the water it will be found necessary to put an absolute limit upon the amount of debt which a municipality may contract, as was done by the voters of this State at the recent election.

In the volume under review will be found a vast mass of data for a study of the whole question of local finance. It is true that the time has not yet come when this material can be used to the best advantage. To make it most useful we must have something to compare it with, and, as we have demonstrated, the different ways in which the Census of 1870 and that of 1880 were compiled make any nice comparison between their results to the last degree misleading. But when ten years hence the minute details of the financial condition in 1880 of every local government in the country, great and small, can be contrasted with the like facts as they will be in 1890, collected upon a plan equally complete in theory and even better worked out in practice, it will be found that if careless and sometimes unintelligent editing has gone far to obscure for a time the true worth of the work done in collecting the statistics of wealth, debt, and taxation, it has not been able to destroy their value altogether in the hands of those who have time and skill to study them thoroughly.

There is practically no discussion of results in this volume. The histories of the national and of the State debts are long enough in all conscience, and are extremely useful, yet the reader can scarcely fail to be struck with a certain lack of precision which seems to characterize them. We do not mean that they do not descend into details, for hey do, oftentimes into very unnecessary ones,

and sometimes, especially in the history of the national loans, interrupt themselves to relate incidents which are neither relevant nor interesting. The trouble seems to have been that as very little attempt was made to digest and summarize the accounts, it was not discovered that some matters, as to which information is still needed by any one wishing to make himself master of the subject, were passed by without notice. In short, this volume confirms the opinion that the Census of 1880 a good deal resembles an overgrown boy. A magnificent framework is there, but the very size of the skeleton makes the want of rounding out and the unequal development of the parts all the more noticeable.

ILLUSTRATED WORKS.

The Waggoner of the Alleghanies. By T. Buchanan Read. Philadelphia: J. B. Lippincott & Co.

The Seven Ages of Man ("As You Like It"). Illustrated with Photogravures from Original Paintings. Philadelphia: J. B. Lippincott & Co.

The Songs of the Angels: Christmas Melodies; The Happy Christmas Time; Songs of the Season; The Holy Night; Christmas Hymns and Carols Centuries Ago; Songs of Bethlehem. By various Authors, with artotype Reproductions from various Old Masters. Anson D. F. Randolph & Co.

Hark! the Herald Angels Sing. By the Rev. Charles Wesley, M.A. With Illustrations from the Old Masters. E. P. Dutton & Co.

Poems for Christmas, Easter, and New Year's. By Hezekiah Butterworth. Illustrated. Boston: Estes & Lauriat.

Annie and Willie's Prayer. By Sophia P. Snow. Illustrated. E. P. Dutton & Co.

Songs of Christmas. By Frances Ridley Havergal. Illustrated. E. P. Dutton & Co.

Seven Little Maids; or, The Birthday Week. Pictures and Verses by Mary A. Lathbury. R. Worthington.

THE illustrator may easily find better material for illustration than the somewhat unreal fantasies of Buchanan Read, but there is no need to make designs as weak as these even to serve the purpose of illustrating Read. There is a determined defiance of the proprieties of design in the most of these illustrations; a coarseness and recklessness which cannot be accepted as vigor or condoned as suggestiveness; a laborious effort to be masterly without any of the subtlety or precision which marks the master—the last vice of a weak and insincere art. In the illustrations under notice, this slovenliness is set off more offensively by the care of the engraver, whose most subtle work is given to show how indifferent to subtlety the designer was. It would be difficult to find a piece of more flimsy and unimaginative design than that opposite p. 66, in which the engraver has made a *tour de force* to express the very flimsiest qualities of execution, and expose the worst style of drawing conceivable. One wonders if the artist could draw the figure any better than a mannikin, and is compelled to admit that the suit of armor standing alone is better than any of the figures which are intended to show some animation. It is sheer abuse of the art of wood-engraving. Mr. Fenn's "Vague as a vessel in a dream" is the only illustration that shows care as drawing, and that is a puzzle as design.

The illustrations to the 'Seven Ages' have not this disguise—they are frankly and honestly of the most vulgar and slouchy kind of design, reproduced with all their vices by photography; and there is not one of the seven which any able artist should not be ashamed of, the best being Mr. Church's "Infancy," which shows that even when the artist will be most careless in his drawing he cannot divest himself of a certain airy grace and fancy which atone for much bad work. But such merely decorative design as this is not in keeping with the subject: Shakspere is something more serious than a Christmas card. The worst of the lot is the "School Boy"—badly drawn, of an extreme slovenliness of execution, confused in its planes, and devoid of character in what is meant for suggestion of detail; certain adventurous dabs of body color being made to serve for apple blossoms, from which the rickety boy has stolen the precocious bird's nest and is running away. The whole landscape seems coming after him in an indignant uprising. To distinguish no further, it does seem as if this volume must be set down as the lowest point of American illustration yet achieved, in spite of its sumptuous get-up and singularly fine typography.

The four collections of hymns and sacred songs published by Randolph & Co. are modestly illustrated by very unequal artotype (what blundering seeker coined that offensive word?) illustrations from the old masters, mainly from engravings. Neatly put up in limp decorative parchment-paper covers, they are, in general appearance, attractive.

'Hark! the Herald Angels Sing' is of the most orthodox type of Christmas book—a Christmas hymn "deaconed out" (as the hymns used to be in the singing in Congregational churches), and each couplet accompanied by an illustration, mostly taken from the orthodox old masters. It calls for no special comment as to the style of illustration, but is a handsome book for the table.

'Poems for Christmas, Easter, and New Year's' is a more important work, admirably calculated for a gift-book to devotionally-inclined people, and illustrated with more than average good taste and effect. The illustration of "The Taper" is good in drawing and engraving, and the poem serves as an introduction to the volume. The following stanza will give the spirit of the book:

> "One taper lights a thousand,
> Yet shines as it has shone;
> And the humblest light may kindle
> A brighter than its own."

The tail-piece of the introduction—a group of roses—is an effective piece of flower engraving. A classical tail-piece on page 15, the head-piece of "In Chaleur Bay," and the landing of the Normans in England (p. 34) are particularly good bits of engraving and design; but a full-page marine, on page 133, must have been drawn by a man who never saw the sea.

'Annie and Willie's Prayer' is a story in verse for children, got up in the gorgeous style of the silk-fringed Christmas books, with twenty-one good woodcut illustrations, besides the brilliant color-printed covers: altogether a charming bit of fancy, and in the best style of production. It is sure to be popular. 'Songs of Christmas' is in a similar vein, and may be classed with it in eulogium; some of the cuts (and particularly a winter landscape by star and moonlight, "There is silence high in the midnight sky") are to be applauded.

'Seven Little Maids' is another of the silken-fringed series, with seven silken-bound maidens each given her verse and picture—pleasant prints of facile design and brilliant color, the whole being grouped in procession on the front cover, echoed by a pretty conceit (a flight of seven birds) on the back cover.

Fine Arts.

THE WATTS EXHIBITION.—II.

THE conflict of critical opinion on Mr. Watts's pictures, which was to be expected from any work so strong and individual, is due to the fact that a certain amount of severe education in art is necessary to a proper understanding of the labors of a man who has attacked art from its most inaccessible side, and reached its highest region, if not the highest summits of that region. To people whose appreciation is limited to the low-lying art of Meissonier, Alma-Tadema, or Bouguereau, and to whom their works represent the purposes of art education, it will be useless to preach Watts. One must comprehend something of the abstract qualities of art as separated from nature to be qualified to pronounce judgment on his subject pictures, though we should imagine that very little art education was necessary to see that his portraits are in a vein which no modern painter has rivalled him in. If any living man, or man of the last half century, has painted a portrait equal to that of Burne-Jones, or in an hour's work has done such a sketch as that of Lord Shrewsbury, or in a single sitting such a *précis* of character as that of Mr. Leslie Stephen, we are not informed of his existence, and we have devoted a good many years of observant life to the study of art in all its forms. The power to comprehend this ought to be regarded as the *sine qua non* of art criticism, and no one who has it not should presume to waste printer's ink and paper in expressing his views of art.

But beyond this there are stages of education before one is frankly and honestly able to say that he enjoys such pictures as the "Paolo and Francesca," and we as much suspect the sincerity or self-possessed judgment of a neophyte who is possessed with enthusiasm for the painter's work, as the intelligence and especially the correct education of a critic or amateur who can say that Mr. Watts's work, however distasteful to the temperament of the individual, is not in the highest range of art thus far known to us. The former might be really self-deceived, and mistake the contagion of genuine appreciation or the magnetism of the personal qualities of the painter for appreciation of the art, while the latter is simply incompetent to judge art in any abstract form, or to distinguish between what pleases him and what is good. And in this we make no question of honesty of criticism or general intelligence. We all know people to whom the negro minstrels are a perpetual delight, and to whom a Beethoven sonata is a dead bore, but who are still persuaded that they know what good music is, and possibly do, up to the level of the minstrels; and so we know people who thoroughly appreciate a range of very honest and excellent painters, such as Gérôme, Bridgman, Boughton, Meissonier, and imagine that it is the art in their works that they admire, while, in fact, what they really like is the nature and the lowest qualities of technique, their education not permitting them to admire anything more abstruse. It is not difficult to persuade people who prefer the minstrels to the symphony, that there is something in music for them yet to learn, but it is hard to convince people who regard the work of Meissonier as the highest reach of art that they are in dense ignorance—because there is no generally recognized standard of taste, and because people have a foolish idea that the test of art is fidelity to nature, which is no more true of painting than of music. But even further than this we are prepared to go, and maintain that if the critics and amateurs who reject Watts were obliged to pass an honest and *original* opinion on Michael Angelo and Tintoretto, they would

condemn them in the same terms that they now employ in reference to Watts. There is a great deal of unconscious hypocrisy in the common admiration of the old masters, and men who defer to authority when they are before a picture by Titian or Tintoret, knowing it to be such, would, if they were in the Palace of Truth, avow, as we all did to ourselves in the early stages of art education, that there was nothing on canvas more odious or uglier. We very well remember an eminent living sculptor who kept in his studio a cast of the Venus of Milo beside his last nude statue, and had the honesty to say that his work was immeasurably superior to the Greek because it had more truth of surface, or what the Italians call *morbidezza*.

Mr. Watts's work can never be confounded, be it for good or ill, with any of the naturalistic developments, there being nowhere any tendency to realistic painting. The virtues which are supposed to inhere in glib, facile representations of minor or superficial facts, stuff painting, details, etc., etc., have no part in his pictures, and whether it be in respect of design, composition, or color, they are from beginning to end frankly ideal, nor is there any concession made to the realistic side of art: the artist's fealty to the highest ideas of his vocation is never bent to any lower consideration of success or popularity. The design is in the largest and freest sense Greek—*i. e.*, as opposed to the *pose plastique*, it is the design of expression, not of a study from the life; of an ideal, and not of a definite and posed model; vital, therefore, and not academical, and as such, even though far less just than it is, it would take rank above any realistic work whatever. It shocks the conventional taste by what that taste takes for want of a finish, which is really a superficial elaboration, impossible and undesirable to a man of Mr. Watts's temper and mental organization. The details of stuffs and accessories are of no value to him, because they do not convey his central idea any more clearly, and when that idea is expressed, any further elaboration is a loss of more than it gains. Of course, other great artists have done differently. Titian has now and then painted stuffs with great delicacy, and Michael Angelo, though he has hardly finished a statue has finished parts of several with great tenderness; but Mr. Watts is neither the one nor the other, but himself, and what he does he does in his own light. It might possibly be better or it might be worse if he were otherwise, but in what he is he is consistent, a thorough and powerful idealist, whom we must take with such shortcomings as he has. We are not disposed to deny that if he combined with the spirit of his design, which is thoroughly Greek in its spontaneousness and expression of an ideal, the extreme refinement of finish which some of the Greeks and Italian masters had, he would have appealed to a larger public; but to ask him to sacrifice the spirit of his design to an elaboration for which he has no care, would be absurd.

Those who want to study Watts rather than to teach him what he ought to have done, will find plenty of scope. As an example of design of the loftiest and most imaginative vein, the "Paolo and Francesca" certainly is at the artist's high-water mark. The movement of the group, the floating, effortless drift of the figures as they go by in the interminable procession of the shades, is marvellous, subtle to the finest degree; and the composition of the lines throughout is so in sympathy with those of the draperies and the figures, that the whole seems a fragment of a ghostly vortex which the spectator catches a glimpse of as Paolo and Francesca are passing. Pallid, unconscious of aught but themselves, so lost in the woe of their perdition that even we forget Dante and his intervention—it is as if *we* saw, and not the poet. This is the true imaginative treatment, unlike that of Scheffer, who has put, in his best solid and academic drawing, a realistic Dante to crown the realism with. In Watts's picture there is an awful unreality pervading the whole. If ghosts are to be seen as ghosts, they could not be better seen than these—beauty, youth, happiness all gone, and only the semblance of living remaining. It is the ideal of spiritual torture he has given (so far as form can convey that ideal), when, in that misery which can by no other be surpassed, of remembering the joy of past years in the midst of hopeless woe,

> "Th' infernal hurricane that knows no sleep
> Propels the spirits with its ruinous force,
> Whirls, smites, torments them in its reckless sweep."

As a piece of technical mastery the treatment of the drapery in this picture could not be materially bettered, or the sympathy of the scheme of color with the theme—pallid, green and ashen, with lurid gleams of color in the distance, as if some more fearful fate were there endured. When one has studied the picture long enough to take it all in, he will find that nothing could well be other than it is. With the profoundest conviction we can but pronounce it in our opinion one of the most triumphant works of modern art, and the most thorough realization of any conception in the "Commedia" we know of.

The "Love and Life" is in a more cheerful vein, and as striking an example of Mr. Watts's feeling for color as the accompaniment of his idea—in this case a tenderer, more hopeful theme. The picture shows more than most others the peculiar method of execution which is the artist's conception of the quality to be given to oil painting, differing, in fact, very little from fresco. It grows probably from his revolt from the glib and waxen or oily texture which most of the English and French painting falls into, and which exercised Blake so greatly that he regarded oil painting as an invention of the devil. Besides these, there is possibly a desire to avoid what is certainly the besetting sin of modern painting, the tendency to display of executive abilities—the vanity of the brush—a weakness Mr. Watts never has been troubled with. We are inclined to think that he has pushed this revolt too far, and that in the effort to avoid all display of execution or common quality of pigment, in "Love and Life" especially, he has run close to losing form and definite, severe gradation, such as he has given in other pictures, and such as his drawings, unfortunately not represented here, show his power over. Except as color, therefore, in which respect it is of an exquisite and complete harmony, the "Love and Life" does not so interest us as do some of the gloomier and more imaginative works.

"DER FREISCHUETZ."

On the programme of the Metropolitan Opera-house is printed a list of twenty-two operas that are to be produced this winter; and of these no fewer than ten contain a mythic or supernatural element. It is no longer the old Greek myth that is to be found in these nineteenth-century operas. That was rendered so threadbare by the composers of the last century that it had to be given over finally to the clown Offenbach. It is the Northern mythology which, by its more sombre and tragic elements, is more potent in stirring our imagination. Weber is the great genius who first saw the pure gold of this new vein. He was closely imitated by Marschner, and in a more original and independent manner by the young Wagner. Nothing could afford a better proof of the correctness of Wagner's theory that mythology is the proper sphere of the music-drama than Weber's predilection for the supernatural as shown in his "Freischütz," "Oberon," and "Euryanthe"; and the fact that Mozart likewise introduced it into his two best operas, "Don Juan" and "Magic Flute." The whole movement received its first great impulse through the "Freischütz"; and this alone would suffice to secure for this opera immortal fame, even if it were not kept alive by its fresh and exquisite music.

How fresh and exquisite this music is, was forcibly shown once more on Monday evening, when it was sung at the Metropolitan Opera-house by an excellent cast, including Frau Schroeder Hanfstängl, Frau Krauss, Herr Schott, and Herr Koegel—singers whose vocal powers are of different degrees of merit, but all of whom united with the chorus and orchestra in interpreting the music with the artless simplicity and deep feeling that it calls for. One is at a loss, by the way, to explain why this opera, which has been sung more than a thousand times in at least one German city, and is one of the six operas most frequently given in Paris, should have been so much neglected in recent years by the opera companies that have honored us with their visits. Those who are able to appreciate a rich and varied orchestral score would always be grateful for a chance to hear "Der Freischütz," which contains not a few "prophetic allusions" to Wagner. Those, on the other hand, who are always clamoring for "melody" should be delighted with Weber's opera, for surely there never was a work so brimful of the choicest melodies and tunes in the form of solos as well as ensemble numbers. In the last act, indeed, this melodic wealth becomes quite amazing and seems almost prodigal, as in "Lohengrin." But perhaps the people who clamor for "melody" have in their mind something quite different—the runs, trills, and other *fioriture* of the Rossini school. These, indeed, Weber avoided, for his taste was too refined and his sense of dramatic propriety too acute, to permit any resort to such cheap clap-trap. Nevertheless, we believe that it is not too late for the "Freischütz" to become popular in America. The taste for Italian ornamental song is less pronounced than it was some years ago, while that for pure melody, as represented in Weber's operas, will never die out because it is the song of nature. It must be borne in mind that the present generation has had no opportunity to pass intelligent judgment on "Der Freischütz" and other German operas. They have been sung by Italian artists, whose only care was applause and personal glory; who despised these operas because in them the music is of more importance than the singer; and who therefore did not do them justice. At the Metropolitan these faults are obviated, and the only thing to be regretted is that the house is not smaller, because an opera like the "Freischütz" would be much more effective in a theatre the size of the Casino.

It has been suggested that Dr. Damrosch, instead of putting this opera on the stage in its original form, with German dialogue alternating with the music, should have adopted the French version, in which the dialogue is replaced by recitative composed by Berlioz. We believe this would have been an unwise proceeding. The German dialogue is not intelligible to many, but neither is the Italian secco-recitativo, with which non-Italian audiences have put up for scores of years. And as for Berlioz's recitatives, they are not generally considered a success. Berlioz himself was averse to writing them, and was only induced to accept the task by the knowledge that if he refused, some one else less competent and less in sympathy with Weber would accomplish it. When the "Freischütz" was to be produced in Paris with the added recitatives and ballet prescribed by the absurd rules of the Grand Opéra, Wagner hap-

pened to be in Paris, and he wrote an open letter in which he declared, "That you select *this* composer (Berlioz) does you honor, and proves that you know how to value our masterwork. I know of no one among living French composers who so well comprehends the score of the 'Freischütz' as the author of the Symphonie Fantastique, and is so capable as he to enlarge it, if this be necessary. He is a man of genius, and no one recognizes more fully than I the irresistible power of his poetic gift," etc. But after the performance he changed his opinion, as he discovered that Berlioz, although very conscientious, had not expended any originality on the recitatives, which were unattractive in themselves, destroyed the effectiveness of the simple melodies, and prolonged the performance intolerably without adding any new features of interest.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2.50.
HENRY HOLT & CO., New York.

DARK DAYS.

By the Author of

Called Back,

Hugh Conway (F. J. Fargus). 16mo. Leisure Hour Series, $1.00; Leisure Moment Series, 25 cents.

THIS NOVEL IS MORE INGENIOUS THAN, AND AS INTERESTING AS, 'CALLED BACK,' which is published in same series and at same prices. These are the only AUTHORIZED editions of Mr. Fargus's books.

HENRY HOLT & CO.,

New York.

"A Work for every Historical Library."

JUST ISSUED.

VOLUME TWO OF THE

Archives of Maryland.

Containing the Acts and Proceedings of the General Assembly of Maryland from 1666 to 1676. Edited by Dr. William Hand Browne, Librarian of the Johns Hopkins University.

The volume is supplied with four very full indexes. Price, in paper, $2.50, postage 26 cents; cloth, $3, postage 34 cents. A few copies of Volume One, 1637-38—1664, may still be had at the same price.

For copies address

JOHN G. GATCHELL,

Ass't Librarian Maryland Historical Society, Baltimore.

MR. MATTHEW ARNOLD WRITES: "I have been reading with much pleasure in your volume, in which you have always something to say, and say it distinctly."

If the world looks into this book with candor and true feeling for art it will not be stingy of applause. Men of taste will recognize a new poet of strong individuality, and will be set a wondering who "Paul Hermes" is.—*Philadelphia Evening Bulletin*

There is a frankness and thoughtfulness in the longest poem quite sure to carry to its conclusion any reader who is persuaded into beginning it. Several of the shorter poems have melody.—*Atlantic Monthly.*

We are inclined to think that "Paul Hermes" has no little of the divine afflatus. He has breadth, depth, and plenty of imagination.—*Newark Advertiser.*

Boston, Mass.

D. Appleton & Co.

HAVE JUST PUBLISHED:

I.

Noble Blood.

A NOVEL. By JULIAN HAWTHORNE. 16mo, paper cover. Price, 50 cents.

A stirring novelette, written in Mr. Hawthorne's most brilliant manner.

II.

The Story of My Life.

By the late J. MARION SIMS, M. D. Edited by his Son, H. MARION SIMS, M. D. 12mo, cloth, 472 pages. Price, $1 50.

Under the simple title of 'The Story of my Life' Dr. Sims has in the most fitting terms narrated the origin and growth of those achievements in surgery which by the general judgment of enlightened men have stamped him as the benefactor of his race. The accounts of Dr. Sims's early struggles are of the deepest interest, and show that the path he trod to final success was not strewed with roses.

III.

Maxims of Public Health.

By O. W. WIGHT, M.D., of the Detroit Board of Health. 16mo, cloth. Price, 75 cents.

"The intelligent householder who has no time, probably no inclination, for systematic studies, may read herein, as he runs, and find hints that will save himself and his loved ones from unspeakable pain and sorrow. . . . The greater portions of the book are devoted to the practical problems of combating infectious diseases and the removal of the filth-conditions in the midst of which they flourish."—*From Preface.*

IV.

Elements of Zoology.

By C. F. HOLDER and J. B. HOLDER, M.D., Curator of Zoölogy of American Museum of Natural History, Central Park, New York. Being the fourth volume in the new series, "Appletons' Science Text-Books." With numerous illustrations. 12mo, cloth, 395 pages. Price, $1 50.

An admirable work for lay readers as well as schools and academies. The design has been to present, in concise and plain language, and in the light of the latest research and investigation, the life-histories of the various groups that constitute the animal kingdom.

V.

The Black Poodle, and Other Stories.

By F. ANSTEY, author of 'Vice Versâ' and 'The Giant's Robe.' Illustrated. 16mo, paper. Price, 50 cents.

VI.

Part Five of Admiral Porter's Novel.

ALLAN DARE AND ROBERT LE DIABLE. A ROMANCE. By ADMIRAL PORTER.

To be published in Nine Fortnightly Parts, octavo, illustrated. Price, 25 cents each Part. A remittance of two dollars will insure the posting of the entire work as rapidly as published. Parts One to Five now ready.

*** For sale by all booksellers, or will be sent by mail, postpaid, on receipt of price.*

D. APPLETON & CO., Publishers,
1, 3, and 5 Bond Street, New York.

Dodd, Mead & Co.'s NEW BOOKS.

A NEW NOVEL BY E. P. ROE.

1. *A YOUNG GIRL'S WOOING.*
By E. P. ROE. First edition 25,000 copies. 12mo, uniform with the other works of the author, $1 50.

2. *PEPYS' DIARY.*
The text is that of Rev. Mynors Bright, who in 1875 made an entirely new translation, containing about one-third more matter than any edition before published.
The edition of Mynors Bright was exhausted almost immediately, and has for some time been scarce.
Our edition is in ten volumes, 12mo, substantially uniform in size and type with the Eversley Kingsley. In cloth, $15.

3. *POETICAL WORKS OF MRS. BROWNING.*
FROM NEW ELECTROTYPE PLATES.
It is well known that there has been no edition, either English or American, worthy of this favorite author. The plates of this one have been made by Messrs. T. L. De Vinne & Co., by whom also it has been printed. Paper and binding are of the best. 5 vols., 16mo, cloth, $7 50.
*** A few copies remain of the de Luxe Editions of both Pepys' Diary and Mrs. Browning's Poems.
These were first impressions from the plates on hand-made (Holland) and Japan paper, limited, and each copy numbered and signed.
A circular with full particulars will be sent to any address on application.

4. *CHURCH'S STORIES FROM THE CLASSICS.*
By PROF. ALFRED J. CHURCH. New Volumes. STORIES OF THE PERSIAN WAR. ROMAN LIFE IN DAYS OF CICERO. Each with 16 illustrations in 6 colors, 12mo, $1 50. Uniform with previous volumes by this author, viz.: 'STORIES FROM HOMER,' 'STORIES FROM VIRGIL,' 'STORIES FROM GREEK TRAGEDIANS,' 'STORIES FROM LIVY,' 'STORIES FROM HERODOTUS.'

5. *FRENCH ETCHERS.*
A new volume similar to our very successful 'Group of Etchers' and 'Score of Etchings.' It contains 20 Etchings and embraces specimens by Daubigny, Corot, Jacquemart, Martial, Appian, Gravesande, Cazanova, Lançon, Le Page, Chauvel, Veyrassat, Ballin, and others. Folio, cloth, $15.

6. *THE VERY JOYOUS, PLEA-*sant, and Refreshing History of the Feats, Exploits, Triumphs, and Achievements of the Good Knight, without Fear and without Reproach, the Gentle Lord de Bayard.
Set forth in English by EDWARD COCKBURN KINDERSLEY. Uniform in size with 'Chronicle of the Cid,' published last season. With many illustrations. Cloth ornate, quarto, $3 00.

7. *THE MERCHANT VESSEL.*
By CHAS. NORDHOFF. A record of personal experience at sea by the author. Quarto, with many illustrations. Uniform with 'Man-of-war Life,' published last year, $1 50.

8. *A NEW ELSIE BOOK.*
ELSIE AT NANTUCKET. By MARTHA FINLEY. Uniform with previous volumes of the Series. 16mo, cloth, $1 25.

9. *A NEW MILDRED BOOK.*
MILDRED AT HOME. By MARTHA FINLEY. Uniform with previous volumes of the Series. 16mo, cloth, $1 25.

10. *AT ANY COST.*
A new story by EDWARD GARRETT. 16mo, cloth, $1 25.

The Nation.

NEW YORK, THURSDAY, DECEMBER 4, 1884.

The Week.

THE most striking thing in all the public documents sent to Congress with the President's Message is that portion of Secretary McCulloch's report which relates to the tariff, to international trade, and to the glut of American manufacturing industry. No apology was needed by way of introduction for it. It gives us not only the truth, but the most important truth, affecting the business interests of the nation to-day. It scatters to the winds most of the material of which the Blaine campaign was made up; and now that the campaign is ended and the smoke blown away, nobody seems greatly surprised to find that tariff reform takes the first place in the recommendations of a Republican Administration. Even the *Tribune* has little fault to find with the Secretary's report. Mr. McCulloch's argument is by no means novel or original. It recites a few plain facts and draws a few plain deductions from them. It shows that our manufacturing power has outgrown our domestic needs; that its full employment as well as its future expansion depends upon our ability to sell our surplus abroad; that the first condition and requisite of selling abroad is cheapness of production; that one of the elements of cost of production is taxation, and that custom-house taxation is the same in its effects upon cost as any other kind of taxation, and is also the kind that can be most easily lightened. These statements are part of the A B C of finance. They were dispassionately considered by the Tariff Commission of 1882, and, considering the protectionist leaning of that body, ably presented. Therefore, Mr. McCulloch's reproduction of them ought not to surprise anybody, and apparently does not.

Mr. McCulloch's recommendation of a new Tariff Commission, to go over the ground travelled by the last one, is valuable only as a means of employing the time which must elapse before political parties, in their changed relations, can determine the ground upon which they shall stand. The election has been in one sense a revolution. The Democratic party, as well as the Republican, was split during the campaign. The Independent bolt was offset and nearly neutralized by the Irish bolt. The causes of the latter movement are not fully ascertained, but it is known that the tariff question was one of the contributing factors. On the other hand, many Republican protectionists supported Governor Cleveland. While Sullivan and Finerty were roaring "British free trade" in the ears of Irishmen, Mr. Henry C. Lea, of Philadelphia, was addressing cogent arguments to Pennsylvania manufacturers and laboring men against the election of Blaine. The preponderance of protection influences, however, was on Mr. Blaine's side, and this preponderance was so great that in the absence of other dominating issues it might be assumed that the country had voted in favor of tariff reduction. We believe that the sober sentiment of the country is in favor of reduction, moderate in amount, carefully but impartially distributed; yet we apprehend that the Democratic party, newly weighted with the responsibilities of government, will want time to explore the ground on which it stands, and that it will not refuse a new Tariff Commission if Mr. McCulloch's views prevail with his own party in Congress. There is no reason, however, to expect that the labors of a new Commission will be more productive of valuable results than those of the old one.

Secretary Lincoln has found it necessary to incorporate in his annual report a rebuke to General Hazen, the incompetent Chief of the Signal Service, which would be sufficient to prompt a self-respecting official to hand in his resignation forthwith. General Hazen had the bad taste to put into his report to his superior officer, Secretary Lincoln, an opinion of his own reflecting upon the propriety of the course of the Secretary in regard to the *Proteus* expedition. Mr. Lincoln very properly calls this intrusion "extraordinary," and "hardly excusable, even under whatever of irritation may have been caused by the findings of the *Proteus* Court of Inquiry." Those findings, it will be remembered, enumerated nine blunders by General Hazen, which "either directly led or largely contributed to the abortive issue of the expedition." Measures ought long ago to have been taken to rid the service of General Hazen. He has absolutely no fitness for the place, and to his record of general incompetency is now added a gross breach of official decorum. His tenure is, however, very short. If President Arthur continues his leniency and allows him to remain till the fourth of March, the new President can be depended upon to make short work of him.

The most interesting statement in the annual report of the Postmaster-General is that the loss to the Department through the reduction of letter postage from three to two cents is smaller than was anticipated. An official estimate put the probable loss at $8,000,000, but the actual loss is a little more than $6,000,000. The actual loss over last year's receipts was only a little over $2,000,000, but to this is added an increase of $4,000,000, which the natural growth of business would have brought into the Department had the three-cent rate been continued. The reduction in rate has greatly stimulated correspondence and has diminished largely the use of postal cards. The condition of the service is so encouraging that the Postmaster-General recommends the reduction of local postage to one cent, and repeats the recommendation of his predecessor that the unit of weight for letters be raised from one-half to a full ounce. This change, he says, would only slightly diminish the revenues, would encourage the sending at full postage of small packages which are now sent as fourth-class matter, and would save the employees in the various offices much valuable time.

These recommendations, together with that of the establishment of a special and prompt delivery system in the cities by the use of a ten-cent stamp, strike us as excellent. There can be no doubt that one-cent postage in the cities would more than double the number of letters now sent. For several years private companies have done a flourishing business here by distributing letters and circulars for one cent each, and they continue to do it in spite of repeated attempts by the Government to stop it as being prohibited by the postal laws. The ounce standard of weight would undoubtedly have the effect which its advocates predict, and it would also be a great boon to all letter-writers. The special ten-cent delivery stamp would be a great convenience, and, if it were well conducted, would certainly be an important source of revenue. If by the payment of so reasonable an extra sum the delivery of a letter in any part of the city could be assured within a short time after it had been posted, thousands of people would be glad to use the system daily.

Mr. Blaine is on his way to Washington for the winter, where he has taken more commodious quarters than he occupied last year. The election being over, there is no longer any necessity for retaining the "modest house" in which he began the composition of the 'History,' and he will be able to add a little luxury to his way of living. Probably the "early breakfast" will give way to a leisurely eleven o'clock repast, and the "light midday meal" be replaced by the ordinary aristocratic seven o'clock dinner. So far as we can see, there is no reason why he should not now venture to live in his own house. He is a very shrewd politician, and must be able to see that the talk about his being a candidate in 1888 will amount to nothing. Advices from Boston say that when he passed through that city on Monday, the few friends who saw him were "impressed with his cheerful and companionable manner, which was never more conspicuous," that "if he is a disappointed man he bears no trace of it," and that he "shows every indication of that intellectual vigor which was his marked characteristic." This is gratifying news. There is no reason why he should not throw off all restraint now and live a free and happy life. As for occupation, he will have a plenty of that, both in composing the second volume of his history, and in revising the first in order to free it of the "bids" for votes which the necessities of his canvass compelled him to put into it.

It is now said that Logan, if not elected to the Senate, will return to the practice of the law, at which he will make "between Chicago and Washington" at least $25,000 a year. This hint, though it cannot be pleasant to the bar of Illinois or of the District of Columbia, is a cheering indication, so far as Mr. Logan and other unsuccessful statesmen are concerned. Conkling retired from politics in this way a few years ago, and is said to have made such a comfortable income at the bar that he is unwilling to return to political life. If Logan really does retire and make $25,000 a year, his example will no

doubt be followed by others, and in the end the practice of the law may come to be the natural termination, just as it was in the days of Webster and Choate the natural beginning, of a brilliant political career. An interesting subject for the next American Bar Association prize essay might be, "For what branch of legal practice does political life best fit a man?" In Logan's case it is said to be the "pension business."

Ever since Cleveland's election the London gossips have been at work inventing rumors about James Russell Lowell. One was that he was so horrified by Cleveland's election that he would resign at once, and so enamored of England that he would take up his abode in Oxford. To give a little pungency to this, it was added that the vacant place would be given to Mr. William Henry Hurlbert, sometime editor of the New York *World*. Mr. Lowell has since been interviewed, and says he will resign when the new President wants his place, and, it is to be presumed, will act rationally, too, about the other matters named, as will Mr. Cleveland. That is, Mr. Lowell will probably, when he quits his present office, return to his old family home, in which his life has been passed, and Mr. Cleveland will appoint some one who will, if not Mr. Lowell's equal in capacity, be a reasonably worthy successor in other respects. The very best thing Mr. Cleveland could do, we need hardly add, would be to keep Mr. Lowell where he is.

The Leman-Brand controversy in Chicago has been ended by the refusal of Brand, the Democratic candidate, to make any further efforts to obtain the disputed seat in the State Senate. He reached this decision on Sunday, when evidence was presented to him showing beyond a doubt that Democrats in Chicago had been resorting to the most dishonorable means to count him in. He has done precisely what any honest man was bound to do under the circumstances. The conduct of the Democrats, in altering the returns and in various other ways attempting to secure control of the Legislature by fraud, is altogether reprehensible, and we trust that the guilty persons will be punished to the full extent of the law. Mr. Brand's withdrawal from the controversy settles the question of majority in the Legislature.

The Joint Executive Committee of the Associated Press have published their formal report on the shortcomings of that body in dealing with the returns of the late election. It is, however, we are sorry to say, rather an old-fashioned "vindication" than a defence or explanation. It says:

> "The investigation shows that while there were some serious errors in telegraphing our reports, especially from remote points, due in part to their being transmitted over different lines of telegraph, and while these errors in the main diminished the apparent strength of Cleveland, there was but one error of importance in the office of the Associated Press. This was in a bulletin issued on November 6, two days after election, known as bulletin number 14."

Nothing that could be got into the same space could well be more misleading—to use a mild term—than the foregoing. On Wednesday, November 5, a bulletin of the Associated Press which is remembered in every newspaper office in the city, gave Blaine 11,000 plurality in this State. On Thursday, November 6, the following was received, and it will be observed it is not "Number 14," but "Number 9":

> *Bulletin* 9.
> NEW YORK, November 6.
> The total returns so far received from New York, with 57 election districts to hear from, give Blaine 552,849; Cleveland, 552,234; Republican plurality, 615. This includes every county in the State, and corrections of the figures heretofore received. The corrections are made upon complete official returns from the various counties.

On that same day the *Evening Post's* table, which was made up from sources accessible to every honest man, gave Cleveland a plurality of 1,378, or within about 200 of the actual number ascertained a week later by the official count. Consequently "Number 14" was by no means the only bulletin issued by the Associated Press calculated to deceive the public grossly. There were several on Wednesday, Thursday, and Friday—some of them, such as that which gave Blaine the 11,000 plurality, of a very disgraceful character. The reports says that the error of "Number 14" was caused by the enterprise of "one of the mathematicians" employed, who undertook to estimate "actual pluralities," instead of continuing to estimate "the percentage of Democratic gains," and that "the sub-agent in charge of the office" sent this out "without sufficient scrutiny." We beg to inform the Committee and the public that this explanation will not do, and ought not to be offered. The "mathematician" threw mathematics to the winds the day after election, and occupied himself with a totally different science, and "the sub-agent" stopped his "scrutiny" for the same purpose.

Rumors of a new "compromise plan" for settling the indebtedness of the subsidized Pacific Railroads to the Government, amounting at the present time to $102,000,000, are met by objections on the part of prominent Democratic Congressmen, who say that they will accept no compromise whatever. In the absence of the plan itself, it is somewhat reassuring to be informed that Senators Edmunds and Garland are in favor of it. Nobody can suspect either of those statesmen of undue partiality toward the Pacific Railroad companies, or accuse them of any want of familiarity with the facts of the case or of the true interests of the Government. It has been ascertained that the Thurman Act was insufficient to protect the Government fully for its advances to these companies. In framing new legislation to supplement the old, care must be taken not to make its terms so onerous that the railroads themselves will fall into the hands of the Government as the second mortgagee. What the Government wants is not a lot of railroads whose value has been largely impaired by competing lines since the Thurman Act was passed, but adequate security for the repayment of its loan. Any measure to this end which shall have the support of Senators Edmunds and Garland will have strong presumptions in its favor, although of course their judgment does not conclude any other Senator or Representative or private individual.

The report of the Utah Commissioners has been published, and is not encouraging reading. They are able to report two convictions for polygamy in the United States Court, obtained through the testimony of the second wife. But this testimony was obtained with great difficulty, and is not likely to be obtained often. One of the men convicted pleaded in arrest of judgment that he was only obeying the law of God, and that the laws prohibiting polygamy are unconstitutional as prohibiting "the free exercise of religion." As regards the growth of polygamy, the Commissioners say that official reports from the six counties in which Mormons most abound seem to show that 196 men and 263 women have entered into the polygamic relation since the passage of the Edmunds Act, and that there has been a decided revival of polygamic fervor. Not over one-fourth of the Mormons are believed to practise polygamy, but its lawfulness seems to be with all of them an article of faith, and as "essential and substantial a part of their creed as belief in baptism or repentance and forgiveness of sins."

In fact, all that seems thus far to have been accomplished by the Edmunds Act is the exclusion of polygamists from voting and holding office. At the late county elections, nearly all the successful candidates were Mormons, but not polygamists. As they probably sympathize with the polygamists, however, their own failure to practise it is not of very great advantage to the law. The Edmunds Act was based on an egregious overestimate of the fondness of polygamists for the franchise and for office. Every one sees why it would be ludicrous to try and suppress adultery at the East by threats of disfranchisement or disqualification for office. Why they should be expected to be more efficacious in Utah, where what the law calls adultery has a religious sanction, it is hard to see. The one great safeguard of the marriage relation here is the social discredit and religious condemnation which follow violations of it. Until they can be brought to bear in Utah, the extirpation of polygamy will be slow work.

A report comes from Connecticut that a Law and Order League is being formed there for the objects of bringing murderers to justice and of prosecuting persons who violate the liquor laws. It is said that some new machinery for detecting the perpetrators of capital crimes is imperatively demanded, since recent experience has shown that the execution of existing laws fails to do it in almost every case. During the past six years there have been a large number of murders committed, and yet only two murderers have been hanged. Some of these murders—those of Mary Stannard, Jennie Cramer, and Rose Ambler—were so extraordinary that they became the talk of the country for many months, yet no one was convicted of the crime in any of these cases. The machinery of the law, as it was operated, was very clumsy and absurdly inadequate. The "clues" were all followed with entire publicity, each day's developments being given freely to the press for publication. We have always held that coroners' juries are unfit for work of this sort, and that their use ought to be discontinued. We believe that the Connecticut laws make their

use optional, and, if this is so, the Law and Order League cannot perform a more useful public service than in exerting a sufficiently powerful influence to have them abolished in the investigation of all future cases.

The progress made by women in the use of the revolver for the redress of injuries committed by men is very interesting. It is not merely that so many women know how to shoot at sight, and have got over the fear of the noise made by gunpowder, which used to strike men as their sex's chief safeguard, but the murderesses now seem to have acquired a knowledge of how to behave after the event. Thus Mrs. Macduff, who lodged a bullet in her husband's back last week in this city, when arrested betrayed no emotion or excitement, but simply said that she shot him "in self-defence," because he "kept his hand in his pocket," where she had reason to believe, from something her mother said, he had his revolver all ready. This may not be good in law, but whenever the practice of shooting at sight becomes common, moving the hand toward the hip-pocket is held by juries to be sufficient justification. Mrs. Macduff knows that this rule prevails among the male pioneers of civilization in the West, and probably argues that an advanced woman ought to do what she can to introduce it in the East. The most progressive women are unquestionably now to be found in the very centres of civilization, and in Paris, which has really always been the headquarters of female emancipation, it is reported that the city is "enthusiastic in admiration of Mme. Hugues," who has done her best to murder M. Morin for sending her insulting postal cards.

According to the *World*, Mgr. Capel's rejoinder to the Rev. Dr. J. H. Hopkins is a delicate tid-bit of "intellectual boxing," which will be relished by the public apart from the question at issue, and that paper attempts for the first time an explanation of the mystery hitherto surrounding the whole controversy. It appears that the Rev. Dr. Hopkins's thesis was that there was "perfect unity" in the Anglican community, and that "visible signs of the near intercommunion with the Greek Church" were at hand. Unfortunately, in order to prove it, he "trusted to second-hand quotations," which he thought to be reliable, but which turned out to be garbled and falsified—though by whom does not appear. He is said to admit this now, and to allege in excuse that he "had not a theological library at command." At any rate, the Catholic prelate was able to meet his onset much as a "slugger" would meet that of an epileptic, and "down" him without trouble. Under these circumstances the difficulty of finding out exactly what the Doctor originally did say will probably increase rather than diminish with time, and the real nature of the dispute become more and more obscure as the years roll by.

Mr. Gladstone's Redistribution Bill seems on the whole to give satisfaction. Mr. Courtney's resignation as a martyr to the principle of minority representation is an unfortunate step for him, as there is every sign that this doctrine has been rapidly losing whatever hold it once had, through the advocacy of John Stuart Mill and others, on the public mind in England. Its decline has been hastened, if not caused, by the immense and increasing disgust produced by the obstruction offered to the transaction of business in the House of Commons by minorities of one sort or another, and by their extreme talkativeness. The chief argument of the friends of minority representation is that every shade of opinion ought to be represented and have its say; but the public is coming to the conclusion that instead of minorities having more say, they ought to have less, and that the best mode of muzzling them is now one of the greatest problems of the day. The feature in the bill which will probably cause most political disturbance, is the disfranchisement of the small Irish boroughs which are now Parnellite strongholds. The general tendency of the bill is against the old English system of representing interests, and in favor of the representation of numbers. In fact, it is based mainly on population, and wholly on population as regards the towns, while the counties keep their corporate character, like our States in the Senate.

The triumph in the Reichstag, by a large majority, of a resolution in favor of the payment of members, in spite of Prince Bismarck's opposition, is a democratic triumph which he will not relish. His ideal legislature is one composed of Tory squires and military men, with money enough to live in Berlin in the modest way in which the Prussian bureaucracy and aristocracy—and they are almost convertible terms—are accustomed to live. As long as he can keep the legislature in the right hands he apparently does not care how far the legislation goes in the socialistic direction. But he does not like the presence of poor professional men and socialistic agitators, who will be sure to make their appearance if they can get a salary. There is a good deal to be said for the old plan of not paying legislators. It has a tendency to make sessions short, and to exclude people who make a living out of politics. But it confines representation on the whole to one class, and that a small one—the class which can afford to live on its own means in the capital—and shuts out a great deal of talent, particularly youthful talent, and all persons really competent to speak for the working classes. In Germany, where the educated class, as well as the working class, is very poor, its effects must be bad, but not so bad as they would be were the parliament a real power. In England the system of unpaid legislators works on the whole well, owing to the tradition, still strong among all classes, which treats politics as the special business of men of leisure. In Ireland it has utterly broken down, owing to the complete political breach between the mass of the voters and "the gentlemen." The only men whom the Irish majority are now willing to send to Parliament are poor ones, who have to be paid in order to live in London. But even in England unpaid legislation is probably doomed. It will not long survive the triumph of the Radicals.

The Congo Conference now sitting in Berlin is doing in Africa, the London *Economist* well observes, the kind of work the Pope undertook to do in America three centuries ago—that is, parcelling out in such fashion as pleases it large tracts of the earth's surface, now only peopled by savages. It is made up of representatives of all the great Powers, and is presided over by Bismarck, and is especially occupied with the question what portion of Eastern Africa is open to European settlement or occupation. It has apparently decided that the basin or watershed of the Congo answers to this description, and it is engaged in defining the limits of the Congo and basin, and deciding what portions of it are already in the bona-fide possession of European claimants. France, Portugal, and the African International Association, holding its charter from Belgium, and represented by Mr. Stanley, are the chief and indeed only claimants. The claims of Portugal are very shadowy, those of France hardly less so; but the International Association, thanks to Mr. Stanley, has a very substantial foothold. Great Britain, which owns enough of Africa, if not too much, already, asks for nothing but the neutralization of the Congo River, and its policing by united Europe. The rest she is willing to leave to those American bogies, Cobden Club and the free-traders.

The preparations making by Austria-Hungary to adopt the gold standard are such as to leave little doubt that the change will shortly be effected. As her present standard is not bimetallic, but silver only, the difficulty of bringing about the reform is not very great. She is not under obligations to redeem her outstanding paper currency in gold, or her public debt, except the small portion which was made specifically payable in gold. A law making the new gold florin equal in value to the present silver florin according to the market ratio of the two metals, would accomplish the desired change. A resumption of specie payments is contemplated simultaneously with the change of standard, and this will prove a more difficult task, although not more difficult than that which Italy successfully accomplished last year. The Austrian movement ought to make a profound impression on the bi-metallists of this country, Austria having been one of their strongest allies in the Paris monetary conferences. Italy, Austria, and Holland having deserted them, they have now no European support except Russia, whose coöperation at the last conference was extremely lukewarm and perfunctory.

The French Chamber of Deputies is evidently determined to stand by the Ministry in China, for it has voted confidence in its conduct of the war by 282 to 187. Nevertheless, the war languishes, and the reinforcements which go out are too small to make any decided impression on the Chinese defence. The occupation of the island of Formosa is not yet assured, and in Tonquin the French are credibly reported to command only the ground they camp on in the interior. The stories of the massing of Chinese on the northern frontier continue, and the advantage they enjoy from having the mountain passes in their rear, and from the extraordinarily light marching order of their troops, are obvious. Sickness and difficulties of transport are undoubtedly trying the French a good deal.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 27, to TUESDAY, Dec. 2, 1884, inclusive.]

DOMESTIC.

THE last session of the Forty-eighth Congress was opened in Washington, Monday noon, with the customary ceremonies. There was a large attendance of the members of both houses. About 1:30 P. M. the last message of President Arthur was received and read. It is a very long document, reviewing the features of the various department reports. It is impossible in a brief paragraph to do more than refer to a few of its topics. He recommends that the scope of the neutrality laws be enlarged so as to cover all patent acts of hostility committed in our territory and aimed against the peace of a friendly nation; that our naturalization laws be revised and made uniform; that the coinage of silver dollars and issuance of silver certificates be immediately suspended; that all excise taxes except those on spirits be abolished; that our coast defences be strengthened; that the navy be restored; that the unit of weight in first-class mail matter be one ounce; that Congress assume absolute political control of Utah; that our merchant marine be revived by commercial treaties, by a better consular service, by the enactment of measures to favor the construction of a steam-carrying marine under the flag of the United States and by the establishment of a uniform currency basis for all countries on the American Continent; that a national bankrupt law be adopted, and that a suitable pension be conferred on General Grant.

The most important feature of the report of the Secretary of the Treasury, Hugh McCulloch, is a careful consideration of the question of our tariff and foreign trade. These two he considers so intimately related that they should be considered jointly by a commission specially appointed. He recommends that the existing duties upon raw materials which are to be used in manufacture should be removed; that the duties upon the articles used or consumed by those who are the least able to bear the burden of taxation, should be reduced. In regard to internal-revenue taxes, he says, that, as these taxes, with the exception of the tax upon whiskey, ought not to be and will not be needed for revenue if appropriations are kept within reasonable bounds, and rigid economy is established in all branches of the public service, they should not be continued.

In his annual report the Treasurer of the United States says: "As a consequence of the inability of the Treasury, under the existing practice, to use either the silver dollars or the silver certificates in its settlements with the New York Clearing-house, where by far the greater part of its disbursements is made, the available gold ran down from $155,429,600 on January 1, 1884, to $116,479,979 on August 12, 1884, while the silver dollars and bullion on hand, not represented by silver certificates outstanding, increased during the same period from $27,266,037 to $48,603,958. As a temporary expedient to stop this drain of gold from the Treasury, the Assistant Treasurer at New York was directed to use in payments to the Clearing-house United States notes to the extent of one-half of the payments. But the amount of these notes in the Treasury, which at the time of the commencement of this mode of payment had accumulated beyond its needs, has now become so much reduced that they are no longer available for such payments to any considerable extent. If a return to the former practice of making payments entirely in gold or gold certificates shall result in a continuous loss of gold to the Treasury not made up to a sufficient extent by receipts of gold from other sources, the question must soon arise for the decision of the Department as to whether it will continue to make in gold or its representative the payments now made through the Clearing-house, or use in its payments the silver dollars or their representative certificates in some proportion to the relation which silver dollars in the Treasury not held for certificates outstanding bear to the available assets, and to an extent similar to that in which they are used at other offices of the Treasury."

The Postmaster-General's report estimates a deficiency of $4,826,349 for the coming year in his department. The deficit in the last fiscal year was $5,204,484. He recommends that postage on local letters in free-delivery offices be reduced to 1 cent, and that the unit of weight in rating letters and sealed packages (first-class matter) be changed from one-half ounce to one ounce.

The annual report of Secretary Lincoln shows that the War Department expended during the last fiscal year $42,332,876 31. Secretary Lincoln urges upon the attention of Congress the Chief Engineer's review of the modern requirements for the defence of our important sea-coast cities, in which is shown not only the urgent necessity of beginning the defensive works which cannot be improvised, but their small cost in comparison with our national resources. The Secretary very pointedly criticises Chief Signal Officer Hazen for the reflection on the War Department in Hazen's report about the relief of the Greely expedition.

Secretary Teller shows in his annual report that the Indians are making commendable progress in education. During the past year new school buildings have been erected at several of the agencies. Five new boarding-schools and twelve new day-schools have been added to the list. There are now eighty-one boarding-schools, seventy-six day schools, and six industrial or manual-labor schools under Government control. Fourteen boarding and four day schools are supplied with teachers and other employees by some one of the various religious denominations, the Government paying a stipulated price for the care and education of the children therein. There are also twenty-three schools maintained by churches and associations without expense to the Government.

The annual report on the Life-Saving Service shows that the disasters to vessels within the field of station operations for the last year have amounted to 337. On these vessels were 4,253 persons, of whom 4,237 were saved, and only 16 lost. The number of shipwrecked persons succored was 532, to whom 1,319 days' relief were afforded. The estimated value of the vessels involved in these disasters was $7,075,975, and that of their cargoes $3,454,050, making the total value of the property imperilled $10,530,025. Of this amount $9,090,134 was saved, and $1,439,891 lost. The number of vessels totally lost was 64.

Owing to an unusual demand for pension money, the public debt of the United States was increased $747,124 13 during November.

A resolution passed the House of Representatives on Tuesday to investigate the employment and conduct of United States Deputy Marshals at the October election in Cincinnati.

Democrats of Georgia, Tennessee, North and South Carolina, and Alabama joined on Friday night at Atlanta, Ga., in celebrating the Democratic victory. There was a big procession, with an address by Mr. Randall. The latter said: "Our political opponents in the recent struggle argued that revision of our tariff laws was a necessity. We of the Democratic party agreed thereto; but our platform went further, and pointed out the manner in which such revision should be made, and a more intelligent and business-like utterance on this vexed question never emanated from a public gathering of representative men in the United States. If I understand correctly the meaning of words, we say that the revenue to be raised should be limited to that required for an economical administration of the Government, and that the amount to be raised by a tariff for this purpose shall be so levied on articles imported which come in competition with our products as to cover the difference in the cost of production abroad and the cost in the United States, thus incidentally protecting capital invested and the labor employed in the United States. Upon this declaration of purpose every intelligent and patriotic Democrat can stand, and our country go forward to its yet greater destiny."

Governor Hamilton, of Illinois, on Tuesday issued the certificate of election to Leman, the Republican candidate for State Senator in the Sixth District. It is said that Mr. Brand (Dem.) is satisfied that fraud was practised in his favor when the ballots were recounted. This decision, if sustained, will make the Illinois Legislature a tie on joint ballot for United States Senator.

Republican primaries were held in New Haven, Ct., on Wednesday night, preparatory to the city election. In various wards Independents, claiming still to be Republicans, but admitting that they voted for Cleveland, were denied the privilege of participating in the caucuses.

The Virginia election law which has three times been vetoed by the Governor, was passed over his opposition on Saturday and is now a law. This gives the Democrats complete control of all of the election machinery in the State. It will be applied to the local elections next spring and to the State election next fall, when a Governor and all of the other State officers are to be chosen.

Judge Wallace, of the United States Circuit Court, on Monday morning handed in his decision in the case of the American Bell Telephone Company against the People's (Drawbaugh) Telephone Company. The decision is in favor of the complainants, the American Bell Telephone Company. This termination of a suit which has occupied more than four years, sustains the preliminary injunction against the People's Telephone Company, and makes the Bell Telephone Company secure in all its rights, as far as this court is concerned. The defendants will appeal the case.

The general feeling among business men in Pittsburgh, Pa., is daily growing more hopeful. Some large orders for railroad supplies have been placed with manufacturers, and bids for others have been asked for. The feeling among iron men is decidedly better on account of the receipt of fair orders for the product of their mills.

The Middletown, N. Y., National Bank closed its doors on Friday. The failure was caused by its President, Thomas King, who accepted large drafts from Benjamin D. Brown, a grain dealer, of Indianapolis, Ind., and Burlington, Iowa, without security. Brown has failed for a large amount. President King's advances were made without the knowledge of the other officers and directors.

The Yale-Princeton foot-ball match in this city on Thanksgiving Day, for the college championship, resulted in a draw, the game being called twenty minutes before the time had expired on account of darkness. The score then stood 6 to 4 in favor of Yale.

Eastern Kentucky and Western Virginia are afflicted with a deadly epidemic growing out of the use of impure water. Hundreds of people have died and the distress is very great. The long drought has made the water sources scanty and impure.

The steamer *Decatur H. Miller*, from Baltimore for Boston, was sunk on Thursday afternoon near the former port by a collision with the *William H. Lawrence*. No lives were lost. Both steamers belonged to the Merchants' and Miners' Transportation Company. The collision was caused by a misunderstanding of signals.

James Edward Freeman, an American artist who has long lived in Rome, is dead.

Mr. Edward H. Ludlow, the oldest and most prominent of New York real-estate dealers, and the President of the Real-Estate Exchange, died in this city on Thursday, at the age of seventy-four.

Mr. Henry Ivison, the well-known publisher, died in this city on Wednesday at the age of seventy-six.

Captain David L. Payne, the famous leader of the Oklahoma Boomers, died suddenly in Wellington, Kan., on Friday while eating breakfast in a hotel. Since March, 1872, he has been the President and organizer of various Oklahoma colony companies, his aim being to settle in the Oklahoma lands in the Indian Territory under the preëmption laws, claiming that the Government had purchased these lands and extinguished the Indian title. In June, 1880, he attempted a settlement, but was captured by United States troops and imprisoned for thirty days. Since then he has made frequent incursions, and has been a constant source of annoyance to the Government, which has frequently driven him off with the aid of troops. At the time of his death he was preparing for another expedition.

FOREIGN.

Mr. Gladstone, the Marquis of Salisbury, and others held a further conference on Thursday upon Parliamentary questions. A definite agreement upon a Redistribution Bill was reached.

Mr. Gladstone presented the Redistribution Bill in the House of Commons on Monday. It provides that all towns of less than 15,000 inhabitants and the small boroughs shall be merged into counties; that all towns of 50,000 inhabitants shall be entitled to one member. England will possess six additional members. The memberships of Wales and Ireland are unchanged. Scotland will have 12 additional members; London will have 37, Liverpool 6, Glasgow 4, Birmingham 4, Manchester 3, Yorkshire 16, and Lancashire 15 additional members. Mr. Gladstone stated that the Government had received adequate assurance of the passage of the Franchise Bill by the House of Lords. The Liberal members generally approve the bill. There are a few exceptions. Mr. Leonard H. Courtenay, advanced Liberal from Liskeard, has offered to Mr. Gladstone his resignation as a Secretary to the Treasury in consequence of the omission from the Redistribution Bill of the principle of minority representation. Mr. Gladstone has requested him to remain. The Irish party is satisfied that there has been no reduction in its membership, and will support the measure.

At a meeting of the Conservative members of both Houses of Parliament, on Tuesday, the Marquis of Salisbury stated that perfect harmony had prevailed throughout the negotiations with Mr. Gladstone regarding the bill. The contemplated measures, he said, would confer the franchise on two million citizens with the least possible disturbance of the existing system. The meeting decided that the Conservatives would agree to the second reading of the Redistribution Bill in the House of Commons, deferring all discussion of its principles till the bill comes up for consideration in the Committee.

Lord Randolph Churchill has declared himself in favor of a revision of the British tariff and the adoption of prohibitive duties, even extending to the tax on corn.

Mr. Edward Mulhallen Marum, member of Parliament for Kilkenny County, Ireland, has written to his constituents resigning his seat, because he does not enjoy the confidence of Mr. Parnell.

An attempt was made at Tralee, Ireland, on Thursday night, which nearly proved successful, to destroy with dynamite the residence of Mr. Samuel Hussey, known as Edinburn House. Many of the windows and a portion of the eastern wall of the house were badly shattered. All the members of the family were in the house at the time, but nobody was injured. This was an exceedingly bold outrage, as the house was under police protection. Mr. Hussey is one of the largest land agents in Ireland.

Judge Manisty, whose extraordinary course in the Coleridge case caused so much unfortunate comment in London, is to retire from the bench. The ostensible reason therefor is old age, he being seventy-five years old.

The steamer *Durango* was sunk on Friday in the English channel by collision with a bark, and twenty persons were drowned.

Sir Alexander Grant is dead. He was prominent in educational matters at Oxford and at Bombay, and in 1872 became a member of the Board of Education of Scotland.

Earl Granville, Secretary of State for Foreign Affairs, has resumed his effort to arrange a peace between China and France. It is stated that he has modified the indemnity proposals, and has sent the modification to Pekin through the Marquis Tseng, the Chinese Ambassador. The Paris *Figaro* announces that General Brière Delisle will replace General Thomson as Governor-General of Cochin China, and that General Negrier will become Commandant Superior in Tonquin. Admiral Regnier will command the Indo-Chinese flotilla. These changes are preparatory to an exhaustive attempt to clear Tonquin of the Chinese. The depots of armaments at the French ports are feverish with activity. It is said that 6,000 French troops will be forwarded to China within a fortnight.

In the French Chamber of Deputies on Thursday there was an exciting and bitter debate on the Tonquin credits. M. Clémenceau attacked the Government policy. He said that Prime Minister Ferry had committed a veritable political crime in declining the Chinese indemnity of 3,500,000 taels. France, M. Clémenceau said, did wrong in accepting the mediation of England, for the latter's disinterestedness was open to suspicion. He said that Prince Bismarck was a most dangerous enemy, but was still more dangerous as a friend. After several replies, the Chamber voted the first credit of 16,000,000 francs, by 361 to 166, and afterward, by a vote of 351 to 179, voted the fresh credit of 43,000,000 francs. The order of the day, being an expression of confidence in the Government, was then adopted without opposition. Afterward the order of the day, pure and simple, was rejected—301 to 233.

The French Chamber of Deputies on Friday, by a vote of 379 to 35, adopted an order of the day declaring that the Chamber maintains its determination to insure the execution of the Tien-Tsin treaty.

At a French Cabinet council on Saturday it was proposed to increase the duty on foreign grain two francs per centner.

The wife of M. Clovis Hugues, member of the French Chamber of Deputies, with a revolver shot M. Morin, a commission agent at the Palais de Justice in Paris on Thursday, because he had slandered her. She fired six shots at her victim, four of which lodged in his chest. M. and Mme. Hugues were arrested, but the former was released. He applauds his wife's action, and Paris is inclined to make her a heroine. M. Morin is in a critical condition.

The Brussels *Réforme* has published a letter from a Belgian at Stanley Falls. He complains of the danger to which Europeans are subjected because of the hostile attitude of the natives, and reports the discovery of a plot to poison Europeans at Leopoldville. The African International Association, he says, refuses the services of porters to conduct Belgians who wish to leave its service to the coast. He asks that his name may be kept secret, as he fears that the Association will wreak vengeance upon those who tell the truth concerning the state of things on the Congo. The letter further says that the Association is in a state of open war with the natives between Lutib and Manyanga. The villages have been burned and many of the natives have been taken captive. This story has been indignantly denied by the Association.

At the Congo Conference in Berlin on Thursday the report of the Committee was adopted. It contains a provision in favor of the extension of the Congo Basin boundary eastward, duly respecting the rights of Portugal, Zanzibar, and one native king. The Powers will offer their good offices on the spot for the settlement of any important questions that may arise. A second committee was appointed to arrange the details, and a third committee was appointed to conclude the labors of the second committee and compile their report. The American proposal for an extension of the Zanzibar territory caused surprise in the Conference, but it is believed that the replies of the different Governments to their delegates will authorize its acceptance. United States Minister Kasson also made a motion aiming at the creation of guarantees of the capital which has been invested by the African International Association in the Congo territory, especially in the building of railways, etc.

The sitting of the Congo Committee on Friday occupied five hours. France proposed a tax upon imports and exports. Italy proposed to tax only arms and spirits. The German delegates appeared to be annoyed at the latter proposal, as Germany largely exports spirits to Africa. The delegates from Portugal, hearing that the African International Association had ordered a quantity of instruments which are required in the slave trade, proposed to prohibit such importations into the Congo country. Sir Edward Malet, the English delegate, suggested a consultation on this subject with Henry M. Stanley. Mr. Stanley said it was possible to abolish the slave trade, but it would be impossible to abolish the traditional system of employing slave servants.

General Sanford has submitted to the Congo Committee a scheme for a railway from Vivi to Stanley Pool, asking the Conference to sanction a monopoly of the line, and the Powers claiming suzerainty to be pledged not to construct another railway over the territory. The project has been printed and circulated among the members of the Conference. Several German bankers and contractors have already applied for contracts to carry out the scheme.

At Saturday's sitting of the Congo Conference Committee it was unanimously decided in favor of the freedom of trade within the limits of the newly-defined Congo basin.

The German Reichstag on Wednesday, by a vote of 180 against 99, adopted a resolution in favor of the payment of its members for their services as legislators. The resolution was strongly opposed by Prince Bismarck, and the result is considered a signal defeat for him. In his speech against the measure Bismarck charged the members with using railway passes, and advocated the revoking of the free list.

At a Thanksgiving dinner in Berlin on Thursday night 270 Americans were present. Minister Kasson called for three cheers for Grover Cleveland, the next President, and they were heartily given. A telegram was sent to the Governor announcing that the Americans in Berlin drank to his health. Henry M. Stanley, Minister Kasson, and others made speeches.

The Vienna police have discovered an extensive socialistic society which ramifies throughout the whole empire of Austria. Several important arrests have been made.

Several months ago it was announced that Fanny Elssler, the famous dancer, was dangerously ill. The illness resulted fatally on Thursday. She was seventy-three years of age.

Porfirio Diaz was on Monday inaugurated President of the Republic of Mexico. He has appointed the following Cabinet: Minister of Foreign Relations, Señor Ignacio Mariscal, now Minister to England; Minister of War, General Pedro Hinojosa; Minister of Justice, Señor Joaquin Baranda; Minister of the Treasury, Señor Manuel Dublan; and Minister of the Interior, Señor Manuel Romero Rubio.

"PRESSURE" AND CIVIL-SERVICE REFORM.

PRESIDENT ARTHUR expresses, as probably his last word on the subject, his unqualified approval of the working of the Civil-Service Act. He says:

> "The system has fully answered the expectations of its friends in securing competent and faithful public servants, and in protecting the appointing officers of the Government from the pressure of personal importunity, and from the labor of examining the claims and pretensions of rival candidates for public employment. The law has had the unqualified support of the President and of the heads of the several departments, and the members of the Commission have performed their duty with zeal and fidelity."

This is, on the whole, a remarkable triumph of the "theorists." It took them fully fifteen years to convince the "practical men" that civil-service reform, as it is called, was anything more than an enthusiast's dream, connected, in some manner never fully described, with "the Millennium." The testimony above cited as to its practical working now comes from one of the foremost of the Practical Men, probably the last one to carry out the system of "rotation" in the New York Custom-house. President Arthur probably knows as much about the working of the old spoils system as any man now living. His confession as to the excellence of the new one, after full experience of its working, is therefore very valuable.

It is all the more valuable because Mr. Cleveland is far more fully pledged to the maintenance and extension of the new system than any President has ever been, and his predecessor's testimony regarding its working must be a great help to him. In fact, civil-service reformis going to be, through a combination of circumstances, the crucial test of the new Administration. By that it must stand or fall. Mr. Cleveland is not prominently known to the public in connection with any question of the day but administrative reform. It is around this point that all the expectations of his friends centre. It is on this point that his enemies look for his failure. We believe he has the firm intention to do right and the courage to do it, and that he will go about his work less trammelled with pledges than anybody who has within fifty years occupied the Presidential chair. No man or body of men has a lien on him of any kind.

This, however, will not save him from the importunity known as "pressure." A large body of Democrats, who have never got it into their heads what civil-service reform means, and have been taught for twenty-five years to look on the capture of the offices as the principal good to be obtained from turning the Republicans out, will expect him to give them the fruits of their victory in the shape of appointments. They will receive the support of some of the older men of the party, who have been unable to keep up with the march of public sentiment on this question, and still live in huts among the ruins of the old Jacksonian Democracy. From them Mr. Cleveland will suffer all that "pressure" can do. It must be remembered, in thinking of this, that it does not take many people to make "pressure." There will probably be about 500,000 persons out of the 50,000,000 who inhabit the United States, who will care one straw what the new President does with the offices. Probably not over 5,000 of these will ever reach Washington in quest of office; but if collected in and about the White House and the lobbies of the Capitol, these 5,000 might make life almost intolerable for a timid and sensitive man. When such a man finds his ante-room full of them all day long, and, as President Lincoln said, has to look under his bed at night to see if any of them are there, and has to listen to prolonged harangues from Senators or Representatives as to the awful consequences to the party or the Administration of not disposing of a certain post-office or custom-house in a certain way, he is very apt to come to the conclusion, as General Grant and Mr. Hayes did, that he really must give way—that he is under both physical and moral constraint. This is sure to be the case with any sort of man on any question on which he is not supported by a united Cabinet. No nerves are strong enough to resist "pressure" if the men whom one sees every day as trusted and confidential advisers, and who are, so to speak, in the same boat with him, appear to sympathize with it, or are cowed by it. In other words, we care not with how much resolution a President goes to Washington, he cannot hold out against the influences which assail him there unless he have his Cabinet at his back. His will is not strong enough either to penetrate the mass of conservative abuses which surrounds all the departments, or resist the assaults of freshly aroused cupidity and unscrupulousness, unless it is strengthened by the sympathy and encouragement of the heads of departments.

President Cleveland's success or failure, therefore, it is safe to say, will depend on his surrounding himself by men who either mean civil-service reform themselves, or know that their places are dependent on their carrying it out. Mr. Hayes went into office as a civil-service reformer, with the best of intentions, we believe, but he complained naïvely shortly afterward that he was surprised to find that he had only one civil-service reformer in his Cabinet. The other members either paid no attention to the matter, or smiled over it as one of the weaknesses of their amiable chief. If President Cleveland should be equally wanting in vigilance, he would speedily be overtaken by ignominious failure, for the doings of his Cabinet, which he could not, of course, oversee or control in all their details, would speedily cover his Administration with ridicule. But with a Cabinet united and in earnest on this question, the 5,000 office-seekers could be made the laughing-stock of the country in one month, and an end be put forever to the notion that a new Administration meant a new division of spoils.

THE SOLID SOUTH AND THE SOLID WEST.

THOUGH Maine is as far down East as one can get in this country, and gave a heavy majority for her Favorite Son, Blaine was essentially a Western candidate. He answered the Western requirements of a public man; he filled the Western imagination. In the Convention the Eastern influence was against him; the West furnished the enthusiasm and the votes by which he was nominated. In the canvass there was no conspicuous exception to the rule that the Republican press west of the Alleghanies supported the party candidate with the same abusiveness, suppression, and mendacity (in kind if not in degree), that marked the course of the Chicago *Tribune* and the Cincinnati *Commercial Gazette*. One of the editors of the latter paper was even summoned to New York to edit a one-cent *réchauffé* of three-cent unscrupulousness in behalf of Blaine. And finally, the vote of the West was reckoned upon with a confidence disappointed only in the case of Indiana—and that was not a fatal disappointment. On the other hand, the effective organization of the Independent revolt (like that of the civil service reform), had its headquarters in Massachusetts and New York. It instinctively turned to Cleveland as the natural antithesis to Blaine, constrained the Democrats to nominate him, and (one might almost add) constrained them to elect him. It directed the canvass, furnished the most eloquent and convincing speakers, and undeniably turned the scale in the three States which Cleveland could not dispense with and Blaine could not get.

It would, of course, have been powerless without the "Solid South"; and the strange spectacle was witnessed of two sections which had been typically hostile ever since the East accepted of the West, in lieu of Seward, the leadership of Abraham Lincoln, joining hands on a national issue. Such an event marks an epoch, and we doubt not that the historian will designate it as the close of the third stage of our civil war. The first stage was over with the surrender at Appomattox. The second was passed when President Hayes withdrew the Federal troops from under the carpet-bag usurpations in Louisiana and South Carolina. To-day—or all signs deceive—we bid farewell to the third, the period in which the bugbear of the Solid South sufficed to keep the Republican party together and in power—the period of shams, as we may call it. Whether that party linger under its present name or not, it must discard as useless baggage—useless as the plumes and knightly tomfoolery of the late canvass—the Southern issue. It must address itself to real questions, which it has been staving off for twenty years because it was so much easier to cry bloody-bones! than to argue seriously any problem in statesmanship. In all probability it will substitute the Cobden Club bogey for the Solid South. By so doing it will at least gain the advantage of being able, for the first time since its formation, to conduct a canvass in the late slave-holding States. This has been often promised, but we have never come any nearer to seeing it than the recent absurd propitiatory Republican manifesto from Nashville.

Nobody knows the extent and genuineness of the protection sentiment in the Republican party. The question of free trade has never been seriously discussed in the past quarter of a century, for reasons too obvious to need pointing out. It is probably fair to say, however, that the strength of protection lies rather in the West than in the East, and that here again a natural alliance is indicated between the East and

the South. It was the Western element of the Republican Machine that invented and scattered broadcast those stupid and conscienceless forgeries of British free-trade propagandism which Elkins inherited from Dorsey. It is to the West that we must principally look for obstruction to tariff and revenue reform, or, in other words, to the winding up of the fourth and last stage of the civil war.

Closely allied with these vital economic questions is that of the currency, another legacy of the war. It is a significant circumstance that on this, too, the influence of the West is opposed to the best interests of the country. The silver craze and the greenback folly took their rise in the Ohio Valley; and it is noticeable that the two leading apostles of the dollar of the fathers—the Chicago *Tribune* and the Cincinnati *Commercial Gazette*—have been equally prominent in their advocacy of Blaine, though Blaine meant the revival of Grantism, and Grantism was the *bête noire* of those journals in 1872. We leave it to others to trace the connection between the mode in which the silver furore was excited, and that in which the Western heart has been fired for Blaine; or between the sordid materialism of the silver men and their insensibility to Blaine's indecent pursuit of money. Enough that here again there is a Solid West that ought to be broken, and which the East and the South together can break if they will.

Their alliance has already saved civil-service reform, which has incurred the steady hostility of the West in spite of Mr. Pendleton's part in giving us what we now enjoy. It has also made possible the miracle of a change of Administration without rotation in office—not simply by virtue of the civil-service statutes, but because the successful candidate has the soundest notions of the business nature and needs of Government, and has given the most unequivocal pledges to eliminate partisanship from the trusts of office. The South and the East can now combine to force the lead in Congressional measures, and it is their duty, not to say their mission, to do so. No sectionalism can long maintain itself against genuine discussion of principles. The Solid South and the Solid West will melt away together before it. Never were the conditions more favorable since what we may term the parliament of ghosts has been dissolved—the palaver of parties afraid to speak their minds about subjects likely to cause a division, and hence likely either to cost the Republicans their rule, or the Democrats their hope of ruling. The Democrats are now half seated on the throne, the Republicans are half unseated. To be wholly in or wholly out of power calls at last for new and tangible claims on public opinion—a wiping out of old scores and the beginning of a fresh reckoning. The statesmen of the South ought to recognize their opportunity, and seize their old places of parliamentary distinction.

SMALL, COMPACT PARTIES.

One of the oddest habits which newspapers and politicians contracted under the spoils system was that of comparing a party to an army, and acting in its management as if it were an army, and were paid by the plunder of the enemy's baggage. Out of this came the ridiculous phrase "shooting deserters" after an election, which of course simply meant refusal of any share in the spoils to those who failed to vote or work for the party ticket. It also produced the phrase "reading a man out of the party" for some kind of unfaithfulness, which was the equivalent of "shooting." It finally begot the notion that, as the power of an army does not depend on its size, but on its discipline and equipment, and on the skill of its commander, so also the strength of a party does not depend on the number of persons who vote its ticket at the election, but on their general fidelity and devotion. From this came easily the conclusion that a political party might be strengthened by having voters abandon it, just as an army is strengthened by getting rid of the cowards and the laggards and the sickly, and that the value of a voter to his party depends rather on the general state of his mind than on the way he votes—and that, in short, the votes of ten loyal, devoted partisans are worth more than the votes of fifty uncertain persons like Independents or Mugwumps.

That we are not guilty of burlesque or exaggeration in all this, will be seen by the following extract from the Albany *Evening Journal:*

"No one disputes that the day of the Half-breed and the Stalwart in the Republican party has gone by. We are united to retrieve disaster. The so-called Independents have been carried by their own treachery into the enemy's camp, and we are well rid of them. The Prohibition fanatics have dug their own graves and slumber in eternal repose. The Republican party is left compact and full of ambition. Let no old scores be brought up to divide the ranks again. Much remains to be done. The contest for the control of the State Government will be upon us in a few months. With a united party we can win, and make it such a triumph that New York shall be ours in 1888. That will mean a reinstatement of the party in power for years thereafter, and it will mean a stronger, more cohesive, better and happier party than we have had for the past ten years."

This would, of course, be perfectly true of an army. An army "compact and full of ambition" would of course be better than an army containing a large body of doubtful or disobedient troops. But the sole object for which party organization exists is to get a majority of votes on election day. As long as it can do this, the state of mind of its voters during the rest of the year, or their opinions on questions of the day, or their general character and conduct, are of no sort of consequence to it. In fact, parties triumph, that is, get hold of power, through numbers simply. A party, for practical purposes, consists of men who vote together, and not of men who think together; their thinking together is of importance only so far as it insures or makes probable their voting together.

Consequently, there is something very ludicrous about a defeated politician's longing for a small, compact party, or his rejoicing that his party has got rid of thirty or forty thousand voters because he did not like their ways, and his hoping that they may never come back. It is in some ways as ludicrous as the conduct of the Dublin mob which testified its hostility to a bank by making a bonfire of its bills. Rational, as distinguished from irrational, conduct of a party would seem to consist in getting as many people to vote its ticket as possible, no matter what kind of people they are, or how many whimsies they may have. Denouncing large bodies of voters who have once voted its ticket and are known to have more or less sympathy with it, and warning them that their votes are not wanted, is very like the conduct of a struggling retailer who should keep a savage dog chained in the store, and require a written character from all customers for cash.

A large proportion of the Independents and Prohibitionists in the late campaign are probably old Republicans whom the Republican nomination disgusted, and whose adhesion can readily be had if their opinions and prejudices and susceptibilities are duly considered by the Republican managers. We should say that the business of sane Republican politicians during the next four years was rigid inquiry into the causes of the defection which destroyed or greatly reduced the Garfield majorities in the Northern States at the late election, followed by strong efforts to win the deserters back by removing the causes of their dissatisfaction. Abuse and denunciation of them strikes most sensible men now, as it struck them during the late canvass, as almost an indication of mental unsoundness. The only disease of which a party ever dies is paucity of votes. The business of getting votes is the one great work of the party manager. No matter how good he is at abuse and sarcasm, and how fertile he is in inventing terms of vituperation, if he cannot get people to support his ticket he inevitably becomes ridiculous, and if he goes on longing to have his party small and select, his friends soon begin to think that the proper place for his "politics" is a lunatic asylum.

Correspondence.

REPUBLICAN POST-ELECTION VINDICTIVENESS.

To the Editor of The Nation:

Sir: The editorials in some of the leading Blaine papers, and the sufferings of St. John's effigies, show that the Blaine managers have not lost since the election the sagacity which was so conspicuous during the canvass. Not content with having nominated a candidate who was deserted by enough Republicans to defeat him, not content with having suppressed during the campaign, by the brutal and contemptuous treatment given to Cleveland Republicans and Prohibitionists, any incipient doubts such as lead to repentance, that may have arisen in the breasts of a few timid deserters, they now seem determined to keep out of the party those who supposed they were leaving it for one specific purpose and for a short time only. Is it possible that they are vindictive—that they are bound that no Republican shall be elected since Blaine was not? or is it rather simple stupidity? Have they learned nothing from six months' close association with Mr. Blaine, who is certainly a distinguished and expert dissimulator, if nothing else? Good heavens! is it possible they can't lie?

Surely there ought to be some kind soul to say to them: "Dear friends, let not your just anger against deceit in all its forms lead you to forget that the most expert casuists say that in public life the concealment of one's thoughts is not always a crime. Let not your abhorrence of sin blind you to the fact that sinners have a vote.

Make it not too cruelly plain to these wretched creatures who, professing to be Republicans, voted for Cleveland or St. John, that they have lost your esteem. Deprive them not of their self-respect by showing them too ruthlessly the depths in which they grovel, or they may not find the courage to try to rise to the heights of purity and self-abnegation, where is to be found the native atmosphere of such as Blaine. Dissimulate, dear friends, dissimulate." R. E. D.

November 29, 1884.

PARSONS AND POLITICS.

To the Editor of The Nation:

Sir: This subject may seem to be already worn threadbare, but a few developments since the election may be worth the attention of your readers.

The papers inform us that the Rev. Dr. Bacon, who felt it his duty to raise his voice against "Blaineism," has been forced to resign his pulpit by the dissatisfied Blaine men of his congregation. Within our personal knowledge a worthy Methodist divine, who chose to exercise his supposed political freedom by voting for St. John, has paid the penalty of his independence by losing the attendance and financial support of a large share of his Republican followers. In all probability he must soon resign or see his church hopelessly divided. In Oberlin, Ohio, a place of great renown for its love of freedom during the anti-slavery agitation, the house of a preacher who worked for St. John was attacked in the night by a Republican mob, and the man was bound over to court by a Republican officer for merely firing into the air to frighten his assailants away.

Such facts as these lead us to inquire whether the ministry in general can be said to share in the boasted political freedom of our Northern States. Poor old Dr. Burchard, remembering, no doubt, how nearly the cry of "Romanism" came to defeating Mr. Grace for the Mayoralty, the first time he ran, undertook to raise a Protestant revolt against Cleveland by the same means. He was not to blame for thinking he voiced the sentiment of his party: we all know how powerfully the opposition to Romanism has served the party in the past. But expediency is the best policy nowadays, and as the Doctor's "Romanism" was inexpedient, he now has the pleasure of hearing himself reviled from one end of the land to the other by the press of the party to which he belongs. Can we blame Republican preachers for being slow to act against their party when such action brings ostracism and abuse, divides their churches, and forces them out of their situations?

We do not wish to be understood as reflecting upon the ministry. We have the highest respect for them, and firmly believe in the Gospel which they preach; but we think that no censure can be too severe for churches which either dictate the political course of their pastors or force them to resign. We believe that Blaine received a smaller vote from the ministry than any other Republican candidate since the war, and that he would have received ten times as much open opposition from this source as he did if the preachers could not have foreseen the consequences of following the dictates of their own conscience. The ancient despotism of the clergy is followed by the slavery of the clergy. Which is the worst? W.

Ohio, November 28, 1884.

THE SOUTH OPPOSED TO SLAVERY.

To the Editor of The Nation:

Sir: As a large owner, before the war, of plantation property, in which I am still interested, and with every opportunity of knowing the feelings of the Southern whites, there seems to me to be no more absurd or impossible idea than that broached since the success of the Democratic party, by some Republicans, namely, that of the possibility of the return of the Southern negro to slavery or quasi-slavery in any shape. If it can be imagined that such a course could be acquiesced in at the North, nevertheless it would be most unpopular at the South, and if submitted to a vote of the Southern whites alone, would be most overwhelmingly defeated, and for this reason, that the labor of the negro, which was once held as property by a small class, has now become a source of profit to a much larger one, and generally one that never owned, or would have owned, a slave, or, under the old system, would ever have been the employer of labor at all—a class, too, in whose hands generally, since emancipation, the labor of the negro has been much more profitable than to his former owner. These and others equally interested in the freedom of the negro's labor far outnumber those who would have any rights in his person, and would be the bitterest opponents of any approach to the old system. A vote upon this subject would probably show a result not unlike the attempt to curtail universal suffrage in one of the lower wards of the city of New York.—Yours truly,

R. J. T.

Morristown, N. J., November 28, 1884.

SENATOR PENDLETON.

To the Editor of The Nation:

Sir: In your article, this week, headed "Room for All of Them," you say that you "doubt very much if Mr. Pendleton used" such language when speaking of the office-seekers.

As a hearty advocate of civil-service reform, I for one shall be very glad if you can make it plain that Senator Pendleton holds true to the stand he took when he introduced the Civil-Service Law—the act which, more than any other of his public services, will cause his name to be handed down with honor in the history of our time.

During the recent canvass Senator Pendleton was advertised to address the "Young Democrats" at the Academy of Music in this city. After hearing him criticise sharply the defects of administration in the several departments at Washington, and, without dodging the issue, resolutely advocate tariff reform, I was more disappointed and disheartened than I can express at his saying *no word whatever in behalf of civil-service reform.* Frankly, I went home convinced that the Senator had not yet learned the lesson of reformers, that of holding to the faith under persecution. Independent Democrat.

Philadelphia, November 29, 1884.

To the Editor of The Nation:

Sir: No little interest, and, among a certain class of Democrats, a great deal of anxiety, are manifested as to the attitude of the incoming national Administration toward the Independents; for it seems to be well understood that both the President and Vice-President-elect freely acknowledge their obligations to this class of voters. So far as one may judge from their public utterances, the Independents to a man want no offices, and the majority of Democrats are not only willing but exceedingly desirous that they be gratified. Though they have no candidates of their own to recommend for offices, it would seem to be highly important that they insist as strongly as possible upon a recognition of principles in view of which they entered the campaign against Mr. Blaine and his coterie. Mr. Cleveland wisely keeps his own counsel; but it is safe to assume, judging by the past, that he acts upon the maxim which Josh Billings has expressed somewhat in these words: Get all the advice you can, then do as you please. It would seem, then, that they ought to do no less than to unite in urging the appointment of some Democrat of eminence and probity to a position which shall be an emphatic assurance that their views upon civil-service reform shall find practical expression. For this reason, there are a good many citizens of Ohio, and doubtless not a few of other States, who would like to see Mr. Pendleton Postmaster-General or Secretary of the Interior. He is not universally popular with his own party, yet there are not wanting signs that his appointment would be acceptable to a larger number of persons than any other. We believe it to be the almost unanimous opinion of the Ohio Independents that, if their State is to have a representative in the new Cabinet, it ought to be Mr. Pendleton. If the Independents generally throw their influence in his favor, it will not only effectually dispose of the charges of self-interest made against several of their leaders in the late political campaign—for which, it is true, there was little ground—but, if successful, it will bring about in the most speedy and effective manner the triumph of the cause they are upholding. If they fail, the failure will be one that brings with it no disgrace. That one or both the above-named Cabinet officers will be Democrats, is fairly certain; that they may both be thorough civil-service reformers, all good citizens, irrespective of party affiliations, may well hope and devoutly pray. S.

Ohio University, Athens, O., December 1, 1884.

BLAINE MEN AND BLAINE WOMEN.

To the Editor of The Nation:

Sir: I thank you for your criticism on the animus of the *Woman's Journal* during the late Presidential campaign. The majority of its writers have freely indulged themselves in a purely sentimental strain, which has shut their eyes to the truth that Mr. Blaine, as a most conspicuous leader in party corruption and official peculations, which are menacing the life of the nation, would be a far more dangerous candidate for President than one who had acknowledged himself guilty of a private immorality and had offered reparation for the same, but whose *public* record for honesty and clean administration of his official duties was irreproachable. This view of the situation betrays an immaturity of judgment which is not shared by all of the women who advocate women's equal privilege and obligation in the suffrage with men.

But is it quite fair, Mr. Editor, to expect of women that they should be free from bias, with a clear perception in matters pertaining to the public interests, when they have never been admitted to any participation in a government which denies their individuality and refuses to recognize them as citizens? The egregious folly of the body of men who are responsible for the nomination of Mr. Blaine is a most glaring conviction of a fatal lack of judgment on their part; and fair play to women constrains me to say that your criticism applies with *equal* emphasis to these men as well as to women.

An "Independent" Massachusetts Woman.

Somerville, Mass., November 20.

THE CAMPAIGN IN CALIFORNIA.

To the Editor of The Nation:

Sir: I will herewith give you some reasons why California is one of the few States in which the Republicans made large gains in the past election.

In the beginning, Blaine owed his nomination to the California delegation. Whenever his name was mentioned in the Convention our delegates howled themselves hoarse. Such tremendous enthusiasm, especially when so genuine, is

sure to be contagious. After his nomination they went in a body to Augusta to congratulate him. They promised him a solid Congressional representation, a Republican United States Senator, and over 10,000 majority in the State. It is a matter of history how well they fulfilled their promise almost to the letter. They failed to elect but one Congressman.

On their return to this city they created the greatest enthusiasm by their old Convention tactics. A magnificent wigwam, capable of holding 4,000, was built in a most accessible location. Nightly meetings were held and strong protection speeches delivered. All this news was carried throughout the State, and the effect was strongly felt. The Democrats were torn by internal dissensions. The Governor, Stoneman, was continually making costly mistakes. An extra session of the Legislature caused intense dissatisfaction. Then the Democratic Stockton Convention adopted a rabid communistic platform, and capped the climax by severely denouncing Field's Presidential aspirations. The most influential Democratic paper, the *Alta California*, was backing Field strongly, and these Stockton resolutions fell heavily on it and caused it to sulk all through the campaign.

The wine and wool growers are solidly for protection, and the Republicans boldly stated that if Cleveland was elected, the duties on wine and wool would be taken off altogether, or reduced so materially that the business could not be run at a profit. The Democratic orators, instead of referring to their own tariff plank, tried to justify free trade. Now, this was fatal to any hope of getting this part of the voters. Very little was said of the Mulligan letters, and there were few mugwumps. The Democratic press devoted a great part of their energies to helping the local candidates, almost totally neglecting the national candidates. Then, for some unexplained reason, the Irish bolted almost solidly for Blaine.

There are very good prospects of this city's getting rid of boss rule, as there is now a very powerful independent party forming.—Yours,

* * * *

San Francisco, November 18, 1884.

BLAINE AND CAZOT.

To the Editor of The Nation:

Sir: People who are acquainted with European affairs often have occasion to notice how inadequate are the reports thereon transmitted to this country by the cable. Trifling events are sometimes described with the utmost minuteness, while important ones are not so much as alluded to. Thus, not one word was said in the telegraphic reports about an incident which has just happened in France, and which may well be pondered as a lesson by the politicians and so-called statesmen whose loose views of public morality came so near inflicting on this country such a man for President as James G. Blaine.

Very recently the name of M. Jules Cazot, President of the Court of Cassation of France (a post corresponding to that of Chief Justice of the United States Supreme Court) happened to be implicated in a lawsuit against a railroad company, from his investment in which Mr. Cazot had derived no profit whatever, and in the management of which he had had but the most trifling part. No one whispered a word against the honored head of the French judiciary for his share in the unfortunate undertaking. Still, so mindful was he of the duty of judges to keep their names free from any contact with what is not recognized by all as spotless, that he, unbidden, unassailed even, forthwith sent in his resignation to the Minister of Justice in a letter of which the following is a literal translation:

"Mr. Minister: I have the misfortune to see my name involved in the proceedings in bankruptcy against the Alais, Rhone and Mediterranean Railroad Company, and in the suit for vacating the charter brought by the receiver thereof against the founders and statutory directors of the same.

"I never had, either directly or indirectly, any interest in that company other than that of the department (Gard) in which I was born. I never possessed any property in it but fifty shares, which are still in the safe of the company, and the tickets entitling directors to compensation for attending meetings (*jetons de présence*), which I declined to realize.

"I left it, after having been connected with it but a short time, with a clean conscience and clean hands. While awaiting the result of legal proceedings I consider my situation irreconcilable with the judicial office which I occupy, and I perform a painful duty in placing it in your hands, and in asking you to accept my resignation of it.—Yours respectfully, Cazot."

Perhaps, had M. Cazot visited the United States, no great reception would have been tendered him in the New York Academy of Music; perhaps no newspaper reporters would have followed him about, publishing every word falling from his lips. I make bold to say, however, that no recipient of such honors ever showed truer respect for the judicial ermine, and that this manly act of his will commend itself to the admiration of all those who consider a pure administration of justice as the most necessary safeguard of free institutions.—Yours truly,

Adolphe Cohn.

Harvard University, Cambridge, Mass., Dec. 1, 1884.

A BIBLIOGRAPHY OF INTERNATIONAL LAW.

To the Editor of The Nation:

Sir: Dr. Vladimir Pappafava, of Zara, Dalmatia, is compiling a bibliography of international law, public and private, which he desires to make as complete as possible. He therefore appeals to all those who have published books, pamphlets, or even single articles upon any topic of international law, to send him the exact title of their works, with place and date of publication; and, if their works have been reviewed in any journals or magazines, he desires a list of such reviews with exact references to the journals in which they appeared (number and page).

Dr. Pappafava's active connection with the Society of Comparative Legislation at Paris secures him the coöperation of scholars in all parts of the civilized world, and warrants the expectation that his work will be exceptionally full and exact. Munroe Smith.

Columbia College, November 26, 1884.

THE BOSTON CITY GOVERNMENT.

To the Editor of The Nation:

Sir: I note that you have been misled (p. 449) by the Boston *Herald* into an ill-timed censure of Boston and its government, and especially of its Aldermanic district experiment. The election does not take place until December 9, and, at the date of the *Herald* article, not one candidate had been nominated by either party. The names mentioned were those collected by the persistence of reporters anxious to fill the columns of the daily press with the gossip of politics.

The system is defended on the following grounds: The city is politically nearly equally divided, with a slight but growing preponderance toward the Democratic side. Under either party, minority representation is hopeless, and it was felt that too much was at stake where the entire ticket was liable to be lost or won by the smallest possible percentage of votes. Locally, the wards were almost equally partisan—*i. e.*, either strongly Democratic or strongly Republican. Hence, by making every two wards into a district, it was hoped that the minority of the city would be sure of a strong representation. If the best educated and wealthiest citizens of the city, in wards or districts wherein they have an entire ascendency, fail to obtain suitable candidates, what hope can you find for the future of representative government?

But in fact the *Herald's* article was absurd and misleading. There is no doubt that the nominations will be satisfactory, and that the nominees will compare favorably with those in other large cities. Certainly we are not likely to fall to the New York standard at present.

As to your own comment, that government by Aldermen is a strange delusion of Bostonians, allow me to say that we are governed by a City Council of two branches—Aldermen and Common Councilmen. Allow me also to say that our city has been very well governed in the past, and that it will to-day bear comparison with any other large city. At present our high taxes for the year have caused much grumbling, but jobs are few and trifling, and our expenditures are for laudable purposes. Perhaps the worst to be said is that our annual changes lead us into attempting too much, and that everything once begun is carried on together with the new projects. We have now our great water supply to enlarge, our sewer-system half finished, our parks laid out in theory by the purchase of land, our school-houses multiplying and education always raised to higher standards, a new court-house earnestly called for, a new public-library building so far in shape as architects' plans can put it. Add to this the demands for police, fire, and health departments whereby every citizen expects a policeman on the corner of his street, a fire-engine within a block, and the streets swept and watered daily, and you must confess that Boston, in really approaching the requirements of its citizens, is doing more than any other city. It is, therefore, evident that a city doing these things may be extravagant, but its government must be very thoroughly organized and efficient.

Certainly do not be misled by the campaign articles of any faction, and believe us to be on the road to ruin. Every one here knows how little value is to be given to a *Herald* editorial on this subject. It has its own pet theory, which, if once tried, would meet with similar criticism from some other journal. Just now some theorists wish to put all the civic powers in the hands of a mayor; the *Herald* favors the scheme, and therefore magnifies the dangers of the present system. It would be only fair for you to withhold your comments until the first Board of Aldermen elected by districts has been a month in office. W. H. W.

Boston, November 29, 1884.

AMERICAN AND GERMAN POLYTECHNIC INSTRUCTION.

To the Editor of The Nation:

Sir: The writer—an American Civil Engineer who graduated at the Rensselaer Polytechnic Institute, Troy, N. Y., and afterwards attended the Polytechnicum at this place—is very often asked the comparative advantages in studying his profession at home and abroad. Believing that the question may be of interest to some of the readers of the *Nation*, the liberty is taken of writing his usual answer.

There is a radical difference in the methods of instruction in the technical schools of the United States and Germany, as to a somewhat less extent in their universities. Here in Germany, the student is *taught* by lectures, which he can attend or not as he pleases. In America, though lectures are becoming more frequent, he must *learn* from books. Here the professor demonstrates his knowledge to the student. There the student must each day demonstrate to the professor that he has learned the subject in hand.

Here the student is treated as a man—which in point of age he generally is—who is earnest in his desire to learn and who knows what he wants. There he is treated more as a schoolboy who must be made to study, and be kept in the path which it is best for his expressed purposes he should pursue.

Owing to the larger corps of professors here, the greater number of subjects taught, and the masterly way in which a fine lecturer makes difficult subjects clear and takes the student easily and rapidly over a large field, the facilities for study are much better than in America.

It is, however, questionable if the greater ease of learning by the lecture system is not fully offset by the mental discipline acquired in the recitation method, which teaches the student how to use books, and gets him into the habit of digging out of them the knowledge which he needs. This advantage is of the utmost importance when we regard the necessities of his future practice, when he will be mostly dependent upon the resources of his own mind and the books available for such further or special knowledge as he may require.

As to the weight which the difference in the methods of teaching just mentioned should have, it is evident that it is dependent upon the character of the student. If he be earnest and determined to learn, he may do better with the superior facilities of the lecture system. If, on the other hand, he be not possessed of more than the ordinary determination and earnestness, he will, in all probability, profit more at a home institution, where each day he will be called upon to show evidence of his progress.

Another consideration of prime importance is that what is taught at home is much better suited to his wants in practice than what he would learn in a foreign school. Just as the architecture of a country is largely shaped by the material available for building in that region, so the methods employed in engineering construction must in a large measure correspond to the availability of different materials and to the peculiar local needs. Thus we have in America an engineering practice of our own, the result of facilities and of the nature of the local problems to be solved.

Though our engineering schools do not attempt to go much beyond the mathematics and physics of the subject, the German polytechnicums teach considerable of the practical application of principles, and introduce the student somewhat into the practice of construction. This latter had certainly better be learned, even though with more difficulty, in America, where the economy of the subject is so different.

Still another and very important factor in deciding the question we are considering is one depending upon the temperament and moral stability of the young man seeking education. If he goes abroad he breaks most of the associations and habits which make up his social life, and he will naturally have to supply their places from the resources of his new surroundings. This, of course, takes place when he goes to college at home, but the change is not so complete, nor are all restraints so entirely removed. The result is that in Europe he is likely to fall into the excesses of student life, which are to be deplored. Whether or not this occurs, or to what extent, is, the writer believes, much dependent upon the opportunities at hand for harmless diversion. Many men, too, can do better in their studies when they can have an abundance of pleasant recreation than when confined too closely to the atmosphere of their labors. Hence with these last considerations in view it would seem wise, of the foreign schools, to prefer one in a large city, where, though there are dangerous attractions, there is ample opportunity to get the desirable recreation in excellent music and society and in the diverting variety of a large city. The writer believes that, as a whole, those students who attend the universities and technical schools of the larger cities derive more benefit and lead better lives than those who, often with a mistaken idea of this subject, choose institutions in the smaller towns such as Heidelberg, Goettingen, etc.

There are numerous other factors bearing upon this matter, but the ones mentioned seem to the writer of the greatest importance; and no one having to decide for himself or his son between a foreign or home school should fail to weigh them most thoughtfully. CHARLES SOOYSMITH.

DRESDEN, SAXONY, October 25, 1884.

Notes.

READERS of *Shakesperiana* have enjoyed Mr. J. Parker Norris's articles on 'Portraits of Shakespeare,' and are now to have an opportunity of possessing them in book form. Robert M. Lindsay, 823 Walnut Street, Philadelphia, proposes to issue a limited edition in small quarto form, on fine laid paper, and "illustrated by twenty of the very best obtainable phototype reproductions" from choice engravings in Mr. Norris's own collection, and by twelve engravings on wood.

James Anglim & Co., Washington, D. C., will publish in January 'The Shakesperian Referee,' a cyclopædia of four thousand two hundred words, obsolete and modern, occurring in the plays of Shakspere, with original and other explanations, commentaries, annotations, etymologies, etc., and translations of all the Latin, French, Italian, and Spanish words occurring in the plays, by J. H. Siddons.

Jansen, McClurg & Co., Chicago, publish directly 'The Life of Abraham Lincoln,' by the late Isaac N. Arnold; and 'The Book-Lover: a Guide to the Best Reading,' by James Baldwin.

'Fifty Years' Recollections of Authors, Books, and Publishers,' by J. C. Derby, will introduce some of the veterans of the book-trade, living and departed.

Lord Tennyson's poem, "Freedom," will be printed in *Macmillan's Magazine* for December.

The new illustrated *Magazine of Western History*, already launched, will be published by Robert Clarke & Co., Cincinnati.

The exact title of the forthcoming work on Dickens, which we recently announced, will be 'Charles Dickens: The Story of his Reading Tours in Great Britain and America (1866-1870), from personal recollections. By George Dolby, Reading Manager.' The author is said to have been associated with Dickens more closely than any one else during the last years of his life.

J. B. Lippincott & Co. have issued a third edition of Dr. E. J. Lewis's 'American Sportsman,' probably the best work of its kind ever published in this country, Doctor Lewis being not only a sportsman himself, a lover of nature and close observer of the habits of the game he describes, but able to present his experience and advice in a connected and lucid manner, which adds much to its value. The number of subjects treated prevents Doctor Lewis from giving all of them the full attention they deserve. The chapter on shooting on the wing is an exception, being ample and complete. Mr. Arnold Burges has contributed full and reliable chapters on dog-breaking and on guns; and the concluding ones on taxidermy, cooking game, the care of accidental injuries and maladies, are to be commended. The book is well illustrated, and many of the small tail-pieces are very good.

A fourth edition of Mr. Charles Loring Brace's 'Gesta Christi, or a History of Humane Progress under Christianity,' has been issued by A. C. Armstrong & Son. The author considers in a new preface the criticism which his book has received from agnostic and "too superstitious" sources—or, to use his own words, "from those who believe little or nothing in Christianity as a supernatural power, and from those who believe too much." A chapter on the influence of Christianity upon art has been added, and perhaps will not altogether escape criticism in its turn.

It were hard to say whether Doré's illustrations or Chateaubriand's text, in the 'Atala' sumptuously issued by Cassell & Co., is the more unlike anything North American, past or present. Such a "desert," for example, as that depicted in the plate facing p. 81 the eye of man hath not yet seen in, or within a thousand miles of, Florida. The translation is not remarkable for purity of idiom or for painstaking. "The ruins of one of those monuments of which the origin is ignored," is not English; and why should the Seminoles be mentioned as "Siminoles"?

The limited edition of Gray's Poetical Works, bearing the American imprint of A. D. F. Randolph & Co. has the distinction of laid paper and broad margins, and white and gilt binding. The type is rather small, but the printing excellent. Birket Foster's eight illustrations on a tinted ground show Eton, and the Shakspere church at Stratford-on-Avon, and for the rest are in the well-known bucolic vein of this artist. They might have been printed much more effectively.

The same publishers send us 'Ivy Leaves,' selections from the poems of Frances Ridley Havergal. The ivy-leaf border for the stanzas has a pretty effect, but if the poetry had been printed in some other ink than green, the result would have been more artistic.

The London Religious Tract Society has published the fifth little volume of its 'By-Paths of Bible Knowledge.' It treats of 'Babylonian Life and History.' The author is E. A. W. Budge, of the British Museum. It is more extensive, more learned, more profusely furnished with faithful reproductions, in the original, of cuneiform tablets, names, and sentences, than Harkness's 'Assyrian Life and History,' which forms the second number of the collection; but it is also much drier and more unpalatable for the common reader, while it cannot pretend to be a work for scholars. There is not a little in it that reads like the following: "Hamurabi reigned fifty-five years. He was followed by Samsu-iluna, his son, who reigned 35 years. Ebisum was the next King, he reigned 25 years. He had a son called Ami-satana, who reigned 25 years. The next two kings were called Ami-sa-duga and Samsu-satana, who reigned 21 and 31 years respectively." Of Sapin-mat-nukurti, Muabbid-Kissati, Abil-Easar-mati, Abil-Bel-usum-same, and other kings, enumerated on the same page, we are fortunately left to learn the names alone.

To those who have had the luck to visit the Lilliputian Paradise known to mortals as Bermuda, Mrs. Dorr's 'Bermuda, an Idyl of the Summer Islands' (ought it not to be Somers' Islands?) will serve to refresh many pleasant memories; and to those who have not had that good fortune the little book may perhaps be even more serviceable by inducing them to acquire a new and delightful experience. If the means of communication were better, no winter resort, so close at hand, would be more popular than this tiny archipelago, lying less than 700 miles from Sandy Hook, with a climate less enervating than that of Florida, and one in which the valetudinarian can linger until the rigors of a Northern spring are fairly over. Mrs. Dorr, though a trifle enthusiastic, does not exaggerate the beauty of the Mudian valleys and sounds, the brilliant coloring of its waters, the great india-rubber tree of Hamilton, or the "Bougainvillia" of Mount Lang-

ton. The book is published by Charles Scribner's Sons.

A brochure entitled 'Some Famous *Hamlets*, from Burbage to Fechter,' by Mr. Austin Brereton (London: David Bogue) gathers into a convenient form much interesting information on the history of the interpretation of the character of *Hamlet* that has hitherto been scattered through a number of old theatrical works, practically inaccessible to the general reader. It will be a valuable addition to the library of every student of the drama. Another theatrical booklet, of charming exterior, but of more interest than value within, is the lecture on the Drama recently delivered by Mrs. Kendal before the Social Science Association at Birmingham. It is exquisitely printed, and is also published by Bogue.

An interesting and valuable book on 'Money: A History of Circulating Mediums from Antiquity to the Present Time,' has just appeared at Leipzig and Prague from the pen of Dr. Max Wirth, the well-known Vienna author and political economist. The work is an octavo volume of 218 pages with fifty-two illustrations, and is an attempt to give a complete history of money in the wide sense of the term. It begins with the gradual transition from ancient barter to the origin of money and mints in Egypt and Western Asia. Then come descriptions of the complicated coinages of the Greeks and Romans, the endeavors of the Constantine and Frank rulers to establish greater unity in their coinages, and the later confusion in this respect during the Middle Ages. In modern times, the author treats of the measures taken to restore once more unity and simplicity in coinages by severe regulations regarding the right to coin, and the introduction of drafts, checks, paper money, and exchanges.

Mr. James's 'Tales of Three Cities' and Mrs. Helen Jackson's 'Ramona' are published in London by Macmillan & Co. David Douglas, of Edinburgh, has added Mr. Lathrop's 'Echo of Passion' to his series of American fiction.

Mr. Julian Hawthorne's short novel, 'Noble Blood,' recently published here by D. Appleton & Co., is now appearing as a serial, under the name of 'Miss Cadogna,' in the English monthly *Belgravia*, published by Messrs. Chatto and Windus, who are the English publishers of most of Mr. Hawthorne's books.

Alphonse Daudet's works, as they masquerade in English titles, are enumerated in the *Library Journal* for November by Mr. David Hutcheson. In each of the twelve instances one translation, at least, follows the original title.

An amusing perversion of a title is met with in a biographical sketch of Henry M. Stanley, given in the October *Bollettino* of the African Society of Italy: "Egli stesso la racconta nel suo libro: *As I have found Livingstone*."

With Buchanan's Administration Mr. W. E. Foster closes, in his *Monthly Reference Lists*, the elaborate bibliographical series on United States history begun in April, 1883. The thirteen numbers deserve to be issued as a whole for the convenience of students.

The *Columbia Spectator* of November 26 gives a list of the portraits now hung in the magnificent hall of the new library of Columbia College. Among them are Copley's portrait of President Cooper, and Stuart's of President Johnson.

The *Princeton Review*, after many years of useful service to the cause of theology first and more recently to general literature, has ceased publication. Its disappearance is much to be regretted, as it was one of the few periodicals which could give space to the serious treatment of serious questions. The transformation of the *North American Review*, and the demise of the *Princeton* and *International*, leave us badly off for a form of periodical publication which abounds in England, and is there abundantly successful.

With the October number the *Scottish Review* completes the second year of its existence. Though not equal in value to the old *North British Review*, it has gained a good position as an exponent of Scottish views on Scottish and general subjects. The present number has only one article on a Scottish topic, and that is a readable account of the Battle of Otterburn, the famous border fight of 1388. Among the other articles there is one dealing with the question of the authorship of the 'De Imitatione Christi.' According to the writer, the secret has not yet been found. Following the practice of the *Westminster*, and some other English quarterlies, the *Scottish Review* gives, under the heading of 'Contemporary Literature,' short notices of new books, and these appear to be carefully written. One excellent feature which distinguishes it from the other English quarterlies is a summary of the contents of some of the leading foreign magazines, such as the *Revue des Deux Mondes*, the *Deutsche Rundschau*, and the *Bibliothèque Universelle et Revue Suisse*.

We have already spoken of the folio monthly serial work called *Descriptive America* (New York: George H. Adams & Son). The October issue has the usual double-page map, this time of Wisconsin, to which State—in its geological, geographical, educational, and industrial aspects—the letter-press is entirely devoted.

The *Magazine of American History* for December concludes the paper on "Unsuccessful Presidential Candidates," but does not verify our prediction that Clay's effigy would be succeeded by Blaine's, with economy of legend. Webster's is given instead. It seems the magazine went to press while Cleveland's election was undecided. As Blaine was already a twice unsuccessful candidate in the sense that Webster was, the editor might have chanced it and put him in also. But—

> "Ceux qui servaient ce dieu fragile
> Ont déjà caché son portrait."

Mr. Charles Ledyard Norton begins a glossary of "Political Americanisms" that already leaves something to be desired. *Abolitionist*, it should have been indicated, was a term taken over from England; and why omit *Bobolitionist*, the derisive nickname in use as early as 1838? *Annexation* and *Annexationist* are omitted. Under *Anti-Masonry*, a greater name than Seward's, Weed's, or Fillmore's, is overlooked: namely, J. Q. Adams's. *Black Republicans* is another singular omission. In general there are too few dates in this vocabulary, of which the present instalment ends with *Bourbon*.

The beautiful little *Gazette Anecdotique*, which M. Georges d'Heylli edits, and which is published fortnightly by the Librairie des Bibliophiles (New York: F. W. Christern), has now nearly completed its ninth year. In the number of October 15 is reproduced the brutal sonnet of M. Jean Richepin against Father Hyacinthe, and also a monologue on the "Deadhead" by the younger Coquelin. The next number gives up much of its space to the fugitive poems called forth by the bi-centenary of the death of Corneille.

The latest of the many series of fine-art publications sent forth by the Librairie des Bibliophiles is the 'Bibliothèque Artistique Moderne,' which is to contain the pick of contemporary French fiction, presented with all the typographic beauty to which M. Jouaust has accustomed us, and adorned with etchings by the best French artists. The series opens with two volumes containing 'Une Page d'Amour,' the most tender and pathetic of M. Zola's novels, and also the most nearly free from the taint that clings to his work. Then will come, in three volumes, the 'Capitaine Fracasse' of Gautier. Zola's book has illustrations drawn by E. Dantan and etched by M. Duvivier, and Gautier's, by Ch. Delort, etched by M. Mongin. They will be followed in time by Stendhal's 'Rouge et Noir' and 'Chartreuse de Parme,' Droz's 'M., Mme., et Bébé,' Lamartine's 'Graziella' and 'Jocelyn,' and M. Ohnet's 'Maître de Forges.'

Are collectors of posters to be found in this country also? In France "mural literature" has its devotees. One named in *Le Livre* for November has ten thousand pieces, illustrated, which do not antedate 1830. Mounted like maps, he keeps them in great portfolios. A vignette for the 'Diable à Paris,' designed by Meissonier and enlarged by Gavarni, makes a poster two metres long. Another collection, of fifteen thousand, embraces also political and non-illustrated placards. Facsimiles of the pictorial kind (on which the first artists have been employed) give a curious adornment to this number of *Le Livre*. A paper on "French Influences in Russia," beginning with Molière, and an editorial tribute to the late Paul Lacroix, are further attractions. M. Uzanne states that the veteran "Bibliophile Jacob" was preparing for publication through Messrs. Didot a huge volume on the Restoration, and left besides a considerable work on the history of ancient and modern cookery, and twelve volumes of his Memoirs, coming down to 1850.

Frederick Keppel & Co. send us a selection of three of the etchings of Joseph Pennell. We cannot, even in justice to the artist, recognize those sent us, viz.: the "Piazza, Pistoia," "Callowhill Bridge, Phila.," and the "Porta Romana, Florence," as favorable examples of his work; the large one of the "Porta Romana" being in our judgment one of the worst managed and least artistic of his works. We have often had occasion to express our opinion of this artist's etching, but this selection does not strengthen it.

Messrs. Scribners' Sons send "The Common Sense Household Calendar" by Marion Harland, illuminated by her portrait, and very well executed in chromolithography. From Brentano Brothers comes "The Chimes," a calendar of verses arranged so that for three days in the month there are receipts, two days riddles, etc., etc., ranging through all kinds of domestic interests.

Cassell & Co. publish a catalogue of their illustrated books with admirable examples drawn from all their publications—some of them very noteworthy, and all in the most careful style of printing.

The sixth annual report of the Geographical Society of Berne (1883-84) is a full and very interesting document of 272 pages, 8vo. Apart from the official documents relating to the year's work and acquisitions, it consists of papers read at the monthly meetings, with a range indicated by the first five: on the Teotihuacan cross, the Dutch East Indies, Pæstum, the unfortunate attempts at Brazilian colonization, Senegal. The matter is in either French or German, the latter language predominating.

The German society for simplifying German orthography, of whose periodical organ *Reform*, published at Norden, we have heretofore made mention, has just published, through its Bremen branch, a neat little *Kalender* for 1885, with the motto, "No more superfluous letters." The special type adopted by the Association (a mixture of Roman and Italic letters, with some diacritic marks) is employed in this almanac. But the disguise of the so-called specimens of American "humōr" would be complete in any type.

Dr. Daniel Sanders has added another to his excellent series of German lexicons, a *tertium quid* between his 'Fremdwörterbuch' and his 'Deutscher Sprachschatz.' The 'Verdeutsch-

ungswörterbuch' (Leipzig: Otto Wigand) is intended primarily for the use of Germans who sympathize with the movement to purify their tongue, and who, when a foreign term answers their thought or leaps to their pen's point, would be glad to have a ready reference to unobjectionable German equivalents. As a consequence, in this dictionary only such foreign words appear as are in common use and are at the same time really superfluous—from the reformer's point of view, at least. Dr. Sanders is a very rational purger, and his introduction to the present work is marked by his customary good sense. Thanks to the principle of selection and to typographical condensation, the volume does not much exceed 250 pages. It will be welcomed by foreigners, however indifferent to the motive which led to its compilation.

—A correspondent writes us :

"I was much interested in your article on copper smelting. One point you overlooked, and that is the exorbitant charges of the few refiners. Their rates are so high that mattes—especially those rich in gold and silver—must go to England for a market. I have tried both, and though the Englishman skins you alive, he lets you live ; but the American kills every time. I hope the duty may be taken off, mainly in the hope of seeing Englishmen come here to settle and to avail of our markets. We do not need any foreign ores for mixing (as the wool men do), but we want skilled refiners to utilize our own products. I could give you much information on this point. However, the refiners are not so much to blame, as they have a monopoly. They get so many bargains that they do not have to encourage trade. For example, I think there are but two refineries on our seaboard, one at Baltimore and one in New York. They fix their own prices, do their own assaying, and, without increasing their works, they have had a constant succession of new victims to shear. I predict that, with the tariff taken off copper, you will see no imports of ingot and no diminution of exports of matte."

—From a literary point of view the publication of the Christmas *Harper's* is really a notable event ; for when a magazine of unlimited resources and large experience, addressing the whole English-speaking world, does its best to provide entertainment for the holidays, the indications it affords of the literary capacity of the people, in a broad sense, both as readers and producers, must be worth observing. On opening and turning over the leaves, one perceives, almost without examination, that in the mechanical execution, the tasteful arrangement and variety of the page, and the finished beauty of the woodcutting in general, there is no room for criticism ; in all these points excellence is as near the best possible as one can hope for. In the text, the poetry naturally catches the eye, and here the first and only suggestion of a Christmas ghost arises in the emergence of Thomas Dunn English from his literary grave ; Stedman and Stoddard—so unjustly associated as the Castor and Pollux of our metropolitan heavens—blaze with their respective magnitudes, to which the eyes of poetic observers are now well-accustomed ; and their verses, together with some stanzas in the style of "The Old Oaken Bucket," mark the height (and English the depth) to which the native Muse could rise on this occasion. In the admirably executed poems by Miss Cone and Mr. Lang there is an exotic element, which one must be a chauvinist to quarrel with, since it has added grace, though of a parasitic kind, to the civilization of every high-bred race. The prose of the number is mainly fiction, as Christmas Eve is immemorially the time for telling tales. There is a pleasure in finding all of it short stories—all except the blessed instalment with which "Nature's Serial" slips out of sight.

—To begin with, there is the "ingenious" story, of the sort that Frank Stockton has made desirable by the cleverness of his successes and the audacity of his failures. This month Mr. Millet writes it—a story without plot, movement, color, situation, character, humor, or any touch of imagination (save that red flash of the artist's windows in the darkness), without anything, in fact, except the information that if a manikin holds a cocked pistol in his wooden hand, and if a leak in the roof lets water drip upon that hand, the expansion of the wood might force the trigger, and so a sleeping man be shot. Then there is the popular-writer story, by Hugh Conway : a narrative of mere horror, coarse, incredible (except, perhaps, to the Society for Psychical Research), violating nature throughout—a New York *Ledger* story. The established-reputation article is not to be confounded with the above; that would be, in this case, to confuse Conway with William Black, who, one readily perceives, could have bowled through all England and a three-volume novel as entertainingly and as emptily as he drives through Surrey and fifteen pages. The established-reputation article is not expected to contain anything but style. Another variety is the domestic-pathetic story (this time by Saxe-Holm), which belongs to the same category as the Old-Oaken-Bucket poetry: this example is unusually successful. Not to continue the catalogue of the species that make up the comprehensive genus of available magazine articles, unreserved praise is to be given to John Esten Cooke's story, which is just the picturesque and winning sketch that a child's tale should be; and also to George Boughton's character-piece, in which the humor is all the finer because it is not insisted on. We must, nevertheless, resort to Mr. Warner's "Christmas Past" and to Mr. Howells's farce, for any literature of the cultivated eye and hand, any touch that belongs to the master of the craft, or that suggests that we have among us any tradition of the art of which the scenes from Goldsmith's comedy, here printed, are so good an example; and Mr. Warner and Mr. Howells, let us hope, will continue to be as available as they are excellent.

— Prof. Henry E. Shepherd, in a second letter to the Raleigh (N. C.) *Chronicle*, urges the necessity of a distinctly organized department of English in the colleges of North Carolina. There is not a college in the State in which the study of English is not subservient to the wishes or the convenience of every other department, living by mere sufferance. The result is, as this writer points out, that students feel a sort of contempt for the study of English. This condition of affairs is not confined to North Carolina. In nearly all Southern colleges teachers who, like Professor Shepherd himself, are earnestly engaged in the attempt to inspire students with a proper appreciation of their own speech, and to present to them the results of English philology, have to encounter the apathy of Regents and Trustees, and to overcome the distrust of pupils, who have been taught to regard purity of idiom as coming "by nature." From this letter we learn that the students at the University of North Carolina are endeavoring to organize an Historical Seminary, the purpose of which will be the study of the history, the legal and political development of the State. In its organization the students are to have the coöperation and experience of Dr. Herbert Adams, of Johns Hopkins University. Professor Shepherd asks for this enterprise the intelligent support of the press and people of North Carolina.

—A correspondent calls our attention to the hanging and general arrangement of the Watts exhibition. We had intended to notice it in the course of the criticisms we should give of the collection; but as the correspondent suggests, what is possibly true, that calling the attention of the Directors to it may help the matter, we say, *nunc pro tunc*, that nothing more shabby was ever seen here than the treatment of this collection, sent at the urgent request of art-lovers in this country, at the risk of loss or damage which might be irreparable, and without any possible advantage either to the painter or to the owners of the pictures. They have shown their interest in American art culture by lending us works which are to many of us here, as well as to the general English public, of an inestimable value, and which we believe will be of the greatest utility in our art education, and the least we or the direction of the Metropolitan Museum on behalf of the public could do, would be to give Mr. Watts's pictures every advantage which the Museum offered. Instead of this they are badly hung, as if the hangers had tried to kill the pictures by hanging them so as to develop the most unfavorable contrasts. Several are placed where the light does not serve to see them, especially the heads of Lord Shrewsbury, Leslie Stephen, and Motley. The large horse picture has not space enough. Worst of all, the space which they need, and which they might have, is divided off and given to some of the most commonplace and frivolous works which the museum shows. It is absurd, in bad taste, and extremely inhospitable. If the museum accepted the collection, it was bound to give it such a reception as befits the occasion and honors the lenders. The least that could be done in propriety was to give the Watts pictures the room to themselves, not only because they need it all, but because the pictures that occupied the railed-off remainder of the gallery present an offensive and inartistic transition from the large, grave, and ideal work of Watts to the extreme trivialities of the realistic work which is placed beside it. The extemporized screen makes it impossible to see properly the greater part of the work hung on and near it, and if it were removed, and the pictures properly hung, they would fairly occupy the whole wall space.

—In the general interest excited by Vedder's illustrations to the 'Rubáiyát' of Omar Khayyám, our readers may like to be reminded that Friedrich Bodenstedt published, some five years ago, a German translation of the entire work under the title 'Lieder und Sprüche' (Songs and Sayings). Bodenstedt has long been known as a felicitous gleaner in Eastern fields, and this translation, of which a copy of the second edition (Breslau, 1881) lies before us, was the work of many years. Taking only the quatrains accepted as genuine by the most competent Persian scholars, he makes about four hundred and forty. He has adopted for the quatrain a pair of couplets of twelve or fourteen syllables, varying the stanzas occasionally with one of eight short lines, using always the feminine rhyme, to which the short syllables of the German adapt themselves so readily. There are ten books: "The Divinity of the Poet"; "The Poet of the Koran and his Prophet"; "Seeming and Being"; "The Limits of Knowledge"; "Fate and Freedom"; "Spring and Love"; "The Poet and his Opponent"; "World and Life"; "The Poet with the Cup"; "Miscellany." The ninth contains one hundred and seven quatrains, making in itself a poem as long as Fitzgerald's, and from it comes a large part of his work, with here and there a quatrain substituted in which Omar had expressed the same idea more happily or more vividly. The reader of Bodenstedt will not find much that is greatly different from the thought in the English, but it may free him from a half-annoying sense that the wonderful pictures were almost too much for the single poem as it appears in the Fitzgerald arrangement. Distributed in a larger space they lose nothing of their fidelity to the spirit of the poetry, which in its turn seems to regain its balance.

— Comparison of translations is impossible but Bodenstedt has appended a number of *Urtexte* as proofs of his faithfulness. He has studied the poet with a poet's soul, yet, after all subtraction for the difficulty of appreciating poetic expression in anything but one's mother tongue, there is greater fire and *verve* in Fitzgerald's work. It has always been said that he colored the original. It is not color, but the illumination given by genius to all that it touches, like a gleam of sudden sunshine across a landscape. Witness the often quoted lines:

> "I wonder what the Vintners buy
> That's half so precious as the stuff they sell";

the sense of which is found in Bodenstedt in two widely separated couplets;

> "Der Weinhändler ist ein erstaunlicher Mann,
> Da er Bessres verkauft als er kaufen kann."
>
> . . . . . .
>
> "Wir kaufen alten und neuen Wein,
> Und geben die Welt in den Kauf darein."

— Mr. J. C. Rodrigues, formerly of New York and editor of the *Musical Review*, has written a letter to the London *Times* in which he points out some of the advantages which New York and Brooklyn enjoy over London in the matter of orchestral concerts. "A foreigner," says Mr. Rodrigues, "may well doubt the English love of music when he hears that in London there are no great symphony concerts during the next three months, except those at the Crystal Palace with its very tedious access. The first Philharmonic concert will be on February 26, and the first Richter concert will take place on April 20. This is certainly too long to wait." He also complains of the expensiveness of concert-going. A ticket for a stall costs 15 shillings, while "in New York, whose Philharmonic Society's orchestra of 120 performers, under Mr. Theodore Thomas, is as good as any in Europe, they ask no more than $1 50, or 6 shillings, for a stall," and the Brooklyn Philharmonic even offers twenty-two first-class concerts for $10 (which is considerably below the prices that prevail in German cities). Mr. Wilhelm Ganz, in a reply to Mr. Rodrigues's letter, explains to some extent the absence of winter concerts. The Richter and Philharmonic concerts succeed because their fame is well established; but "the London musical public is slow to believe in the merit of any new musical enterprise," and Mr. Ganz's own experiences were not encouraging: "My annual series of five Saturday afternoon orchestral concerts in St. James's Hall," he says, "involved an outlay in 1881 of £1,250, or an average of £250 per concert, and in the following year the average was nearly £300. It is obvious from these figures that the prices quoted for admission by your correspondent as usual in America would be impracticable here." Mr. Ganz is mistaken if he imagines that concert-giving is cheaper in New York than in London. The New York Chorus Society, *e. g.*, spends $2,000 on every concert, and sometimes $3,000, the principal expenses being the full orchestral rehearsals. The secret of the success of New York concerts lies to a large extent in this, that our halls are larger and that most of the auditors are regular subscribers, so that the success of the series is not endangered by the varying attractiveness of particular programmes. It is generally easier to obtain small sums than large sums of money; but in the case of concerts it seems to be easier to get $10 in one sum than five times $2 through the season.

—Professor John K. Paine's symphonic poem on Shakspere's "Tempest" was the opening piece at the second Brooklyn Philharmonic concert on Saturday evening. It is one of his best works, and Mr. Thomas and his orchestra gave it an interpretation which insured it a warm reception by the large audience. The composition is not new, having been written about eight or nine years ago and produced heretofore in Cambridge, Boston, New York, and elsewhere. Some improvements however, have been recently made in the instrumentation; the second movement has been enlarged, and the coda rewritten. As it now stands it not only gives evidence of the scholarship to be expected of a Harvard professor, but of originality of invention and rare felicity in modulation and instrumentation, especially in the second movement, which, with its broad, flowing melody and really exquisite orchestral coloring, is a thing that any contemporary European composer might be proud of, and which proves peculiarly effective after the stormy *Allegro con fuoco*. The last movement approaches the sonata form, and in its general structure the composition differs from the symphonic poems of Liszt, in which one predominant theme is elaborated after a poetic principle of development, whereas in the "Tempest" the four movements, although united without a break, have their separate themes, and are connected and correlated on the æsthetic principle of contrast. The orchestra also played the overture to the "Flying Dutchman" and Beethoven's Eighth Symphony. The remaining items of the programme were the spinning chorus and ballad from the "Flying Dutchman," in which Miss Emma Juch and Miss Kate Nüffer took the solo parts, and some part songs for women's voices with harp and horn accompaniment (op. 17) by Brahms. These were sung with pure intonation, remarkable precision, and charming expression by the ladies of the Philharmonic chorus. As compositions they are not remarkable, although the third, which is called "Greetings," has a pleasing theme and a quaint accompaniment which haunts the memory. In the other three the most noticeable thing is the want of harmony between the poems and the spirit of the music. Brahms has no dramatic sense, or he would never have written such animated and cheerful strains for Ossian's poem about a fallen hero, his howling hounds and his ghost, and a weeping maiden. Every song of this kind appearing since Schubert's epoch-making "Erlking" must be regarded as an anachronism. The method of writing music regardless of the meaning of the words (which culminates in Italian opera) is sometimes called the "absolute" method—perhaps because modern works written in accordance with it are doomed to absolute oblivion.

—G. Valbert (Victor Cherbuliez) has a very bright and somewhat caustic article in the *Revue des Deux Mondes* for November 1, on the "Colonial Policy of Germany." He begins by reminding his readers that Bismarck in 1871 said: "I do not want colonies; indeed, for us Germans possessions at a distance would be precisely like the fur cloaks of those Polish noblemen who have no shirts." With this view Prince Bismarck's countrymen seemed for some years to agree. But of late the condition of the "underwear" having improved, the Chancellor appears to think that a fur cloak is no longer inappropriate. So he is reaching out for colonies in all directions. If the Reichstag refuses to sanction his measures, he never says to them *adieu*, he only says *au revoir*. In the end they come about. A society at Hamburg bought certain lands and commenced plantations on the islands of Samoa. A second company was formed to protect the first. This protecting company had a capital of 10,000,000 francs, the interest on which at 3 per cent. was guaranteed by the Imperial Government. To protect the Imperial interests thus created in Polynesia a fleet had to be sent to the Samoan Islands and a coaling station had to be acquired. In a similar spirit a footing has been secured in western Africa. A Bremen house, represented by Herr Lüderitz, acquired a certain extensive region in that part of the aboriginal territory where "a kingdom could be bought at the price of a few bottles of brandy." The region thus acquired bordered upon the English possessions of Cape Colony, and was separated from them by the Orange River. Lüderitz sought the protection of the German Government, and the Chancellor sent a steamer to guard the novel establishment from attack and insult. This constitutes the title of the German Government to the territory extending some twelve degrees from the Orange River to Cape Frio. Friction with the English colonists south of the Orange ensued. In December, 1883, Bismarck addressed a note to the English Government, asking if Great Britain had any right to a control of the territory of Namaqua, and, if such right was claimed, to be so good as to explain the title. No answer came at once, and Bismarck on the 24th of April last, apparently losing his patience, sent a telegraphic despatch informing the English Government that Herr Lüderitz and his possessions were on that day placed under the protection of the German empire. On the 23d of June the English Government honestly answered that it did not think it possessed any right to the territory, and consequently would respect the German acquisition. But this is not the only place in Africa where the German flag has been planted. It has taken possession of the important Bay of Biafra, and thus has installed itself just east of the delta of the Niger and opposite that coast of Guinea which is at once the Brazil and the Guiana of Africa.

—In the opinion of M. Valbert the object of these colonial enterprises is purely commercial. He discusses the probability of a motive to furnish an outlet for the surplus population now flowing to the United States, but finally rejects it, and expresses the belief that Bismarck simply wishes to secure the best of trading facilities for the German people without the expense of establishing and carrying on a colonial government. This appears to M. Valbert a kind of sly way the Chancellor has of securing every possible advantage, and making other people pay the bills. Just how this is to be done is not made very apparent; but the author appears to be haunted with an unpatriotic suspicion that the astute Chancellor is to outwit everybody at the Berlin Conference, and that France in particular is to have her African possessions and interests put in jeopardy. Bismarck has already shown a disposition to profit by French enterprise in that he has just persuaded the French Government to open their ports in Africa to German commerce. He is now disposed to carry this selfish principle still further, by urging that the same rules of international freedom and protection shall be extended to the Niger and Congo that were given to the Danube by the Congress of Vienna. Whatever happens, it is perfectly certain that Germany has added greatly to her strength by her African possessions. The enterprise of France in Africa seems, after all, to have been simply carrying grist to Bismarck's mill; and "everything leads to the belief that we [France] shall give much more than we shall receive."

—We learn from the Athens Αἰών of September 29 that a shepherd has lately made some discoveries that go far to prove that the cave on the plateau of Nidha, just under the highest summits of Mt. Ida, and not any other of the numerous caves scattered over Ida, is really the cave in which the ancients believed Zeus to have been concealed and reared, thus supporting the common opinion. This shepherd, having observed not only the altar cut in the solid rock just outside of the cave, which had been observed by all before him, but also some large stones near by evidently cut by the hand of man, happened to come into possession of a Cretan almanac for

1883. In that he read that the first inhabitants of Crete were the Daktuloi, who dwelt on Mt. Ida. From this he conceived the idea that that cave was probably one of their dwellings, and that any one who should make excavations in it would unearth their treasures. Proceeding to excavate, he very soon found a number of ancient lamps; fragments of pottery, one of which, ten centimetres in length and six to seven in width, had incompletely stamped on it the form of Plouton; pieces of very thin leaves of gold; and skulls of cattle and rams with the crescent-shaped horns of the ancient sacrificial animals. A little distance from the cave were found twenty-four poor tombs of the Roman epoch, and in and outside of them many fragments of pottery and bronze, bronze handles of kraters, and fragments of tripods. Besides these, the following whole objects were found in and outside of the cave together, viz.: a little bronze cow of bad workmanship, six centimetres long; a bronze goat, the same size as the cow, but of better workmanship; a silver needle or nail, two centimetres long and about as thick as a lead-pencil, ending on one end in a blunt point, and on the other in a round gilded head like the ordinary button of a man's overcoat; a number of round leaves of gold, the majority with four, but some with only two holes. By a fortunate coincidence, Dr. Fabricius, of the German school at Athens, some days afterward came into the neighborhood, and as soon as he learned of the discoveries he went and made accurate observations of the finds, the cave, and the neighborhood. The large stones found near the cave Dr. Fabricius pronounced bases of statues, two of bronze, the other of marble; and two of the bronze fragments he says belonged to a crest of a helmet of a statue. Dr. Fabricius also expressed the opinion that this cave was the Idæan Cave of antiquity.

—Every reader of history remembers that stirring event in the early life of the great Athenian lawgiver, when he rushed into the market-place in a pretended frenzy, and recited a poem in which he called upon his countrymen to wipe out the disgrace of being stigmatized as Salamis-losers, though Athenians, and so incited them by his words and his own enthusiasm that they joined him in an attack upon the island, and wrested it from the hands of the Megarians. Plutarch tells us that 500 volunteers engaged in this expedition under the stipulation that, if they were victorious, they should hold the island in property and citizenship. Upon this expression of Plutarch's, Grote remarks: "The strict meaning of these words refers only to the government of the island; but it seems almost certainly implied that they would be established in it as klêruchs or proprietors of land, not meaning necessarily that all the preëxisting proprietors would be expelled." This supposition of our historian has received a remarkable confirmation from an inscription published, with a keen-sighted commentary, by Ulrich Koehler, in the *Mittheilungen des Deutschen Archaeologischen Institutes* of Athens (1884, p. 117). The inscription was found in recent excavations on the Acropolis, and is made up of four fragments which fit nearly together, filling up probably about one-half of the original, on the left hand. It is complete at the top and bottom and on the left, and was composed of twelve lines, the first six of which were written *stoichedon—i.e.*, with the letters in perpendicular as well as horizontal lines; in the remainder, this arrangement was not observed. The letters are archaic, and show at once that they belong to the sixth century B. C. The contents of the first half are fairly made out, and consist of a decree of the people in relation to the occupation of Salamis by the cleruchs, and their rights and duties towards Athens. They shall pay taxes and serve in the army, but if any choose not to take up residence on the island, they are to lease their allotment of land, doubtless to the old inhabitants, as Grote supposed, the lessees to pay a sum to the public treasury.

—In point of epigraphy, the inscription stands between the famous Sigean inscription, which is earlier, and a dedication on an altar from the time of the rule of Hippias, 527-510 B. C. The former has usually been placed about 535, but Sigeum had been in the possession of the Athenians from a considerably earlier period—since 610, according to Duncker. The capture of Salamis falls between 575 and 559, according to the same authority. Hence, one important conclusion from the present inscription is, that the Sigean inscription must be set back nearly to the beginning of the sixth century, and Athenian epigraphy gains a foothold almost as early as the Ionian in the inscription of the mercenaries of Psammitichus carved upon the legs of the colossal rock-hewn statues of Ramses II. at Abu Sambul in Nubia. Nor does the important bearing of the inscription end here. It presents an example of an Athenian decree of the people earlier by nearly a century than any hitherto known, and for this reason its formulas are exceedingly interesting to the student of language and valuable to the historian. The earliest known example of the Athenian cleruch system was that of the 4,000 settlers sent out to occupy the land of the Euboeans, after the defeat of the latter not long subsequent to the expulsion of the Pisistratids. This inscription proves its existence upon the subjugation of Salamis, and apparently in a form very similar to the later usages. The opening formula is striking for its simplicity, and (if Koehler is right in his conception of the missing portion) for the statement that, "it is resolved by the people (*demos*)," without mentioning the Senate. Koehler concludes that the Senate had not yet assumed the leading position which it attained after the reforms of Clisthenes.

—A case of "trial by newspaper," with a curious sequel, is attracting attention in Germany. In February last, the people of Stuttgart, whose nerves had not yet recovered from the scare caused by the Heilbronner case, and the complete failure of the police to detect the criminal, were again startled by the robbery and murder of a pawnbroker in his shop. Strong circumstantial evidence pointed to a cab-driver named Döttling as the guilty person, and he was accordingly brought to trial in October. The case was of extraordinary interest, and opinions as to the result were, so to say, even, till the verdict was announced. The natural interest felt in the trial was, moreover, greatly increased by the fact that the populace took sides, as in a political question, as to the guilt of the accused. Needless to say, that the situation was made the most of by the newspapers, especially by the one having the largest circulation, which devoted to it an extraordinary amount of space. Imagine, then, the sensation when, on the morning in which the final arguments were to be made, the presiding judge ordered the reporter of this newspaper to give up his seat in the space reserved for journalists, on the ground that he had taken sides for the prisoner, in so doing had misrepresented facts, and had accused the Court of cross-examining his witnesses in the interest of the prosecution. In short, the reporter was charged with what we should term contempt of court.

—That the incident should be made much of by the journal implicated was natural, but its importance lies in the general feeling of professional injury exhibited by the press throughout Germany, though the occasion of this exasperation would seem, in this country, a very mild exercise of judicial prerogative. Some of the opinions expressed are original enough to deserve mention. First, it is charged that the act was a violation of the law which declares that trials shall be public. It is admitted that a court can lawfully expel a person, but it is claimed that this punishment can be administered only for an offence committed in the Court's presence. But the main point of the defence is that the press may not only lawfully take sides during a trial, but that it is its duty to defend the accused whenever there is doubt as to his guilt—a new application of the principle that a person is to be deemed innocent till *proved* guilty. In other words, trials are no longer to be settled by judge and jury, but by a triple body, of which the public, as represented by the press, is not the least important. In opposition to this view, it is gently remarked, by adherents of the old order of things, that the carrying out of this theory would impose burdens which the press has hitherto shown no desire to assume. For if it is a constituent part of a tribunal, it cannot avoid doing its share in judging all cases, not being at liberty, as now, to choose only such as are sensational or scandalous. Whether or not the exercise of prerogative was wise in this instance may be an open question; but it is forcibly urged that some measures are necessary to compel newspapers, in reporting legal proceedings, not to pander to the prejudices of the supporters of either side.

MARYLAND.

Maryland: The History of a Palatinate. [American Commonwealths.] By William Hand Browne. Boston: Houghton, Mifflin & Co. 1884. 12mo, pp. 292.

Sir George Calvert, Baron of Baltimore. A Paper read before the Maryland Historical Society, April 14, 1884, by Lewis W. Wilhelm, A.B., Fellow in History, Johns Hopkins University. Baltimore. 1884. 8vo, pp. 172.

THE second title of Mr. Browne's history of Maryland expresses the characteristic feature of this colony. It was a *palatinate*, that is, a feudal jurisdiction, and its proprietor was a feudal prince. It is true it was not held by strictly feudal tenure, but by socage; nevertheless, the powers of the lord palatinate were of that sovereign character which we associate with feudalism. Other colonies had features of this system, but only one other—Pennsylvania—was the possession of a single proprietor; and the grant to William Penn was made at so late a date that it affords far less interest as an example of this institution. The stirring period of colonization was already past (Maryland had been in existence fifty years before Pennsylvania was founded), and less than a century of proprietary government remained—a period during which the large concerns of the European nations wholly overshadowed the petty colonial life. Moreover, when Maryland was founded, feudalism still possessed a certain degree of vitality; but the storms of the Civil War left it much weakened, and the abolition of feudal tenures, twenty years before Penn's grant, gave it its death-blow. Maryland, in the seventeenth century, presents the best example of a genuine feudal jurisdiction; and in the eighteenth century, it is an instructive example of the gradual encroachment of popular self-government upon feudal jurisdiction. The interesting instances that have recently been discovered, of actual manorial jurisdiction, with its Court Baron, make this feature of Maryland history all the more striking.

The principal interest of Mr. Browne's work is found, as is natural, in the early portion. The period which followed the restoration of the Charter in 1715 is treated with sufficient fulness, and presents a good view of the decaying palatinate: the Revolutionary period is rather cursorily handled; and the volume ends with the attainment of independence. The reasons given in the preface for thus limiting the scope of the work are no doubt sufficient. We should have been glad, however, to have a fuller account of the civil history of the State during the Revolutionary War. Some very interesting questions present themselves in regard to this: the formation and characteristics of the new Constitution; the attitude of the State in relation to the public lands; the public opinion out of which so positive a political thinker as Luther Martin sprang. Certainly, Maryland appears, in the Revolutionary period, with a very distinct individuality, and with a notable degree of statesmanship in its public men, as well as of military ability in its soldiers.

The early history of our colonies—public as their settlement was, and copiously illustrated by contemporary literature—abounds nevertheless in legendary features, and in problems which require careful study. Maryland presents her full share of these problems, and the traditionary accounts of her early history have been subjected to severe scrutiny and criticism, with the result of weakening at least their claim to acceptance. It is, for example, a tradition, preserved by most of our school histories, that Lord Baltimore's object in founding a colony was to establish religious toleration, or at least to afford an asylum for persecuted Catholics. Maryland is frequently called a Roman Catholic colony. Recent writers, however—among them Mr. Wilhelm (p. 165)—have called attention to the fact that at this period, under the personal government of Charles I., there was really no persecution of Catholics in England. Mr. Neill, moreover, has shown, by the testimony of the Jesuits, that Maryland was not a Catholic colony, even in the qualified degree assumed by Mr. Browne (p. 22), "that most of the 'gentlemen adventurers,' as they were called, were Catholics, and most of the laborers and servants Protestants." For the matter of that, Lord Baltimore's charter, while licensing him to found churches, etc., explicitly requires that these shall be *according to the ecclesiastical laws of England*—a condition, it is stated, not found in any other of the proprietary grants of this period.

Again, as to toleration. Toleration in Maryland is rather a matter of administration than of formal establishment. There is not a word of it in either the charter or, we believe, the early laws. The famous act of toleration (not very complete or hearty toleration at that) was not passed until 1649, after the execution of Charles I., and was the work of a Protestant Governor and an Assembly in which a majority appear to have been Protestants. Nevertheless, when compared with the act of *intolerance*, as it may be called, of the triumphant Puritans in 1654, we may pronounce it, in Mr. Browne's words (p. 68), "a compromise between the differing sentiments in the Assembly"—neither the work "of zealous Catholics nor of zealous Protestants." Whether it may have "come up to Baltimore's idea of toleration" is a question upon which we really lack the data to form a conclusion. If toleration, in Mr. Bancroft's language, "grew up silently, as a custom of the land," and was only "formulated" by the statute of 1649, it is nevertheless true that it was the only policy possible for the proprietor.

We do not say this by way of calling in question his tolerant and humane spirit. He seems to have been an honest and fair-minded English gentleman, and his struggle with the Jesuits is an indication that he was not disposed to be domineered over by the authorities of his Church. But, apart from this, any other course than toleration would have been wholly out of the question. He could not, under the authority of Protestant England, follow the example of the Massachusetts Company and found a colony of which his religion should be the corner-stone. On the other hand, as a Catholic, he could not exclude his co-religionists, as the other colonies did. In this sense, that Catholics were not excluded, were even invited, he may be said to have offered them an asylum. But, so far as it is possible to trace motives, we must agree with Mr. Wilhelm (p. 165)—speaking of the first Lord Baltimore, whose plans, we may suppose, were carried out by his son—that "it is not improbable that religion formed one element in his motives, but quite a secondary one," and "that, notwithstanding his virtues, his piety, his papal adherence, he sought the grant of Maryland more for an economic than for a religious object."

In the controversies with Claiborne as to jurisdiction, and with Penn as to boundaries, the Maryland proprietors seem to have had right and justice on their side, and we find the treatment of these subjects, on the whole, satisfactory. Only, with regard to the settlements on Delaware Bay, the case is not so clear. We cannot, with Mr. Browne, consider the phrase *hactenus inculta* to be a mere term of description, not of condition. In all the territorial claims of our colonial period, *occupancy* is essential to give validity to a title by grant or discovery; and it is a fair question whether the previous occupation of the territory in question by the Dutch did not completely vitiate the Maryland title. It was certainly so decided.

In relation to the oath offered to the first Lord Baltimore by the Virginia authorities, Mr. Browne seems to us to do injustice to these authorities. As a sincere Catholic, Lord Baltimore could not take the oath of supremacy—the oath of allegiance he was willing to take; and when he found himself unable to comply with the requirements, he gave up his intention of residing in Virginia, and petitioned the King for a new grant for himself. Of the act of Governor Potts, in tendering the oath, Mr. Browne says (p. 15):

> "This was rather a cool proposition to one who had so recently held high office under the King. . . . He might very well have challenged their right to offer it, since, while it is true that the President of the Council of the Virginia Company had been empowered to administer this oath, no such power was given to Potts or any authority in the province after the company's dissolution, and in offering it they incurred the penalties of a high contempt."

Mr. Wilhelm's view of the case is quite different, and is clearly the correct one (p 140):

> "In the instructions to Governor Yeardley, of Virginia, in 1624, he was directed 'to administer the oath of allegiance and supremacy to all such as come there with intention to plant and reside; which if any shall refuse, he is to be returned or shipped from thence.' These instructions had been renewed to his successors, and were felt to be incumbent upon Dr. John Potts, the acting Governor, in the absence of Governor Harvey."

The letter sent by the Council to the King speaks of Lord Baltimore in the most friendly and honorable terms, but says: "In true discharge of the trust imposed on us by his Majesty, we could not imagine that so much latitude was left for us to decline from the prescribed form so strictly exacted."

Lord Baltimore's Charter says that the lands are to be held "in free and common soccage," and "not in capite, or by knight's service"—two terms which are here used as equivalent, both being descriptive of feudal or military tenure, as distinguished from socage. Mr. Browne, understanding the *or* to be disjunctive, gives a foot-note which attempts to distinguish between the two, defining knight's service as military service, and tenure *in capite* as consisting in uncertainty of service—a distinction without a difference, which can only bewilder the reader. A still more serious and more unaccountable error is contained in the closing sentences of the book (p. 286): "Maryland fought through nearly the whole of the war, not only as a sovereign, but as an unconfederated State. She was an ally, not a member, of the Confederation. It was not until March 1, 1781, when an equitable arrangement with regard to the western lands had been agreed to, that Maryland entered the Confederation as the thirteenth and last State." The Confederation *did not exist* until March 1, 1781. On this date the act of Maryland, giving her assent to its articles "as the thirteenth and last State," gave the Confederation legal existence; and, as Elliot says (i, 99), "Congress assembled on the 2d of March under the new powers."

BOOKS ABOUT THE STAGE.

Études Dramatiques. I.—Le Théâtre-Français. Par Charles de la Rounat. (Bibliothèque d'Art Moderne.) Paris: Librairie de *L'Art;* New York: F. W. Christern. 4to, pp. 72. 1884.

Isidore Baurel, ou les Mystères du Théâtre Italien. Conte Chinois. Paris: Léopold; New York: Christern. 12mo, pp. 136. 1884.

Artistic Tableaux. Text by Josephine Pollard. Arrangement of diagrams by Walter Satterlee. White, Stokes & Allen. 1884. Oblong 8vo, pp. 56.

The Life and Adventures of Peg Woffington, with pictures of the period in which she lived. By J. Fitzgerald Molloy. London: Hurst & Blackett; New York: Scribner & Welford. 2 vols., 8vo, pp. xiv-293, 284.

THE managers of *L'Art* have at last begun in earnest to utilize in books the numberless illustrations of all sorts which have appeared in its pages periodically. It may be doubted whether *L'Art* has given quite its full share of space to the important art of acting, but at all events it has not neglected it wholly. We can recall an essay by Mr. Walter Herries Pollock on certain of the leading English comedians, and another by M. Francisque Sarcey on the kindred art of *mise-en-scène*. Now, among the earliest volumes of the promising "Bibliothèque de *L'Art*" is this of M. de la Rounat's on four of the chief artists of the Comédie-Française. M. de la Rounat was one of the most learned and acute of French dramatic critics before he became, several years ago, the manager of the Odéon theatre, which he has bravely striven to restore to its proper place in the Parisian theatrical hierarchy. In the four essays here reprinted he considers the careers of Mme. Arnould-Plessy and of M. Régnier, now both retired from the stage, and of M. Got and of M. Delaunay, now at the head of the Théâtre-Français, although neither of them has quite as full a share of either popular favor or critical approval as M. Coquelin, the most incomparable comic artist of our time. All four of these actors have been also criticised at length by M. Sarcey in the first series of his 'Comédiens et Comédiennes.' M. de la Rounat does not speak with authority, as does M. Sarcey, and his criticism, by the side of the latter's, is perhaps a little pale; but it is always entertaining and instructive. It supplements M. Sarcey's admirably, and serves to correct the rather large personal equation of the foremost of French dramatic critics. Moreover, while in 'Comédiens et Comédiennes' only one portrait of each artist is given, in these 'Études Dramatiques' there are a score, mostly firm and vigorous pen-and-ink sketches by M. P. Renouard. Perhaps both author and artist suc-

ceed best with M. Got. To him M. de la Rounat devotes most space, and it is pleasant to read his account of an actor, frank, manly, honest, upright, never jealous or self-seeking, an honor to his profession, with a character wholly free from the petty failings to which those who follow his calling are peculiarly prone.

The anonymous pamphlet which, under the transparent disguise of being a *conte chinois*, pretends to give an account of the misadventures of M. Maurel in managing the Italian opera in Paris last year, is scarcely worthy of mention. It is the fourth and the dullest of a dull series of thinly-veiled personalities, beginning with 'Sarah Barnum' and including 'Marie Pigeonnier' and 'Nana Judith.' There is much indecency and very little wit in these catch-penny publications. We mention them now only because they serve to point a moral in the history of Molière's life. The only basis for much of the evil legend which clouds certain portions of Molière's career is an unsavory anonymous pamphlet called 'La Fameuse Comédienne,' and directed against Molière's widow. Apparently this pamphlet was dictated by feminine spite, and it is singularly akin in style and in substance to these anonymous pamphlets of our time. Now, no one who knows anything about the inner history of the French stage of the present day would place any reliance on any statement in any one of these vile pamphlets, nor would he dare to draw any inference from them. There is no reason why we should not treat 'La Fameuse Comédienne' with exactly the same contemptuous indifference.

A good manual on the part of composing *tableaux vivants* would be welcome. The book for which Miss Pollard and Mr. Satterlee are jointly responsible is only pretty good. Perhaps it would be more exactly accurate to say that it is good enough as far as it goes. Miss Pollard provides the text and Mr. Satterlee has added outline sketches—"working drawings"—very simple but quite sufficient. Miss Pollard's style is not blameless, but it is intelligible, and her suggestions are in general to the point. She has seized the main idea of the *tableau vivant*—that it is intended primarily and chiefly for the exhibition of female beauty. A man has no more business in *tableaux* than he has in a *ballet*—no more and no less, for his duty in either case is merely to set off and accentuate the feminine protagonist. Miss Pollard does not precisely formulate this theory, but she has acted on it. Nearly all the *tableaux* she and Mr. Satterlee set before us consist solely of a single female figure. It might have been well to add a note now and again as to the kind of womanly beauty needed in a given tableau. For example, both "Evening Hanging out the Stars" and "Autumn Painting the Leaves" should be represented by brunettes, but the former may fairly be taken by a slight, pale brunette, while the latter requires a robust and more sumptuous beauty. The description and the diagram of the seventeenth tableau do not agree, as the sketch contains one more male figure than the text allows for. We think it would have been well to suggest, at least, the giving of a unity to an exhibition of *tableaux*, like the "Pictures from Longfellow's Poems" presented in New York a year or two ago, under the management of Mr. F. D. Millet. A word might also have been allowed to the presentation of certain of the best known of Mr. Du Maurier's comic drawings from *Punch*.

Mr. J. Fitzgerald Molloy has hitherto compiled four volumes of gossip about 'Court Life Below Stairs' in the reigns of the Georges, and he has obviously read widely, if not deeply, in the many memoirs of that time. Yet he seems not to have discovered that even in Peg Woffington's day the old-fashioned dedication, with its fulsome flattery, was falling out of use. Mr. Molloy inscribes his two volumes about Peg Woffington, one of the most charming actresses of the last century, to Miss Ellen Terry, one of the most charming actresses of this century. But if Miss Terry carries into private life the keen sense of humor she exhibits on the stage, we doubt if she will thank him for point-blank flattery like this: "Seldom, if indeed ever, has such a happy trinity of genius, grace, and beauty been united in one person. The perfection and tenderness of your tragedy, the justness and brilliancy of your comedy, are alike subjects on which innumerable pens have discoursed with vast pleasure—themes on which all who have witnessed your performances have dwelt with uncommon satisfaction." But if the dedication is high-flown and absurd, the book itself is welcome; for we have hitherto had no other account of Peg Woffington's career than the idealized portrait presented in Charles Reade's novel, and in the brilliant but artificial "Masks and Faces," which Tom Taylor helped him to write. The material for a sketch of her life is abundant, and Mr. Molloy has made good use of it, in the main. But he has marred his work by two grievous faults: he romances and he pads. He tells the tale of Peg Woffington's childhood and youth with all the license allowed a novelist; he invents characters and sets down imaginary conversations. The result is neither biography nor fiction—it is a hybrid. As the sailor said of his brandy-and-water, it is two good things spoiled. This style of writing is thought to be picturesque, but it is insufferable. Mr. Molloy has been led into it, apparently, from a desire to fill out two volumes. This desire is responsible for the shameless padding, which the most cursory reader cannot but detect. The author, it is true, is careful to declare that he has given us not only the life and adventures of his heroine, but also "pictures of the period in which she lived." But these pictures take up twice as much space as he devotes to Peg Woffington herself. We do not overstate the case when we say that the story of Peg Woffington's life fills barely one-third of these two volumes. In the third, fourth, fifth, sixth, and seventh chapters of the second volume, for example, there is scarcely even a mention of the actress's name; and the volume contains only eight chapters. Pages 246-271 of this volume are taken up solely with an abstract from Colley Cibber's comedy, the "Careless Husband," the excuse for which is that Peg Woffington had made *Lady Betty Modish* one of her best parts. It is also to be noted as a fault in Mr. Molloy's book that he is inclined to whitewash Peg Woffington in a way which her own honest frankness would have despised. She was a light and wayward beauty, with a good heart and an open hand. Her relations to Garrick the author allows us to guess, but her intimacy with Sir Charles Hanbury Williams would not be suspected by the uninformed reader, if Mr. Molloy had not quoted the admirable copy of verses Sir Charles wrote to his Peggy—one of the best bits of *vers de société* of the eighteenth century. And Mr. Molloy omits the bitter jest which her success as *Sir Harry Wildair* evoked from Quin.

ILLUSTRATED WORKS.—IV.

Holland and its People. By Edmondo De Amicis. "The Zuyder Zee Edition." G. P. Putnam's Sons.

Romeo and Juliet. With twelve illustrations by F. Dicksee, A.R.A., reproduced in photogravure by Messrs. Goupil & Co. With an introduction by Edward Dowden, LL.D. Cassell & Co.

A Series of Character Sketches from Dickens. From original drawings by Frederic Barnard, reproduced in photogravure by Messrs. Goupil & Co. New York: Cassell & Co.

Cathedral Churches of England and Wales. Descriptive, Historical, and Pictorial. Edited by the Rev. Professor Bonney, F.R.S. Cassell & Co.

Jack in the Pulpit. Edited by J. G. Whittier. R. Worthington.

THE publishers of the superb edition of the 'Holland' of De Amicis (a work already noticed, on its first appearance, in our columns) have every reason to be proud of it. It is in the fullest sense of the term an *édition de luxe*, and is printed in three grades, the first (of 25 copies) being on Whatman paper, with an extra set of proof etchings printed on satin; the second (of 200) on ragged-edged linen paper, with duplicate set of etchings; and the third (of 325) on linen paper with a single set of etchings. There are about 60 illustrations, between etchings, photogravures of some of the most noted Dutch masterpieces, and woodcuts. Of etchings, their respective artists have done nothing in our judgment better than the frontispiece by Mr. Swain Gifford, a most delightful bit of marine; C. A. Platt's "Dordrecht from the Maas," and Colman's "Tower De Montalbaan, Amsterdam." Mr. Vanderhoof's contributions indicate that he is under an impression that much ink means much strength, and that he has yet to learn that a little ink goes a great way when it is in the right place. Mr. Pennell's two etchings are in his usual vein, and the initials, head-pieces, etc., are in an excellent style of wood-engraving for this kind of material. The photogravures, by Goupil & Co.'s process, are of course in their way admirable reproductions of the originals, but the difficulty in the application of the process to old pictures is enormous. Not only do values not render well by photography, but the forms which are traceable by the eye, and which an etcher can follow without difficulty, disappear in the negative, so that the result is a loss in some cases of the dominant tones in the picture, and almost invariably a confusion of all of them. With the modern French art, which is always mindful of the value a tint may have in photography, this process is unsurpassable; but we have not yet seen any example of old art successfully treated by it. The 'Holland' is distinctly thus far the American book of the year.

The temptation to employ superlatives is very great when we have to deal with publications like the 'Romeo and Juliet.' All that Whatman paper, exquisite typography, red-letter chapter headings, and folio binding of the substantial kind can do to dignify literature, we have in this edition. The commentary which serves as introduction is the history of the play, and of its growth and transmigration through the various folk-lore of elder Europe, until in Shakspere's hands it took its definite and immortal shape. If, in the commentary, there occurs now and then a passage of commonplace sentiment, the average reader will not be the less pleased with the exhaustive study—not alone Mr. Dowden's, but a résumé, legitimately included, of all that Shaksperian students have said or brought to light on the subject.

The main object, however, in this edition has evidently been the illustrations, and of these we cannot speak so decidedly in praise. The photogravure is here at its best. The designs appear to have been made in monochrome, and therefore nothing is lost in the photographing. But the level of the design itself is far below the Shaksperian. Its best is skilful and well-arranged *pose plastique — tableaux vivants;* and Mr. Dicksee is clearly not a man to grapple with Shakspere. There is a curious want of perception of the dramatic moment. In the fighting scene—"clubs, bills, and partisans"—the fencing is not up to good stage work; the

swordsman on the right has his sword, (a rapier, moreover), thrown back over his shoulder as if he meant to deliver a St. George cut with it, leaving himself entirely without guard and at the mercy of his opponent. Unless he carried his sword down his back, as a Southerner used to carry his bowie-knife, it would be absurd to imagine it ever getting into such a pose. In the background, one of the combatants is making a good downward broadsword cut with a weapon which is unmistakably a rapier; and his opponent, in a picturesque cloak which he would make haste to drop at the first pass, is warding with his sword thrown back over his left shoulder. The best illustrations are in the genre vein—"Stay, fellow, I can read," for example, and that in Act I, scene 5, where Romeo and Juliet steal away from the festivities: but even here there is no passion, fine as is the tableau. The friar, in Act II, scene 3, is a very studio model; in scene 6 he is in genuine action, such as it is, and the lovers are well conceived; but the scene in *Juliet's* chamber, when she dismisses her nurse, is a curious failure. The deathbed scene, Act IV, scene 5, is, as picture, a charming piece of academical composition, but no more can be said of it: all the action is theatrical and forced. It is a hard standard to bring design to, that of Shakspere; but there is no shirking it when a man will try conclusions with "Romeo and Juliet."

There is a branch of the art of design which, without being in the Greek sense of the term *ideal*, is not to be relegated to the Hades of realism, but is the expression of a known and recognizable type drawn from the experience or imagination of others—a Hamlet, a Cordelia, or, as in Mr. Barnard's studies, a Pecksniff, a Pegotty, or a Weller. The idealism here is purely intellectual; it has nothing to do with general types of dignity or grace, and no consideration of æsthetic gravity can influence the artist. His business is, if possible, to evolve an image which embodies a definite and precise individuality, as severely drawn as a study from life; and the intellectual power required for success is something not to be confounded with mastery of drawing or polish of style. It is as definite and innate a gift as the sense of the ideal or the feeling for color. The series of 'Character Sketches' by Mr. Barnard issued several years ago was very popular, and this will doubtless meet with as great success—perhaps greater; for the photogravure process which is employed makes the prints the most absolute facsimiles, and while they give the artist the full credit for all the finesse they exhibit, exact of him all that was formerly the united excellence of engraver and draughtsman. The Pecksniff is admirable, and in its way a masterpiece, down to the merest triviality of toying with the eye-glasses—a piece of subtle and vital character drawing. There is no other in the series equal to it, perhaps for the reason that no other of the characters treated is so pungently individual. The Weller drawing is, however, most excellent, and noteworthy especially as free from the air of caricature with which illustrators generally think it necessary to invest Sam. The younger Weller is a most distinct revelation of the character, and neither here nor in any other of the series is there an approach to caricature—nothing to let down the dignity which was characteristic of the great novelist at his best, and which he did not always remember himself. This portfolio will be a great pleasure to admirers of Dickens, as well as a sound commentary on his work as far as it goes.

'Cathedral Churches' is a well got-up volume on the thirty-four cathedrals of England and Wales, fully described and copiously illustrated with woodcuts, which are often of high excellence and generally above the average of such works. The typography is irreproachable, and the book is a compendium of all that most people would care to know of the subject, in such a shape as to adorn any book-table.

The most charming of the silk-fringed series is the *jeu d'esprit* 'Jack in the Pulpit,' which Whittier (in a brief introduction reproduced in facsimile) tells us he was foster-father of. The illustrations are excellent copies of the water-color drawings, decoratively enshrining and including the text. The illuminated cover, with a portrait of Whittier, is a *tour de force* of chromolithography.

CHILDREN'S BOOKS.—IV.

Miss Alcott's 'Spinning-Wheel Stories,' which have nearly all appeared in *St. Nicholas*, are now published by Roberts Bros. in a plain little volume. They are as full of variety, spirit, and good feeling as we always expect anything from this author's pen to be. The story of "Onowandah" is a beautiful Indian tale, that of "Tabby's Tablecloth" a very live one of Revolutionary times, while "The Hare and the Tortoise" is a capital rendering of the old idea adapted to these days of bicycles.

The travels and adventures of 'Three Vassar Girls in South America' are more interesting than the experiences of 'Three Vassar Girls in England,' issued last year by the same firm (Estes & Lauriat), for the excellent reason that Mrs. L. W. Champney has now chosen a subject not worn threadbare, and which gives better opportunity for incidents not of the every-day type. The style remains without charm, and the heroines, though with one exception not the same as in the previous book, are similarly unattractive. A defaulter, a detective, and some love-making assist the interest of the story, which, however, is meant to be of only secondary importance, and to serve as a lure to the reader to absorb the information contained in this account of a journey to the Amazons, etc. The author draws her facts, and illustrations also, from good sources, and the principal defect in the knowledge imparted seems to be its fragmentary character. It should serve as a stimulus to more exhaustive reading.

'Zigzag Journeys in New France and Acadia' (Estes & Lauriat) is the title of the most recent volume of Mr. Butterworth's series. The "History Class" are herein supposed to learn a little history, tell stories of Acadia, and to visit Nova Scotia, the St. Lawrence, Quebec, etc. The travelling amounts to but little as personal experience, but serves as occasion for more history and much legend. Sometimes the story or legend is so far from being apropos, that it gives the impression of being dragged in by neck and heels. The historical portions are more or less confused, but will help to refresh the reader's memory; the topical descriptions are not without interest, and many of the illustrations showered so freely upon a not always closely-related text are good. On the whole, one can learn something, in a desultory way, and receive some entertainment from this book; but to read much of such literary patchwork would not tend to elevate taste or train the mind to method.

Mr. Rideing's 'Young Folks' History of London' (Estes & Lauriat) is rather a description than a history, as the historical portion occupies only ten chapters out of twenty-four, the remainder of the volume being really a guide-book. An historical character, however, belongs to all these chapters, and they abound in historical incident and reminiscence. Both parts of the book are good, being written in an attractive style, and showing the results of intelligent industry. The least satisfactory portion is that which treats of the city in the middle ages. It is not to be expected that its municipal history—one of the most obscure points in English history—should be made much of; but it is quite a surprise to find no mention of the Steelyard, or, indeed, of so important a fact as the relation of London to the Hanseatic League, as being one of its four foreign factories. On page 25 we find a gross error: that "until the reign of Edward I. the other towns of the kingdom had no liberties. They did not have any voice in the government, and had not even the privilege of electing their own officers." On the contrary, the right of choosing local magistrates is found as early as the charters of Richard I. and John. The illustrations are, as a whole, very good, but sometimes strangely misplaced—as when illustrations of sandals and beards are inserted in the text in the account of Lord George Gordon's riots. On the whole, the book can be heartily commended, and we are sure that the author's hope will be fulfilled, that "should it be [the reader's] good fortune to visit the great metropolis, the volume will prove an interesting companion to him in his walks along the famous streets and historic by-ways."

No small child within our acquaintance would fail to be captivated by Routledge's 'Picture-Book of Wild Animals' and 'Picture-Book of Domestic Animals.' They are small folios, with full-size colored prints and woodcuts, and many smaller engravings in the letter-press, which has a very bold typography and is frequently of purpose monosyllabic. The first-named book is the better of the two in all respects, and the colored plates in both are decidedly inferior. The best of the woodcuts are fine indeed.

There is quite as much of the original in 'Our Young Folks' Josephus' (Philadelphia: J. B. Lippincott & Co.) as any of our young people will care to read; and many of their elders, having this, will hardly care for more. It reproduces the Old Testament History in a continuous and engaging manner, and supplements it with an account of the later fortunes of the Jewish people corresponding to which in the Christian Bible there is a blank for memoranda between the Old Testament and the New. It is for this last that our obligations to Josephus are remarkable. He had a personal share in much that he records, and documentary evidence for much besides. The general trustworthiness of his history is not questioned, although here and there the bias of his vanity or desire to please his Roman friends tells heavily upon his page. Mr. Shepard's abridgment is more injurious to this part than to the Antiquities, and throughout something of a *staccato* quality results from his method. The shortness of his chapters in many instances increases this effect. The part corresponding to the Old Testament narrative suffers immensely in comparison with that. Virgil is not so weak compared with Homer as Josephus in comparison with the authors of the books of Samuel and Kings. But the continuity of the whole is an agreeable feature. The illustrations are not many, and they are reductions of Gustave Doré's well-known Bible pictures. "The return of the Ark" is singularly impressive, and in the "Death of Samson" the artist takes no pains, as many of the critics do, to make the miracle as small as possible. He has not stuck at any disproportion between the size of Samson and the size of the pillars. Mr. Shepard's expression in his preface concerning the mention of Christ in the Antiquities is very weak. "It is held by some authorities," he says, "to be an interpolation." What is true is that the critics unanimously reject it in its present form, and nearly all deny even its partial genuineness. Mr. Shepard omits it altogether. The absence of any chronology whatever from his book is an outrageous fault. There is not a date from first to last, and, except

the year of this or that king's reign, nothing to fix the time of the events.

There is something very fresh and wholesome about 'Heidi,' which Louise Brooks has translated from the German of Johanna Spyri (Boston: Cupples, Upham & Co.). A little orphan who has fulfilled one mission, that of humanizing the soul of her misanthropic grandfather, the solitary Alp-dweller, is suddenly sent upon another—to cheer, and ultimately, by a plausible chain of circumstances, to cure an invalid child of wealth in the city of Frankfort. In the end she restores "the Alm uncle" to society, and herself becomes the heir of a childless physician, not to mention the sunshine she brought into the life of a blind grandam to whom she ministered. No lover, except a goatherd, is given to Heidi, and we do not see her wooed or happily married. The story consists in the evolution of her own character, and its influence on those with whom she comes in contact; nor will children ask for more. The book is full of the Switzer's delight in his breezy heights and broad vistas, and all the sights and sounds of nature awakened from her winter sleep. Humor is not Mrs. Spyri's forte, yet the boy Peter serves very well as the clown of the narrative, and the heavy comedy of the Sesemann household detracts little from the general artistic effect. The sub-titles of the two volumes —"Her Years of Wandering and Learning," and "How She Used What She Learned"—suggest a much older person than the heroine is allowed to become; but, for that matter, she is throughout a precocious creature. The translation is certainly praiseworthy.

Quite above the average is Edward Jewitt Wheeler's 'Stories in Rhyme for Holiday Time' (Funk & Wagnalls). Books of this class it is usually safe to shun, but Mr. Wheeler has not only facility but decided poetic feeling. "How, after all, the Sky didn't fall," is a clever rendering of a Grimm *Mährchen*. "Eglantine; or, The Magical Gloves," might be another, but we do not recognize it. As a sample, we will quote a stanza or two from "When Spring Began":

> "While roaming in the woods one day,
> I asked the question, half in play,
> 'Who can tell when Spring began?'
> Straightway the answer came, 'I can.'
> And Robin Redbreast cocked his head.
> 'All right! Then pray proceed,' I said.
> 'I must,' said he, 'express surprise
> That any one with two good eyes,
> Or even with one, should fail to see
> Spring's coming must depend on me.
> When I come, then will come the Spring—
> And that is the gist of the whole thing.'
>
> . . . . . .
>
> "'Well, bless my stars! For pure conceit,'
> Began the Brook, 'you two can beat
> All I e'er heard. As if it were true
> Spring never came at all till you
> Were born, and will not when you're dead!
> I'm sorry, sir, you've been misled,
> But I can set you right. I know
> Spring comes when I begin to flow.
> When my ice melts, and not till then,
> Spring dares to venture forth again.'"

Another pretty conceit is "The Boy to the Schoolmaster," a catechism in respect to out-door life. Mr. Wheeler himself, by the way, has

> "failed to tell
> Just when to say *lie* and when to say *lay*."

On page 17 we read:

> "Beneath the table Fido laid,
> And loudly boasted, 'Who's afraid?'"

Mr. Satterlee's illustrations are coarsely-executed pen-drawings.

'The Very Joyous, Pleasant, and Refreshing History of the Feats, Exploits, Triumphs, and Achievements of the Good Knight without Fear and without Reproach, the Gentle Lord de Bayard, set forth in English by Edward Cockburn Kindersley' (Dodd, Mead & Co.), is a book of a type which has become common of late years, as the holiday season has approached, and of which —barring the absurdly long title—we cannot have too many examples. It is worthy to stand with the four admirable boys' books of the lamented Sidney Lanier, and in one point of view is even to be preferred to them. For there is nothing so healthy for boys to read as books which present the portraiture of a noble character; and if King Arthur deserves to be placed by the side of the Chevalier Bayard, yet there is this difference, that he is in reality a fictitious character, while the model presented in Bayard is that of an actual historical personage. The book before us, therefore, combines the heroic features of the 'King Arthur' with the historical value of the 'Froissart.' As a picture of society in the sixteenth century, and a narrative of some of its most stirring events, its value is very great. The condensed translation is excellent: thoroughly readable for boys (to whom archaisms are a stumbling block), and at the same time possessing a racy flavor of antiquity. The illustrations are numerous, but unequal in merit. Those which occupy a full page are, for the most part, excellent, even if often of little historical worth. There are also some interesting views of places. But most of those in the text are indistinct—apparently from the fault of the engraver.

In 'Young Folks' Ideas,' by "Uncle Lawrence," an adaptation from the French (J. B. Lippincott & Co.), we have one of the numerous attempts to give instruction under the thin guise of a story. Like most of its class, it is very fair to look upon, and will prove tempting to parents, but we fear that, like its predecessors, it will be inwardly loathed by the hapless children who receive it. "Uncle Lawrence" is less successful than many in embodying the information he has to give about bread-making, gold-mining, glass-blowing, photography, etc., in the form of fiction. The closing incident in particular is not only absurd but decidedly objectionable on the score of morals. A girl of thirteen gets possession of a will by which she is made sole heiress of a large property. As she wishes others to share it with her, she deliberately burns the will, and is praised for it, especially by the family lawyer and the author, who ends his story with the remark: "Mollie had had a great many ideas in her little head, but wasn't this the best of them all?" "Uncle Lawrence" ought to know better than to commend an act which perhaps just falls short of being a crime in the sight of the law.

There is an irritating improbability in the incidents of 'Left Behind,' by James Otis (Harpers) which we fancy the most unexacting of young readers will feel. The constantly recurring thought, What a fool the hero was! must seriously diminish the enjoyment of the story. A boy eleven years old goes ashore from an outward-bound European steamer to buy a top at the moment of its departure, and it sails without him. Knowing no one in New York, and having only six cents, he is naturally at a loss what to do. He tells his story to two street-boys of his own age, the one a newsboy, the other a bootblack. They take him to their home—a hogshead in a warehouse-yard—where he spends the night with them. Their advice is for him to earn money enough to buy a ticket for Chicago, his home. This he proceeds to do by selling newspapers for ten days in the City Hall Square. During this time he lives with his new friends, shares their rough fare and amusements, and finally rejoins his father, who very liberally rewards the boys for their kindness to his son. The street Arabs and their companions are painted in ideal colors which will rather surprise those who enjoy their intimate acquaintance. The story, however, is very good in its tone, and is well told, the boys' theatrical performance in particular being described with some humor.

Icaria: A Chapter in the History of Communism. By Albert Shaw, Ph.D. G. P. Putnam's Sons.

In Mr. Richard T. Ely's little book on 'French and German Socialism in Modern Times,' one of the most interesting chapters was that upon the Communism of Étienne Cabet, and the most interesting and valuable portion of this chapter was an account of the Icarian Community in Iowa, by a friend of Professor Ely, indicated in a foot-note as "Mr. Albert Shaw, late graduate-student in the Johns Hopkins University." We are not surprised to find that the interest awakened by a week's visit to the Icarians has led him to a thorough study of their history, their fortunes, and their aims; the outcome of which is the present volume of 219 pages, which has been accepted by the Johns Hopkins University as a thesis for the degree of Ph.D. upon the completion of a course in the department of history and political science. The honor was well-earned, for the book is written in an admirable style. It is at once critical and sympathetic in its tone, and is evidently based upon adequate study and personal observation of the facts involved.

The story would be a very interesting one, and the book would justify itself, if it had no instruction for us in regard to Communism in general. But a more instructive book in regard to the working of this system, which has engaged the enthusiasm of so many ardent spirits, could hardly be devised. The Communism of Icaria was, moreover, Communism pure and simple. It had not that religious aspect which has pertained to the majority of Communistic enterprises in America, and which, as Mr. Shaw observes, makes them better adapted for study as religious than as Socialistic phenomena. These religio-Communistic enterprises have, as a rule, been more successful than those of a more secular character, but they do not furnish material for judging Communism as an industrial system on its own merits.

Mr. Shaw's first chapter is an account of Étienne Cabet, the founder of the Icarian Community, and of his Utopian romance 'Voyage en Icarie.' Born in 1788, Cabet had been a democratic revolutionist in 1830, and a place was given him under the new Government. But his radical opinions soon brought him into great disfavor, and procured his peremptory dismissal. Elected to the Lower House, his criticism of the Government assumed a tone so revolutionary that he was allowed to choose between imprisonment and banishment. He chose the latter, and went to England for five years. He went a Democrat; he returned a Communist. This was in 1839, and in 1840 his 'Voyage en Icarie' appeared. Mr. Shaw has devoted a page to a facsimile of its title-page, and so full a knowledge of the spirit and method of Cabet could not have been conveyed in the same space in any other way. The book described an ideal community, discussed the faults of the old social and industrial systems, and ended with an historical sketch of Communism which was brilliant and misleading in about equal parts.

It is Mr. Shaw's belief that Cabet did not, at first, intend the making of any local experiment. "Icaria" was what France might possibly become after the fall of Louis Philippe. But the urgency of friends and the persecution of enemies determined Cabet to make a trial of his system. He wrote, and evidently believed, "We have no doubt of being able to unite more than a million of coöperators." Sixty-nine of the million sailed for Texas, February 3, 1848. Fifteen hundred were to follow this advanced guard in a few weeks. But while the sixty-nine were on the way the monarchy collapsed and the Republic was declared. The Icarians were divided by this event. The majority thought best to stay at home and found Icaria there. Cabet, too, might have thought so if his chances for the Presidency of the new Republic had been better. As it was, only nineteen of the intended 1,500 sailed, and

Cabet followed them a few days before the election of Louis Napoleon.

There have been thousands of disappointments parcelled out to emigrants to America who have sent no one on before them to spy out the land; but it may be doubted if there was ever one more melancholy and pathetic than that of the first Icarians. Expecting their purchase to be on the Red River, they found it two hundred and fifty miles from it. To reach their destination was a fearful labor, and their experience after their arrival was so miserable that to stay would have been absolute failure. The next move was extremely fortunate. The Mormons had abandoned Nauvoo in Illinois, and the Icarians stepped into their deserted town. In four or five years the community was prosperous, and numbered nearly six hundred members. It never numbered more; Mr. Nordhoff's figures, "not less than 1,500 people," being a great exaggeration. With property worth $65,000 in its hands, the success of the community at this time (1855) seemed well assured. But difficulties growing out of the government of the society soon made a miserable change.

Of these difficulties Cabet was himself the prime occasion. No chapter in the history of the Icarians is so sad as this, for Cabet was an earnest and unselfish man; but the community which he had done so much to foster seemed his own, and his right to do with it what he would beyond dispute. Seeking to bring about some radical change in the constitution of the society, the attempt produced a strife of parties, and finally his own expulsion. He left Nauvoo with 180 of his most devoted followers, and died in St. Louis November 8, 1856. His companions started a new movement a few miles from St. Louis, which ended in 1864, "with few words and many tears." The Nauvoo Icarians went to Iowa, and there split upon the rock of modern Socialism, with which the Elders did not sympathize. For a while the sections dubiously flourished side by side; then the young Icarians went to California and founded "Icaria Speranza," of which fruit-raising is the principal industry. It is possible that a brilliant future awaits this remnant of Cabet's Utopia, but it will prove the advantages of Californian soil and climate rather than the intrinsic excellence of the Communistic policy. The Icarian Community tried its experiment under many favorable conditions. Its success, so far, has not been very great. Scores of similar experiments have done no better. Mr. Shaw devotes a chapter to these, and another to "Personal Sketches." These chapters and an appendix, giving various laws and contracts of the different communities, make a valuable addition to his book. Our meagre summary of its contents must not deter our readers from a first-hand acquaintance with its interesting and instructive pages.

Studies in Wordsworth; Culture and Acquirement; Ethics of Tragedy; and Other Papers. By Henry N. Hudson. Boston: Little, Brown & Co. 1884.

This volume of essays is mainly composed of what would be more fitly termed lessons in Wordsworth's poetry given to Mr. Hudson's classes of young ladies. When it is said that Mr. Hudson regards Wordsworth as, "next after Shakspere," the best poet to be studied in schools, and adds that he takes up the "Ode on Immortality" with the same dread that one feels in trying to teach "Hamlet," every one will be prepared for a Wordsworthian of the purest water. It is astonishing, under the circumstances, that so very little that is new should be found in a book that contains the fruits of many years of close and truly reverent study of a poet believed to be of the first order. Perhaps Mr. Hudson has preferred to take the more eloquent and authoritative expressions of the critics he quotes so liberally, when he might have given his own conclusions in his own words as he first reached them. One point only do we find of interest, and that is a minor matter—a gloss on the blindest passage in the Ode:

> ——"those obstinate questionings
> Of sense and outward things;
> Fallings from us, vanishings;
> Blank misgivings of a creature
> Moving about in worlds not realized."

There probably is no "elegant extract" which, being so little understood, is so much quoted as the above. Mr. Hudson explains "questionings" as "doubtings," "distrustings," and very aptly expounds the sense by a passage of Wordsworth's prose, concerning his boyhood: "I was often unable to think of external things as having external existence; and I communed with all that I saw as something not apart from, but inherent in, my own immaterial nature. Many times while going to school have I grasped at a wall or tree, to recall myself from this abyss of idealism to the reality. At that time I was afraid of such processes." This interpretation Mr. Hudson claims as original, and it is entirely satisfactory, though in all such poetic expressions of Wordsworth there is a surplusage of vagueness which is essential to the full impression. The psychological experience itself is not uncommon in minds of morbid activity.

The value of Wordsworth to the young is not very clearly made out, except as he is an author respected from the first because of his fame, and more intelligible the more he is read in later years. Evidently it is as a substitute for, or at least as an initiation into, religious emotion that Mr. Hudson himself prizes this poetry, and hence he insists more on the philosophic aspects of it than on the rustic element, in which there is so much of truth and beauty mixed up almost grotesquely with the comical naïveté of "the Laker." In connection with this, one or two defects of Mr. Hudson come out. We may all grant that Wordsworth's poems have afforded a truly religious emotion to many minds, in fact to most of his admirers; but when it is asserted that he was a man of intense *passion*, which he found hard to curb, that is another matter. It is true he told a friend, as is here said, that he "had never written love-poetry because he dared not—it would have been too passionate"; but that only means that he was of an ascetic cast of mind. There is no evidence in his verse (and that is the place where it could not fail to be shown) that he ever heard one note of the song the Sirens sang. This absence of passion from his poetry is, indeed, one reason why his works make so good a text-book for schools.

The second defect of Mr. Hudson is his incapacity to understand Arnold's admission that Wordsworth "has no style"; to this dictum, in its obvious meaning, our author demurs. Now there is nothing more sure in regard to Wordsworth than that he did not possess the literary sense, the instinct of the born man of letters, by which one knows excellence of workmanship in his own case at once. No man with "a style" could write so unevenly as Wordsworth, who not only could not tell when he was writing prose and when poetry, but was equally unable to perceive whether he was writing well or ill. This literary deficiency in his make-up, which makes his poetry an unweeded garden, is one very strong reason, it may be remarked, why his works do not make the best text-books for schools "next after Shakspere." From "Hamlet" even to "the great Ode" itself is a very long step in time and art and power, quite over Milton's head, who, as the most cultivated of English poets, ought to have his place unquestioned next after the most original of all poets, in the schools of our tongue. Nevertheless, we would not be understood as discouraging the study of Wordsworth in schools for young ladies, or in any schools whatever where literary culture is aimed at. He had not the passion of Byron or the literary faculty of Keats, but he had a health beyond either, and as an educator of the emotions in the young his poetry is incomparably better than theirs.

The remaining essays in the volume do not call for any notice.

A Treatise on Ore Deposits. By J. Arthur Phillips. Macmillan & Co. 1884.

It is a somewhat singular fact, when one considers that the mines of the English-speaking races yield more than three-fifths of the precious-metal product of the world, that hitherto the only important treatise on ore deposits in the English language has been the translation of a German work by an American. Whether it be due to want of ability, or of time, or of inclination on the part of English and American geologists, the fact remains that since Von Cotta's work, now about thirty years old, the only two treatises on ore deposits that have appeared were written by Germans. To write such a work as it should be written requires not only laborious and painstaking compilation, but peculiar qualifications on the part of the author. The most important of these are a thorough grounding in geology, a long practical experience in and personal knowledge of the most important mines of the world, and, last but not least, a discriminating faculty which shall enable him to judge what of the literature of the subject is trustworthy and what not.

Mr. Phillips's reputation and his previous publications are evidence of his possessing in an eminent degree the two first qualifications; but, after a perusal of the present work, one is inclined to doubt if he is so well endowed with the all-important discriminating faculty. This is a serious fault in a work which is destined probably to be for a long time a standard authority on ore deposits; for mining geology at the present day may be considered to be in a transition state, the *à priori* reasoning of former times having been abandoned by those who are studying it in the proper spirit, while the accumulation of undoubted facts is as yet insufficient for any wide generalization on the inductive method.

The subject is treated from two standpoints, theoretical and descriptive. The former gives the various classifications and theories on the genesis of ore deposits which have been put forward at various times. In this part the extreme caution of the author about expressing a decided opinion is noteworthy, and forms a remarkable contrast with the decided views which have of late been advanced by men who, by that very readiness to explain everything, prove their inferior knowledge. In the second part are given descriptions of the various mines in the different countries of the world, treated geographically, and without any attempt to classify them all under one or another type.

The fact that in the description of the precious-metal mines of the United States Mr. Phillips has not only adopted the arrangement but also copied whole pages of the matter, with or without quotation marks as the case may be, of American publications, is highly complimentary to the authors of these works; but it would probably have been more satisfactory to them had their writings been mentioned by name rather than lumped together under one general heading. It is an ungrateful task, however, to carp at a work which is on the whole so admirably done, and which is destined to be of so great practical value to our large and ever-increasing mining community.

BOOKS OF THE WEEK.

Allair, Madame. New York: F. W. Christern.
Anstey, F. The Black Poodle and Other Tales. D. Appleton & Co. 50 cents.

DARK DAYS.

By the Author of

Called Back,

Hugh Conway (F. J. Fargus). 16mo. Leisure Hour Series, $1.00; Leisure Moment Series, 25 cents.

THIS NOVEL IS MORE INGENIOUS THAN, AND AS INTERESTING AS, 'CALLED BACK,' which is published in same series and at same prices. These are the only AUTHORIZED editions of Mr. Fargus's books.

HENRY HOLT & CO.,
New York.

MR. MATTHEW ARNOLD WRITES: "I have been reading with much pleasure in your volume, in which you have always something to say, and say it distinctly."

If the world looks into this book with candor and true feeling for art it will not be stingy of applause. Men of taste will recognize a new poet of strong individuality, and will be set a wondering who "Paul Hermes" is.—*Philadelphia Evening Bulletin*

There is a frankness and thoughtfulness in the longest poem quite sure to carry to its conclusion any reader who is persuaded into beginning it. Several of the shorter poems have melody.—*Atlantic Monthly.*

We are inclined to think that "Paul Hermes" has no little of the divine afflatus. He has breadth, depth, and plenty of imagination.—*Newark Advertiser.*

The CONFESSIONS OF HERMES, and Other Poems. By Paul Hermes. For sale by all booksellers. Price, $1.25.

DAVID McKAY, Publisher,

PHILOSOPHY.

Being Outlines of Psychology, Empirical and Rational. By Rev. E. Janes, A. M.

W. B. HARDY, Publisher,
Oakland, Cal. $1.25.

Specimen copies sent to teachers on application. Also copies of favorable notices from Pres. Mark Hopkins, Prof. G. S. Morris, Prof. Francis Bowen, Prof. G. P. Fisher, etc.

FUR AND SEALSKIN GARMENTS.—C. C. Shayne, the well-known Wholesale Fur Manufacturer, 103 Prince Street, New York, will sell elegant Fur Garments at retail at lowest cash wholesale prices this season. This will afford a splendid opportunity to purchase strictly reliable Furs direct from manufacturer, and save retailer's profits. Fashion Book mailed free.

The Leading Gift Book of the Season.

One Year's Sketch Book.

Illustrated and arranged by Irene E. Jerome. Engraved and printed under the direction of George T. Andrew. Cloth, black and gold, $6.00; Turkey morocco, $12.00; Tree calf, $12.00.

A matchless volume, that everybody will admire. A new artist, with a master-hand interpreting and sketching pictures from the hand of the great Master. Every page reveals beautiful bits from Nature's gallery. Flowers and foliage, birds and brooklets, moonbeams and music, of ever-varying charm and color, salute us as we turn the leaves, and we almost feel that we can mark the transitions of warmth and chill. Every picture in this volume teems with exquisiteness and most delicious sentiment.

Forty-six full-page illustrations, each 9½x14 inches.

*** *Sold by all booksellers, or sent postpaid on receipt of price.*

LEE & SHEPARD, Publishers,
Boston.

THE LOMBARD INVESTMENT COMPANY, 13 Sears Building, Boston, Mass., offers to trustees, guardians, and conservative investors, Western Farm and City Mortgages, in denominations of $200 to $10,000, completed for sale and delivery, yielding 6 per cent. interest, payable semi-annually. The collection of principal and prompt payment of interest guaranteed. These loans are carefully selected by the Company's Vice-President and Western Manager, resident in the West, who has loaned to the eminent satisfaction of over 2,000 investors more than $6,000,000, mostly for parties occupying fiducial positions, Savings Banks, Insurance and Trust Companies.

Being based on actual values, free from speculative influences and the fluctuations of the stock market, they are particularly recommended to investors with whom *safety* is the first consideration.

The Nation.

NEW YORK, THURSDAY, DECEMBER 11, 1884.

The Week.

THE N. Y. *Times* has rendered the public a service by bringing the text of the new commercial treaty with Spain as a special cablegram from Madrid. Simultaneously with its publication Minister Foster has come home to render such assistance as he may in securing its ratification by Congress. If we are unable to approve of the treaty in its present shape, or in any shape in which it is likely to be presented, we are moved by no prejudice against reciprocity in general, or against the author of the important negotiation now before the Senate. The total imports of sugar into the United States during the fiscal year 1883 were 2,630,000,000 pounds, costing $91,000,000, upon which there was an average duty of two cents per pound, yielding about $52,000,000 of revenue. Of the total importation of sugar Cuba and Porto Rico furnished $56,000,000 worth, or more than one-half. The revenue derived from this particular source was between $20,000,000 and $25,000,000. The duty on sugar imported from other countries remaining the same, the effect of the treaty will be to give an advantage of two cents per pound to the planters of Cuba and Porto Rico at the expense of our Treasury. Sugar cannot be cheaper to American consumers so long as any portion of our supply comes from countries paying the tax. The Cuban planters will simply pocket the duty which would otherwise go into the Treasury of the United States. If an appropriation of $20,000,000 per annum were made by law as a bonus to the Cuban planters, the effect would be the same.

What are we to get in return for so extraordinary a donation? Cuba and Porto Rico are to admit free of duty provisions, live animals, coal, cotton and woollen manufactures, certain classes of iron and steel, agricultural implements, wood and wooden ware, and a few articles of minor consequence. Wheat and flour, which constitute a large share of our exports to the Spanish West Indies, are still burdened with heavy duties, viz., wheat 50 cents per 100 kilos, flour $3 per barrel. The New York quotation for West India shipping flour is now $4 30 to $4 40. The Cuban duty under the treaty is therefore equal to 70 per cent. ad valorem. Possibly this extravagant duty—extravagant in a treaty of reciprocal trade—may be relaxed or modified if the Senate of the United States proves stubborn. But we should not esteem it wise policy to buy trade with Cuba at so high a price even if breadstuffs were admitted free. What the treaty amounts to is a scheme to purchase a small market in the West Indies at a present cost of $20,000,000 per annum and at a growing cost hereafter, since the bonus which we offer to Cuban sugar will stimulate the growth of the article there enormously. It is estimated by good authority that the island is capable of producing all the sugar now consumed in the United States. The premium of 2 cents per pound will of course be paid as long as the island produces less than the total consumption of this country, minus the small amount produced in Louisiana. If so large a sacrifice of revenue is to be made by the Treasury, surely the consumers of sugar ought to reap a share of the benefit.

President Arthur's recommendation that Congress provide a suitable pension for General Grant has not attracted much attention or given rise to much comment in the press. We think that the people of the United States, or a very large majority of them, would favor some measure which should have the effect to put General Grant beyond the reach of pecuniary solicitude. His military services overtop and belittle all the errors with which he may be chargeable in other walks of life. He fills too large a chapter of the nation's history to be overlooked or neglected in his declining years. But the method by which the nation may properly testify its continued appreciation of his services is open to fair discussion. The objection to placing him on the retired list of the army is, that such a proceeding breaks in upon a well-settled army regulation, and puts him again in advance of General Sherman and other officers, retired and to be retired, who have rights to be considered. A pension General Grant declines to accept. A measure to provide a decent competence for all ex-Presidents from the public Treasury would cover his case, would have no exceptional features, and would accord well with the dignity of the nation. Perhaps no time more fitting than the present could be found for the introduction of such a measure. There are, or soon will be, three Republican ex-Presidents. In course of time there will be a Democratic ex-President. The country can well afford this contribution to its own dignity.

The Supreme Court has decided, in the case of Chew Hong v. The United States, that the Chinese Restriction Act, requiring a Collector's certificate as the only evidence of the right of a Chinese laborer to reënter the United States, is not applicable to a Chinese laborer who lived in this country at the date of the treaty of 1880, but who left this country before the act of May 6, 1882, was passed, and did not attempt to reënter until after the act of July 5, 1884, was passed. The right of such laborer to reënter was secured by the treaty of 1880, and the court holds that Congress did not intend to violate the right. Chinese laborers who were here at the date of the treaty can be admitted, the court holds, upon such evidence as will be competent on general principles of law. The decision of this case is based on the ground that the acts of Congress did not necessarily conflict with the treaty, and that the duty of the court was, if possible, to make the statute and the treaty stand together. The opinion shows that the court will not lightly allow acts of Congress to override treaties. Judges Field and Bradley dissent, insisting that the decision would flood the Pacific Coast with Chinamen, who would come thronging over with perjured affidavits to show that they were old residents.

Our esteemed contemporary, the *Tribune*, thinks that if Governor Cleveland would frown with sufficient fierceness upon the existing commercial depression it would presently go away, and that the country would soon be blessed with a revival of business. The frowning should be directed principally toward the tariff agitators. Let it be understood once for all that these mischievous persons are to be put down, and trade will speedily revive, as it would have revived if Blaine had been elected. The most striking feature of the present depression is a glut of manufactured goods. Secretary McCulloch tells us that this glut arises from an excess of producing power as measured by the consuming power of the country. This is known to be the true state of the case by nearly every manufacturer in his own line of business. Especially is it known to the makers of pig-iron, who have observed with consternation the steady growth of the iron trade in Alabama, Tennessee, and Virginia, in spite of the crisis, and who have felt the invasion of Eastern markets by Southern producers. Ninety-nine thousand tons of Southern pig-iron have been shipped to points east of the Alleghanies during the present year, according to statistics gathered by *Bradstreet's*. Surely neither President Cleveland, nor Mr. Blaine, nor the whole Congress of the United States can frown down those producers of pig-iron who insist on flooding the American market at the present low prices. Nor can anybody, however patriotically inclined, frown out of existence the excess of boot and shoe machinery, which is capable of supplying the country for a whole year with the product of six months' labor. We trust that Governor Cleveland will not waste his time in such futile endeavors. If the crisis is to be dealt with by making faces at it, the *Tribune* can make enough for all of us.

Notwithstanding the recent stoppage of a number of mills and the reduction of wages in others, there are some signs of improvement in business. All the trade journals agree upon this point. While some mills have stopped, others have resumed business. The increasing demand for good investment securities on the Stock Exchange is perhaps the best evidence of returning confidence. In the nature of things, the depression which has borne so heavily upon all departments of industry during the past two years cannot last much longer. Prices of all consumable products are so nearly equalized—have been levelled down to so near the same standard—that there must presently be an acceleration of exchanges. The country is yet far from being finished. There is vast room still within our own territory for the employment of new capital, and still more room for American enterprise abroad whenever we shall reach the stage of enlightenment to look for profitable trade beyond our own boundaries. The transition from high to low prices—the indispensable requisite to a revival of trade—has been painful indeed, but it has been borne. History has repeated

itself on this point, and we have every reason to expect that the future course of events will be not unlike that of former crises—that the pendulum will swing back, slowly at first, but with an accelerated motion, and that trade and industry will shortly be found in a fairly prosperous condition without anybody knowing what causes have wrought so agreeable a change.

President Andrew D. White wrote to Governor Cleveland, apropos of one of his vetoes, one of the warmest eulogies a public officer has ever received. This did not, however, prevent his supporting the mendacious and corrupt Blaine. We are glad to see, however, that he has once more recovered his political judgment, for he observed to the Young Men's Republican Club at Syracuse the other night:

"The main purpose of every citizen is clearly to see that the work of the city is intrusted to men who are capable. If the Republican party fails to give you men who will do this, it is your duty to vote for the other party until your party gives you worthy men. Your duty is to keep the skirts of the Republican party free from all suspicion of corruption."

This is true of the nation as well as of the city now, has always been true, and will always remain true. Do not let us have any forgetfulness of it hereafter at national elections.

The "city legislature" of Sacramento have just given an illustration of the tendencies of municipal government, by licensing the game of "stud-horse poker" and games with dice. This leads the Sacramento *Record-Union* to declare that "the people of the city have but one remedy left them, and that is to rise in their might, and put on record their disapproval in such emphatic language that the people of the State cannot mistake their sentiments on the subject." Stud-horse poker, it points out, is "as dangerous and alluring a game" as any, and this no doubt is the reason the trustees have licensed it. The trouble will not be cured by the people "rising in their might," however, unless they can get laws which will secure them a different species of trustees. There must be something wrong in the system which produces trustees who license dangerous and alluring gambling games, and so the *Record-Union* seems to think, for it adds: "The whole matter now so agitating this community emphasizes anew that for which we have long contended, that municipal affairs should be divorced from politics; that city business should be conducted on business principles; and that in city government political domination should be a secondary matter, and municipal rectitude and economy the first and chief considerations."

It has occurred to the Irish supporters of Mr. Blaine in New York that their services and numbers in the recent election had not been sufficiently recognized. So, when their committee came together at the Astor House the other day to affirm their undying hostility to British free trade and British "manners and customs," they adopted, as part of their address, a statement of their own numerical importance. "In the two cities of New York and Brooklyn," they said, "35,000 Independent Irish-American votes were cast for the Hon. James G. Blaine and Gen. John A. Logan, the standard-bearers of the protective policy; and in the State of New York the record makes it clear that a total of not far from 100,000 votes were cast by the same element for the same cause." If this is an approximately correct statement of the "Irish defection" in NewYork, it enables us to form some idea of what the Independent Republican vote for Cleveland must have been, since this vote not only offset the Irish secession, but reversed Garfield's majority of 21,000 in the State. The Cincinnati *Commercial Gazette*, in a recent article replete with post-election wisdom, said that the entire Independent bolt in New York did not make a difference of 200 votes. Insomnia is a dreadful thing.

The *Tribune*, whose condition of mind about the solid South is almost as frenzied as that of poor Mr. Halstead, publishes a handbill which it says was circulated in North Carolina during the late campaign, in which such dreadful questions as this are propounded: "Are you willing for negroes to intermarry with white people in North Carolina? Are you willing for your children to go to school with negro children and so grow up with them in social relations? If you are, vote for the Radicals. If you are not, vote the Democratic ticket." The *Tribune* says that the handbill "from first to last is a brazen denial of the cardinal American doctrine of equal rights," and in a voice hoarse with emotion and trembling with excitement asks: "How do you like it, Henry Ward Beecher? How do you like it, George William Curtis? How do you like it, Thomas Wentworth Higginson? How do you like it, James Freeman Clarke?" These gentlemen probably dislike this handbill and all silly literature, including a good many of the *Tribune's* articles. What the writers of such stuff need, like Mr. Halstead, is sleep, which is the best of all cures for mental inflammation. They should imitate the sluggard who does not care a cent for handbill denials of cardinal doctrines.

It is gratifying to observe that at a time when the minds of the negroes are filled with anxiety concerning the intentions of the Democrats toward them, some of the more intelligent of their race are endeavoring to restore sober-mindedness and even confidence, by having white men of character and intelligence to address them "in meeting." In Charleston, S. C., a colored conference was recently assured by a gentleman who possessed the esteem of the negroes, that their fears were groundless, and that Mr. Cleveland's election was no disaster to them, and we learn from the reports of the address that he was implicitly believed. Ministers of Atlanta, Georgia, organized a public meeting of colored citizens a few days since, and invited Governor McDaniel and Senators Brown and Colquitt to address it. Governor McDaniel has since his inauguration shown himself the constant friend of the negroes. The Senators named have been always active workers with them in their churches. "Big Bethel" Church in Atlanta has often been crowded by them when Mr. Colquitt was to address them, and the Baptists throughout the State have, with reason, regarded Mr. Brown as their friend. The selection of these three by the ministers was, therefore, natural and judicious But a negro element in Atlanta, it seems, has considered this invitation a great offence, and the ministers who issued it have been, we learn, threatened, and one of them actually attacked. When it is remembered how docile and submissive the negroes generally are to their pastors, it must be admitted that this recent demonstration in Atlanta against them on the part of the political negroes is very significant. It would seem that a ferment is desired, and that no efforts of a reasonable nature to bring about tranquillity will be tolerated.

The necessity of a change in the training of the young men of the South is the subject of almost daily comment by such journals as the Atlanta (Ga.) *Constitution*, the Charleston (S. C.) *News and Courier*, and the Raleigh (N. C.) *Chronicle*. It is earnestly insisted that there shall be schools in the South from which pupils can go and at once earn their living by means of the practical knowledge there acquired. It will be remembered that we called attention about a year and a half ago to the significance of the step taken by the State of Georgia in this direction. The report of the commission appointed by the Legislature of Georgia to visit the best technical schools of the country, and to devise and report a plan for the establishment of similar schools in that State, has tended to increase the general desire for practical education. The appointment of a commission, with powers and objects similar to those of the Georgia commission, is now being urged upon the Legislature of North Carolina. It is maintained that the time is now ripe for this change. Already, in recognition of the demands of the times, several Southern universities have much improved and enlarged their scientific and technical departments. The directors of the North Carolina Orphan Asylum, by recently establishing in that institution a department for the industrial training of the children, have still further opened the way toward the adoption of such schools of technology as at present exist in the North, and notably in Massachusetts.

Mrs. Sarah C. Howe, the great Boston banker, is out of jail, and has started in business again at 132 West Concord Street. She is said to have made an offer to her creditors to pay 6 per cent. a year during the time she was in prison on all deposits made with her in the year in which she was arrested, and this handsome proposal will doubtless win her the confidence of many of her old customers. In fact, the ladies are said to be flocking to the new bank with their little hoards, and Mrs. Howe keeps strictly to her old plan of operations. She refuses to have anything to do with men, because her aim is "to give the women a chance to manage their own property," and "because men tell what they hear, and it gets printed in the newspapers." As she owes nearly half a million, of which she robbed her old customers, and has no assets of any sort, and is fresh from jail, where she was sent for this sort of "banking," her successful start at a new place presents a spectacle which must make some of our greatest male financiers sick with envy.

A good deal of amusement has been caused in London by a published statement that the banks were about to combine to enforce the following resolution, which is said to have been already adopted by a well-known financial house: "The Board being of opinion that it is on many grounds inexpedient for clerks employed by the bank to contract marriages on insufficient means: Resolved, As a general rule, but subject to any exceptional circumstances which may induce the Board to dispense with such rule, that in future if any member of the staff whose income is less than £150 a year shall marry, he shall be disqualified from continuing in the bank's service, and will accordingly be required to retire from it." Married clerks, unmarried clerks, and engaged clerks have published letters complaining of this proposal, but it seems based on sound financial principles. One of the great difficulties with banking, in this country at least, is that the employee's income is not sufficient to meet the expenditures caused by the increasing demands of wife and family, and the deficiency has to be supplied from the funds of the bank; this leads to scandal, arrest, or flight to Canada, and many other unpleasant consequences. The defaulter is almost always a married man, and often an exceptionally loving husband and father. It is not because he means to do wrong, but because he so loves his home and cannot bear to see those whom he loves deprived of their natural luxuries, that he is led into temptation. A curtailment of marriages, in cases where there are no sufficient means of support, would help the banks greatly here.

The Prince of Wales's second son has been entered as a law student in the Inner Temple in London—it is hard to say with what object, inasmuch as he can hardly mean to practise at the bar, and could learn as much or more law at home with a private tutor than he will ever learn by "keeping terms" in the Temple. The difficulty of providing for the younger members of the royal family is, however, growing with their number, and with the progress of democracy, so rapidly that there is no knowing what shifts may be in store for them. Every year the number of those who vote openly in the House of Commons against grants to members of the royal family increases, and there was witnessed in the last case the strange spectacle of two ministers, one of them a member of the Cabinet, leaving the House when the vote was being taken. With the new constituency created by the Franchise Bill, this difficulty is likely to increase. In fact, the practice of pledging members on their election to vote against royal allowances has already begun in Radical boroughs. Professor Stuart, who has succeeded Mr. Fawcett in the representation of Hackney, was obliged to take this pledge the other day. The philosophical Radicals, like the *Spectator*, utter strong remonstrances against it, on the ground that it is illogical to keep up royalty at all and allow, for the sake of a small sum, scions of royalty to go about as genteel paupers. But then, as some one said the other day, the British people knows how to be illogical when it pleases. There is a vague expectation that the Queen's private fortune, which is supposed to be large, will be a fair provision for the younger generation, though nobody knows how she will leave it, and everybody knows that she shares to the fullest the German idea about the value of a royal family to the country. Consequently she may not do anything very handsome. She has not been generous to the Tecks, who have been reduced so low that their furniture was sold at auction, and they are now living on the Continent in very straitened circumstances.

The difficulty has by extraordinary good fortune been warded off from the British people for two centuries. William and Mary had no children. Anne had thirteen, who all died in infancy. The first two Georges had just enough to make the succession secure. George III. had a large family of worthless sons, who got heavily in debt, but only two besides George IV. married, and these had only one or two children each. The Duke of Kent had one daughter who succeeded to the throne, and the Duke of Cambridge one son, who has been easily provided for. The Queen's large family has brought about a novel state of things, therefore, and awkwardly enough at the opening of a democratic régime, when taxpayers are becoming very unwilling to support any one in idleness, and when promotion in the army or navy for anything but merit is becoming increasingly odious. The only easy way out of the difficulty for the men seems to be marriage with rich girls, either American or English. They cannot, as yet, "go into business," or if they did so would, like the rest of the world, probably fail. At the bar they would be exposed, even if they had any ability, to a rivalry and antagonism which would be full of humiliation. In fact, they would probably never get a brief, except in the hope that they would exert social influence on the jurymen. They would, however, probably succeed immensely as family physicians, but medicine has not yet secured a firm footing in England as the profession of a "gentleman." We have no doubt that ten years of practice in this field, in London, would enable any Royal Duke or Prince to retire with a snug fortune, even if it were well known that he only administered bread pills. They are great fools, indeed, not to make "a pot of money" out of English reverence for rank, while it is yet time.

The unfairness of the outcry against Justice Manisty, for setting aside the verdict of the jury in the case of Adams against Coleridge, has been exposed by a barrister in a letter to the London *Daily News*, in which he says:

"Every practising barrister knows that Mr. Justice Manisty entered the verdict as he did, under Order 40, Rule 4, in order that the plaintiff might go at once to the Court of Appeal. Had the Judge entered judgment for the plaintiff, or abstained from entering judgment at all, the parties would have had to have gone to the Divisional Court, and from thence to the Court of Appeal. It is an evil sign when bad motives are hastily assigned, and whatever the merits of the case itself are (and I certainly agree that the defendant should either as a gentleman have justified or withdrawn his letter), the public may rest assured that the administration of the law, by Mr. Justice Manisty, was honestly carried out, and that there is not the slightest danger, because of the position of one of the litigants, that justice will not be done."

The position of any English judge trying a case of this kind, in which the head of the judicial bench was mixed up, was of course a delicate one, and it was made all the more so by the fact that the plaintiff employed no counsel. The absence of defence was almost certainly due to the unwillingness of Lord Coleridge's family to increase the volume of the scandal. Mr. Bernard Coleridge undoubtedly had more to say in justification than he said, if he had been disposed to make more of a public exhibition of himself and his family, and of the man his sister is going to marry.

The decision of the English Court of Appeals in the *Mignonette* case, that it is murder to kill a man for the purpose of eating him, in order to save one's own life, is interesting, and will doubtless be accepted throughout the Anglo-Saxon world as good law; but we advise nobody who is caught at sea with a party of shipwrecked friends in an open boat and short of provisions, to rely on it for safety, especially if he is young, tender, and stout. The citation of the case will make no impression on them. They will take the chance of being convicted of murder in preference to the chance of dying of starvation. The part of wisdom—low, worldly wisdom, we admit—in such a situation is to be the first to suggest eating somebody, and to be most active in promoting the movement. Of course if lots are drawn this will do no good, but lots are not always drawn. The victim is, as in the *Mignonette*, often selected on the ground that he is young and has few ties, and by urging this view the voluble, active, energetic, and public-spirited man has always a good chance of escape. The opportunity of real self-sacrifice will often, too, have an overwhelming attraction for some minds, and should be painted in glowing colors to any one who shows any signs of weakness for this kind of fame.

The state of things in Denmark is a novelty in constitutional government which excites curiously little attention in other countries. For nine years the Ministry has always been in a small minority in the Parliament or Folkthing, upholding the royal authority against Radicals of the most extreme type, each session consisting of a long wrangle, ending in dissolution, and the elections always sending back the same or similar men. The Minister, Mr. Estrup, in the meantime governed as Bismarck used to do before 1866, in complete indifference to the Parliament or its opinions. At the late elections, out of 102 members, of which the Folkthing consists, 83 were elected bitterly hostile to the Ministry, and the remaining 19 moderately so, and they at once resolved not to discuss any proposition ormeasure emanating from the Minister. Nevertheless the sky looks brighter for him than it has done for many years past. As has happened in Belgium, and indeed as happens sooner or later everywhere, the Radicals have produced others still more Radical, who are disposed to pronounce the moderates "traitors," and who want to rip up both Church and State. Consequently there is a division of increasing bitterness in the ranks of the Opposition, and Mr. Estrup is hoping that the moderates may come over to him.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 3, to TUESDAY, Dec. 9, 1884, inclusive.]

DOMESTIC.

THE Electoral Colleges of the various States met throughout the whole country on Wednesday, and cast their votes in accordance with the result of the late Presidential election in each State.

According to the best authorities, Senators Bayard and Garland are booked for places in President Cleveland's Cabinet—the former for the State or Treasury, and the latter for the Attorney-Generalship. It is doubtful whether any other Senators will be taken, as it is thought that the withdrawal of these two, who are perhaps the strongest men on the Democratic side, may be attended with some inconvenience in that body. The other names most frequently mentioned in connection with the Cabinet are ex-Senator Thurman; Mr. Barbour, of Virginia; Mr. Vilas, of Wisconsin; ex-Senator McDonald, of Indiana; ex-Senator Trumbull, of Illinois; and Governor Waller, of Connecticut. It is an undoubted fact that if the Independent Republicans desired a representative in the Cabinet, they could have one, but the prevailing belief is that they do not want any offices, but will be well satisfied if President Cleveland gives them good government instead.

Governor Cleveland visited this city on Thursday to attend the Actors' Fund Benefit performance at the Academy of Music.

In the Senate on Wednesday Mr. McPherson (Dem.) introduced a bill to immediately suspend the coinage of the silver dollar. Among its provisions are: That the Secretary of the Treasury be authorized and directed not to reissue any United States notes of a denomination less than $5, and to cancel and destroy all United States notes of a less denomination than $5, and to cease engraving or printing all such notes; and, upon the deposit of silver bullion in such sub-treasury as he shall designate, to issue to the depositor thereof silver certificates having upon their face the weight and market value of the metal so deposited, calculated in United States gold dollars at the rate of 25 8-10 standard grains to the dollar. The Secretary is also authorized and required, on the presentation of any silver certificates issued under the provision of the act by the legal holders thereof, to redeem the same by delivering to the depositors silver bullion of the weight and fineness certified upon the certificate, and to immediately cancel and destroy such certificates.

Senator Cameron on Thursday introduced a resolution that the Committee on Finance be directed to inquire whether it would be expedient to expend the surplus revenue of the United States, or any portion thereof, for the purpose of reviving the shipping and export trade, by allowing a rebate from tariff duties on foreign goods imported in ships built and owned in the United States, and by also allowing a premium on American products and manufactures exported in American vessels, and report by bill or otherwise. Senator Hill, of Colorado, on the same day introduced a resolution against the restriction of silver coinage.

In the Senate on Monday Mr. Mitchell (Rep., Pa.) read a letter from General Grant relating to the bill recently introduced to give him a pension. General Grant expressed the hope that the bill would be withdrawn, as under no circumstances could he accept a pension, even if the bill passed both houses and received the approval of the President. Mr. Mitchell said that he had introduced the bill because he was Chairman of the Committee on Pensions, and the President had recommended a pension for General Grant. In deference to the latter's wishes, Mr. Mitchell withdrew the bill.

Mr. Buckner (Dem., Mo.), Chairman of the Banking and Currency Committee, introduced in the House on Monday his bill to suspend the coinage of the silver dollar, and moved its reference to the Banking Committee. That Committee has already taken a position in favor of the suspension of this coinage, and a reference to it would have been equivalent to an immediate favorable report. The friends of the silver dollar were strong enough to prevent this reference, and the bill was sent to the Committee on Coinage.

A sub-committee of the House of Representatives has been formed to investigate alleged irregularities in the office of the First Comptroller of the Treasury. The charges are made by J. J. Barker, a former clerk in that Department, who alleges that vast sums of money have been paid out illegally to officials presenting false and fraudulent bills.

In his annual report, Secretary Chandler, of the Navy Department, says the criticisms advanced against the new steel cruisers last year are based upon theories at variance with the progress of modern shipbuilding. The objections to the machinery in the *Chicago* are met by the satisfactory performances of the *Louisiana*, whose machinery is similar, and the peculiar features of the *Boston* are to be found in the Chilian vessel *Esmeralda*, which is the latest development of naval construction in England. The new cruisers will be able to overtake 96 per cent. of the merchant steamers of the world. The Secretary recommends the construction of seven modern cruisers annually for ten years, as a measure calculated to give the country at moderate cost a navy adequate to train its officers and maintain its safety and honor. He adds that the speediest and most economical way to remedy the defenceless condition of our coasts and harbors is to complete the partially constructed monitors.

One of the most important plans which leading Democrats have under consideration, contemplates securing the control of the United States Supreme Court before the close of the Cleveland Administration. The subject has not taken form in any bill, and it, perhaps, may not assume that shape at this session; but it has been considered in detail by prominent Democratic Senators. It is proposed that the court shall be increased to fifteen judges; that, for the purposes of all ordinary business, seven shall constitute a quorum; while for the consideration of all constitutional questions, twelve shall constitute a quorum. There is only one Democrat on the present Supreme Bench.

The United States Supreme Court on Monday rendered a very important decision in a Chinese case. The effect of it is that the restrictive Chinese law does not apply to Chinamen who were in the United States at the time the law was passed, and that these Chinamen can come and go, without obtaining certificates, as freely as residents of other countries. Californians say that the result will be to nullify the law, as the Chinese will have no difficulty in securing evidence to prove that they were in this country at the time, whether they were or not.

Among the prominent Republican candidates for Senator Lapham's seat in the United States Senate from New York are President Arthur, Levi P. Morton, James D. Warren, Wm. M. Evarts, and Chauncey M. Depew.

The full text of the Spanish-American commercial treaty in regard to West Indian trade was published in this country by the New York *Times* on Monday and Tuesday.

At a meeting of the Executive Committee of the Eastern Pig Iron Association, held in Philadelphia on Wednesday, the question of establishing a national club with protective principles, as opposed to the Cobden Club, of England, was considered, in connection with other business looking to the protection of pig iron from injurious tariff legislation. The club proposed is to be entirely non-partisan, and will, it is explained, "have in view the combination and unification of the influence and interests of American economic principles."

There were some signs of returning prosperity during the week. The North Chicago Rolling Mills resumed operations on Thursday, giving employment to 3,000 men. They will continue until February at least.

On Monday the Hopewell Mill, at Taunton, Mass., which has been shut down the past two months, started up on full time with a full complement of hands. The stoppage was to add new machinery and rearrange the old. The Bates Mills, at Lewiston, Me., which have been running on two-thirds time lately, started up on full time on Monday morning, with a reduction of 5 per cent. in the wages of the employees.

A large strike of hatters is in progress at South Norwalk, Conn. Trouble was apprehended on Friday and Saturday, but there were no riots.

There was a widespread gale from the Pacific coast in this country to the British Isles on Saturday and Sunday. Considerable damage was done to shipping.

Five masked men took possession of a train on the Little Rock, Mississippi River & Texas Railroad, five miles from Little Rock, on Saturday night, and, compelling the passengers to hold up their hands, robbed them and the express safe, the latter containing about $2,000. Bloodhounds were put on the robbers' tracks, and they were traced to Little Rock and arrested. Three of them have been identified.

Francis D. Moulton, the "mutual friend" in the Tilton-Beecher case, in which he was the chief witness for the plaintiff, died on Wednesday evening in this city, in the fiftieth year of his age. He was a native of this city, where he was graduated from the old Free Academy. His acquaintance with Mr. Beecher followed an intimate friendship with Theodore Tilton, who had been his classmate. His share in the famous Brooklyn trial gave him great notoriety for the time being.

Judge Seneca M. Dorr died in Rutland, Vt., on Wednesday, aged sixty-four. He was a prominent Free-soiler in the days before the war, and became one of the founders of the Republican party. Judge Dorr was influential in developing the great marble interests of Vermont. His widow is Mrs. Julia C. R. Dorr, the writer.

FOREIGN.

The Redistribution Bill passed its second reading in the House of Commons on Thursday, without division. The Franchise Bill finally passed the House of Lords on Friday without amendment, and the royal assent was given on Saturday.

In the House of Commons on Thursday Mr. Henry Campbell-Bannerman, Chief Secretary for Ireland, replied to a question as to whether the Government would prosecute the authors of articles in *United Ireland* inciting to crime and disaffection. He said the Government was awake to the evil of the articles referred to as published in *United Ireland*, but he doubted the wisdom of giving factitious importance to the paper by prosecuting it. An exciting scene ensued. Mr. William O'Brien, member for Mallow and editor of *United Ireland*, jumped to his feet and declared that the Chief Secretary was making an attack on him. The Speaker of the House thereupon interposed, and declared Mr. O'Brien out of order. Mr. O'Brien resumed his seat.

It is reported that Mr. Gladstone has offered to the Marquis of Ripon, the late Governor-General of India, the position of Viceroy of Ireland. If the Marquis accepts the office it will be necessary for Parliament to pass a bill to enable a Roman Catholic to hold the Viceroyalty.

The House of Lords on Friday, acting as the Supreme Court of Appeal, decided that the endorsee of a bill of lading was not liable for the freight.

The London *Times* on Saturday said: "The prospect that America will put a stop to the coinage of silver by repealing the Bland Bill has

unsettled business in India and caused Calcutta exchange to decline to 1s. 6⅞d."

The Rev. Edward Girdlestone is dead. He was born in London, September 6, 1805, and was educated at Balliol College, Oxford. After holding various positions in the Church, Mr. Girdlestone, in 1872, became Vicar of Olveston, near Bristol. He was the author of a volume of sermons entitled 'Reflected Truth,' and of many occasional sermons and pamphlets. Mr. Girdlestone was best known to the general public through his advocacy of the cause of the agricultural laborer, to which since 1867 he was constantly devoted. At a meeting of the British Association at Norwich in 1868 he made the first suggestion of an Agricultural Laborers' Union. He was a consistent opponent of ritualism.

Joseph Warner Henley, a British public man of wide reputation, is dead at the age of ninety-one. He was educated at Oxford. He did not enter public life until he was forty-eight years old, when he was elected to Parliament, and he remained in it until he was eighty-five. In 1852 he was President of the Board of Trade under Lord Derby.

The case of Captain Dudley and the mate of the wrecked yacht *Mignonette*, who killed the boy Parker to keep themselves alive, and against whom on November 6 a special verdict was found in accordance with the facts, was heard on Thursday in London by the full bench of the Court of Appeals. Lord Chief Justice Coleridge, in pronouncing the decision of the court, said all the judges agreed that the act of the prisoners amounted to murder, and the conviction must be affirmed. They were accordingly sentenced to death on Tuesday. The British Home Secretary has recommended Queen Victoria to respite them.

Earl Granville, the British Secretary of State for Foreign Affairs, has instructed Sir Edward Malet to adhere to his declarations in the Congo Conference, and to decline to admit that either the Powers or the Conference can interfere in that portion of the Niger territory which is under English protection.

The report of the Congo Sub-Committee made on Saturday proposed that the navigation of the Congo River and its tributaries, and also the traffic of side canals and railways, should be free. The only duties imposed shall be such as shall be sufficient to meet the expenses of navigation and traffic. The Powers may arrange a quarantine at the mouth of the Congo and watch the execution of the navigation statutes. The report also contained proposals of neutrality by Belgium and Germany. Mr. Kasson, United States Minister to Berlin, is preparing an elaborate project, dealing in a comprehensive manner with the question of the neutrality of the Congo basin. He will submit it to the Conference.

Baron de Courcel, the French delegate, presided at the meeting of the Committee of the Congo Conference on Saturday. Several of the technical delegates gave their opinions, and the discussion had lasted five hours when article 10 of the report was reached. Further discussion was thereupon adjourned till Monday. The report was debated by all as applying only to the Congo. The Niger was reserved for a separate discussion. Most of the members of the Conference were present, among them Count von Hatzfeldt, the Prussian Minister of State. Baron de Courcel made a forcible attack upon General Sanford's railway scheme, in the course of which he said the Conference had no power to grant concessions. General Sanford was at once aroused by this, and in an indignant manner expressed the hope that no one suspected him of being personally interested in the proposed railway. Baron Lambermont, of Belgium, supported General Sanford; but as Baron de Courcel and other delegates stated that they had no instructions to act in this matter, and that it would have to be postponed, General Sanford's proposal fell through.

The Congo Committee agreed on Tuesday that the African International Association shall have control only over the navigation of the Congo River; that England shall have control of the navigation of the lower, and France the control of the navigation of the upper, waters of the Niger River. Both these governments have bound themselves by a formal declaration to uphold freedom of navigation. Any other Power which may acquire territory in that country will be required to undertake a similar obligation. The Committee accepted England's proposals regarding the Niger without reservation, but subject to the sanction of the Conference itself. The sanction is regarded as certain to be given. England's position on the Niger is therefore left altogether unchanged.

Henry M. Stanley opened the sitting of the Geographical Society at Edinburgh on Thursday, and subsequently addressed the Chamber of Commerce and the Edinburgh Literary Association.

It is said that the Porte is negotiating with England with regard to Egypt, upon the basis of British occupation for fifteen or twenty years, a recognition of the Sultan's sovereignty, and a capitalization of the Egyptian tribute so as to leave a surplus for Turkey.

A messenger who arrived at Dongola on Sunday in eleven days from Khartum said that the Mahdi was within three hours' march of Khartum. General Gordon sent General Kashamelmoos, with five steamers and 500 men, to harass the rebels on the Nile as far as Shendy and to capture produce. He shelled the inhabitants out of that place and took many prisoners. Small parties of rebels make daily attacks on Khartum, but are invariably repulsed with heavy loss. The Mahdi fears to make an open attack lest it should result in great slaughter of his followers.

It was reported at Dongola on Monday that the Mahdi had accepted the challenge to his prophetic powers proposed by General Gordon. It is asserted that he tried to make his followers walk across the Nile, and thereby lost 3,000 men.

A White Book was presented to the German Reichstag on Friday, which gives an account of the foreign affairs of the Empire. Such a book is unique in the history of Germany. It consists of fifty-five closely-printed folio pages, and is taken up principally with the affairs of Germany on the west coast of Africa. It covers the period between April 15, 1883, and October, 1884, and gives full details of the annexations of territory made by Dr. Nachtigal, the special German Commissioner for the west coast of Africa, along with the vain protests of Mr. E. H. Hewett, the British Consul at Old Calabar. Commenting on it, the London *Times* said: "It must be admitted that this first stage of Prince Bismarck's colonial policy has been marked by a promptness, thoroughness, resolution, and vigor unsurpassed at any period of his career."

In the German Reichstag on Wednesday Prince Bismarck declared that the introduction of Dr. Windthorst's motion, to repeal the law empowering the Government to expel or intern priests for illegally exercising their functions, after its recent rejection by the Bundesrath, was disrespectful to the Bundesrath. Prussia would not consent to repeal the law, at least not for the Polish districts. The negotiations between Prussia and the Roman Curia since 1878 had been practically without result, although Prussia had granted various concessions. These negotiations were still pending. The Government could afford to wait. It would only make further concessions in case concessions were made by Rome with a view to the restoration of peace. Prince Bismarck said that he was rejoiced to hear Dr. Windthorst state that he was opposed to a Parliamentary Government. "If it were possible," added the Chancellor, "for the Government quietly to resign and say to the majority, 'Here are our portfolios; be good enough to continue the despatch of public business,' then matters would be even worse than now. If the majority, consisting of the Conservatives, the Centre, with its adherents, the new German Liberals, the Volkspartei, and the Social Democrats, had to reconstruct the Government, the result would be a ministry like that of England under Mr. Gladstone." In spite of Bismarck's opposition the motion to repeal the law was carried by a vote of 217 to 93. This implies a complete failure of the negotiations between Prussia and the Vatican.

The Berlin *North German Gazette*, Prince Bismarck's organ, explains that his remarks were not intended as a special criticism of Mr. Gladstone, but of the system of coalition ministries. Such a ministry, he thinks, is always impeded by the necessity of respecting the opinions of the different parties entering into the coalition.

During a consideration of the Senatorial Reform Bill on December 2, the French Chamber of Deputies, by a vote of 372 against 135, carried an amendment which places the members of the Senate upon the same footing as members of the Chamber of Deputies, regarding incompatibility between membership of Parliament and the holding of other public functions. The Deputies also, by a vote of 260 against 246, adopted an amendment providing for the election of Senators by universal suffrage and *scrutin de liste*. Both these votes were Government defeats, and a Cabinet crisis seemed imminent.

The French Cabinet were in consultation on Wednesday. At the earnest request of President Grévy, the Ministry abandoned their intention of resigning. The Council during its session decided to resubmit the Senatorial Reform Bill to the Senate, and demand the adoption of the scheme approved by the Commission of the Chamber of Deputies.

The French Senate on Thursday passed the vote of urgency on the Senatorial Reform Bill, and referred it to a committee. On Friday, by a vote of 111 to 103, it decided to postpone the election of life Senators till after the Reform Bill had been disposed of.

The French Senate rejected on Sunday two amendments to the Senate Reform Bill, one of which proposed the election of Senators by universal suffrage direct, and the other to elect them through delegates. Prime Minister Ferry strongly opposed the first amendment. On Monday the Senate finally passed the bill. The Chamber of Deputies on Tuesday passed the bill without amendment, which amounts to a vote of confidence in the Government.

An Anti-Protectionist League has been formed in Paris, its special aim being to agitate against the proposed duties upon corn.

It is said that the French fleet at Formosa is cholera-stricken.

The Italian Minister of Finance announces that notwithstanding the adverse influence of the cholera epidemic, the budget will not show a deficit. He estimates that the receipts will in future suffice to meet both ordinary and extraordinary expenses without recourse to loans. The economic condition of the country is continually growing better, leading to the hope that the Government will be enabled to convert the redeemable debt.

M. Schenck has been elected President of the Swiss Confederation for 1885, and M. Deucher Vice-President. Both are Radicals.

Meetings have been held in Halifax, N. S., and St. John, N. B., urging the Dominion Government to rearrange a reciprocity treaty on fair terms with the United States, and to make efforts to secure advantageous trade relations with the Spanish and British West India Islands. At Gloucester, Mass., a meeting has been held to protest against the free admission of British-caught fish into our markets under the proposed reciprocity treaty.

THE CANAL COMPLICATIONS.

It appears from the President's message that he has recently negotiated a treaty which gives our Government the right to construct a canal, railway, and telegraph line across Nicaraguan territory; and the Chamber of Commerce of this city has, upon his own suggestion urged Mayor Edson, to get the mayors of "other seaboard cities" to send delegates to a conference to agitate the subject. An agitation can have only the object of bringing pressure to bear on the Senate, as the treaty now depends on the ratification of that body, and seems a very questionable proceeding. The Boston *Advertiser*, in a very temperate article, calls attention to various difficulties in the way of a ratification of any treaty with Nicaragua such as the President describes, which are quite enough to show that "pressure" is very inadvisable under the circumstances, and that the mayors of the seaboard cities had better let the Senate alone for the present. One great obstacle to a treaty is that our rights and duties under the Clayton-Bulwer treaty of 1850 are by no means yet ascertained to the satisfaction of both parties. The long correspondence between Great Britain and this country on the subject of the canal has resulted in nothing definite. The Clayton-Bulwer treaty provides that neither the United States nor Great Britain shall obtain any *exclusive* control over any highway across the isthmus. Now the plain truth about the matter is, that down to the time when Mr. Blaine became Secretary of State, this country never dreamed of withdrawing from the Clayton-Bulwer treaty; and the only ground which the ingenuity of Mr. Frelinghuysen has enabled him to find for any authority or right in our Government to dig a canal of its own, is that, the treaty, having been made in 1850 with reference to a pending scheme for the construction of a canal, is now obsolete, and that we consequently cannot be bound by it. England, however, insists that the treaty is in full force and effect, and in confirmation of this view quotes Article VIII. of the treaty itself, which refers to the two Governments as desiring, in making the treaty, "not only . . . to accomplish a particular object, but also to establish *a general principle*," and Article VI., "The contracting parties in this convention engage to invite every State with which both or either have friendly intercourse, to enter into stipulations with them similar to those which they have entered into with each other," etc. This looks certainly like an agreement intended to be permanent, and if it has by lapse of time and change of circumstances ceased to be binding, it is our duty to show this. Treaties are not to be lightly torn up; and for the administration of a retiring party, after such a correspondence as has passed between Earl Granville and Mr. Frelinghuysen, to rush through a secret treaty in violation of an existing one, and that against the repeated and emphatic protest of the other party to it, not only would be an act very doubtful as a matter of international morals, but would impose upon the incoming administration burdens and embarrassments from which it ought to be free.

It must be remembered that the dispute about the Clayton-Bulwer treaty is not a mere lawyers' question of the force and effect of certain words in a treaty. It involves a consideration of the international policy of two great commercial nations with regard to a marine highway. We have been put by our diplomacy—it makes little difference who is responsible for it—in the position of insisting on withdrawing from a treaty providing for the joint protection of the highway, in order that we may protect it ourselves. Are we not called upon, by every consideration of decency and respect for the public opinion of civilized states, to show why we think we can protect it better alone than we can jointly with Great Britain and other commercial nations? Or are we not bound at least to show that we have such a direct national stake in the highway that we cannot afford to allow any other nation to touch it? We might show this, for instance, by proving that the canal would be only or mainly used by American ships; but we know very well that we could not do this, for really English ships would do an enormous part of the carrying trade; and the canal is not designed for American or English commerce, but for the commerce of the whole world. The object of the Clayton-Bulwer Treaty was, the English Government says, to prevent the very thing we are now trying to do—the acquisition by a single nation of what was intended for all mankind.

Under these circumstances, our talk about assuming the duty of protecting the canal and preventing England from helping us will have a very insincere sound. To most people it would seem as if the Clayton-Bulwer Treaty were a benefit to us. It neutralizes the canal and exempts commerce in it from all the dangers of war. The only practical effect of a single country undertaking to do this would be that, in case of war between the two, she would be able to seize and close up the canal, so that our demand to protect it seems very like a cover for a scheme against the general commercial interests of the world. But this brings us face to face with the most serious obstacle of all, and that is that we have no navy. We are now actually insisting on furnishing the world with a marine highway and promising to protect it, and police it, and neutralize it, when we are not a naval power, and refusing the help of a great naval power with whom we have agreed to do the work jointly.

In the foregoing remarks we have attempted to put as strongly as possible only the unanswered objections to the abrogation of the Clayton-Bulwer Treaty, and to call attention to the necessity of answering them, if they can be answered, and the positive duty of all Democratic Senators of pausing before they hand over, by the passage of a new treaty, such a heritage of embarrassment and trouble as this dispute would surely become to the incoming Administration.

GOVERNMENT TIMBER LANDS.

The protection of timber-growing upon the public domain has at last become a cause of anxiety to the Government. President Arthur has called the attention of Congress, in three successive messages, to the necessity of protecting the Government forests; and the Commissioner of the Land Office devotes a considerable portion of his last published report to the same subject.

The Government manages its forests badly. It sells to speculators for two dollars an acre land covered with timber worth often several hundred dollars an acre. Millions of dollars are lost to the Treasury in this way every year. It allows itself, moreover, to be robbed in all directions of the best and most valuable timber. Timber-thieving was partially checked under Mr. Schurz's administration of the Interior Department, but it has always gone on, and will always be practised as long as the present laws remain in force. It has been long openly carried on in Florida. It is a notorious fact that the great saw-mills upon Pearl River were entirely supplied for years with logs stolen from Government land in Mississippi. The Government timber sales in Minnesota have always been a great public scandal, in which some of the most astute and powerful politicians of the Northwest have been involved. The Government has been cheated in the disposal of the red-wood lands of California, which foreign and home corporations have been busy during the last year or two in securing through fraudulent entries. In fact, wherever there has been Government land covered with timber, there have been fraudulent entries, false swearing, and stealing, often aided by the very officials who are paid to protect the property of the United States. These are facts, widely and generally known by every one who has had occasion to examine the workings of the land laws as applied to timber lands.

The Commissioner of the Land Office now recommends "some modification of the laws, by which remaining forests may be better preserved, or a more adequate revenue derived from their sale." "I am of opinion," he goes on to say, "that such lands should be reserved by law from ordinary disposal, and sold only after appraisement and upon sealed bids, at not less than the appraised price." These are wise and sensible recommendations. It is doubtful, however, if Mr. McFarland fully comprehends the relations of the Government forests to the development of the country, or understands all the bearings of the case. The Government forests can only be wisely considered under two distinct heads, namely, (1) forests valuable for the material they contain or may contain; and (2) forests whose first and greatest value to the country is a protective one. Many of the Government forests belong to this second category. They control the flow of great rivers, and maintain the slopes of important mountains. No amount of material which such forests might contain would justify their destruction under any sound and economic administration. If they are cut, it should be done carefully and under some well-considered system of management. Forests of the first class the Government will do well to dispose of. Forests are difficult things to manage, and the Government should not engage in the business of raising timber, or waste its energies in protecting property which private owners can protect more cheaply and effectually.

And here it must be remembered that the forests which will probably be found desirable for the Government to retain under its direct control, are the least valuable as sources of lumber supply. Those which are grouped about the headwaters of the Missouri

and the Columbia, the Rio Grande, and the Arkansas are priceless in the influence which they exert; as bodies of merchantable lumber their value is slight. What should be done, if Congress will give the subject the consideration it deserves, is to determine what portion of the public domain should be retained in permanent forest. This being decided, the remainder of the Government forests should be surveyed, and, the quantity and value of their timber having been estimated, sold as recommended by Mr. McFarland. As a simple business precaution the timber should be estimated. Sales should not be made upon insufficient information. The time has passed when the Government of the United States can afford to sell to speculators 10,000 feet of white pine, or 100,000 feet of California red-wood, for two dollars. Actual settlers and honest emigrants, for whose benefit our land laws have been framed, are not the real beneficiaries under the practical workings of these laws, and there is no valid reason why the Government should not obtain something like the market value for what it wants to dispose of.

It is doubtful, however, if the Interior Department is equipped for dealing properly with this question. The location of the permanent Government reserved forests is a scientific problem, and it can only be wisely determined by scientific men, to whom should be left also the preparation of a scheme for the subsequent care and development of all such reserved forests, and whose opinions in regard to the best methods for disposing of such portions of the Government domain as it is unwise to retain are worth considering. The President, whose interest in the subject is real, could well be authorized to appoint a commission to consider and report upon the general subject of forest preservation; or the whole matter might be referred to the National Academy of Science—a body of men thoroughly capable of giving sound advice upon it. Its consideration cannot be postponed indefinitely. Fires and advancing civilization are every year making greater and greater havoc in the far Western forests. In a very few years there will no longer be forests upon the Western mountains. These forests have grown slowly, and often with the greatest difficulty; once destroyed, they will never grow again, and the opportunity to establish forest reserves and insure the irrigation of vast territories will be gone forever. Delay has already been carried to the utmost limits of safety.

RECIPROCITY IN COPYRIGHT.

The copyright agitation has begun this year by a recommendation in the President's message on the subject, which will, we take it, be followed up actively by Mr. Dorsheimer. No matter whether his bill can be passed at this session or not, it is only by keeping it before Congress and the public that the agitation can be made effective. The *Publishers' Weekly* says that "it is to be hoped that the mistakes of the previous agitation for this bill, in which publishers were told to keep 'hands off' the entire question, will not be repeated at this session, but that all interests that can be marshalled in behalf of an adequate measure will be enrolled in its support." In order to correct this mistake, it brings forward a draft of a bill which it supposes will harmonize all interests, as follows:

Section 1. The privileges of copyright to be extended to foreign authors, or their assigns, for the same periods (including renewal) and on the same conditions as to native authors, subject to the provisions or limitations hereinafter set forth.

Section 2. Such copyright to be granted only on works whose first edition is published in the country of origin on or after July 1, 1885.

Section 3. Such copyright to be granted only when claimed and declared by registration at Washington, prior to publication in any country, on payment of the usual fee.

Section 4. *Such copyright to be granted only to the citizens of such Governments as shall extend the privileges of copyright to American citizens, to the satisfaction of the President, as declared by executive proclamation.*

Section 5. *Such copyright to be granted only on works manufactured in the United States within six months from the date of first publication in any country, and no importation of copies or editions of foreign manufacture to be permitted except by consent of the author or his assigns.*

Now, we by no means ask publishers to keep their "hands off"; on the contrary, we ask them, if they do not want to see their trade in foreign copyrights ruined altogether by pirates, to unite with us in urging a simple authors' copyright bill, like Mr. Dorsheimer's, and trusting to their own skill and forethought, and enterprise and capital, to enable them to find a market for their books, whether in England or in this country. We further respectfully suggest to them that, if possible, they should get the *Publishers' Weekly* to keep its "hands off" until it acquires more accurate knowledge of the matter than it now seems to possess.

What the advocates of compromise plans like the above always insist on overlooking is the *reason* which led to the failure of the Harper-Clarendon treaty. That treaty embodied the principle of requiring manufacture in the United States, and the *Publishers' Weekly* insists that it was defeated by the wicked English publishers, who, it solemnly declares, had "much less right than American publishers to meddle in the matter." Now, undoubtedly, some of the English publishers did object, and it is the business of those who undertake to pass an international copyright measure, to remember that they will always object to any measure which makes the enjoyment of copyright dependent on the place of manufacture being a foreign country. To say that they have no "right" to object to the negotiation of a treaty which their own Government is asked to make in the interest of foreign publishers, is simply silly. Of course they will object, and object strenuously, and this brings out in a strong light the fundamental difficulty in making any such arrangement—that it is an attempt to negotiate a protectionist treaty with a country which does not recognize the protective principle. England, it should be remembered, has made ample provision for international authors' copyright with any country which will grant reciprocity. The moment the Dorsheimer bill passes, it is adopted under the English statute as an act of reciprocity, and we have authors' copyright established in both countries. But the English laws make no provision for publishers' copyright, and to ask them to adopt such a measure as the Harper-Clarendon treaty is to ask them to violate the principle on which all their copyright legislation is based, and that for the purpose of enabling American publishers to secure the English copyright market. It is strange, and can only be the result of ignorance, that writers who discuss the subject do not see that the principle of protection cannot be introduced as part of a reciprocity statute, any more than it can as part of a reciprocity treaty. Of course we can pass an act giving English authors copyright here on condition that they manufacture here; but as the Authors' Copyright League is supposed to be working in the interest of American as well as English authors, we hold that authors should have nothing to do with the passage of such a statute. What they ask for is reciprocity—*i. e.*, justice between the two countries. They do not want, as the *Publishers' Weekly* says they do, "as much copyright as they can get." They want the right of a literary man to the results of his labor recognized everywhere, whether he be an American or an Englishman. We believe that nine-tenths of the publishers of the United States are fully in sympathy with these views.

THE EDUCATION OF REPUBLICANS.

The "Blaine and Logan Club" of Nyack, in this State, last week converted itself into a "Young Men's Republican Club," and hired rooms which are to be open every evening, and well supplied with "Republican literature," the leaders in the movement being, we are told, of the opinion that "the best way to make Republicans is to educate them in the doctrines of the party." This is undoubtedly, as far as appears on the surface, a very sensible course. What they mean by "Republican literature" we do not well know; but if there be such a thing to be had, it is undoubtedly the thing to feed voters upon in preparation for 1888. During the late canvass nothing of the kind was to be procured for love or money. There was plenty of "Blaine literature," showing that the existence of the American Republic had come to depend on its having Mr. Blaine for Chief Magistrate; but there was no literature preaching party doctrines of any sort. Nor are we quite sure that there are any Republican doctrines properly so called. None were produced during the late canvass from any authoritative source. Mr. Blaine went about the country recommending a very high tariff, or, in other words, the tariff as it is; but then the Convention which nominated him pledged the party "to correct the inequalities of the tariff, and reduce the surplus." The Democratic platform recommended the same thing in almost the same terms. So that while there may be said to be a distinctively Blaine view of the tariff, there cannot be said to be a distinctively Republican view. This would be true, even if the Republican party had come into power as a high-tariff party. It did nothing of the kind. It created a high tariff solely as a means of raising revenue for the expenses of a great war. The Nyack club will therefore have much difficulty in covering their tables with Republican literature. But they can easily get over this difficulty by covering them with good books and periodicals on general

questions of government, such as taxation, the civil service, the administration of justice, the best means of preventing corruption, etc.

A wholly different policy seems to have been marked out by some of the other Blaine and Logan clubs. What occupies their minds just now is the need of keeping the Republican party small, select, and compact. They do not want voters, they say, so much as reliable men. There is one of these organizations in Plainfield, N. J., which resented so bitterly the support given to the St. John ticket by a number of Republicans who could not swallow Blaine, that they refused to receive them back on any terms in preparation for the city election. The consequence was that the outcasts started an Independent municipal ticket, which drew enough votes to give the city to the Democrats for the first time in its history. The "Young Men's Republican Club" in this city engaged in work of the same purifying character last week. They "scored the *Times* and the *Evening Post* in the most scathing terms," and gave strict orders that nobody should be admitted to the organization hereafter who voted against Blaine and Logan at the November election. Somebody present argued, in opposition, according to the *Tribune*, that "it was necessary to bring into the party all the voters that could be obtained," but the majority held that "a small organization which could be depended on, was better than a large one composed of many who would turn traitors whenever their own preferences were not consulted."

It will thus be seen that it is really not voters the Republican party needs; that it has become now something more nearly resembling a social club or a Congregational Church than a political party. In fact, the managers are apparently going to be more strict about admission than any church or club has ever been. No club or church, to our knowledge, has ever made admission dependent upon one's thinking well of one particular man, or has ever argued that anybody who does not like this man must be unfit for membership.

We would suggest that under these circumstances separate polling places at elections be prepared for Republicans, where the inspectors can examine voters' references. As the number of votes cast will be of no importance, any needed amount of time can be taken for inquiry into the voters' antecedents and general disposition. No good Republican will wish hereafter to win by a majority not composed of the "best people." In fact, the party is apparently going to make a great experiment in government, somewhat like the donkey races in which every jockey rides another man's ass, and the one who gets in last takes the prize.

Here is a programme which strikes us as just the thing for the Blaine and Logan clubs during the next four years:

"Having in one way or another hit on a Presidential candidate, for the first time in twenty-four years, who divided the party on the question of his personal honesty, and brought on it its first defeat, let us stick to him during the next four years as our most precious possession. Let us pretend, in explanation of our defeat, that it is a great thing for a party to be in a minority at the polls, and that the mission of the Republican party is really to make parties small, and select, and weak, rather than large, promiscuous, and victorious. Let us, therefore, persecute every Republican who did not like James G. Blaine, no matter how much he may agree with us on any other subject, and drive him away so that he shall not presume to vote our ticket next time. Above all, let us keep Blaine before the people as our next candidate, and pretend that he is the real party leader, and that it is treason to vote for anybody else. In this way we shall prevent the intrusion of outsiders into the party, as well as the return of deserters. The inconveniences of a crowded party, such as in getting your hat and coat when going away, are well known, and have of late caused much complaint. It cannot be too widely known, therefore, that no converts any more than penitents are allowed here. It ought also to be borne in mind that 'Republican literature' is hereafter to consist simply of 'The Life of James G. Blaine, Blaine's 'Twenty Years of Congress,' Blaine's Letter to William Walter Phelps about his marriage, and Blaine's Proposal to distribute the whiskey tax among the States, and Blaine's Proposal to pay the debt of West Virginia out of the National Treasury."

SOME CURIOUS WORKINGS OF THE FRENCH TARIFF.

THE tariff trouble in France is taking an extraordinary turn, but one which is almost sure to come, sooner or later, in every protectionist country not blessed, as the United States are, with an immense quantity of fertile and unoccupied land. As protective tariffs usually run, at first only some industries are protected, and those apparently prosper under it. But, by and by, all industries insist on having a share, and then it is discovered after a while that protection for all means protection for none. In England the system broke down under its own weight forty years ago. The manufacturers found out that if the farmers were allowed to have protection, too, protection was of no use. So they insisted on free trade in food, and free trade in food soon brought free trade in everything.

In France and Germany things are nearing the same course. The farmers are in both seeking a share in the protection enjoyed by the manufacturers, and the result will be, doubtless, after a period of suffering more or less prolonged, to bring the whole structure down about their ears. In France the manufacturers have long had protection, but the farmers had but little at any time, and lately even less. Now, however, the pressure of American competition is forcing the farmers to demand a share of it, and of course the price of food cannot be raised or kept high without cutting proportionately into the profits of the manufacturer and the wages of the artisans, among whom there is in the large towns at present, and particularly in Lyons, a great deal of distress. The result is, that there are two most extraordinary agitations going on in different parts of the country. The object of one is to have the price of wheat made higher by law; the object of the other, to have the price of bread made lower by law. The farmers ask for a smart duty on foreign grain; the workingmen in the great cities ask to have the price of bread kept low by municipal ordinance. The agricultural societies in the north, east, and west, everywhere in fact but in the great wine districts, are asking for higher import duties on cattle, grain, and flour, in order to make all food raised at home dearer.

On the other hand, the Municipal Council in Paris the other day, after having in vain tried to induce the bakers to lower the price of bread voluntarily, passed an ordinance directing the Prefect of the Seine to fix the price by executive order, the difference between that and the cost, of course, to be made up to the bakers out of the municipal treasury. The Prefect has intimated that he will pay no attention to the ordinance, but it is considered grave enough by the gravest and most practical of the Republican journals—*Le Temps*—to merit a series of elaborate articles on the expenses and profits of the bakery business. The fixing of the price of bread by municipal ordinance is not a new thing in France, but it would be a new thing to have it accompanied by an agitation to keep the price of food up by raising the duties on foreign products.

The Government is a good deal puzzled to know what to do in the matter of the import duties. The Minister of Legislature says he thinks an ad-valorem duty of 10 per cent. on grain will do. But a great meeting of farmers, held recently at Nancy, drew up a petition in which they asked for 25 per cent. on wheat, 40 per cent. on flour, 20 per cent. on oats, and 10 francs a head on cattle, and they formed a farmers' league to urge the matter. The Council-General of Aisne has addressed the Ministry in much the same terms, and the movement is spreading all through the agricultural districts. On the other hand, the great commercial and manufacturing towns are naturally taking the alarm. The Chamber of Commerce and the Municipal Council of Lyons and the Chamber of Commerce and the Syndicate of Produce-Dealers in Marseilles have all sent up protests against the raising of duties. A league has also been formed at Bordeaux to fight the project. The Chamber of Commerce at Marseilles points out that grain and flour give that port a third of its business. The League of Bordeaux declares that wheat is higher under the free-trade régime of the last twenty years than under the sliding scale which was in force from 1841 to 1860, the reason being, they say, "an economic law, which provides that abundance, by stimulating consumption, prevents the accumulation of surpluses, and the consequent lowering of the price." It adds that a high duty on wheat would be ruinous for importers, shippers, brokers, railroad companies, and boatmen.

The whole affair illustrates admirably the instability of the protectionist régime. No equilibrium is ever possible under it. No one industry can long be protected without protecting all; and when all are protected, each finds that it is no better off than before, and clamors for more protection, and, if it gets it, is again soon compelled to divide with all the others. Then each soon begins to groan again under the burdens imposed on it by the protection given to the others, and there is a furious row, and the free-traders begin to chuckle, and propose a settlement by a general lowering of duties all round. The distress continues and increases,

and the protectionists account for it by ascribing it to the uncertainty and alarm caused by "these attacks on the tariff," and say all would be well if nobody would attack the tariff. But in the meantime nobody is able to suggest any way of preventing attacks on a high tariff without a change in human nature, and this is beyond legislative power.

SURRENDER, OR COMPROMISE?

LONDON, November 25.

THE last ten days have presented a series of surprises and novel combinations unprecedented in the memory of living politicians. In my last letter I described the position of the two parties toward one another in the matter of the Franchise Bill, the Liberals insisting that it must be kept separate from a bill redistributing seats and be passed at once, and the Tories demanding the immediate introduction of the Redistribution Bill, in order that the two measures should be passed together. Moderate men on both sides desired a compromise and pacification. Extreme men on both sides shouted for battle—the Tories, in order that they might compel a dissolution of Parliament; the Radicals, in order to use the popular excitement against the House of Lords for the purpose of overthrowing that Chamber. The result of an election in Warwickshire had elated the Tories so much that warlike counsels gained the upper hand among them, and those who hoped for peace had begun to despond.

In this state of facts Mr Gladstone suddenly came forward with a flag of truce. In Parliament on Monday, the 17th, he offered either to bring in forthwith a Redistribution Bill, if the Tory leaders would give him adequate assurances that they would pass the Franchise Bill (which was then awaiting its second reading in the House of Lords), or to communicate with them privately regarding redistribution, and, in fact, avail himself of their aid in settling the measure before it was introduced. He undertook at the same time to make the passing of the Redistribution Bill through the House of Commons a "vital question," *i. e.*, to resign or dissolve Parliament if he failed to pass it in 1885. The largeness of this offer took the country and the Tory party by surprise. It went, or seemed to go, much further than any of the previous suggestions thrown out by the Government, for it gave the House of Lords and the Opposition chiefs complete security against what they had always professed to fear—viz.: the passing of an unfair scheme of redistribution as soon as the Franchise Bill had become law. The fighting Tories would have preferred to refuse it and compel a dissolution. But the more moderate section compelled them to accept the proposal, and they yielded, because they knew that a large part of the Tory Peers, already wavering in their allegiance to Lord Salisbury, would have broken away from him had so liberal an offer been rejected. Accordingly the armistice was concluded. On Tuesday, the 18th, the Tory party held a great meeting of Peers and members of the House of Commons at the Carlton Club, where, with scarcely a vote of dissent, it was agreed that their chiefs should enter into the private communications Mr. Gladstone had offered, and that if these communications resulted in an agreement on the principle of redistribution, they should allow the Franchise Bill to pass through the House of Lords; the Redistribution Bill being, as Mr. Gladstone suggested, at the same time read a second time in the House of Commons, so as to bind that body to a general acceptance of its provisions. Since the 18th things have gone on smoothly. Mr. Gladstone, with five members of his Cabinet, has had a private conference with Lord Salisbury and Sir Stafford Northcote, and yesterday, in order to enable further conferences to be held without the interruption of proceedings in Parliament, the House of Commons adjourned till December 1st, by which day it is supposed that the Redistribution Bill may be ready.

Such a strange and unprecedented phenomenon as the leaders of the two great hostile parties laying their heads together, to settle a measure over which they were expected to engage in mortal combat, has excited endless criticism, and been received with very different feelings in different quarters. Most of the Tories are, and all of them profess to be, well satisfied with what they call the surrender of the Government. They are getting what they have always demanded—the production of the Redistribution Bill before the Franchise Bill passes. They have obtained a virtual admission that the Lords were right in insisting upon its production. They have secured a voice, and even a decisive voice, in the settlement of the redistribution scheme, and they have averted, or at least postponed, that popular campaign against the Upper House which a general election on the question of the Franchise Bill would certainly have involved, and which might have ended in its fall. These are no small gains, and while they have put the Tory party into good humor, they have strengthened Lord Salisbury's hold upon it, for the concessions of the Government are attributed to his firmness.

Needless to say that the good humor of the one party to a contest means the ill humor of some one else. There is much ill humor among the Radicals. They, too, talk of the surrender of the Government, and bitterly complain that Mr. Gladstone, after engaging them in a struggle with the Peers, should now be consenting to march his party under the yoke. That deep, sullen dislike to the Upper House which has long been latent among the masses, had begun to flame out during these latter months of agitation, and promised to consume them utterly. It is now dampened, and the House of Lords, so far from being abolished, seems to them complimented and strengthened by the concessions which the Government has made. This is the main source of Radical displeasure. Another is found in the fear that a Redistribution Bill concocted in conclave with the enemies of the people must needs prove a rotten and worthless measure. Better, say they, a good hearty fight with the Tories, even prolonged for some years, which should end in a thoroughly democratic rearrangement of constituencies, than a sorry compromise under which the Tories will be nearly as well off as they are now. These feelings prevail largely among the working classes all over the country. They have found expression in the resolutions of a number of clubs, and would have been expressed far more generally but for the immense deference for Mr. Gladstone, and the impression that he is more likely to outwit others than be outwitted himself. Among the Radicals in the House of Commons the disappointment is less marked, though it exists, and it chiefly springs from the sense that private members are, by this compact between the chiefs of the two parties, being ousted from their legitimate rights of criticising and amending the Redistribution Bill when it appears. The feeling is natural, nor wholly groundless, because, of course, when the details of the bill come to be debated in Committee of the Whole, attempts at amendment will be met by the plea that the bill is the result of a compromise, and the Tory chiefs will call on the Ministry to observe the compact, and reject any suggestions which could be held to disturb even its smaller points. However, the great majority of the Liberal party in the House of Commons acquiesces in the conduct of the Government, because it has had occasion to value Mr. Gladstone's sagacity and skill, and because the belief that the Tories are as much disposed as the Government to base the reallotment of seats upon population, makes it trust that a good bill will emerge from the conferences now in progress.

Has there really been a surrender, as the Tories proclaim and the working-class Radicals dolefully admit? Do the laurels remain with the House of Lords, and is their position strengthened? It is too soon to pronounce, until we see what kind of redistribution scheme is propounded. But even admitting that Mr. Gladstone has yielded to the Lords in form and externals, there are reasons for holding that it was good policy to do so. What was the alternative to such a compromise as he has offered? Either the dissolution of Parliament or the creation of a sufficient number of new Peers to turn the vote of the House of Lords in his favor. It is not certain that he could have obtained the latter from the Queen—it is indeed much more probable that she would have refused to employ an expedient never used but once since 1688, although the threat of it proved efficacious in 1832. As to the former, a dissolution of Parliament would have involved great loss of time to Parliament, with great loss of money to its members, and would have accelerated that Irish crisis which the return to Westminster of Mr. Parnell with seventy members behind him is expected to bring about. Besides, it is far less certain than the Radical clubs suppose that it would have strengthened the Government, and hastened the settlement of Parliamentary reform. The tide would have run pretty strong against the Tories in the boroughs, and especially in the large boroughs, but then the borough members are mostly Liberals already. In the counties the Liberals would, under the present restricted suffrage, which the farmers do not wish to see extended so as to include the laborers, have lost many seats, some say as many as twenty-five, counting fifty votes on a division. This would have left them still superior in strength to the Tories, but, taken along with the losses to be expected in Ireland, inferior to the Tories and the Parnellites combined, and therefore unable to command a steady majority in the House of Commons. The House of Lords would of course have been greatly damaged by the outburst of popular anger evoked against it. But that is not a result which the Cabinet, or at least the majority of the Cabinet, are anxious for. They have no stomach for a fight with the Lords, because they know that it would be a long fight, because they have no scheme for reforming that House prepared, because they fear that a number of their more timid supporters would fail to follow them in an attack. There are therefore reasons of party interest as well as of patriotic moderation by which the Government may justify their surrender, though certainly it is odd to contrast their pacific language now with the bellicose language in which many of them indulged during the autumn. The Tory newspapers do not fail to underline this contrast, and the enjoyment of it does something to reconcile the more ardent Tories to the delay of that dissolution of Parliament which hangs like a glittering prize before them.

In reality, the Government have surrendered less than appears. They have lowered their banners, silenced their bands, unloaded their guns, but they are marching onward none the less. In all human probability, the Liberal party will be stronger after the passing of the Franchise and Redistribution Bills than it is now; so that for the sake of this substantial gain the leaders can afford to be jeered by their antagonists and reproached by discontented followers. I must not speak as if the compact were certain to be carried out, and the bills certain to be carried through, for there are still difficulties

ahead which may upset everything. But the wisest heads, and among them Mr. Gladstone, whose prescience is rarely at fault, believe that the next August will see both bills passed, and next January year see a general election held on the new system.

The success of the negotiation so far is an extraordinary evidence of his power over his party and the country. No other leader could have ventured to stoop to such concessions, because no other leader is known to have such pride and such fighting force. He is strong enough to yield where a weaker man would have to sustain his character by resistance. No one else could have induced his followers in the House of Commons to surrender their rights of discussing and improving a measure of this kind so absolutely into his hands, or have imposed silence on the deep and general disgust of the Radical party among the masses which is commanded in the midst of a bayonet-charge to halt and pile its arms, and which finds the hated Peers getting, as it fancies, all that they had ever asked. Mr. Gladstone seems to be himself a little surprised at his own success in thus carrying his party along with him. He is certainly a master in the art of inspiring loyalty. He wears an air of satisfaction in the course he has taken, of seeming always more than equal to the dangers of the situation, which goes as far to fill his party with confidence as does their sense of his superiority in ingenuity and dexterous tactics to all his antagonists and all his friends. He is like one of those old naval heroes whose spirits rose higher the harder the wind blew. There is, however, something else which this new departure in our constitutional life illustrates, and that is the strength of party bonds, and the diminished importance and independence of Parliament. That the Prime Minister and the leader of the Opposition, after denouncing each other through the autumn, should settle over a table in private a whole new system for representing the people in Parliament, and then produce it to be passed through both Houses as their joint work, seems as strange a transformation as any in a Christmas pantomime. That both Houses should be prepared to acquiesce, resigning their own functions to their party chiefs, is still stranger. Such an according between two high contending powers is not likely to recur. But the habit of obedience to a chief who commands the country is one which may well be maintained. It is another symptom of the diminished respect for Parliament which the nation feels, of the growing power of party organizations, of the tendency of the masses to deliver themselves up into the hands of a single man. In the present instance the man is gifted with unrivalled ability and vigor, and disciplined by unrivalled experience; but the democratic leaders of the future may obtain the same authority with less title to it, and a weaker sense of responsibility for its temperate use than Mr. Gladstone feels. Y.

A NEW JULIET.

LONDON, November 25.

THE revival of "Romeo and Juliet" at the Lyceum Theatre in London, with Miss Mary Anderson in the chief title-rôle, has been anticipated for some time as one of the events of the present theatrical season. Mr. John O'Connor returned to scene-painting, after many years' absence, in order to lend additional attractions to the occasion; the Hon. Lewis Wingfield, who designed the gallery of historical English costume at the International Health Exhibition, assumed the scenic direction of the play; and everything possible was done to insure a brilliant, and, indeed, unequalled spectacle on Mr. Irving's own ground. The result has proved somewhat disappointing, and it is to be hoped that stage managers with a fast-developing passion for archæology will take warning. As a spectacle, merely, the recent revival fell short of Mr. Irving's presentation of the play. With John O'Connor and Hawes Craven furnishing much of the scenery, it could not fail, of course, to be imposing and beautiful, but it was impossible to help feeling that the efforts at accuracy had hindered the artists more than they were likely to help the public. Or perhaps it would be truer to say that the great attention conspicuously given to minute details, whether of architecture, of costume, or of stage arrangement, did more harm by drawing off the attention of the public from the real and permanent interests of the play, than they did good by giving in the spectators' imagination a local habitation to the story which, of all Shakspere has left us, stands perhaps least in need of such assistance to reach men's hearts.

The force of archæology can probably go no further than in this revival: if it makes the attempt, the playgoers who go to the theatre to see acting will be inclined to beg for a judicial separation between the display of scenery and the display of dramatic art. The former has now reached such a point of elaboration as to deserve a representation by itself: the scenes might be exhibited one by one, while a gentleman with a wand pointed out their merits, extolled their ingenuity, and defended their innovations. Subsequently the play might be acted before a plain curtain. Then each of the playgoers of different tastes might "take what fits his own," and the grieving judicious would at least be spared the painful exercise of tracking the thread of poetry through all the devices in which the stage-carpenter and Carpaccio struggle for preëminence in this Wingfield-cum-Shakspere exhibition. Possibly the stage-carpenter, far more than the artists, is to be blamed for the irritation which prompts such suggestions as the above, for other revivals, not much less elaborate, have roused no such feelings. During the present performance whole "sets" suddenly turn inside out, solid masonry dissolves in all directions, and furniture glides mysteriously across the stage, until, instead of the atmosphere of Verona, one comes to believe one's self in a city of the Arabian Nights, where palaces spring up and vanish like mushrooms.

It is simply impossible to preserve the spirit of the play under such unsteady surroundings. For instance, after the impressive scene (Act IV., sc. 3) in the Friar's cell, which is brought to a close by *Romeo's* words—

> "But that a joy past joy calls out on me,
> It were a grief, so brief to part with thee"—

the "Farewell" is almost taken out of his mouth by the scene-shifter's whistle, and the whole structure of masonry, stone steps, iron gates, and all, revolves and twists and wriggles until, just as the spectator is compelled to turn away for giddiness, lo! there emerges *Juliet's* chamber and balcony. A minute later, after the exquisite and thrilling scene between the lovers, all whose

> "——woes shall serve
> For sweet discourses in our time to come,"

the whistle shrieks again, and the balcony carries *Juliet* bodily out of sight. Little opportunity is there for what Coleridge calls the "spiritual vision," where "the mere external senses of seeing and hearing" are so fully occupied; and little hope of it will there be until the stage managers realize once more the absolute truth of his words, that "the principal and only genuine excitement ought to come from within." The programme bore the announcement: "As the setting of the scenery is very elaborate, the management beg the indulgence of the audience for any delays that may occur this evening." What sentiment but one could be provoked by reading this, while the words of the actors at the footlights were frequently positively inaudible because of the shuffling and banging attendant on the production of the elaborations behind?

I have taken the opportunity of expressing at this length convictions which have been growing rapidly in the minds of many playgoers of late years, because on the present occasion there is very little to say about the acting. Miss Anderson's visit to England has been a great success, and it is almost impossible to walk twenty yards in any of the chief "shopping" streets of London without coming across a score of photographs of her in some window; but she has never succeeded in convincing any of the critics whose good opinion counts for much, that she has any of the qualities of a great actress, except those of devotion and perseverance. In Gilbert's "Pygmalion and Galatea" and "Comedy and Tragedy" she conld hardly, however, have exhibited these qualities if she had possessed them. Her *Juliet* was therefore awaited with much interest as a decisive experiment. The verdict of the critical public upon it is almost unanimous: it is the best thing she has yet done. In appearance she is perhaps the most beautiful *Juliet* of playgoers' recollections—though there are dissentients. For her conscientious study and courageous efforts she is accorded great praise, and in a few of the commonplace scenes—like that between *Juliet* and the *Nurse*, when the latter returns from the interview with *Romeo* (Act III., sc. 3)—she was thoroughly successful. But this revival has also shown how incompetent Miss Anderson is to express either the poetry or the deeper emotions of such a character as *Juliet*, or, indeed, to attain to any consistent and genuine comprehension of the character at all. On this point all the critics are agreed. The *Standard* says that in much of her acting, "Miss Anderson is a thousand miles away from *Juliet*." The *Times* says: "If a figure of sylph-like grace, ... if the gushing but empty rapture of a school-girl who has dabbled in poetry and inspired herself with the second-hand sentiment of the circulating library, should be deemed sufficient, then this new *Juliet* will please." And the *Daily Telegraph* gives a true, if severe, characterization of her acting in these words:

> "We shall be heretical enough to declare that of all modern actresses Miss Anderson is the most faultless in repose, the most fidgetty and faulty in movement. She swings her arms about and beats her body to denote despair. She stalks and strides to depict restlessness. She glares to illustrate terror. She is perpetually acting, very often acting extremely well, acting to convey to her audience the impression that the woman before us is love-sick, or a coquette, or passionate, or distracted, or terror-stricken, but never deceiving any one with the idea that a single note of any passion is sincere."

It is already announced that Miss Aderson will next produce "Cymbeline," playing, of course, the part of *Imogen*. Nevertheless, I will venture to prophesy that her greatest real success will be in some future modern comedy of a tragical nature, where there is no occasion for poetry, and plenty of room for determination in acting. Her recent career in England furnishes only the discouraging proof of how small a part the ability to act really well need play nowadays in a great popular and pecuniary success.

VITROLLES AND THE BOURBON RESTORATION.—IV.

PARIS, November 20, 1884.

WE left Vitrolles at the moment when the Duc de Richelieu had been charged by Louis XVIII. with the formation of a new cabinet. He did not yet know what the King would do with him, but he was prepared to lose his post of Secretary of the Cabinet. The King was somewhat embar-

rassed when he had to announce to him that the Duc de Richelieu did not wish to have him present at the Cabinet councils. The King tried to gild the bitter pill, telling him that he would continue to see him often. He continued for some time to do so, but of course the connection became looser from day to day. The King had soon a new favorite, M. Decazes, the young prefect of police, whom he saw every day, and who amused him by his anecdotes, perhaps by listening to his own anecdotes. Vitrolles soon found himself in a sort of opposition in company with Monsieur, the brother of the King. The Comte d'Artois and his friends were more royalist than the King; they were called the *Ultras*. Decazes was the great enemy of the Ultras; he accused them of forming a state within the state, and of hindering the proper working of parliamentary institutions.

Monsieur one day asked Vitrolles to write a memorandum on the situation of France; he wished it to be placed before the eyes of the Emperor Alexander before the opening of Congress. Three copies of the memorandum were made and sent by various ways to the Cabinets of London, of Russia, and of Austria. Vitrolles had been dealing directly with the Emperors and the Kings during the troubled period of 1814 and 1815, when he worked for the restoration of the Bourbons; all was still uncertain, and he risked his life in his undertaking. He did not see that it was improper for him to correspond directly with the sovereigns, and to give them private information on the state of France, when the Restoration had been effected, when Louis XVIII. was on the throne, and recognized by all the courts of the world. His "secret note" was a mistake, and he soon had to pay for it. Decazes, his enemy, found his opportunity: he denounced Vitrolles to the King as being the heart and soul of the opposition of the Comte d'Artois; he spoke of the conspiracy of Monsieur and of his friends, who had founded a new paper, the *Conservateur*, which attacked the Cabinet with the greatest vehemence.

Vitrolles was deprived of his honorary title of Minister of State, and a few days afterward he was summoned before a *juge d'instruction*, as implicated in a conspiracy. The judge showed him a blue pamphlet—the "secret note," which had been printed in Germany—and asked him if he was the author of it. "I answered the judge," says he, "that if he meant by being the author of the writing that I composed it as it was presented to me, I was not the author; but if he meant by these words that this was the expression of my opinions, I would not and could not deny it. These last words were intended to leave me a loophole in case some parts in my own handwriting were presented to me, more or less in conformity with the printed pamphlet." Vitrolles was not arrested on the spot, but he learned afterward that he would have been if he had not answered in this somewhat Jesuitical manner. The next day his examination was continued; the judge asked him if his memoir had been addressed to the foreign courts, and what were his relations with them. "Yes," said I, with indignation, "I have had the most intimate relations with the allied sovereigns, and with their ministers. At the beginning of 1814 I went and placed myself in the midst of them, at Châtillon. When I arrived, the reëstablishment of the royal house was uniformly rejected by all; it was looked upon as absurd and impracticable. A fortnight afterward this Restoration was adopted and looked upon as the salvation of France and of Europe. Such have been my relations with foreign courts."

Human nature is so made that it cannot carry easily the burden of too much gratitude. The Bourbons owed too much, in one sense, to Vitrolles. There were not wanting people who tried to persuade them that they owed him nothing; that, after all, he had only been the *mouche du coche;* that no solution was possible in 1814 except the Restoration; that all the allied sovereigns together could not have forced a foreign dynasty on France. When the danger is over, it is pleasing to think that there has been no real danger. Still, we have found by our own experience that in 1870, when no Vitrolles was on hand, no monarchical restoration took place. The force of legitimacy is not so great in our century that it makes obedience a necessity. At any rate, it was not for the Bourbons themselves to persecute Vitrolles; his fault was not such that it could efface his services.

Monsieur, the Comte d'Artois, had been the first inspirer of the "secret note," and Vitrolles felt much wounded because he had given him no mark of sympathy in his present trouble. He complained to M. de Polignac of the Count's indifference, and the Count sent for him: "How can you have believed that I was indifferent?" and he paused, somewhat embarrassed. He knew that Vitrolles was not rich, that he had lost his salary as Minister of State; he ended by saying to him: "You know, my friend, if you need any money you must apply to me." Vitrolles did not like this way of offering a service: "I give Monsieur," said he, "my word of honor that I will never need any money." "I kept my word," he says in his memoirs, to the Comte d'Artois and to the King Charles X.

The so-called conspiracy was no conspiracy at all; all the accused were acquitted, and Vitrolles was left alone. He gave vent to his ill-humor in his paper, the *Conservateur*. The other contributors were Villèle, Polignac, Chateaubriand; the success of the paper was immense, and Vitrolles confesses that it was chiefly due to the brilliant and eloquent articles of the author of the 'Genius of Christianity.' Another contributor of great talent was joined to the staff some time afterward—the Abbé Lamennais, author of 'Indifference in Matters of Religion.' The destinies of the *Conservateur* were more brilliant than durable. The Duc de Richelieu left the Cabinet on the 27th of December, 1818, and M. Decazes formed a new Administration, which lasted until the assassination of the Duc de Berry in 1820. Decazes was dismissed, and, the censorship of the press being reëstablished, the *Conservateur* ceased to appear. M. de Villèle formed a Cabinet in 1821, but he was not on good terms with Vitrolles, though they had made the *Conservateur* together. The King was becoming old, and more and more indifferent; the reign of Charles X. began virtually with Villèle. Still Vitrolles remained completely in the background. Nothing was found in his papers concerning the long ministry of M. de Villèle. The Memoirs begin again with the Cabinet of M. de Polignac.

"The Government of the King," says Vitrolles, "had always forgotten the first condition of the existence of all power on earth, which consists in the undisputed, uncontrolled, open, and legal possession of the quantity of authority necessary for the government of the people." Vitrolles did not like the *Charte:* he found the Constitution, with all its parliamentary complications, impracticable. But he maintains that Charles X., as much as Louis XVIII., had no intention of taking away any of the liberties given to the nation in 1814. "Louis XVIII. was maintained in his illusions by his pride of authorship (*amour-propre d'auteur*) of the Constitution, Charles X. by his oath." Polignac considered himself the future saviour of the monarchical principle. Charles X. had much personal affection for him. Polignac became the head of a sort of political and religious party, which placed, in the phraseology of the time, the throne on the altar. Vitrolles was sent as French Minister to Tuscany, when Polignac's ascendancy began to be felt; and he was quietly at his post when he heard of the formation of a Polignac Cabinet. Such a Cabinet was a formal declaration of war against the liberal party of France. Vitrolles felt that the storm was coming, and that the monarchy was in danger. He came back to Paris in October, 1829, and saw at once Polignac and the King. He did not conceal from Charles X. the fact that the formation of the new Cabinet had not been received with favor, and explained that it was not enough to change the men if the things were not changed. He meant by the things the constitutional complications of the *Charte*. His plan was a return to the old Constitution of the French monarchy. The Chambers, in his opinion, should only be allowed to vote fiscal laws. His programme was complete and extensive: it even embraced a plan of decentralizing the provinces. The King heard him with patience and kindness; he still hoped to be able to govern with the Chamber, even when the majority was hostile to his Cabinet. Polignac and the King looked only for the means of governing, with a hostile majority, within the limits of the constitutional law. Vitrolles wished to change the constitutional law itself. One day he talked of these subjects with Beugnot, who suddenly became enthusiastic. "If Providence," said he, "had destined us for this great work, I would have given you my *esprit*, you would have given me your courage, and together we would have done great things!"

On the 22d of July, 1830, Vitrolles dined at Saint-Leu with the Prince de Condé, with the Duke and Duchess of Orleans. On his way he stopped at Saint-Cloud, and saw the ministers. Rumors of a *coup d'état* were in the air. At Saint-Leu, Vitrolles had a conversation on the situation with the Duke of Orleans: "What do you think the ministers will do? What is the disposition of the King?" said the Duke. Vitrolles confessed that he was uneasy, that the faces he had seen at Saint-Cloud in the morning made him think that some dark design was meditated. "But have you an idea," asked the future King of France, "of what they can be meditating? Can they dissolve once more the Chamber which has just been elected? There would be no motive; you cannot shut people's mouths before they have spoken. It would be easier to accommodate one's self with them than to dismiss them." Vitrolles adds (and in such a case his opinion is very important):

"I am convinced that at this moment the Duke of Orleans had neither foreseen nor prepared the events which forced him into power. However prejudiced I might be against his character, against his timid and underground opposition during all the period of the Restoration, I could see throughout all my intercourse with him on this day neither a thought nor a flagrant hope; not even the wicked smile which would have come to his lips if he had foreseen the misfortune of others, and what good might come out of it for himself. He did not see beyond the clouds, and he was afraid of the clouds."

If he had seen beyond these clouds he would have seen the streets of Paris covered with barricades, the King, Charles X., returning into exile, and himself riding with Laffitte to the Hôtel de Ville, and received by Lafayette; he would have seen the tricolor flag at every window. The day after this interview the Revolution of 1830 broke out.

Correspondence.

AN EXPLANATION OF THE "SOLID" SOUTH OF TO-DAY.

To the Editor of The Nation:

Sir: There has been a great deal of late in the newspapers about the negro and the "solid";

South, but I have nowhere seen an attempt to explain just how and why the South is "solid." Of course in a brief letter it is impossible to take into consideration *all* the elements of the question; but it may be worth while to write out what appears (to one who has recently made a tour of the Southern States for the purpose of studying this and kindred questions) to be a fair explanation.

As everybody knows, the reconstruction legislation was of such a character as to deprive the Southern whites of their former leaders, and at the same time it introduced nearly a million voters who could do nothing without political engineers. Probably there never was in any country a broader and easier entrance into political life. Just as men sought gold in California in '49, so thousands sought office in the Southern States—for what they could "make" out of it. The vast majority of them were thorough self-seekers: they stirred up race hatred; they knew next to nothing about the negro, except that he was confiding, and hence easily deceived and made a tool of. It was only by engendering prejudice, and then feeding it almost to gluttony, that they were able to keep apart two peoples who (every candid observer of Southern life will admit) have something akin to a natural affection for one another. They drew about themselves the most shrewd negroes who had an ambition for office. They educated them in their methods, and had them preach their doctrines to the other negroes. What in '66 and '68 were mere campaign pretences, became in '75 and '76 the prejudice of a race.

These and other things forced the whites—with few exceptions, mainly for selfish reasons—to join forces against a common enemy who was not slowly destroying their property by corrupt taxation. The "revolution," as the Southerners commonly call the period of 1875-76 when they overthrew "carpet-bag government," relieved the South of most of the "carpet-baggers," but still there remained the negro politicians and the "scalawags," *i. e.*, those white Southerners who joined the Republican party for the purpose of obtaining office. Their aim was the same as that of the carpet-baggers had been; but they had little influence at the North, and soon found that Hayes's Administration could not be used as the tool of Southern Republicanism, as Grant's had been. They soon saw that without the grand display of Federal authority and consequent excitement, the former machinery could not be kept in motion. They therefore gradually gave up all hope of everything but Federal offices.

After the Democrats once secured supremacy, it was comparatively easy for them to grow in strength. In local organizations they began in earnest to try to make plain to the negroes that the interests of blacks and whites were mutual; that the fields they cultivated belonged to Democrats; that the Democrats in injuring the negro would necessarily injure themselves; that the "carpet-baggers" and "scalawags" were men without property, and, hence, cared little whether taxes were high or low, or whether schools were open or closed, etc., etc. This may be news to many in the North—alas, I am afraid it is—but it is just as certainly true as that there is a South.

Each of these new elements—the class of Republican leaders since '76, and the new policy of the Southern Democrats—has gradually been working out important changes in the political problem. Some of the rewards of this patient endeavor to *make* and then enlighten a public opinion are these. In State affairs the negro has learned that the Democrat has given him lower taxes, better schools, and more peace and prosperity than the Republican. In county and local politics, where the negro personally knows the candidates, he frequently shows that he has overcome his former prejudice and fear by not voting at all or voting directly for the Democrat. The writer knows of countless instances of this. In some counties there has been a "fusion" between the more liberal Democrats and more intelligent negroes.

But does the negro ever vote for a Democrat in *national* politics? is a question which may well be asked at this point. The almost unanimous testimony of Southern Democrats is that he does not. Here, then, is the difficulty. Knowing this, we have been used to looking at the census, and, seeing large negro majorities throughout the "black belt," have said, "Nothing but fraud, then, could have prevented Republican majorities." *It does not follow.* Besides what has been said above, let it be remembered that in some counties, as in Yazoo, Miss., there is no Republican organization; that in some States, as in Georgia, the Republican ticket was only partially filled out; and that in all parts of the South there are hundreds of negroes who have come to the very sensible conclusion that they have been deceived in the past, and that the best way to look out for the future is to "make right smart o' cotton," keep their mules fat, and let politics, brass bands, and picnics alone. A letter recently received from a prominent ex-judge of Mississippi, who is an active and conscientious Republican, and is allied with the best element of his party in that State at the present time, gives a true and clear description of the purposes and status of the Republican party in his State. It makes plain the reason why the Republicans do not win there, and how the South may be "solid" without fraud or intimidation of any kind. He says:

"It was plain to me that the various positions to make up the machinery of the campaign were sought for not with the view of enlightening the people or of promulgating the doctrines of the party, or even with any hope of success or any expectation of helping the country, but simply that by reason of holding such a position the holder thereof would be entitled to so much the more consideration in the distribution of Federal appointments in case of success. When the committees and candidates were named, all would be accomplished which was ever expected. There was no earnestness. There were no men standing up and proclaiming their doctrines for their doctrines' sake."

A Political Student.

THE COPPER-REFINING INDUSTRY.

To the Editor of The Nation:

Sir: In your paper of December 4 you give in your "Notes" an extract from the letter of a correspondent reflecting severely on American copper-refiners. Will you in fairness give equal prominence to this reply?

The charges of American refiners are not exorbitant—mattes, especially those rich in silver and gold, find a market here every day. We do need foreign ores for mixing, as much as or more than the wool men need foreign wool. English refiners have tried the experiment of coming here to settle, but their experience has been such that their example is not likely to be followed unless the conditions change. The refiners have no monopoly; on the contrary, the competition is sharp, and as freight from Montana to Liverpool is the same as to New York, in addition to the five refineries at work in this country at present we have the competition of all the English refineries—represented here by active agents; and I may note that the effect of the competition has been to kill off four concerns in this country in the last three years, and to largely increase the plants of the others.

Further, the refiners do not buy on their own assays, but follow the same system as that adopted by the English, viz., the buyer and seller both assaying, and referring to an umpire if necessary.

Copper, owing to the great surplus over home consumption, must occupy the same position as wheat. The surplus must be sold to free-trade England, and the price of all must be based upon the price of the surplus. Under the circumstances the manufacturers of brass and copper goods must enter the markets of the world. The refiners, although laboring under the burdens of the tariff, including high-priced coal and labor, and especially exclusion from the world's markets for ores, are still supplying our home markets with ingot copper made from Western mattes at a price lower than that now ruling in England. Not only are they doing this, but, hampered as they are, they have carried their ingot copper into the markets of the world, and to-day are selling in England, France, Germany, Russia, and India, in direct competition with the English refiners.

Robt. M. Thompson.

87 and 89 Wall Street, New York, December 6.

A CONTRIBUTION TO THE "GREEK QUESTION."

To the Editor of The Nation:

Sir: Some years ago a vote was passed by the universities of Prussia opposing the admission of graduates from the so-called "Realschulen" (schools without instruction in Greek) to the study of law and medicine. Those in this country who wished to maintain the study of Greek as an indispensable part of college work were rejoiced to receive the sanction of such eminent authority. But it seems now that the importance of this action has been overestimated, and that it offers but another proof of the tenacity with which the members of ancient corporations cling to existing institutions even in the face of reason. Public opinion in Germany is undoubtedly moving against this academic verdict. A book has just been published which shows that the opposition to such an artificial attempt to restrict the popular tendency is no longer confined to the interested party itself, but is shared even by a man whose well-known impartiality and established position give to his views an unusual weight.

Doctor Paulsen, Professor of Philosophy and Pedagogics in the University of Berlin, concludes his admirable 'History of Higher Education in Germany from the Reformation to the Present Time' with a review of the present needs of education in that country. No one could acknowledge more frankly and gratefully than does Professor Paulsen how much Germany owes to the study of the classics. He shows that since the time of Luther it has been the dominant force in education. He traces the various phases of its development, and gives most carefully-drawn pictures of the men who were distinguished in this field. His sketches of Erasmus, Melancthon, and the poets and thinkers of Weimar are masterpieces both in sharpness of conception and in simplicity of style. But the study of the past does not blind this author to the demand of to-day. The historical development of the last three centuries, he says, may be defined as a slow but steady progress toward the formation of a distinct modern culture, separating itself gradually from the ancient civilization out of which it grew. To-day this modern society has reached its maturity. To Erasmus the ancients were models of living; even Goethe considered the Greeks as unattainable ideals of beauty and greatness. For us they are the subjects of research and criticism. It would be absurd to educate our boys as if they belonged to the age of the Humanists. What we want above all is to

make them understand their own world, the people of which they are a part, the life of nature about them, the men among whom they have to make their way. These are the indispensable parts of modern education.

Now is it possible to combine with these a thorough study of the ancient world? The bad results of recent attempts to accomplish this in Germany justify Professor Paulsen in denying this possibility, and consequently he does not hesitate to exclude all classical study except the elements of Latin from the curriculum of the Gymnasium. In its place he puts a broader and more detailed treatment of history in all its branches, a more complete instruction in modern languages, a more thorough study of the German language and literature, an elementary course in philosophy, comprising ethics, logic, psychology, and politics. Natural science and mathematics would also gain by the proposed change.

The book will doubtless make a sensation in Germany, and it is to be hoped that here, too, it will be of service in supporting those who believe that a liberal education is possible without forcing us back into times long gone by.

KUNO FRANCKE.

CAMBRIDGE, MASS., December 1, 1884.

TELEPATHY.

TO THE EDITOR OF THE NATION:

SIR: Apropos to the discussion in your columns on Telepathy, the following circumstance happened precisely as stated, and is worthy of record.

A middle-aged lady was subject to severe spells of sick headache. One morning her daughter, a healthy young married woman, residing several miles away, awoke quite ill. She told her husband, that she had dreamed that her mother had sent her sick headache over, and that she (the daughter) had cooked and ate it. She lingered a few days and died. The mother never afterward had an attack of sick headache. This all happened several years since. By no process of human reasoning can it be explained.

Respectfully, J. W. DEAN.

CHARITON, MISSOURI, November 26.

Notes.

D. APPLETON & Co. have nearly ready an addition to the Parchment Series—'English Sacred Lyrics'—and the sixth and concluding volume of Bancroft's 'History of the United States.' The second volume of McMaster's 'History of the American People' will follow somewhat later.

Robert Clarke & Co., Cincinnati, announce for immediate publication a volume entitled 'The Children-Out-of-Doors, a Book of Verses, by Two in One Home,' the authors being John James Piatt, United States Consul at Cork, Ireland, and his wife, Mrs. S. M. B. Piatt.

Lady Brassey's new book, 'In the Trades, the Tropics, and the Roaring Forties,' is to be published in a few days by Henry Holt & Co. It fairly bristles with illustrations, even the maps and charts being bordered with pictures of scenes in the regions delineated.

Three volumes, v, vi, and vii, close the beautiful edition of the works of Alfred Lord Tennyson, begun some months ago by Macmillan & Co. Only fastidiousness, or, say, the members of a Tennyson Club, could ask for anything better. The division in these last volumes is such that "Enoch Arden" and "In Memoriam" are brought together in one; the dramas "Queen Mary" and "Harold" in another; and in the last, "The Lover's Tale" and a miscellany of ballads, sonnets, translations, etc.

A boxful of tiny books forming a "Nutshell Series" (G. P. Putnam's Sons) is but a passing conceit on the part of the compiler, Helen Kendrick Johnson. The six little volumes contain scraps of philosophy, wisdom, sentiment, proverbs, epigram and epitaph, wit and humor. The lines are not very sharply drawn, and these titles might almost be reduced to two. The Old-English letter employed throughout is a case of reversion to a bad usage.

The Christmas number of the *Publishers' Weekly*, as usual, takes its place among the attractive picture-books of the season, in addition to its wealth of information for purchasers of holiday gifts.

The *American Architect* gives with its issue for November 29 a specimen of the gelatine print with which it proposes to supply its readers once a month, if they will pay for it a dollar extra. An imperfect but still valuable "photo-caustic" print has for some time been a regular feature of the *Architect's* illustrations for ordinary subscribers.

The *English Illustrated Magazine* for December contains some interesting experiments in wood-engraving, which show the efforts made by the publishers to develop the powers of the art in emulation of the American school. There is an inequality in the results which does not appear in *Harper's* and the *Century*. The frontispiece, after Burne-Jones's study for his King Cophetua, is excellent in a certain imitative way, but laborious, and at first sight seems "processed." The illustrations to Austin Dobson's amusing poem are, in a lighter and orthodox vein, good, but the Gainsborough series is poor interpretation of the originals. The only engraving which comes within measurable distance of the American work is Brendamour's full-page cut after O'Brien —"Clovelly Pier." The difficulty in most of the work, especially in the heads, where delicate gradation is needed, is the want of good training in drawing. Something ought to be done to induce a better class of art-workmen to adopt wood-cutting in England. Line engraving has almost died out because it don't pay, and perhaps because line engraving is much more readily supplanted by photogravure, etc.; but the best type of block work can never be done by mechanical process or supplemented by it, as incised work can be; and if first-rate block printing is going to be done, it must be done by educating wood-engravers to the necessary ability, and giving them a wider range of artistic knowledge.

Cassell & Co. present to subscribers of the *Magazine of Art* for 1885 a capital etching by J. A. S. Monks, "Crossing the Pasture." We have so often had occasion to praise the honest and intelligent work of Mr. Monks that we have hardly need to say more than that this new plate is worthy of his reputation. It represents a flock of sheep straggling up a rolling pasture in the seedy days of late autumn. The execution is straightforward, and entirely free from affectation of dexterity or exaggeration of any kind.

We regret to notice the discontinuance of the *Bibliographer* at the close of its sixth volume. Something might be said of shortcomings in its contents and in its mechanical conception and execution, but its services were real and its loss will be felt. It will be succeeded by *Book Lore*, "a magazine devoted to old-time literature," and likewise published by Elliot Stock.

Babyhood (New York, 18 Spruce St.) makes a good beginning with its December number, and bears the impress of definite, practical aims and competent direction. Marion Harland writes on "Baby at Home in Winter" and on nursery cookery, Dr. J. B. Isham on the adulteration of milk, and Dr. L. M. Yale on vaccination, etc., etc. There is an excellent department of "Nursery Helps and Novelties," and everywhere the aim of the editors is seen to be practical. As soon as the magazine finds its proper audience, and an interchange of ideas takes place, *Babyhood* will shape and be shaped, and should grow better and better. Articles by well-known writers are promised for succeeding issues.

Wunderlich & Co. publish two original etchings by Benj. Lander, "Along the Shore" and "Saturday Afternoon." They are both in an excellent style of work, and show close adherence to the sound laws of the art. The "Saturday Afternoon" is remarkable for its size as well as for its quality. It shows two boys fishing from a punt drawn up to a weedy shore, with a delightful sky and distance. How far textures may be rendered in etching, or how far they ought to be, is practically disputed by etchers, but we believe that the true law is (and this is observed by Mr. Lander throughout) that line should follow form, and never ignore texture even if it do not attempt to render it minutely. The distinction between smooth and rough, stuff and flesh, sky and distance, as indicated by the line, are quite indispensable to good work, and Mr. Lander's plates clearly show it.

Mr. Charles W. Greene, Merchantville, N. J., sends out a tentative "List of the Mediæval Schoolmen, or Scholastic Theologians and Philosophers," for which he desires additions and corrections.

Mr. Otto Wollermann, 80 Second Street, Brooklyn, E. D., desires us to state, that the little *Kalender* of the German Society for Simplified Spelling of which we made mention last week, cannot be had through the trade. On receipt of ten cents Mr. Wollermann will undertake to send a copy to any address.

Librarians must decide whether the mummy-cloth literature of German invention is adapted to their shelves or to easy classifying. The public will continue to be amused by a talent so original as that of C. M. Seyppel's, and, we can now add, so fresh. His third "Aegyptische Humoreske," 'Die Plagen' (New York: Westermann), has only a family resemblance to its predecessors, and is superior to number two, so that we cannot yet predict an exhaustion of the vein. The travesty is of the seven plagues of Egypt, and the means they afford of placing an Israelite in power, and of enriching the whole servile nation so that on the crossing of the Dead Sea (here managed in a fleet) they take away every gold piece in the land of bondage—with consequences visible to this day. Pharaoh, pursuing likewise in a fleet, is blown up by his domestic enemies, who have cunningly placed a "Thomasuhr" on board. Artistically, none of this series has been cleverer, and the tint necessary for the plague of blood and the Red Sea, does much to heighten the effect. For pure humor, one may instance the courtship scenes; while, in spite of its grotesque elements, the three-storied design on p. 5, is almost charming.

The Italian Minister of Public Instruction, Signor Coppino, last July, ordered the librarians of the State libraries to furnish him with a list of all the scientific periodicals and serials taken by them during the previous year. A form was furnished them to be filled out, and a scheme of classification with twenty-six classes and many subdivisions. The returns are to be published; they will form a list as useful as that published in 1878 by the libraries of Boston and vicinity, and perhaps more extensive.

Dr. R. Garnett has resigned the position of Superintendent of the British Museum Reading-room.

M. Alfred Darimon—who was successively an associate editor of Proudhon's Socialistic journal, *Le Peuple*, and editor-in-chief of his *La Voix du Peuple* and *Le Peuple de* 1850, during the stormy period of the Second Republic, and, under the

Second Empire, one of "The Five" who formed the democratic opposition in the Corps Législatif of 1858-63, but, after his reëlection in Paris, followed his friend Ollivier in slowly veering around toward the Government side, and disappeared even before Ollivier from the political scene—has recently published two very interesting volumes of historical recollections. Their titles are 'Histoire de Douze Ans, 1857-1869' (Paris, Dentu, 1883) and 'À travers une Révolution, 1847-1855' (Dentu, 1884). The former volume, which throws a great deal of light upon French politics during the decline of the Empire, is by far the more important, while the latter, in which Proudhon, with his vagaries and eccentricities, occupies the foreground, is, in a certain sense, more amusing. Piquant correspondence of unquestionable authenticity, and conversational reminiscences demanding much allowance for more or less unavoidable slips of memory and egotism, abound in both. They will be best appreciated and enjoyed by those most familiar with the French history of the period covered by the "souvenirs."

'En Algérie; trois mois de vacances,' is the title of a very pleasant book of travel by "Kohn-Abrest" (Paris, 1884). It is concise and vivid in its descriptions, and sound and interesting in its historical retrospects. The writer, though a foreigner, speaks in the tone of a patriotic Frenchman. He is happy to find many charming things of nature and art, and cheering evidences of growth, colonizing skill, and prosperity in the great transmarine dependency of the French Republic, but has no hesitation in recording and branding the shocking barbarities committed in acquiring it. He is a good-natured observer, and dwells by preference on the pleasanter and brighter aspects of Franco-African life. He did not penetrate far into the interior, but saw enough of the coast and its cities, the Metidja, and the slopes of the Atlas, of Arab, Kabyle, and immigrant life, to give sufficient variety to his short volume. Characteristic, though not particularly handsome, illustrations add to its interest.

Riehm's Biblical Cyclopædia, modestly styled 'Handwörterbuch des Biblischen Altertums für gebildete Bibelleser' (2 vols.; Bielefeld and Leipzig, 1884), is finally complete in the hands of its subscribers. Instead of the two years which its publication was originally intended to last, it took ten to complete it; and instead of for one volume embracing twelve hundred 8vo pages, the subscribers have had to pay for two with more than eighteen hundred pages. But few friends of Biblical literature who have acquired it will have grumbled either at the increase of price or the slowness of publication, considering the more than proportionate increase in value through greater fulness and maturity. The editor's original colaborers, including, besides his colleagues at the University of Halle, Professors Beyschlag, Hertzberg, and Schlottmann, such first-class Biblical critics and Orientalists as Franz Delitzsch, Ebers, Kautzsch, Mühlau, Schrader, and Schürer, have stood by him to the last, excepting a few who died before the completion of the work. As it is, it is one of the most learned publications of its kind, and probably the handiest ever issued in German. As a German work, it is quite remarkable for clearness, conciseness, and neatness of pictorial illustration. In regard to archæological discoveries, it is fully abreast of the time; but it can hardly be said to be sufficiently advanced in its criticisms concerning the composition of the books of the Old Testament. Another defect is frequent contradictoriness, especially in chronological matters, arising partly from the great latitude granted the contributors, most of whose articles are signed, and partly from changes in views, wrought by the advance of Biblical archæology during the protracted period of publication.

—To the great majority of anglers in this country the highly colored newspaper accounts of piscatorial exploits "written on the spot," form the literature of angling. Others have heard of the existence of "Sir Isaac Walton," as he is brevetted by one author of several angling books, and perhaps are familiar with the pages of his great pastoral. Few there are, however, who have any idea of the magnitude and worth of angling literature. Its distinguished names on this side the water are scarce, the most eminent being the late Dr. Bethune, whose modestly named "bibliographical preface" to the Wiley editions forms the most charming and appropriate introduction of the many which begin the ninety-odd Waltonian issues. In England, however, the subject has not been deemed unworthy the attention of men famous in science, literature, and jurisprudence. Sir Humphry Davy, besides giving to the world the safety lamp, wrote 'Salmonia,' one of the best known works on angling. Christopher North made this subject prominent among those illumined by his strong mind and prolific pen. Chitty used a part of his well-earned ease in the composition of the 'Flyfisher's Text-book.' Charles Kingsley has written nothing more delightful than 'Chalk Stream Studies,' and his 'Prose Idylls and Miscellanies' are found in every library of which Walton is the head. Not to go back to Oppian, Ausonius, and other ancient writers on angling (including those of the Old and New Testament), Germany, France, and Italy—and Italy especially—have a considerable angling literature, some of it of a high class in everything but the practical part. At the present time the cause of this department of letters is led by two scholarly Englishmen, Thomas Westwood and Thomas Satchell, whose latest benefaction is the *Angler's Note-book* (London, 19 Tavistock St., Strand, W. C.). They seem to be constantly anticipating and amply providing for a demand which never comes; but, we fancy, the pecuniary disappointment is more than made up for by the consciousness of good work, and the full appreciation of the few to whom it is known.

—The *Angler's Note-book and Naturalist's Record* (not to clip the title) has been issued monthly since June last, and is published in three editions, a special one at twelve shillings, one at six, and one free to the subscribers to the special edition of fifty copies, which is kept by the publishers until the completion of the series, when the numbers are forwarded together so as to reach their owners in perfect condition and fit to form the handsome volume they are designed for. It would be hard for the editors, if they wished, to make their paper anything but the reflex of their own thoughtful and well-furnished minds, and every number contains more than one article which "not half-a-dozen men in our town could have written," as the villager said of the works of William Shakspere which had been lent him for perusal by his minister. A delightful flavor of archaism pervades all of the work of the editors, whether it be in articles, reviews, or descriptions of rare angling books. Volumes like Crawhall's 'Compleatest Angling Book'; Gervase Markham's 'Compleat and Experienced Angler,' or 'Country Contentments,' wherein he says: "A skilful angler ought to bee a generall scholler and seene in all the Liberall Sciences," etc., etc., he must also be "strong and valient, neither to be amazed with Stormes nor affrighted with Thunder"; the work of Thomas Barker, "of Bracemeale in the Liberty of Salop," who, though supposed to have followed the humble vocation of a cook, has contributed one of the quaintest and most original books to the fund of angling lore—these, with many others of the same kind, afford full opportunity for the peculiar attractiveness the editors can diffuse through the subjects they love to treat. Mr. Westwood's "New River," in the August number, is charming in its quiet flow of gentle and peaceful narration, so appropriate to the easy-going stream and the beautiful English landscape through which it meanders; and the review of 'Wanny Blossoms,' a new North Country book—natural, quaint, and strong—makes one wish it longer than the three pages it occupies. While the *Note-book* is much more devoted to the literary than the practical side of angling, we believe it admits well authenticated, properly written accounts of actual angling feats, if meritorious. Still, we think its present clientage would much prefer having the monthly space filled, as it has been, with the results of the richest existing knowledge of the literature of angling, yet too little known. It might not be inappropriate to mention here, as germane to what we have said above, and an interesting fact, that the clergy have, more than any other class, made valuable and interesting additions to angling literature.

—There is no abatement of late years in the perennial interest which attaches to the discussion of the position of Woman, but there is a noticeable change in its character. The argument that because she is not clever enough to succeed as a lawyer she must be kept from being a lawyer by main force, is less and less frequently pressed into service. The finality of this change of tone is made strikingly evident by the fact that a book of etiquette published within a few years in the Franklin Square Library declares that it is no longer considered good form to ridicule the qualities of the female mind. In the *North American Review* for November Judge Robert C. Pitman takes a roseate view of what will be the effect of the entrance of women into politics; and in the last two numbers of the *Princeton Review* Mr. Francis King Carey gives a remarkably good discussion of the question from the historical standpoint. He remarks that among different savage tribes almost every possible division of labor between men and women has found a place (except that the women have never been exclusively the fighters), from that of the Todas and Karens, among whom the only occupation of the women is to embroider, sing, and cook, to that of the Javans, whose women alone attend the markets and conduct all the business of buying and selling. It is proverbial among the Javans that men are fools in money matters. On the whole, it appears that in the early stages of civilization industrial pursuits were largely in the hands of women. The legal position of women among the Anglo-Saxons was one of great freedom, although there is a falling off from the just and simple treatment of them by the early Germans. Mr. Carey does not sufficiently insist upon the fact that the retrograde movement of later times is due almost wholly to the Church. The Canon Law, which, according to Sir Henry Maine, has deeply injured civilization, differs in no other respect so much from the secular law which preceded it as in its views of the status of married women; and, as Mr. Carey shows, the changes in legislation that have lately been made in many states are nothing more than a return to the state of things that existed in early Anglo-Saxon times.

—There are two things which, at the first glance, prepossess one against Mr. F. A. Ober's 'Mexican Resources and Guide to Mexico,' a pamphlet of ninety pages issued from the press of Estes & Lauriat as a supplemental volume to the same author's 'Travels in Mexico' (reviewed in the *Nation*, No. 981). Its material was gathered for that book, and prevented from incorporation in it by "the relentless veto of the publishers." It thus has the air of a piece of

work meant to dovetail into something else unfortunately wanting. The second objectionable feature is the twenty-five pages of advertisements inserted between the pages of reading matter. One cannot but be suspicious of a publication thus floated. Yet it is but fairness to say that the part descriptive of the productions and commerce of the country is an unusually careful, accurate, and unbiassed collection of information. The authorities followed are competent and up to date. Deduct typographical errors, and the occasional failure clearly to discriminate the Mexican usage from Castilian propriety, and there is little lacking in its compact completeness. The "Guide" part is perfunctory and ineffectual. It carries its own proof of inadequacy, and exposure of what we might almost call the disingenuousness of the title, in the admission: "In speaking of Mexico, we naturally presuppose that the capital is meant; and it is with the City of Mexico as an objective point that these descriptions of routes are written." No one who would know all that can be told of the lines of travel in the whole *country* of Mexico, need think that this writing of Mr. Ober's at all imperils the supremacy of 'Appleton's Guide to Mexico' (see the *Nation*, No. 969), which, in its second and corrected edition, is a model of accurate utility.

—In regard to our recent assertion that "the second *n* in engineer belongs to engine, and the suffix is not *neer* but *eer*; motoreer is the analogous form," the Hartford *Courant* "begs to remark that the second *e* in engineer belongs to engine as much as the second *n* does—that is, if the *Nation's* spelling of the word is to be accepted as correct. Hence the suffix is not 'eer' but 'er,' and engine-er is a word of very easy construction. It follows, too, that motor-er is the analogous form, and not motoreer." We do not understand the clause about the *Nation's* spelling of engineer. Will the *Courant* kindly inform us how it thinks the word ought to be spelt? Is any different orthography common in Connecticut? However this may be, it is plain that the *Courant's* division of the word is wrong. The writer has been confused by our misleading English alphabet. If *e* belonged to the root, it would be silent, and the word would be pronounced engin-er, as it is said to have been in old English. The *eer* may be the correspondent, perhaps the representative, of the French *eur;* or it may be compared with charioteer, musketeer, mountaineer, auctioneer, pamphleteer, mutineer, or, if you please, with privateer and gazetteer, where there was a silent *e* in the original root, exactly as in engine.

—Prescott, in his 'History of the Conquest of Peru,' in the portion relating to the Incas, makes extensive use of a narrative which he calls the work of Don Juan Sarmiento. Late investigations have resulted in the discovery of the fact that in reality it is the second part of Cieza de Leon's Chronicle, the supposed loss of which has been a source of regret to historians. This discovery was made independently by Dr. Manuel Gonzalez de la Rosa, and Don M. J. de la Espada, both of whom had access to the original manuscript preserved in the Escurial. The former prepared a portion of the text for publication, but for some reason left it unfinished in the hands of Trübner, the London publisher. In 1880, M. J. de la Espada brought out an edition of the work with notes, under the title 'Segunda Parte de la Crónica del Perú, que trata del Señorio de los Incas Yupanquis y de sus grandes hechos y gobernacion' (Madrid, 1880), forming a volume of the "Biblioteca Hispano-Ultramarina." The Hakluyt Society has published (1883) an English translation of this edition, under the editorship of Clements R. Markham, with notes and introductory matter. As projected by Cieza de Leon, according to his announcement in the prologue of the first part, the Chronicle was to consist of four parts. The first part, treating of "The Divisions and Descriptions of the Provinces of Peru," was first printed in 1554. An English version was published by the Hakluyt Society in 1864, with the title "Travels of Pedro de Cieza de Leon, 1532-50." The second part, noticed above, is on the "Government, Great Deeds, Origin, Policy, and Roads of the Yucas." Part three, giving a history of the discovery and conquest of Peru by Pizarro, is still in manuscript, and is, says the Spanish editor, inaccessible. The first and second books of part four, on the war between Pizarro and Almagro, etc., is also unpublished. The third book of part four, containing the history of the civil war in Quito, has been edited by Don M. J. de la Espada, at Madrid (in 1877). Books four and five, and the commentaries which were to form the concluding part of the Chronicle, are not known to exist, and were probably never written.

— The curious and abounding industry of the German scholar finds a new illustration in a tractate by J. Altona on 'The Prayers and Modes of Religious Address to be Found in the Old-French Chansons de Geste' (Marburg: N. G. Elmert). This is the ninth of a series of essays, no less entertaining than instructive, published by E. Stengel and his pupils, and designed to illustrate the animal life and dream-lore, the arms, habits, proverbs, burial customs, *Frauenwelt*, speech, and speech-peculiarities to be gleaned from an exhaustive inspection of Old-French, Provençal, and general Romance monuments of the early Middle Ages. In the tractate before us, Herr Altona confronts, with true Teutonic thoroughness, a series of categorical questions, each under its own *Abschnitt*, and each, of course, with its divisions and subdivisions. Some of these "dark questionings" with regard to the *chansons de geste* are: Who prays in them? Who is addressed in prayer? What is the manner of the prayer? What the occasion? What the religious ceremonies accompanying the prayer? Each of these self-inflicted interrogatories is abundantly answered from the great mediæval poems—the Roland song, William of Orange, the songs of and about Charlemagne, Ogier, Oberon, and so on; and nearly every fact is fortified by quotations and statistics. In the song of Roland, for instance, Charlemagne prays exactly twelve times, while Roland himself prays "only" eight times. God, Christ, the Holy Ghost, the Trinity, the Virgin Mary, and saints innumerable are found to be the deities and semi-deities invoked; the two first, however, oftenest. Mute, direct, and indirect invocation abounds in these great semi-religious poems, in which the heathen are almost invariably depicted as "Saracens," no matter what their nationality. There is great wealth of epithet in the invocations, and the prayers reveal themselves as utterances of piety, praise, thanksgiving, intercession, penitence, and confession. They are accompanied by peculiar religious ceremonies, dismounting from horseback, kneeling and kissing the earth, folding or extending the hands to heaven, turning to the east, beating the breast, and crossing one's self. The whole of the middle ages is deposited in these poems, from which Herr Altona has gathered so much material for his essay.

— Six years have elapsed since the publication of the first volume of Professor Wellhausen's 'History of Israel,' which promised to become the standard critical work on the subject, and the second (and last) has not only not yet made its appearance, but seems to be relegated to a more or less distant future. That this was to be the case became apparent when the author, on republishing the first volume a short time ago, changed the original title, 'Geschichte Israels,' into 'Prolegomena zur Geschichte Israels,' thus converting it into an independent work complete in itself. Wellhausen's latest publication, 'Skizzen und Vorarbeiten' (Berlin, 1884), makes this clearer still. This, of which the first *Heft*—in reality a very respectable volume—is before us, is to prepare the way for the carrying out of several literary schemes which engross the historian's attention. "These schemes embrace Israelitish history, old Arabic antiquities, and the history of the Arabs to the downfall of the Umay'yids." The *Heft* before us contains first a reproduction of the article "Israel" contributed by Wellhausen to the 'Encyclopædia Britannica.' This extensive essay, here entitled "Abriss der Geschichte Israels und Juda's," is evidently intended to form a temporary substitute for the promised second part of the 'Geschichte,' while the author is giving his chief attention to Arabic topics. Two-thirds of the *Heft* is devoted to the original and a partial prose translation of the portion of the 'Songs of the Hudhailites' left inedited by Kosegarten, and next year's instalment of the 'Skizzen und Vorarbeiten' will have an essay on party characteristics in the earliest history of Islam. The 'Britannica' article is reproduced only to the point where Ezra's reformation gives a new turn to the history of the Jewish people, and for the rest is substituted a chapter on "Judaism and Christianity." The notes of the 'Britannica's' "Israel" are left out. That the English garb of that interesting historical sketch is the original one may, perhaps, be inferred from the circumstance that a slip of the pen which struck us in the 'Britannica'—"Hosea ben Beeri"—speaking of the King, not of the prophet—does not appear in the German book, where King Hoshea is correctly designated as the son of Elah.

—It is not too much to say that Richard Wagner's "Lohengrin" was heard for the first time in New York last week, although it has been for many years one of the most popular operas in the local repertory. Not only have the conductors who have heretofore brought out this opera always omitted about a fifth part of the score, almost all of which Dr. Damrosch has restored, but in all these performances not only the text, but *the music too*, was translated into Italian. Now "Lohengrin" occupies a peculiar place among Wagner's operas. It is the last work of what is called his second period, being the direct predecessor of the Nibelung Tetralogy. It therefore contains the elements of both his second and third styles. In his first style ("Rienzi") Wagner was little more than an imitator of Meyerbeer and the other leading opera composers of the day. In the second period ("Flying Dutchman," "Tannhäuser," and "Lohengrin") he is already thoroughly original, but much of the vocal and instrumental melody still bears the marks of the tuneful lyric school of opera; while in his last period most of the melody proper is relegated to the orchestra, and the vocal part consists of melodious declamation, in which the actor is quite as important as the vocalist, and often more so. Of the dramatic elements, in so far as they are found in "Lohengrin," New York audiences have never had a good opportunity to judge; and in saying that heretofore the music itself of this opera has been translated into Italian we simply mean that the lyric portions alone received adequate attention, the dramatic portions being either omitted or caricatured. But so great is the beauty of this score, and so varied the interest of its story and its lyric melody, that even with these drawbacks "Lohengrin" has achieved

its present popularity. Judge, then, of its effect when both the lyric and the dramatic features are rendered in an equally adequate manner, as was the case last week at the Metropolitan Opera-house. The orchestra followed Dr. Damrosch's baton conscientiously, and played the introduction to Act III. with marvellous spirit. In the first scenes the chorus was somewhat unsteady, but sang all the rest of its music (including some that is usually omitted) in a most effective manner. The Wagnerites had much trouble to restrain the applause of the uninitiated during the progress of the music, and the curtain had to be raised three or four times after each act. The audience was the largest since the opening night, and the indications are that "Lohengrin" is "booked" for at least half-a-dozen performances this season.

PARKMAN'S MONTCALM AND WOLFE.

Montcalm and Wolfe. By Francis Parkman. In two volumes. [France and England in North America.] Boston: Little, Brown & Co. 1884.

In his preface to 'Count Frontenac,' published seven years ago, Mr. Parkman says: "Passing over for the present an intervening period of less decisive importance, I propose to take, as the next subject of this series, 'Montcalm and the Fall of New France.'" With title somewhat altered, the book thus announced now lies before us, in two volumes; and we possess, from Mr. Parkman's pen, a complete history of the French in North America, with the exception of the period from 1701 to 1749. Upon this intervening period we suppose that he will now go to work.

The history of the war in which Montcalm and Wolfe figured—the Seven Years' War of European history, the French and Indian War of America—begins as a matter of course with the treaty of Aix-la-Chapelle in 1748; the new war began to threaten, on both sides of the Atlantic, as soon as the old one was finished. The events of the nominal peace occupy more than half of the first volume; in these years, however, of nominal peace, fall some of the most interesting events here narrated — the removal of the Acadians, Braddock's defeat, and the other military events of 1754 and 1755. The Seven Years' War had its beginning in these irregular operations in America.

It was mainly questions of boundary that were at issue here. It might be said in general terms, that the Alleghanies formed the natural boundary between New France and the English colonies; the sea-coast belonging to England, and the valleys of the St. Lawrence and the Mississippi to France. Certainly the exploration and occupation of the Mississippi gave France as clear a title to this river as England had to the Hudson and the Delaware. And the natural limits of the valley, it must be admitted, were the mountain ranges which bounded it on each side. It is in virtue of this definition of Louisiana that we now have possession west to the Rocky Mountains; not unreasonably the French Government claimed east to the Alleghanies. But in the West there was no competing claim; in the East, the grants to several colonies extended across the mountain barrier. More than this, the colonies had begun to take possession of the region in dispute. Actual occupation within a reasonable period is necessary to give validity to a bare claim; and, while the French had occupied the Mississippi Valley proper, and thus obtained an undisputed title, the vast Ohio valley had been neglected by them. Here the English had the first occupation, giving them what must be recognized as a valid title to the upper waters of this river. The Ohio Company, in 1750, began the settlement of the country beyond the Alleghanies. As in the West there were indeterminate boundaries, leading by natural steps to armed collision, so, in the East, there were disputed boundaries. Acadia had been transferred to Great Britain by the treaty of Utrecht, and apparently there could be no dispute as to what Acadia included; for the French had always claimed, under this title, as far west as the Penobscot, or even the Kennebec. Nothing would seem more indefensible than the juggling by which they gave the term a new definition, claiming "that it did not even cover the whole of the Acadian peninsula, but only its southern coast, with an adjoining belt of barren wilderness." At this end of the line, too, therefore, were present the elements of disturbance; and it is not strange that hostilities broke out under such circumstances, before the chief belligerents had made up their minds to war.

It was not any accident, then, but the necessary movement of events, that made the war begin just here and then. "Such was the complication of political interests," says Voltaire, "that a cannon-shot fired in America could give the signal that set Europe in a blaze." "Not quite," answers Mr. Parkman. "It was not a cannon-shot, but a volley from the hunting-pieces of a few backwoodsmen, commanded by a Virginian youth, George Washington" (p. 1). He does not mean that it was an accidental volley. The two nations were moving towards each other with hostile interests and intents; and if the volley had not been fired that day upon the Youghiogeny, it would have been fired soon after by some other party. The next year, 1755, followed Braddock's expedition and defeat, of which it need not be said that we have a graphic and lucid narration. The account of this fight differs in some particulars from that to which we are accustomed. "Braddock has been charged," says Mr. Parkman (vol i, p. 214), "with marching blindly into an ambuscade; but it was not so. There was no ambuscade; and had there been one, he would have found it. It is true that he did not reconnoitre the woods very far in advance of the head of the column; yet, with this exception, he made elaborate preparations to prevent surprise." His real fault appears to have been committed after the battle commenced, in not allowing his soldiers to adopt the backwoods tactics. "The Virginians alone were equal to the emergency. Fighting behind trees, like the Indians themselves, they might have held the enemy in check till order could be restored, had not Braddock, furious at a proceeding that shocked all his ideas of courage and discipline, ordered them, with oaths, to form into line." A new feature of the account, if we are not mistaken, is the panic of the Canadians and the repulse of the Indians in the early part of the fight. At the death of Beaujeu, it looked as if the English had the victory; but the courage and address of the new commander, Dumas, and the other French officers, soon restored the confidence of the Indians, reëstablished order, and turned the fortune of the day.

When we look over the whole series of events in this year 1755, we see that the Acadian tragedy was not an insulated act of objectless tyranny, but an incident in the year's campaign. Although peace still continued in name, it was only in name, and both parties were in reality actively hostile. This affair is therefore to be justified or condemned as a war measure: whether, in view of an impending war with France, it was necessary, and whether, admitting its necessity, it was carried out considerately and humanely, is the question. As regards the last point, there seems to be no question that the intention was to avoid all unnecessary harshness, and that, in fact, the orders were as a rule executed faithfully. There could not fail, with the best management, to be individual cases of hardship; and at best it was impossible that a policy of this sort could be carried out without great suffering. With the best intentions and the most considerate management, it must remain, in Mr. Parkman's language, "a measure too harsh and indiscriminate to be wholly justified" (i, p. 258).

The question of its necessity resolves itself into the two-fold question—whether there was sufficient provocation, and whether this was the only or the best way of meeting the difficulty. As to the first question, the new evidence brought up by Mr. Parkman must be admitted to be conclusive. The intermeddling of the French priests, and their unbounded influence over the Acadian peasants, left the English authorities no choice but to proceed to some vigorous and severe measures. If the English supremacy was to be maintained in this land—which belonged to Great Britain as much as Massachusetts did—it was indispensably necessary that it should be occupied by a loyal population. Either the present population must be made loyal, or it must be removed, and its place taken by English subjects. It appeared to the English authorities that the first course had been tried long enough, and had failed utterly. This was proved by the refusal of the inhabitants to take the required oath of allegiance. Nor would it do any good to try longer, unless the mischievous influences should be removed. But this was out of the question so long as the French occupied the adjacent territory. A clear case appears to be made out: there was no hope of bringing the inhabitants to a condition of loyalty, and the only remedy was to remove them and fill their places with others. A clear case, that is to say, *as a war measure.* As one of the grand succession of events by which the continent of North America was secured to the English race, the deportation of Acadian peasants, accomplished with as little suffering as possible, was a very small affair, but one of decisive influence. If we should raise the question of the inherent justice of the surrender of Acadia to Great Britain, or, indeed, of the final conquest of all Canada, which is the subject of this book, we should involve ourselves in discussions which admit of no determination. The question of nationalities, a decisive one at the present day, did not exist in the eighteenth century. The justice of placing these French Catholics under the rule of Protestant England was not a question which occurred to the statesmen of that day. Once so placed, it was their duty to be good subjects to their new masters, and this they refused to be. The blame for the affair rests principally, as Mr. Parkman has shown, upon the French Government and the French priests, whose influence it was that kept these poor people disloyal.

Mr. Parkman, the author of 'The Jesuits in North America,' cannot be accused of underrating the heroism and self-sacrifice of this devoted body of missionaries. But he has occasion more than once in this work, as in this case of the Acadian peasants, to condemn their conduct in the strongest terms. We find an interesting passage in reference to the mission of the Moravian, Christian Frederic Post, to the hostile tribes of Indians in 1758 (ii., p. 144):

"He was a plain German, upheld by a sense of duty and a single-hearted trust in God; alone, with no great disciplined organization to impel and support him, and no visions and illusions such as kindled and sustained the splendid heroism of the early Jesuit martyrs. Yet his errand was no whit less perilous. And here we may notice the contrast between the mission settlements of the Moravians in Pennsylvania and those which the later Jesuits and the Sulpitians had established at Caughnawaga, St. Francis, La Présentation, and other places. The Moravians were apostles of peace, and they succeeded to a surprising degree in weaning their converts from their ferocious instincts and warlike habits; while the Mission Indians of Canada retained all

their native fierceness, and were systematically impelled to use their tomahawks against the enemies of the Church. Their wigwams were hung with scalps, male and female, adult and infant; and these so-called missions were but nests of baptized savages, who wore the crucifix instead of the medicine bag, and were encouraged by the Government for purposes of war."

It may be noted that within twenty years of this time the order of Jesuits was suppressed by Pope Clement XIV.

We have left ourselves no room to speak of the principal subject of the book, the capture of Quebec by Wolfe; but it is enough to say that it is narrated with that brilliancy and picturesqueness of style of which Mr. Parkman is master. In short, we have here a book which will take its place as a masterpiece in military history—the best account of the most important war in our colonial period.

JEVONS'S INVESTIGATIONS IN CURRENCY AND FINANCE.

Investigations in Currency and Finance. By W. Stanley Jevons. Illustrated by Twenty Diagrams. Edited, with an Introduction, by H. S. Foxwell, M.A. London and New York: Macmillan & Co. 1884.

OPINIONS differ concerning the wisdom of giving to the world the unfinished work of a deceased author. It can seldom be the case that his literary fame will be thus enhanced; and, although there have been men who have bequeathed their bodies for dissection in the interests of science, few writers would care to have all their literary remains exposed to the scrutiny of an undiscriminating public. Mr. Foxwell seems to us to have allowed his devotion to the memory of Professor Jevons to carry him too far when he publishes scraps and fragments of manuscript that are so incomplete as to be almost unintelligible, with all the pains that a classical scholar would expend upon the remnants of an ancient inscription. These fragments, however, form but a small part of this book; the bulk of it is made up of essays that have appeared during the last twenty years in magazines or in the proceedings of various societies. These their author had himself made preparations to reprint, and they may, therefore, be considered to appear with his sanction. They fall into two groups, the first comprising eight papers treating of prices and commercial fluctuations; the second consisting of seven papers upon subjects connected with the currency. Most of them are accompanied with elaborate diagrams, which are themselves an enduring monument to the patient industry of the author. A bibliography, occupying fifty pages of double columns, and an index, make the book of service to all who are interested in the subjects of which it treats.

It is too soon as yet to form a definite and final judgment of the value of Jevons's contributions to economic science. That value is no doubt great, but we are unable to concur in the enthusiastic estimate that some noted economists, as well as the editor of this work, have put upon it. Mr. Alfred Marshall, for instance, not only holds that the great body of Mr. Jevons's work "will probably be found to have more constructive force than any, save that of Ricardo, that has been done during the last hundred years," but also says of the researches contained in this volume that "the pure honesty of Mr. Jevons's mind, combined with his special intellectual fitness for the work, have made them models for all time." We shall endeavor to present some considerations, as well as our limited space will allow, showing that it would be unfortunate for the progress of political economy if Mr. Jevons's methods of investigation should be generally accepted as models.

Probably the best known of this writer's productions is that entitled 'A Serious Fall in the Value of Gold.' It is certainly the one that cost him the most labor, and it seems to be generally regarded as the best example of his skill as an investigator. His aim was to show that prices had advanced, that they had advanced by a certain percentage, and that their advance was due to an increase in the supply of gold. His method was to compare the reported prices of certain articles during a number of years prior and subsequent to a period just before the gold discoveries in California and Australia, with their prices during that period; the latter prices being regarded as the normal ones. In order to show that prices had advanced it was necessary only to consult the price-lists of trustworthy journals; but here he encountered a difficulty in the fact that "in commercial quotations it is usual to state, not an average price, but the highest and lowest prices, comprehending any varieties of quality as well as any variations of price in the period considered." This difficulty proved so serious as to prevent him from deducing any exact conclusions from the numbers. He accordingly assumed that if he took the average of the highest and lowest prices he would obtain the average price of the commodity.

We may test the accuracy of this process by applying it to a few quotations from the current reports of the *Evening Post*. We find given there sales of 14,000 barrels of flour at from $2.10 to $5.75. Cheese is quoted at from 1½ cents to 11¾ cents, no quantity being given. It is impossible to contend that the average of these prices can have any significance whatever. It is indispensable to ascertain the quantities sold at the different prices in order to arrive at any useful results. We consider, therefore, that Mr. Jevons's calculations are vitiated at their inception, and although it is highly probable that the error would not be very great, it is also probable that it may be great enough to affect his results seriously. In one instance he seems to have recognized the danger, and takes from one journal the rather higher prices of Limerick butter during one period, joining them with the higher prices of Waterford butter taken for another period from another journal.

Assuming, however, that the averages given by Mr. Jevons are correct as to the several commodities, it by no means follows that his method of averaging these averages will show the true range of prices. He selects thirty-nine articles—we suppose that to an Englishman thirty-nine seems the natural number of articles to select—and then takes the geometric average of the increased prices that he has found, as showing the depreciation of gold. The reasoning by which he justifies this course is as follows:

"The price of cocoa has nearly doubled since 1845-50. It has increased by 100 per cent., so that its variation is now expressed by the number 200. Cloves, on the contrary, have fallen 50 per cent., and are now at 50. The arithmetic mean of these ratios would be ½ (200+50) or 125. The average rise of cocoa and cloves would then appear to be 25 per cent. But this is totally erroneous. The geometric mean of the ratios expressed by the numbers 200 and 50 is 100. On the average of cocoa and cloves there has been no alteration of price whatever."

Now we suppose that the only practical value of this investigation is to show how much less in goods a man will get for the same amount of money at one time as compared with another. It would seem to follow from Mr. Jevons's statements that a purchaser of cocoa and cloves would fare as well now as formerly. But if we conceive a buyer who has been in the habit of purchasing three pounds of cocoa for a shilling and three pounds of cloves for the same price, to go forth with his two shillings, he would find after getting his cocoa that he had nothing to buy his cloves withal. But if he had reasoned otherwise than Professor Jevons, and concluded that the average of prices had risen 25 per cent., he would have taken with him two-and-sixpence and returned with both the commodities that he wanted. In point of fact, this method of computation occasioned some criticism, and was defended by its author upon three grounds—first, because the geometric mean lies between the arithmetic and harmonic means; second, because it presents facilities for calculation by logarithms; and, third, because—

"It seems likely to give, in the most accurate manner, such general change in prices as is due to a change on the part of gold. For any change in gold will affect all prices in an equal ratio; and if other disturbing causes may be considered proportional to the ratio of change of price they produce in one or more commodities, then all the individual variations of prices will be correctly balanced off against each other in the geometric mean, and the true variation of the value of gold will be detected."

The first two of these reasons, whatever may be thought of their cogency, are intelligible, but the last, after prolonged study, we wholly fail to comprehend. We shall be obliged to leave the case with our readers, and proceed to other questions.

In any attempt to ascertain whether prices had on the average risen, it would seem to be of fundamental importance to consider the comparative quantities of the articles whose prices are taken as the basis of calculation. Thus, if we find that pepper, cloves, and indigo have doubled in price, while wheat, cotton, and petroleum have fallen one-half, we should hardly feel justified in concluding that the average price of commodities was unchanged. Such, however, would be the conclusion reached by Professor Jevons's method. It is true that the question has suggested itself to him whether there should not be some discrimination in the classification of commodities; but as he finds that no writer has attempted to decide this question, he declines to attempt its decision. To dismiss a question so vital to the inquiry as this seems not in accordance with the true spirit of scientific investigation. If it was worth while to undertake the labor at all, it should have been undertaken with the determination to make it complete. The interval of twenty years that has elapsed since this paper was first published is sufficient to have enabled the author to make up his mind whether the quantity of commodities to be exchanged for gold is or is not a circumstance of importance in determining prices.

We have spoken as if Mr. Jevons's method of determining the average price of any commodity was to assume the market quotations as a basis. The method that he actually adopted, however, was quite different from this; for under the plea that it was necessary for his purpose to eliminate temporary fluctuations, he modifies the quotations whenever in his judgment they vary too much from what he considers their natural course. Thus, in the case of cotton, as our civil war caused an abnormal advance in its price, he considers that "it will be more generally satisfactory, no doubt, to exclude such extreme fluctuations from our inquiry altogether"; and a like course was adopted with the prices of hemp and flax during the Crimean war. But it is obvious that it is unsafe to allow any investigator to exercise his discretion in regard to the figures that he will employ. We desire to learn how much prices have advanced, but we actually learn only how much they would have advanced if the course of events had been other than it was. Throughout the investigation Mr. Jevons seems to confound the two inquiries—whether the price of goods has advanced, and whether that advance is due to the increased supply of gold. We find serious errors in his treatment of the latter question; but our space does not allow

us to take up this subject, or to discuss his reasoning concerning commercial crises and the sun-spot cycle.

In point of fact, Professor Jevons undertook to deal with several problems of prodigious difficulty, without having carefully considered either the precise nature of the problems or the appropriate method for their treatment. He wrote a paper in advocacy of a Government telegraph, and when that change had been brought about he wrote another paper showing how pernicious it was. He plunged into a maze of figures and historical researches in order to show that the spots on the sun were the cause of bad harvests and financial panics; and when he had fatigued himself with the labor, he laid it down in disgust, declaring that it was folly to undertake it until it had been ascertained whether the sun-spots had any effect at all upon vegetation. He had an extremely *alert* mind—he accomplished much by suggesting inquiry and stimulating discussion; but he went to the bottom of nothing. We cheerfully accord to him a distinguished place among economists; but his distinction is due to the immense range of his studies, to the readiness of his intellect, to the brilliancy of his imagination, to the fascination of his style, and not to the soundness of the methods that he employed.

RECENT NOVELS.

On a Margin. Fords, Howard & Hulbert. 1884.

The Shadow of John Wallace. By L. Clarkson. White, Stokes & Allen.

The Inner Sisterhood: a Social Study in High Colors. By Douglas Shirley. Louisville: John P. Morton & Co.

A Young Girl's Wooing. By E. P. Roe. Dodd, Mead & Co.

The Armourer's 'Prentices. By Charlotte M. Yonge. Macmillan & Co.

Joy; or, The Light of Cold-home Ford. By May Crommelin. Harper's Franklin Square Library.

Beauty and the Beast. By Sarah Tytler. Harper's Franklin Square Library.

A North Country Maid. By Mrs. H. L. Cameron. Harper's Franklin Square Library.

The Bassett Claim. By Henry R. Elliot. G. P. Putnam's Sons.

The Gray and the Blue. A story founded on incidents connected with the war for the Union. By Colonel Edward Reynolds Roe. Chicago: Rand, McNally & Co.

'On a Margin' is crude in language, melodramatic in conception, and hopelessly confused in execution. When an author calls his preface "A matter of precedent," and his table of contents "Procession of the story," and says, in describing a young woman, "The memorable part of the girl's form was her hands," any reader with the smallest trace of the literary instinct knows what to expect, and has nobody but himself to blame if he goes further. Incident is heaped on incident with a reckless prodigality that people never use except with what costs them little or nothing; and, accordingly, these incidents are such as a diligent reader of sensational newspapers can gather in profusion. Jim Fisk and Sam Ward are served up in all their glory. The dangers of Wall Street are depicted with a very knowing air, but a single instance will serve to show what perilous stuff this is for the bucolic mind to handle: The hero, being a junior clerk in a stock-broker's office, is represented as executing orders at the Stock Exchange as his employer's proxy. This must have been done under a poetic license, as the practical rules of the Exchange do not recognize or permit proxies. Notwithstanding the abundance of incident, the story can hardly be said to have a plot, as the various events merely succeed each other without any mutual connection or dependence, seeming to spring from nothing and lead to nothing. And, in like manner, the characters have no more individuality than the shadows in a magic-lantern show.

According to the dedication, 'The Shadow of John Wallace' owes its inspiration to 'The Ring and the Book.' The story is not positively unreadable; it has occasional descriptive passages which are sympathetic and graceful, but the author's aspiration is far beyond her power of performance. Indeed, it is hard to understand how one who has studied the masterly management of the drama of the wronged or wronging Pompilia could have treated a kindred subject so awkwardly, and, if the word may be applied to fiction, so unscientifically. Beyond the advent of John Wallace in the Long Island village, and the transient presence of the woman presumably responsible for his exile, three-quarters of the book have no event which sustains interest in the main issue, that is, in the mystery of John Wallace, in the secret of his prolonged sojourn among uncongenial people in a foreign land. Then, into fifty pages are crowded three sensational stories, any one of which may be the story of John Wallace, but not one of which impresses the reader—forced to scamper through lawyers' offices, lunatic asylums, and ruined ancestral halls—as even remotely connected with him. The literary style is unusually conscientious, but labored and heavy. As if to guard against any possibility of illusion, the author is constantly obtruding her personality, appealing to the reader, telling what she means to do and what sort of a story this story is. We often wonder when the people who write novels will learn how this trick annoys the most patient people who read them.

The make-up of 'The Inner Sisterhood' is extraordinary: a bundle of leaves in seven strong colors, tied together with silk cords. All the strength and variety are in the paper; the seven confessions of the seven young women impressed thereon are monotonously feeble, flippant, and vulgar. We foresee that these effusions are destined to form the text for a luminous homily by an English essayist on queer social usages in America. He will observe solemnly that twenty-five years of English exhortation have failed to loosen the hold of the word "fix" on American affections. He will point out the futility of a scheme for higher education of women who habitually find some things "real hard" and other things "powerful big." He will pounce upon those parents who calmly go to bed, leaving the hall lamp dimly burning for the benefit of a young daughter who may be fetched home any hour before dawn by any stray young man, and he will hold the Federal Government responsible for the impropriety. He will argue on the evidence that the "storm-door" is a feature of national architecture specially intended to express the feelings of the young man after he has turned the damsel's latch-key. He will carefully analyze the emotion which prompts the young man to close this strange "storm-door" softly and slip down the steps, contrasting it with that which impels him to disappear with a flying leap, leaving the parental porch a prey to Boreas and the tramp.

Mr. E. P. Roe's last novel, 'A Young Girl's Wooing,' throws no light on the problem of his unquestionable popularity. The large annual circulation of such unqualified trash may be an encouraging sign of the times to the sentimental moralist, than whom no human being has less faculty for looking facts in the face, for seeing life as it is, or for properly conceiving what it should or might be. The thought that it is read at all must depress those who believe that the average literary taste is some measure of average intelligence; of national soundness, mental and moral. Mr. Roe ranks among novelists about as an organ-grinder ranks among musicians. A lusty Italian with a hurdy-gurdy can inflict a *mauvais quart d'heure* on a sensitive ear, but the torture is nothing to that of an hour's enforced attention to 'The Young Girl's Wooing,' if the victim has an instinctive repulsion for didactic platitude and cant, if he even dimly appreciates truth in external fact and in ideal, if he has a notion that the English tongue is warm, flexible, living, not a ponderous, mechanical arrangement of arbitrary sounds.

Though it would be most unfair to place Miss Charlotte M. Yonge in the same category with Mr. Roe, the mystery of why people have read and do continue to read her books is almost as deep. The germ of her story is generally healthy, and that of 'The Armourer's 'Prentices' is no exception. But the forces brought to bear do not develop the germ into a thing either of beauty or strength. The two youngsters who, with hearts full of hope and courage, with little money in their purse, go forth from the New Forest to fight fortune, are capital figures round which to weave a romance. Miss Yonge, however, utterly fails to sustain interest in their career, and her elaborate descriptions of London life in the early Tudor times never group themselves into vivid, effective pictures. As she addresses herself chiefly to young people, she labors most industriously to combine amusement with instruction. Unless an author's style is fresh, sharp, and imaginative we doubt whether this praiseworthy object is ever accomplished. Such a prosy narrative as that of the 'Armourer's 'Prentices' is most apt to make a young person of fair spirit shun the historical romance consistently.

The great trouble with Miss Yonge is that she never knows when she has said enough. The same constitutional defect is common to the authors of two recent numbers of the Franklin Square Library—'Joy' and 'Beauty and the Beast.' Both novels are by women who have fairly earned some distinction in their profession; both are fairly entertaining, and yet one-third of each is clearly an encumbrance on two-thirds. In 'Joy' the characters and conditions are so different from those with which the author has hitherto dealt, that she seems to be protesting that she has seen life and can talk all sides. With the two Spanish Jewesses hiding from the world on an English moor, she has done very well; but the Spaniard so intimately connected with their fortunes is too dark-browed and disreputable for anything but highly-wrought melodrama. He is, however, judiciously put in prison at an early stage, and not allowed to escape until his presence is demanded by the exigencies of catastrophe. The author of 'Beauty and the Beast' handles her desperado without gloves. He is a soldier in her Majesty's service, only escaping the lash by timely succession to a baronetcy and broad acres. The doings of Sir William Thwaite among people of gentle breeding are told naturally and with commendable boldness, though some chapters outrage good taste and do not intensify the situation.

'A North Country Maid,' in the same series, is equally over-written, and is vicious without mitigation. The plot is a succession of the oldest stage tricks. Nobody cares much, at this late day, for the girl who marries a brute that her father's butcher's bill may be paid; and the frequent mention of the exact sum, not omitting the odd ha'penny, will not serve to wring the tear of pity. The heroine's purchaser, Earl Dungarvon, is a loathsome person. He is not drawn from any sort of life, and has not even been

given the redeeming physical splendor of those choice monsters upon whom Ouida has conferred a patent of nobility.

The latest issue of the Knickerbocker series, 'The Bassett Claim,' is a story of Washington life with the usual setting of Congressmen and legislative intrigues kept well in the background, while the real interest depends upon the loves of young men and women, and the struggles of the former to get on in the world. The story is very simple and very natural, with just a dash of mystery at the end to give it romantic flavor. The people one meets in its pages make no pretence of being anything more than ordinary human beings, with some knowledge and cultivation, and as a consequence turn out to be very pleasant acquaintances. The most pleasant one of all, perhaps, is old Tom Bassett. This kindly old gentleman's influence is seen here and there throughout, though he himself dies almost at the opening of the story, with the title of his bill, "for the relief of old Tom Bassett," upon his lips. His long life had been mainly spent in efforts to have his own and the other French spoliation claims paid by Congress, and the brevity of the few touches with which the genial impression of him is given adds to its distinctness rather than otherwise.

The whole story, in fact, is told with a directness, with now and then a vein of sprightly humor, which relieve a somewhat open and ineffective plot. With more sombre treatment it would have proved wearisome; for there is nothing absorbing in the fact that old Tom's great-nephew, Windward Bassett, should go to Washington to help forward the claim (for he is in no need of the money); nor that his mother and sister should follow him; nor that he should fancy himself in love with a pretty girl, get jilted, and forget her; nor even in the fact that his college chum should have been all along in love with Miss Bassett, and finally marry her. But these simple elements are so well developed that, with the frequency of lively conversation and epigrams, and the slight air of mystery, and the charm about Miss Sheffield, the story is never dull. In the last chapter, indeed, the author gives himself away, as Henry James has characterized the admission on a novelist's part that he is only "making believe." And whether one agrees or not with Mr. James, that this is a violation of a sacred trust, one must nevertheless be pained at learning, as a reason for the *envoy*, that "the reader expects completeness, pays for the volume on that understanding, and very properly feels cheated if on examination he finds his little toy-world only half done." To a work of art such a touch of commercial values at the finish would be beyond question a blemish entirely ruinous.

It cannot be said of Colonel Roe's novel, 'The Gray and the Blue,' as of Mr. Elliot's, that he has made the most of his story. In spite of the fact that the remarkable coincidences on which the story turns are not beyond the range of probability, the situations are so crudely imagined, there is so little sense of proportion or construction shown, that the work seems strained and artificial. It is certainly done with carelessness, and the reader from the start sees through the various complications so easily as to lose interest in what might have been made a striking narrative. The style is almost the newspaper style, in fact, and while there are two incidents of the Rebellion which in a measure contribute to affect the relations of the characters, the war, nevertheless, serves rather as a topic of conversation than as a foundation for the story. The tone of the discussions, however, between the gray and the blue is mild and inoffensive, and meant to be conciliatory; but it is without great originality or depth of thought.

ILLUSTRATED BOOKS—V.

One Year's Sketch Book. Illustrated and arranged by Irene E. Jerome. Engraved and printed under the direction of Geo. T. Andrew. Boston: Lee & Shepard.

Orchids: The Royal Family of Plants. With illustrations from Nature. By Harriet Stewart Miner. Boston: Lee & Shepard.

The Pilgrim's Progress. By John Bunyan. With one hundred illustrations by Frederic Barnard and others. London: Alexander Strahan; New York: A. D. F. Randolph & Co.

"*From Greenland's Icy Mountains.*" By Bishop Heber. Illustrations by Thos. Guilfoye and Edmund H. Garrett. Boston: Lee & Shepard.

The Mountain Anthem: The Beatitudes in Rhythmic Echoes. By Wm. C. Richards. Boston: Lee & Shepard.

The Land of Rip Van Winkle: A tour through the romantic parts of the Catskills—its Legends and its Traditions. By A. E. P. Searing. Illustrated. G. P. Putnam's Sons.

THE most noteworthy thing in the history of American art is the so general wide encouragement of ill-educated art work. The calm courage with which young people who have no training whatever, start on a career which demands, logically, long and severe training, as well as exceptional natural adaptation, and meet with enthusiastic encouragement—the numerous sculptors who cannot model a hand properly, painters who cannot draw a tree decently, etc., etc., but whose statues greet us in public squares, and whose pictures ask for our admiration at the lips of friendly relatives on the ground of their being by "natural geniuses who never had a lesson"—one does not meet with anywhere else in the world. What in art is untaught is bad—there is no such thing as self-taught genius, any more than there is self-developed speech. All who are not properly trained are *pro tanto* unable to do good work. Women, as a general thing, require rather more training in art than men, and generally have much less. The charity and interest of unwise friends encourage them to waste their lives in work which will go into the dust heap when the personal interest is exhausted, instead of insisting on their learning a business which they have set their hearts on.

The 'Sketch Book' before us is an instance in point. The artist has never learned to draw properly a flower, or put a landscape into keeping with its values in their places. She has never learned to draw anything with delicacy, and yet will draw flowers. On the other hand, she has a strong sense of the pictorial, undoubted talent—budding genius we don't stumble on so often as to be familiar with its features, perhaps—and with good training might have done really good work. Her book contains all this information. It is got up with great luxury of type, wood-engraving and paper, and makes an attractive *ensemble* with many charming fancies, but contains not one thoroughly good drawing from beginning to end. We sometimes see genius compared to fine gold. But this is a mistake: it is bronze, rather—worth much or little according to the labor spent in putting it into shape. "Thou, O God! givest all good things to labor." The fine gold is in the conscience and sincerity of purpose which makes even its least result of value.

The most fascinating, if not most royal, of all plants to genuine flower-lovers are the orchids, and the author of the book under review has given twenty-four plates of members of the family, with some text, including verses not a few in the way of quotation—the former rather scientific than artistic; the latter popular, not to say poetical. The drawings cannot be called good as flower-painting, not even in the vein they follow—that, namely, which is shown at its best in Japanese flower work. Even the largely disposed Cattleya Trianæ, with all its gorgeousness—one of the easiest to draw and most attractive to the artist of the family—is most inadequately represented. Good work in the Japanese vein is that which, giving the form in all its subtlety, makes no attempt to give the modification of the local color produced by light and shade; rendering each tint exactly as if seen in a diffused light which fell equally on all parts. Good flower painting as art, on the contrary, renders the local color in, and through, shadow with equal fidelity. The artist of these drawings effects a most unsatisfactory compromise between the two: her local color is spoiled by an attempt at shadow that does not render properly the form, which it is the function of light and shade to do.

The book is evidently conceived from the artistic point of view, and it is unfortunate that the author had not learned to draw a flower properly, as the get-up of the work is sumptuous. She notes the Cypripedium Spectabile, very fitly, as one of the most beautiful of the family, and says it is easily domesticated. Has she ever tried and succeeded? We imagine not, from the fact that it has proved very difficult, and that she has not included it in her series. There is no orchid more exquisite in color or graceful in form, but we have never seen it in any collection, and the late Professor Jackson, of Union College, an ardent botanist and horticulturist, used to say that it was untamable, and its home is in the Mohawk Valley all around Union. Another of the most beautiful, which the author does not include, is the Cypripedium Calceolum, almost as fine in color as the Spectabile, and equal to it in form. The book should have been called 'A Selection of Orchids,' not 'Orchids,' for those included are but a minute part of this splendid family.

The immortal parable of Bunyan is hardly conceived in a spirit which lends itself to the worldly vanity of modern art. The ideals and types are too subjective to be made matter for realization, so that a proper and dramatic illustration can only be the work of a designer fully in sympathy with the work—a *rara avis in terra*, whatever it may be in the Celestial City. Mr. Barnard's attempt, therefore, to put before us in true counterfeit the personages of Bunyan is rather an attempt at the impossible than something more difficult than to draw Shakspere's personages. These, we know, may be seen in the flesh, but Bunyan's people are only born of the spirit, and the conception of them is dependent on the temperament of the reader and his views, but in all cases is accompanied by an atmosphere of unreality which contradicts the concrete embodiment. Mr. Barnard has undertaken to make actual, as he drew a personage in "Richard III.," a creation of the fancy whose indispensable condition is impersonal and subjective, in spite of its typical character (or perhaps on account of it). The actualization, therefore, of Mr. Worldly Wiseman rather suggests the "Merry Wives of Windsor" than the 'Pilgrim's Progress'; and the more actual and human the image evolved the more it contradicts Bunyan's ideal. The attempt was inevitably, regarded from the higher side of art, a failure; and from the lower or purely pictorial side is not much better, from the flimsiness with which the work has been done. The illustrations as drawing and engraving belong to the *Graphic* school.

The Missionary Hymn and 'The Mountain Anthem' are two of the silk-fringed, illuminated-cover series of Christmas books, illustrated by woodcuts—the whole rather remarkable for good

wood-engraving than intelligent or appropriate designing. It is indeed a problem to illustrate the Beatitudes, and the hymn of Bishop Heber is hardly a theme for pictorial amplification. It is a matter for grave consideration how far the lavishness in the direction of illustration on so poor bases as these is conducive to the education in taste of artist or public. It becomes a problem in political economy, not to be treated in this place.

The plan of 'The Land of Rip Van Winkle' is the not novel one of weaving the legends and descriptions of the country into the narrative of a journey through it. In this case the most is made of the Catskills, which yield an amount of romance of which no one suspected them capable, and of the greater part of which few, probably, ever heard, before the author intervened. Seven wise people leave New York in September (had they been wiser they had left earlier), and go through the vicissitudes of a hot journey, beginning by steamer to Catskill, during which the company are served with Captain Kidd with many variations—facts mixed with fancy. Then the travellers thread their way through all the show places of the mountains, and "the artist" and "the literary fellow" of the company alternate with rustics and Mr. Oldbore, the antiquarian of the seven, to make up the interest necessary for so long a narrative, which winds up with the legend of Rip Van Winkle as told by Irving. The stories are not always either *vere o ben trovate*, which is a capital defect in a mosaic of this kind; but they are lively, which compensates for much. The illustrations vary from good to middling, some being very good, as, for instance, "On deck of steamer," "Captain Kidd and Governor Fletcher," and an illustrated title-page in emulation of Japanese work. There is a panoramic view of the whole Catskill country from the "Overlook," in four sheets, and about a hundred other illustrations. The paper, typography, and make-up are excellent, and the book will, without doubt, be a success, and deserves it, as holiday books go.

A novelty in illuminated work is 'The Guest Book,' an improved and glorified form of the album of old days, which claimed a contribution from every friend of the owner. It provides for the "coming and going of guests, with pages for autographs, incidents, and sketches pertaining to pleasant visits, social calls, and other gatherings," and is designed and illustrated by Annie F. Cox, and published by Lee & Shepard. The blank leaves are interspersed with pretty illuminated headings and ornamental letters in color, of which some are very appropriate. It will give play to much ingenuity on the part of the young ladies, and may be made the object of diversified displays of good taste.

BOOKS OF THE WEEK.

Story of a Hunchback. Chicago: Jansen, McClurg & Co. $1.
Sweet, H. First Middle English Primer. Thomas Nelson & Sons.
Taylor, Rev. W. M. The Lost Found and the Wanderer Welcomed. Charles Scribner's Sons. 75 cents.
The Seven Ages of Man, from Shakspere's "As You Like It." Illustrated with photogravures from original paintings by F. S. Church, etc. Philadelphia: J. B. Lippincott & Co. $3.
Thorn, Ismay. All Play. Illustrated by T. Pym. A. D. F. Randolph & Co. $1.25.

The Nation.

NEW YORK, THURSDAY, DECEMBER 18, 1884.

The Week.

THERE are some things in Secretary Frelinghuysen's defence of the Spanish treaty—said to be the composition, in the main, of Mr. Foster—which sound like economical novelties, and make one feel as if one of the results of the high tariff was the eradication from the American mind, or memory, of the theory of exchange. How, for instance, does "the loss of revenue which a reduction of the sugar and tobacco duties involves, harmonize with the policy which placed coffee and other like products on the free list?" Putting a commodity on the free list means declaring that it shall pay no duty, no matter from what part of the world it comes. This inevitably lowers the price, and surrenders to the consumers the sum lost to the revenue. But taking the duty off a commodity coming from one particular part of the world, which furnishes only a portion of the supply, surrenders the sum lost to the revenue to a particular set of foreigners, and not to the consumers. This policy cannot, therefore, "harmonize" with the coffee policy, because the only thing in common between them is that they both reduce the revenue. You might as well say that a man who lost $50,000 in gambling was like a man who spent that sum in founding a public library. It also resembles somewhat the *Tribune's* ground in the late canvass, that Blaine was as good a man as Washington, because charges were made against them both.

The reciprocity treaty concluded with Mexico contains a provision (Article 9) that it shall remain in force for six years, and until the expiration of a twelve-months' notice by either party at any time afterward. By Article 5, however, it is provided that in case any changes in the tariff, as against *other nations*, are made by Mexico or the United States, "either by legislation or by means of treaties," the party affected by the change "may denounce this convention even before the term specified in Article 9, and the present convention will be terminated at the end of six months from the day on which such notification may be made." Now, by the Mexican treaty, sugar "not above No. 16 Dutch standard" is to come in free. The Spanish treaty just concluded admits Spanish sugar of the same grade free, besides making innumerable other changes. This appears to be just the case Article 5 of the Mexican treaty was designed to provide against. It involves a change in our tariff in favor of Spain, which affects Mexico. Consequently, if the Spanish treaty is ratified, the Mexican Government can, if it chooses, terminate the Mexican treaty in six months. The lawyers in the Senate, therefore, will have to balance the risk of losing the Mexican treaty against the advantages of the Spanish treaty. A commercial policy based on treaties which may be torn up whenever the area of the policy is extended, is an economical novelty which may well cause the Senate to hesitate.

The Boston *Advertiser*, referring again to the Clayton-Bulwer treaty, says that "if England persists in regarding the treaty of 1850 as still binding and applicable, it is the clear duty of Congress either to abide by, and act under, its terms, or else to appeal to arbitration, stating our willingness to pay an indemnity if we fail to show, first, that the treaty bore only on a 'particular object,' long since past, or, second, that the violation of the treaty by Great Britain has rendered its further continuance subject to our pleasure." There is a subtle irony about this which we fear is too delicate for general comprehension. The fact is that we can never show that the treaty has only a "particular object," because the treaty itself (Art. 8) refers to the two governments as desiring by means of it "not only . . . to accomplish a particular object, but also to establish a *general principle*."

The work of constructing a Cabinet for President Cleveland is proceeding with undiminished briskness in the newspapers. The greatest activity is displayed by the Republican journals and by the few Democratic journals which did all they could to defeat Cleveland during the campaign. It is in the latter particularly that we find the liveliest anxiety about the new President's attitude upon civil-service reform. They are sure that if he enforces the present law, and especially if he attempts to enlarge its scope, there will be trouble in the party. They view with solicitude such rumors as that Senator Pendleton will be given a Cabinet position, and almost despair of the perpetuity of free institutions when they contemplate the possibility of Cleveland's adopting a policy in accordance with the views of the Independent Republicans. They talk constantly of the irrepressible conflict between the Bourbon Democracy and the reform element of the party, and warn Cleveland of the danger before him. Yet outside of the columns of these newspapers there are few signs of any such conflict. The Democratic journals which supported Cleveland in the canvass are waiting patiently to see what his policy will be. We have yet to see one of them which demands that he either disregard the Civil-Service Law or refrain from extending its scope. The ablest of them are urging precisely the policy that the Independents believe he will adopt—namely, of complete fidelity to civil-service-reform principles. The most eminent leaders of the Democratic party take the same position, and we have no apprehension that this gratifying unanimity of Democratic sentiment can be disturbed, much less overcome, by the meddlesome interference of the late Butler organs.

The *Tribune* has discovered one of the saddest things connected with Cleveland's Administration, and that is that Cleveland has "tendered a portfolio of Secretary of State" to Bayard on the nomination of "England." The way "England" nominated him was by "naming him in certain papers" published in that kingdom, and "expressing the hope that he would not decline to take office under the new President." All that "England" wants now, says the same authority, to make her triumph complete, is to get into the Cabinet a "leading Mugwump free-trader." That she will accomplish this also there is, it appears, little doubt, and with a President, two members of the Cabinet "to her liking," and the office of Vice-President filled by a "Southern sympathizer," where would be the fruits of the war? Where, indeed, would be the fruits of the Revolution; for are not English papers to-day full of praise of George Washington, showing clearly that the old traitor was all along in the pay of Lord North? It appears, too, that this ruthless Power is now going to "force us to accept her free-trade notions." They are to be administered weekly with a kitchen spoon, in no better menstruum than oleomargarine, under the superintendence of the Cobden Club, which is coming over for the purpose in two ships, like Thackeray's Rumptyfoozle, with lots of gold—oh, so much gold! "Will Americans sit idly by," asks the *Tribune*, "and see these designs carried out, their industries crippled, and factories either closed or continued at starvation wages?" We think not. We think there will be trouble if Bayard goes into the Cabinet under these circumstances, accompanied by a Mugwump free-trader, and begins forcing free-trade notions down American throats. The thing cannot be done. Let England beware.

The remarkable sentiment in favor of civil-service reform which was displayed at the Democratic banquet in Baltimore on Thursday evening, will make the toes of the hungry portion of the Democratic party colder than ever. The banquet was given to Senator Gorman by the business men of Baltimore, and among the guests were Senators Bayard, McPherson, Hampton, Lamar, Pendleton, and other of the ablest leaders of the party, many of whom have seen Governor Cleveland recently and have talked with him. The direction of the exercises was also in the hands of men who are familiar with the Governor's views. It is most significant, therefore, that in such a gathering a toast in favor of civil-service reform should be proposed, containing such emphatic declarations as this: "We look to his (Cleveland's) Administration to enforce all the laws that secure it, and to inaugurate others which will widen the scope of its operations until the corrupting spoils system shall cease to be even a possibility in our political life." The selection of Senator Pendleton to respond to this sentiment was another significant incident, as was his confident prediction of what the new President will do: "The scope of the Civil-Service Law will under him be widened; its tentative period has passed, and Mr. Cleveland's Administration will not end until the spoils system has ceased to be a possibility in American politics."

Colonel "Bob" Ingersoll has been interviewed at Cincinnati on the subject of Cleve-

land's election. Seeing that he was exposed to immediate assault from the *Commercial Gazette*, his opinions betoken much personal bravery. "Responsibility," he said, "will make the Democrats conservative. They want to succeed in 1888. That will make them prudent, and the probability is that Cleveland will do his level best to give the country a good Administration, and that he will succeed. I do not think the world is going to destruction because the Republican party is out of official place. There are as many Republicans now as before election. They will all have influence, and that influence will be felt and respected by the Democratic party. If Cleveland does well, it will be a fortunate thing for the whole country. It will show that the country is safe in the hands of either party. We want good government, and we want to become civilized to that degree that both parties can be trusted." Colonel Ingersoll did not take any active share in the late campaign, but he gave it the "keynote" eight years ago when he designated Mr. Blaine as a Plumed Knight. The keynote which he now sounds for Mr. Blaine's competitor strikes us as the more pertinent and useful of the two.

Professor A. L. Perry, of Williams College, writes a "ringing letter" to the *Million*, the free-trade weekly newspaper published at Des Moines, Iowa, on "The Meaning of the Election." The meaning of the election, according to Professor Perry, is that "politically the Republican party is as dead as Cæsar." Its condition is like that of the Whig party in 1852. Although it cast more votes than ever before in its history, as the Whig party did in 1852, yet it has sinned against the nation beyond hope of forgiveness. It has sinned chiefly by maintaining war taxes in time of peace to protect the rich at the expense of the poor. It has allied itself to all the great monopolies and monopolists, and published the alliance to the world at the millionaire banquet at Delmonico's just before the election. It tried to steal the election after the votes had been cast, and, failing in this, the party turned with fury upon the victors and sought to punish them for voting for Cleveland. "They died very hard, and accordingly they died very dead. The whole country observed their unseasonable contortions, and made a careful note of the death-rattle too long deferred." Their candidate for the Presidency, after courting the votes of the Southern States with honied words, turned furiously against them after the election, and sought to stir up the sectional strife which he had previously said was dead and buried. Whatever needed to be done before the election to detach from the party the floating vote, without which it would have been defeated in most of the Northern States, has been done since the election, and done thoroughly. It only remains for the Democratic party, Professor Perry thinks, to take up the question of revenue reform, knock off the duties on raw materials, and reduce correspondingly the duties on manufactured products, in order to open the door to a profitable foreign commerce and secure to itself a long career of victory, based upon internal peace and business prosperity.

The *Sun* does not like Mr. Schurz's opinion that "the defeat of Mr. Blaine was due principally if not exclusively to the way in which the Little Rock and Fort Smith bond transaction was presented to the voters," and declares that "there is no reason to believe that the (Mr. Schurz's) Little Rock speeches had much if any effect on the votes they were designed to influence." This may be all true, Esteemed Contemporary, but consider for one moment how much more effective your utterances on this subject would be if you had answered those questions about your political sagacity which the *Nation* put to you just after the Presidential election. Two of these were:

I. Why did you say on the 21st of September that "it was a safe prediction that in New York city Butler would have more votes than Cleveland," you being at the time a political prophet of some distinction?

II. Why did you say on the 27th of October that "no sensible politician believed that Cleveland stood any chance of saving Connecticut, New Jersey, or California," and on October 29 that "there was scarcely a doubt that Grover Cleveland would lose New York, New Jersey, and Connecticut," you being at the time one of the most sensible politicians in the country?

Now there is a strong popular desire to believe that you are a political prophet of high standing, and know beforehand how every election will go, and know exactly what influences are operating most powerfully on the popular mind before election; but people's faith in you is hindered and in many cases destroyed by your failure to tell what it was that went wrong with your predicting and analyzing apparatus during the late Presidential canvass. Until you tell, your corrections of Mr. Schurz and other persons about the condition of public opinion will simply make the judicious smile—not grieve, mind you, but smile; for the judicious like an occasional laugh as well as anybody.

Seldom if ever has the need of a national bankruptcy law been more keenly felt than within the year now ending. Two causes have hitherto stood in the way of the passage of a fairly good law: the opposition of Southern members of Congress to any change whatever, and difference of opinion among the advocates of a national law themselves on the question of procedure. Some Southern communities, having good State laws, feel that there is greater safety in retaining what they have than in tempting the chances of a general bankruptcy law. These communities have probably experienced less loss than others from the late years of commercial depression. The Southern commercial balloon had scarcely lifted itself from the ground four years ago, and the decreased inflation did not cause it to fall very far, while long training in the ways of adversity may have made the fall still easier. At any rate it is beyond question a fact that the Southern commercial element does not favor a general bankruptcy law. It is the merchants of the great cities of the Eastern, Middle, or Western States who desire it. Their customers are distributed over the whole country, and without a general bankruptcy law they have as many different classes of risks in dealing with their customers (aside from the question of personal confidence) as there are different insolvent laws in the various States. That a few of the Southern or Western States have good insolvent laws is of small value to the merchant who sells his goods to customers in nearly every State in the Union. And the fact is that these laws in some of the States, New York not excepted, are actually pernicious; those conceding the right of preferences to creditors being particularly obnoxious.

The States whose laws are of indifferent character would suffer if merchants in the great commercial centres were to discriminate in credits so as to be somewhat more exacting toward traders in those States. The Southern sentiment is perhaps in part due to apathy, but it partly arises from a failure of the merchants to realize in what manner it would be for their own advantage to advocate a general law, and what changes in their commercial relations the want of such a law may produce in the future. Efforts of our commercial bodies to urge upon Southern merchants the importance to them of this subject will be work in the direction in which the most good will be accomplished, and it is none too soon for making such efforts, to the end that when the long-looked-for revival of trade does come it may be under the auspices of a good commercial law.

The McPherson bill providing for the issue of national bank notes at the par value of the bonds deposited as security for the same, appears to be the only measure relating to this class of questions which has much chance of passing Congress at the present session. It is certainly unobjectionable, and while not dealing with the subject in a large way, it is desirable that some measure should pass which shall stop the retirement of national bank notes and prevent the national banking system from falling into disrepute, until Congress shall have time and opportunity to deal with it in a more comprehensive manner. The talk which some newspapers are indulging in at the present time, implying that "the national banks must go," is extremely flippant. The truth is, that when the national banks go, a good many other things will go at the same time which society has become accustomed to and cannot do without. The whole business of the country has been building itself upon and around the national banking system during the past twenty-one years. It must be kept alive as long as there is a bond basis for it to rest upon; and when this can no longer be found, the resources of statesmanship and business experience must be called upon to furnish something to take its place. Meanwhile the McPherson bill provides an adequate breathing spell.

A verdict of $5,000 against the Lake Shore Railroad Company has been rendered by a jury at Cleveland, as damages for discriminating in accommodations and rates for freight shipped over that road. The Standard Oil Company had peculiar influence with the railway company, and directed its efforts towards shutting up the works of a competing refinery through extortionate freight rates and refusal of proper facilities for shipping. The discrimination was so glaring that there was no difficulty in getting a proper case for the courts, and the Judge in charging the jury laid down wholesome law when he said:

"Whether railroads are considered as public or private corporations, whether they are public

highways or otherwise, it is manifest to me that the establishment of these great railroads by legislative authority, with all their great privileges, powers, and franchises, and their construction, are largely due to the fact that their right to take private property for that purpose, without the consent of the owner, makes them, in some measure at least, public works, established for the benefit of the public. If they were not designed for public use, it is difficult to understand why such great privileges are conferred on them. They are common carriers, made so by law, and the public have a right to their use and benefit as such on terms of equality without unfair discrimination; and this requirement or exaction on the part of the public does not, in my judgment, impair or in any manner infringe upon the equitable or legal rights of such carriers of freight and merchandise."

It is well that such flagrant violations of the law now and then occur, so that a sharp check may be given by courts and juries. Usually these discriminations are so carefully hidden that they cannot be brought to light.

In the Southern States convicts are not confined, as is well known, in penitentiaries, but are generally employed in large force upon works of internal improvement, such as the working of roads and the cutting of canals. In Alabama and in Georgia their labor is controlled by individuals or companies who purchase it from the State. The "convict lease" systems of these two States are not equally bad, though both have been severely and not unjustly denounced. In Georgia all convicts, of whatever sex or condition, are "leased" for a fixed sum per annum, while in Alabama they are divided into groups according to their skill and strength (the young, the sick, and the infirm being set apart to be provided for by the State), and bids are received for the use of their labor. In South Carolina large numbers are kept constantly engaged in the phosphate beds belonging to the State, and in western North Carolina large railroad systems have been constructed by their labor. A project has been lately proposed in the last-named State to provide for the draining, by means of convict labor, of the swamp lands owned by the State Board of Education. It is claimed that if this is done, the lands will be so increased in value that from their proceeds the public schools of the State will be well sustained, independently of the "Blair bill" provision, and that the State's revenue will be augmented by the taxes collected from the purchasers. This plan of utilizing convict labor has received the approval of the Charleston (S. C.) *News and Courier*, which hastens to commend it to the consideration of the Legislature of South Carolina, as in that State also are many thousand acres of land in the "low country" covered with swamps, but capable of conversion into fertile fields. It is difficult, as this journal says, to find a way to employ convicts satisfactorily. The North Carolina plan will meet with favor because it provides work for convicts which will not come into competition with the work of any class of citizens, and which will not directly enrich any one in particular.

The trustees of the Presbyterian Theological Seminary in Columbia, S. C., are at present engaged in stamping out the doctrine of "evolution." The Rev. Dr. Woodrow has been preaching it in one of the chairs of the Seminary, so they have dismissed him. The poison, however, seems to have spread among his colleagues, for the Professors of Church History and the Professor of Biblical Literature thereupon immediately resigned. Evolution, as held by most Christians, simply means a slower and more complicated process of creation than that hitherto believed in, so that it is hard to see the danger of it when preached by a theological professor. But it is an excellent sign of the times that it should be causing trouble in a Southern Theological Seminary. Until now not a sound of the storms which were agitating the world of thought ever reached these institutions. In fact, they were all, or nearly all, standing protests against all kinds of intellectual movement. It cannot be very long since the name of Darwin was unknown in them. To have one of them rent by dissensions over his theory shows that the old stagnant South is rapidly passing away.

There are many unpleasant intimations that some of our esteemed contemporaries, in their eagerness to maintain their increased campaign circulation, are returning to the filth business which assumed such alarming proportions after the advent of two-cent journalism. The same system of collection is used now as then. The back villages of the country, as well as the large cities and towns, are scoured for disgusting scandals which are thrust under the noses of New York readers. In recent issues of the morning papers, we find scattered over them in conspicuous places, such head-lines as these: "Elopement or Abduction?" "A Romance of Crime"; "A Missing Palmyra Widow"; "The Husband's Love Stolen"; "Eloped with a Negro"; "Married at a Pistol's Muzzle"; "Where is Printer Gray's Wife?" "Bigamous Doctor Linn," and "Love in his Very Old Age." Nearly all these titles cover matter which is not news but filth, and which no respectable man would be willing to have brought into his family. We believe that its publication is not only an offence to public decency, but that it is bad business policy as well. Some of the journals which tried the experiment a few months ago found this latter fact to be true, and we earnestly hope that all others will discover the same thing presently, and spare the public further infliction.

Chinese cheap labor, or what amounts to the same thing, is causing a political crisis in Queensland, Australia. The cultivation of sugar cane having been introduced extensively in the provinces, the planters have been compelled by foreign competition to bring "indented laborers" from the Polynesian Islands. The supply of these Kanakas, as they are called, has run short, and the planters have turned their eyes toward India as a convenient country having a dense population and a low rate of wages, and as being an integral part of the British Empire. An outcry against cheap labor has been raised by the white population, of so decided a character that the Government of the provinces have interposed to prevent the "importation." The planters declare that if they cannot get cheaper labor than that of European immigrants the cultivation of sugar will cease, but this threatened alternative has no effect upon the other party, who say that they would rather see all the cane burned than to have the province invaded by Indian "serfs." The wages paid to Kanaka laborers are six pounds sterling per year, with rations, clothing, and housing; to white laborers one pound per week with rations. This remarkable difference in the rate of wages is further enhanced by the cost of the rations, which are ten shillings per week for white laborers and only half as much for Kanakas.

There are signs of renewed agitation in Ireland, and there is apparently some want of harmony in the Cabinet as to the manner of dealing with them. At all events, members of the Government outside the Cabinet are allowed to talk about the matter in a very contradictory way. Mr. Campbell-Bannerman, for instance, who succeeded Mr. Trevelyan as Secretary for Ireland, has been making a speech in which he declares that the spirit in which Ireland is governed must be changed, that the Irish are a proud people, and will not be appeased by any concessions made with an air of "benevolent condescension." Here he really touched, as an Englishman rarely does, the root of the Irish difficulty. It is this which makes the goodness and benevolence of really well-meaning Englishmen like Mr. Forster and Lord Spencer positively exasperating to the people they are sent to rule over. On the other hand, Lord Morley, the Under Secretary of War, has been making a speech in the House of Lords in which he dwells with much severity on the intractable spirit shown by the Irish, and predicts that it will be necessary to renew the Coercion Act. If this came from a higher source, it would be a declaration of war, which Parnell would be nothing loth to take up in the new Parliament.

No session of the Delegations of the Austrian and Hungarian Parliaments has passed off as satisfactorily as the one recently closed at Buda-Pesth. Never, since its establishment by the compacts of 1867, has that rather artificial institution for the transaction of common affairs, on a semi-international basis, displayed such smoothness in working, in spite of ineradicable divergencies of interests and aims east and west of the Leitha. The Emperor-King, the Minister of Foreign Affairs, the Common Minister of Finance, who is also charged with the control of affairs in the virtually annexed provinces of Bosnia and Herzegovina, all had the pleasure of seeing their communications and programmes received with uncommon cordiality. All the appropriations asked for were voted—almost without a reduction—with a readiness regardless of the long, unbroken chain of yearly Cisleithanian and Hungarian deficits. There was no haggling or contention between the two coöperative bodies. Not a single unpleasant incident marred the harmony of the proceedings. This excellent disposition of the Delegations was mainly due to the circumstance that they assembled at the moment when the three Emperors' meeting at Skierniewice had caused disquieting misgivings and forebodings, especially in Hungary, which the declarations of Francis Joseph and Count Kálnoky, at the beginning of the session, most agreeably dispelled.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 10, to TUESDAY, Dec. 16, 1884 inclusive.]

DOMESTIC.

THE reciprocity treaties are the most important topic of discussion in Washington. There is an impression that the President has so long delayed the development of his trade policy that he will not be able to secure the ratification of the treaties. The Spanish treaty has unquestionably injured the Mexican treaty-enabling act.

The injunction of secrecy was removed from the text of the Spanish treaty by the authorities at Washington on Wednesday, and it was printed in the *Congressional Record* on Thursday. It does not materially differ from the copy recently cabled from Madrid to the New York *Times*. Secretary Frelinghuysen on Thursday submitted to the President a statement of the purpose and effect of the various articles of the treaty, and an analysis of the schedules attached to it. He said in the course of his statement: "I cannot doubt that the convention will work immediate benefit to our citizens, our trade, and our vessels. The loss of revenue which a reduction of the sugar and tobacco duties involves, harmonizes with the policy which placed coffee and other like products on the free list. Unlike that measure, however, the present scheme utilizes this favor to our own population by employing it in the purchase of other favors. With the enlarged demand in Cuba and Porto Rico for articles which we are by this arrangement enabled to supply under favorable conditions, a commercial movement toward the Antilles from our shores must spring up which will tend to equalize, if indeed it do not speedily entirely equalize, the present inequality of trade between them. Our vessels must necessarily share largely in this augmented commerce. Under an act of the Cortes the Spanish Government is empowered to ratify the convention and to put it into operation without further legislative action. The completion of the compact by ratification of the convention, and by passage of the statutes needful to carry it into effect on our part, rests wholly with the Congress of the United States."

By the convention concluded between the United States and Nicaragua on November 28, 1884, and now before the Senate for ratification, the United States undertakes to immediately construct a ship canal from Greytown to Brito on the Pacific. Nicaragua is to cede to the United States the right of way through her territory, and in addition, in perpetuity, a strip of land three miles wide on each side of the canal, together with the ports and harbors of Greytown and Brito. The United States is to have absolute ownership and control of the canal. Nicaragua is to have one-half of the tolls levied and collected on the commerce of the canal. The United States has the right to make all necessary provisions for the protection and defence of the canal. There is to be reciprocity of trade between the two countries.

In the Senate on Wednesday, on the request of the Committee on Commerce, the Interoceanic Ship Railway Bill was withdrawn. A letter from Captain Eads explained that certain changes had been made in the concession from Mexico which made the withdrawal necessary.

The House on Monday, by a vote of 166 to 69, passed the bill which has been so long pending, elevating the head of the Agricultural Department into the position of a Cabinet officer, and giving him the title of Secretary of the Department of Agriculture, as well as providing for him an assistant secretary. On Tuesday it passed a resolution for a holiday recess from December 20 to January 5.

The House of Representatives on Wednesday passed the Military Academy Appropriation Bill. It appropriates $309,771, being a reduction of $40,792 from the appropriation for the current year, and $83,573 less than the estimates.

The Sub-Committee of the House Committee on Appropriations having in charge the subject of pension appropriations has agreed upon a bill appropriating $60,000,000, the amount asked by the Commissioner of Pensions for the next fiscal year.

The House on Monday fixed January 16 for the consideration of the McPherson and Dingley Bank Bills. The Dakota Bill was considered in the Senate.

The bill for the admission of Dakota as a State was passed by the Senate on Tuesday by a vote of 34 to 28, the Republicans voting in the affirmative, and the Democrats in the negative. The bill provides for a division of the Territory on the forty-sixth parallel of north latitude, the part north of the line to remain a Territory under the name of Lincoln.

Representative Warner (Dem., O.) is a Congressman who failed of reëlection. He attributes his defeat to the printing in the *Record* of a speech, on leave, by his opponent, Mr. Taylor, criticising Warner's course regarding pension bills. He occupied the time of the House on Friday morning in arraigning Mr. Taylor for that speech. Mr. Taylor replied, and there was a very acrimonious debate. The House voted to strike from the *Record* so much of Mr. Taylor's speech as was offensive in criticism of members of the Senate or the House.

The dinner given by the business men of Baltimore on Thursday night to Senator Gorman was attended by about two hundred leading men. Senator Pendleton responded to the toast, "Civil-Service Reform—Governor Cleveland is its best practical exponent; and we look to his Administration to enforce all the laws that secured it, and to inaugurate others which will widen the scope of its operation, until the corruption spoils system shall cease to be even a possibility in our political life."

The Boston Committee of One Hundred, representing the Independents and the anti-Blaine Republicans in the last campaign, adopted a report of the Executive Committee on Monday recommending that the organization be made permanent.

The Brooklyn Republican organizations continue to expel members who voted against Blaine and Logan.

In the Blaine-*Sentinel* libel suit in the Federal Court at Indianapolis on Saturday, the President of the *Sentinel* Company filed an affidavit asking that further proceedings be stayed, until the plaintiff had answered the interrogatories which were filed with the amended bill of discovery. The suit was set for trial for December 23. On Tuesday the suit was dismissed at the request of Mr. Blaine. In his letter to his attorneys Mr. Blaine said that he did not believe he could get a fair jury on trial in the State of Indiana.

The New Orleans Cotton Centennial Exposition was opened on Tuesday afternoon in the presence of a great crowd. At the Executive Mansion in Washington interesting ceremonies also took place. President Arthur, surrounded by his Cabinet and distinguished people, took his station at a telegraph table. At half-past two the signal was received from New Orleans that all was ready, and in a few moments the address of President Richardson to the President of the United States was received and read to the company. President Arthur immediately made a reply congratulating the people of the Southwest on their prosperity, and formally declaring the Exposition open. He then touched a button which set in motion the machinery of the Exhibition, 1,100 miles away. His speech was telegraphed and read to the crowds at the Exposition building.

The Board of Directors of the Columbia, S. C., Theological Seminary on Thursday, by a vote of 8 to 4, expelled Prof. James Woodrow, D.D., from his chair in the Faculty, because of his teaching evolution. This is the case which has attracted attention in Presbyterian circles of the South for months, and has been tried before several Synods. The Synod of South Carolina acquitted him of heresy, but requested him not to teach evolution except in an expository way; the Synods of Georgia and Louisiana condemned him for his "anti-Christian and materialistic" views.

In the Stewart-Huntington case on trial in the General Term of the Supreme Court in this city, the jury, on Wednesday, returned a verdict for the plaintiff for $102,923 82.

Wilkinson Brothers, private bankers, of Syracuse, failed on Wednesday. The liabilities are about $400,000. The assets will about cover the preferences of $98,600. The institution had a good credit, and its failure was a surprise. Westcott & Co., brokers, of the same place, suspended on Thursday. One of the Wilkinson Brothers was a special partner.

The City Bank of Schenectady, N. Y., suspended on Monday. It had a paid-up capital of $100,000, and its last statement showed a surplus of $15,000, and undivided profits of $27,091.

Reuben R. Springer, of Cincinnati, died on Wednesday. He is widely known for his magnificent gifts to that city in the form of a Music Hall, Exposition Buildings, and College of Music, to which he has contributed within the past nine years about $300,000. He was eighty-four years old. His last illness was of very short duration.

Mr. Springer's will was admitted to probate on Monday. The estate is estimated at $3,000,000. The amount given to charitable associations is $500,000. Every local Catholic charity is remembered. Music Hall and the College of Music get $50,000 each, and the Art Museum $10,000. The only beneficiaries outside of his blood relatives are the family servants. The Art Museum also receives all of his magnificent art collection except a few pictures of a religious character bequeathed to the Cathedral. The rest of the estate goes to the children of his three deceased sisters and one cousin.

Prince Alexis Saigo, of Japan, who has been a member of the household of Baron de Struve, the Russian Minister, in Washington, for several years, died in Washington, on Wednesday, from an attack of typhoid fever. The Prince, who was only eleven years of age, was a son of General Saigo, of Japan, and a nephew of Colonel Oyama, the Japanese Minister of War, now on a visit to this country, The latter was with him when he died.

FOREIGN.

Prince Bismarck met with another severe defeat in the Reichstag on Monday. A motion was made to create a second directorship in the Ministry of Foreign Affairs, which met with considerable opposition. In the course of the debate Prince Bismarck reminded the House that he was compelled in 1877 to ask to be relieved of his functions because of overwork and ill health. He had only been able to continue in office by the law providing him with a substitute. If the House refused to grant the means with which to provide the substitute with suitable compensation, he must decline to be responsible for the foreign policy. The motion was lost by 119 for to 141 against it.

The trial of eight Anarchists, including Rupsch and Reinsdorf, was begun at Leipsic on Monday. They were charged with attempting to cause an explosion (and kill the Emperor William) at the unveiling of the Niederwald monument. Rupsch confessed that Reinsdorf ordered him to fire the mine, but that he cut the fuse.

Before the Congo Committee in Berlin on Wednesday, Mr. Kasson, American delegate, presented a neutrality project which has a much wider scope than any proposals that have yet been made. His proposition, besides providing for the neutrality of both the Congo and Niger Rivers, includes inland territory, rivulets, and canals. The delegates from France and Portugal strongly oppose Mr. Kasson's proposition, the German delegates are silent, and the

English delegates are apathetic. It is expected that the Conference will finish its deliberations by December 20.

The Congo Committee, on Friday, provisionally accepted the French neutrality proposal, which provides for the free navigation of all the rivers and canals, and free passage over all the railways and roads, in both the Congo and Niger countries by all nations, peaceful or belligerent, for the purposes of commerce in time of war.

The Prussian budget shows a deficit of 22,000,000 marks.

The Bohemian Mortgage Company of Vienna, which was recently reported to be in great financial difficulty, owing to the crisis in the sugar trade, suspended on Thursday. A depression on the Vienna Bourse ensued on Friday. Many banks were embarrassed.

Vienna was visited on Wednesday by a violent hurricane, which lasted for three hours. Omnibuses, cabs, and even railway trains were overturned, with the result of seriously injuring many people. In several instances shop windows were blown out and the contents scattered far and wide. Buildings were unroofed and high walls fell down.

A terrific explosion occurred at or under London Bridge late Saturday afternoon. Its cause is a mystery, but it is supposed to have been the work of Irish dynamiters. All accounts agree that the explosion took place not far from the centre of the bridge. One theory is that fifty pounds of dynamite were thrown into the water from the bridge; another is that the explosive was placed on one of the buttresses. The only damage done was the destruction of perhaps $250 worth of glass warehouses on both sides of the river, the twisting of several lamp-posts, and the knocking down of a number of persons and animals. At the time of the explosion an inspector and two constables were watching the bridge.

United Ireland, of Dublin, says it has fresh evidence that James McDermott is an emissary in the pay of the police. The outrages he has planned are a part of the conspiracy directed from Dublin Castle to bring discredit on the Irish race. The paper reiterates the charge that Edenburn House, at Tralee, was blown up with an infernal machine which was one of three sent to County Kerry by McDermott, and which had been purchased with British gold.

The new Chief Secretary for Ireland, Mr. H. Campbell-Bannerman, recently delivered a speech in which he advocated a more liberal form of government for Ireland. He said that the great mistake made by the English in their treatment of Ireland lay in the fact that their policy was too obviously one of "benevolent condescension." The address has caused considerable commotion, because it is taken to indicate that the Government has decided on a new departure in its Irish policy.

The Marquis of Salisbury is in feeble health, and will take a foreigh trip.

The sentence of Captain Dudley and Mate Stephens, the *Mignonette* cannibals, has been commuted from hanging to six months' imprisonment without labor.

It was reported that Mr. Adams and Miss Coleridge, daughter of the Lord Chief Justice, were married privately in London on Thursday; but Mr. Adams denies it.

A despatch to the London *Times* from Dongola, dated December 12, said: "At the present stage the Nile is the only available route for the expedition. It is impossible as yet to indicate any probable time for the arrival of the expedition at its destination. All the camel corps, including the bearer company and three transport companies, are advancing to Korti, some distance beyond Ambukol. One troop of Hussars, all the West Kent and Royal Irish regiments, one company of Highlanders, and the Egyptian camel battery are still at Wady Halfa. General Lord Wolseley will pay a farewell visit to the Mudir to-morrow, and later in the day will embark for Ambukol. The soldiers are eager to meet the Mahdi's forces, but fear his strength is failing. It is reported that his followers are deserting him." General Wolseley inspected Debbeh on Monday and started on to Korti.

The Egyptian natives have little confidence that the British expedition will prove successful. They positively refuse to accompany the English forces beyond Meraweh on any condition.

A messenger arrived on Monday at Korti from Khartum, which he left eleven days previously. He reports that General Gordon was well and that he recently defeated the rebels, killing a large number of them, and blowing up the forts at Umderman.

There were rumors in Paris on Wednesday that the French Government will avoid any conflict in the Chamber of Deputies or in the Senate upon the bill for the reduction of the estimates for worship, and, finding it impossible to pass the Budget in time to be useful, intends to ask the Senate to vote the supplies needed in provisional twelfths at the close of the session, or upon the conclusion of the debate upon the Budget in the Chamber.

The French Senate on Thursday began the discussion of the Tonquin credits. The Duc de Broglie took a leading part in the debate. He said the Government should be held responsible for increasing the gravity of the situation between France and China. The members of the Right would refuse to vote the credits. Prime Minister Ferry, replying to the Duc de Broglie, said it was the duty of the Government to pursue a policy of moderation until it proved unavailing, in which event he pledged himself to energetic measures. "You will soon see," he said, "how the Government intends to respond to the legitimate impatience of the country." England's voluntary mediation had proved abortive through the attitude of China. The time for negotiations had expired; the moment for action had arrived. M. Ferry denied that France had isolated herself. She was friendly, he said, to all the Powers. M. Ferry explained that the advance would begin as soon as the credits were voted. The Senate voted the credits, with only one dissentient voice. The Right abstained from voting.

The Tariff Committee has presented a report to the French Chamber of Deputies relative to the production of cereals. It states that the yield of cereals in France has steadily increased during the last thirty years. At present the average yield per hectare is equal to the average yield in America. The importation of grain from foreign countries has a tendency to diminish prices, and thus the prices of the French products are not regulated by the cost of production, but by the maximum prices obtainable in France for cereals from India and America. These could be sold for five or six francs per centner under the usual price. Consequently they are able to bear a duty of three francs without any resulting rise in prices.

The Duc d'Aumale, President of the Council of the Department of the Oise, submitted to Prime Minister Ferry, of France, on Wednesday a resolution adopted by the Council, praying for an increase of customs on all farm products which are not affected by existing commercial treaties, in order to enable France to meet foreign competition. The resolution asks also that on the expiration of the present treaties the duty on the articles affected by them shall be increased, and that no new treaties shall be concluded until the tariff laws have been revised.

The Central Chamber of Commerce, of London, adopted a resolution on Thursday asking for a Parliamentary inquiry into the causes of the present agricultural depression, with a view to protection. An amendment to the resolution in favor of free trade was rejected by a vote of 28 to 9.

The French Senatorial elections are fixed for January 25. The vacancies caused by expiration of terms of various Senators and by deaths number 87, divided as follows: Republicans 47, Reactionists 40.

The Paris *Figaro*, in an article entitled "How a Treaty is Signed under the Republic," says that King Norodom, of Cambodia, refused to sign the treaty placing his dominions under a French protectorate. Thereupon M. Thomson, the French Governor of Cochin China, forced his way into the King's palace, attended by a body of marines with fixed bayonets, entered the royal bed-chamber, and compelled King Norodom, on peril of his life, to sign the document. King Norodom has sent a protest to President Grévy against the manner in which he was forced to sign the treaty.

A despatch from Hong Kong to the London *Times* on Friday said: "Affairs at Kelung and in Tonquin remain *in statu quo*. General Delisle threatens to resign his command in Tonquin unless he shall be reinforced. Each mail steamer brings more Germans for the Chinese military and naval service. One hundred and twenty-six Germans have already entered the Chinese service."

A despatch from Admiral Courbet, dated Kelung, Saturday, December 13, says: "We have dislodged the Chinese from the works which they had thrown up menacing our positions. Two hundred of the enemy were killed or wounded."

General Miot telegraphs from Madagascar that on December 6, after a march of fifteen hours, he captured a fort south of Fort Vohemar. He had with him a force of 1,200 men, 300 of whom were Europeans and 900 friendly natives. He captured five guns of the Hovas, 200 of whom were slain. The French loss was only four wounded, one seriously.

The French Government has decided to transfer the penal colony of New Caledonia to Madagascar, in order to avoid the threatened complications with Australia.

A French doctor claims to have discovered a way of preventing the ravages of phylloxera, from which the grape-growing districts have been suffering so seriously of late years. Experiments with the use of arsenic have proved successful, and the doctor is making still others upon a larger scale.

The distinguished French General, Émile Fleury, is dead at the age of sixty-nine. He took a prominent part in the *Coup d'état*, and was wounded in the struggle between citizens and soldiers. After the Second Empire was established he was appointed aide-de-camp to Napoleon. In 1856 he was made a General of Brigade, and in 1863 a General of Division.

Jules Bastien-Lepage, the French painter, died on Thursday. He was born in 1848, and since 1873 has exhibited many pictures at the Salon. In 1874 he received a third-class and in 1875 a second-class medal. In the latter year he also received a second prize at Rome.

Pierre Clément Eugène Pelletan, a well-known French writer and Senator, is dead at the age of seventy-one. He was a contributor to and editor of a number of Paris newspapers and periodicals in the earlier years of his literary career. In 1863 he entered upon a political career in the French Chamber, acting with the Democratic wing. He became a Senator in 1875, and has been Vice-President of the Senate.

The Turkish atrocities in Macedonia are increasing. About 200 Christians have been murdered within the past few weeks, and three villages have been burned. Kidnapping is common, and the inhabitants are afraid to leave their houses.

There is a revolution in Corea. The outbreak occurred during an entertainment given by the King to the British Minister and others. On a given signal, the King's son and six ministers were massacred. The Queen also disappeared. A collision occurred between the Chinese troops and the Japanese. The King placed himself under the protection of the Japanese. The foreign residents of Corea are safe. The motives of the rebellion are unknown.

THE NICARAGUA CANAL.

By the Nicaraguan treaty now before the Senate, our Government undertakes to set aside, without formal notice or discussion, the Clayton-Bulwer treaty with England, to take possession of a strip of territory six miles wide across the Isthmus of Panama, and build a ship canal through it, and to do all this under a treaty with Nicaragua which the Government of that country has, under its constitution, no power to make—for we believe no written constitution authorizes an executive to make cessions of territory to a foreign Power, except under compulsion. The canal is to cost anywhere from $100,000,000 to $150,000,000, and is to be fortified and protected hereafter by the United States, not only along the banks, but at both ends. The undertaking is on the whole the most formidable one of a peaceful nature which this Government has ever entered on. In fact, it has entered on none at all approaching it in magnitude except the suppression of the Southern Rebellion. It is the first attempt to acquire and occupy what may be called foreign territory at a considerable distance from the United States, and to hold it permanently and rule its population by military force, and to prevent its invasion at either end by a powerful fleet. This may truly be said to constitute a "new departure" for the Government, of a most serious character, and it is, therefore, one which ought not to be made hastily, and above all ought not to be made secretly. In other words, we do not think any scheme of which the remoter consequences are likely to be so serious, ought to be finally settled without giving the people of the United States an opportunity of thinking over it and discussing it in the press. Yet this is what will take place if it be ratified now in secret session by the Senate.

The policy based on what is called the Monroe Doctrine has hitherto been what may be called a waiting policy. That is, the United States gave notice to all the world that no European Power would be permitted to make acquisitions of territory on this continent, or to take any formal means of acquiring influence thereon; and then stood by, allowing the Spanish-American population to work out its own destiny in its own way. The Clayton-Bulwer treaty with England, concluded in 1850, really contained nothing contravening the Monroe Doctrine. It simply added Great Britain's guarantee of the neutrality of any canal which might be constructed across the Isthmus to the guarantee of the United States. In other words, Great Britain in that treaty *entered into the very stipulations with regard to the Isthmus which the United States would have had to impose on her as the result of a successful war waged in defence of the Monroe Doctrine.* The reason why the Clayton-Bulwer treaty has since become distasteful is, not that it contains any improper concession to England, but that it binds the United States to refrain from exerting exclusive control over the Canal, and from acquiring any territory or erecting any fortifications on the Isthmus. It is through these stipulations that it is now proposed to break, and the reasons for breaking through them, in view of the attempted construction of the French canal, are probably potent, if not overwhelming. But surely a "decent regard for the opinions of mankind," if not our own self-respect, requires that it should be done courteously and deliberately, and after a reasonable amount of discussion. Treaties are not eternal, or meant to be eternal, no matter what their language may be. Their maintenance depends on circumstances always, on simple convenience often. No people is bound to let the provisions of a treaty stand for one hour in the way of whatever its safety, honor, or welfare may seem to require. But every treaty between civilized Powers ought to be abrogated considerately, deliberately, and after full notice, with full and courteous statement of the reasons which seem to call for it.

The reasons for the abrogation of the Clayton-Bulwer treaty are numerous enough. The history both of Great Britain and the United States during the last thirty years abounds in them. Not only has the "Pacific Slope" come into existence since then on the American side, but the European and Asiatic cares and burdens of Great Britain have multiplied enormously. Not only is her guarantee with regard to anything in this hemisphere worth much less than it was then, but she is probably much less ready to offer it. Nevertheless, the only chance of withdrawing from the position which has been offered her was an insolent and threatening despatch from James G. Blaine, in which, either through ignorance or forgetfulness, he omitted all reference to the Clayton-Bulwer treaty whatever, and was neatly "shut up" by a slightly sarcastic answer from Lord Granville. Since then there has been nothing worthy of the name of discussion over the matter. The abrogation of the treaty by the secret conclusion of another with Nicaragua is doubtless "smart," but it will not look well, and is unworthy of a Government which is just undertaking the protectorate of the whole continent. Any Power strong enough to do this is certainly strong enough to set about it openly, decently, and in order.

Moreover, as to the Monroe Doctrine itself, nothing can be odder than the form it has of late taken—namely, of unwillingness to let Great Britain or any other Power promise or pledge itself not to interfere in Central America or with any canal which may be made across the Isthmus. The original Monroe Doctrine, as propounded by its author, was that any attempt of European Powers to extend their "system" to this hemisphere would be considered hostile to the interests of the United States, and therefore opposed. The attempt to construct a canal across the Isthmus by a European Power, or by a company protected by a European Power, might possibly be considered an infringement of the rule, and therefore properly be opposed by this Government. But in the controversy started by Mr. Blaine the ground was taken that we must not even allow a European Power to guarantee the neutrality or the peaceable use of a canal—that is, must not allow it even to promise not to extend its "system" to this continent. As the sole object of the right to fortify the canal, and to own the territory along the banks, which we now ask for under the proposed treaty, is to prevent its being entered or closed by a belligerent force, of course all promises not to enter it or close it made by any of the great naval Powers are pure gain. All that part of the Clayton-Bulwer treaty, therefore, which binds Great Britain to protect the canal from interruption or seizure, and to maintain its neutrality, and to induce other States to do the same, is worth preservation, if preserved it can be. As far as it goes or will go, it is to the United States the equivalent of a certain amount of military force. It is to guard against the possibility that the canal may be forcibly entered, blockaded, or destroyed by some European Power, that the United States desires to own it and provide for its fortification. If any or all of the Powers could be induced to promise solemnly not to do any of these things under any circumstances, would it not be a gain for civilization as well as for this Government? In fact, if this secret treaty with Nicaragua, made by an expiring Administration in its last days, were thrown aside, as it ought to be, could President Cleveland win distinction for his Administration in any better way than by opening negotiations with Great Britain for the abrogation of the Clayton-Bulwer treaty in a frank and friendly spirit, without bluster or bravado? He could describe in plain terms the change which the last thirty years have wrought in the relations of this Government to the Pacific Coast, and in the public sentiment about the transit across the Isthmus, and explain the methods, whatever they were, by which the United States proposed to construct a canal, and the expediency as well as necessity of their owning or controlling it. For an exposition of this sort the history and condition of the Suez Canal would furnish abundant illustration.

We have little doubt that, approached in this way, Great Britain, situated as she is, would concede everything we asked for; and were the canal to be (as we trust, if ever made by this Government, it will be) a contribution to the weal of the civilized world as well as a means of sending troops to the Pacific Coast, she would readily bind herself to refrain from all warlike meddling with it. Is it not, in fact, far more consonant with American policy and traditions to seek great ends in this way, than by threats of violence which no government in the world is less ready to carry out, and which no government in the world ever carries out with so much damage to moral and political interest as this one? If there be a nation in the world which suffers morally and politically from war, it is this. Therefore the true American policy with regard to canals, as all other things, is the policy which makes for peace, which makes persuasion rather than the sword the instrument of national greatness, and which in its treaties, as in all else, sows the seeds of conciliation rather than of strife.

TREATIES IN THE HOUSE.

The question whether the House of Representatives can refuse to pass the legislation necessary to carry into effect the Mexican or other treaties duly ratified by the Senate, recalls the measures taken by us to compel the French Legislature to carry out the convention of 1831. That treaty provided for the payment by France of indemnities for spoliations on American com-

merce. The French Chambers refused to vote the money. On this, Jackson, who was President, sent a message to Congress recommending immediate reprisals (the same "form of negotiation" which France is herself now making use of in China) unless provision should be made for the payment of the debt at the next session of the French Chambers. Mr. Wheaton, in a letter on the subject from Copenhagen, summed up the view of the matter taken at the time by all public men as follows:

"Neither Government has anything to do with the auxiliary legislative measures necessary on the part of the other State to give effect to the treaty. The nation is responsible to the Government of the other nations for its non-execution, whether the failure to fulfil it proceeds from the omission of one or other of the departments of its Government to perform its duty in respect to it. The omission here is on the part of the legislature; but it might have been on the part of the judicial department. The Court of Cassation might have refused to render some judgment necessary to give effect to the treaty. The King cannot compel the Chambers, neither can he compel the courts; but the nation is not the less responsible for the breach of faith thus arising out of the discordant action of the internal machinery of its Constitution."

Wheaton lays down precisely the same doctrine with regard to the United States in his treatise on the law of nations. "Under the Constitution of the United States, by which treaties made and ratified by the President, with the advice and consent of the Senate, are declared to be 'the supreme law of the land,' it seems to be understood that Congress is bound to redeem the national faith thus pledged, and to pass the laws necessary to carry the treaty into effect." One reply to this is, that the House may refuse, if it likes, to pass the law required. That is to say, the House may commit a breach of faith because there is no way to punish it for so doing. This is true, and there is absolutely no limit to the application and extension of the principle. The House may, for instance, refuse to pass the Appropriation Bill for the army, and thus bring the army to an end, or it may refuse to pass any appropriation bills, and thus bring the whole Government to a standstill, or it may refuse to pass any bills originating in the Senate, and thus prevent that body from initiating any legislation. It has the power to commit a great variety of wrongful and revolutionary acts, but this does not make them right or lawful. With regard to treaties, of course, if it were to insist on refusing legislation to carry them into effect, it would only lead to other governments adopting the same course with regard to us. In the end we should probably get rid of all trouble with the matter; for foreign nations would soon cease to make treaties with us, if they came to understand that treaties had to be in practice ratified by a large and irresponsible body like the House, whose opinions could not be guessed at in advance, notwithstanding that it was admitted by our own legal writers to have no authority in the matter.

Another point made by those who are trying to gain for the House a supplementary control over the treaty-making power is, that, when the subject to which the treaty relates is one over which both the House and the Executive have jurisdiction, the constitutional rights of the House cannot be abridged or diminished by the action of the President and Senate. The House, for example, has a joint right to regulate commerce and to pass money and revenue bills. No general tariff can become law without its sanction. Now, it is insisted, the Senate has only to ratify a sufficient number of treaties with foreign Powers to paralyze the powers of the House in this respect altogether, and the only way of meeting this difficulty is for the House to refuse the legislation necessary to put a treaty in operation whenever it does not think well of it. The question first arose in connection with the Jay treaty with England. The House passed a resolution at that time declaring that, whenever a treaty required laws to be passed to carry it into effect, they had a constitutional right to deliberate and determine upon the propriety of passing such laws. In the end, however, Congress passed a statute to carry the treaty into effect; and it is obvious that unless the House actually refuses to grant the legislation required, the question whether it possesses a veto upon the treaty-making power growing out of the nature of the subject cannot be determined.

The grant of the treaty-making power in the Constitution, it must be remembered, is absolutely unlimited. It extends to all subjects on which States are accustomed to negotiate with one another—the termination of wars, the acquisition of territory, the regulation of commerce, the settlement of claims, the international protection of property-rights, etc, etc. These trench at a great many points upon the prerogatives of the House, and, in the case of the settlement of claims, directly involve the appropriation of money. The Geneva arbitration, for instance, was the work of the President and Senate, but the appropriation of money to pay the Halifax award under it required action by the House, which was very grudgingly granted.

This seems to make it tolerably clear that the test of coördinate jurisdiction cannot be applied. The treaty-making power extends over a variety of subjects which also come under the ordinary law-making power, and usually the House *must*, if we desire foreign governments to make treaties with us at all, pass the legislation required to carry the treaty into effect. It seems to have been the opinion of our great constitutional lawyers, like Wheaton and Kent, that the ratification of a treaty makes it "law," and ends all discussion. But is there no limit to this? We say there undoubtedly is. Whenever the Senate attempts to make use of the treaty-making power for revolutionary purposes, to betray the country, to destroy its sovereignty, to compel the raising of taxes for the purpose of paying tribute abroad, then the House may be called upon to stop the work. But this is wholly outside of the ordinary administration of government.

The idea, therefore, that the consent of the House can be necessary to the ratification of a treaty, even when it has a coördinate constitutional jurisdiction over the subject involved, seems to be untenable. But the question of the *propriety* and good sense of exercising the power in such cases is another matter. This is what seems to be involved in the present commercial treaty question. The House, the majority in which represents the incoming Administration and party, is somewhat puzzled to see an outgoing Administration undertaking, on the eve of its disappearance from the scene, to institute a new commercial policy through the Senate which will seriously hamper the action of the House on the tariff, and which is apparently designed to do so. We have already got the most complicated tariff in the world; but the tariff, modified by a series of commercial treaties, might be more complicated still. In fact, we can easily conceive of the President and Senate managing by such use of the treaty-making power to nullify the wishes and aims of the public with regard to the general commercial policy of the country. In other words, where the tariff is involved, it seems as if the treaty-making power ought to be resorted to with great hesitation, and not until the effect of the proposed changes is well understood and there is good ground for believing them to be desired by the country; least of all to force a treaty through the Senate in the interest of a party retiring from power.

MR. FOSTER ON INTERNATIONAL TRADE.

Mr. Foster is making statements in explanation of the Spanish treaty which cannot but surprise the commercial community, supposing him to be correctly reported. He told the Chamber of Commerce on Friday that "in negotiating the treaty the Government started out on the basis of conviction that 55,000,000 of people could not trade with 2,500,000 on equal terms?" But why not? What is the basis of this conviction? Must two storekeepers have families of equal size in order to exchange goods on equal terms? Or can a capitalist not buy peanuts from a peanut man in the street on the same terms as the schoolboy who has only one dime that he can call his own? Where did this conviction originate? To what feature of human affairs is it due? Can it exist in the brain of a negotiator of a commercial treaty without seriously damaging his work? Is any man fit to negotiate a commercial treaty who has not got hold of the fundamental idea of international commerce, that all trade is barter, or, in other words, is the exchange of goods for goods, and not the matching of population against population?

Suppose 2,500,000 people in Cuba devote themselves wholly to raising sugar and tobacco, and bring their whole crop of both to the United States for sale, the sugar and tobacco both appear in the market as sugar and tobacco of certain grades. How does the Cuban owner ascertain what he can sell them for? Simply by finding out what the American consumer is willing to give. And how does the American consumer find out what he is willing to give? Simply by ascertaining what he would have to pay for similar tobacco and sugar, raised at home, or in other countries than Cuba. This, and this only, fixes the price. The American does not go to the Cuban and say, "I like your sugar, sir, very much, and, if your island contained more inhabitants, should be glad to pay you a higher price for it. I think it fully equal to the Brazilian sugar in every way, if not superior to it; but Brazil, as you are aware,

contains 10,000,000 of population to your 1,500,000, and therefore I can only offer you, say, one-quarter of what we are paying for Brazilian sugar."

Supposing the Cuban to sell his sugar on these low terms, because it was raised by a small population, and to look around for his return cargo of American goods, and to conclude that he will take it mainly in agricultural implements. After looking at the English price-lists, he goes to the American manufacturer and tells him he wants so many ploughs and reapers, and so forth, and asks for terms. The American, learning that he is a Cuban, would then, on Mr. Foster's theory, get down his *Tribune* almanac and see what the population of Cuba was, and tell him his rates accordingly. "Oh, but," the Cuban would say, "that is not only dear, but dearer than English goods of the same kind," and the American would then ask him what the population of Great Britain was in 1881. The Cuban would say 35,000,000. "What was the population of the United States at the same date?" the American would inquire. "I suppose 50,000,000, or thereabouts," would be the answer. "Don't you see, then," the American would observe rather severely, "that you, as a resident in a small country, not only cannot have goods as low as residents in larger countries, but you cannot possibly expect a country containing 50,000,000 of population to sell you goods as low as one containing only 35,000,000, even if the quality were the same?"

Now, if there be anything in the theory of the Government and Mr. Foster about the difficulties of trade between countries of unequal population, conversations of this sort between native and foreign dealers would often be heard. As a matter of fact, however, if they were heard to-day, it would be assumed by the bystanders that the parties to them were mentally unsound, and nobody would deal with them. Population has no more to do with equality in trade than the color of men's hair, or their height. The largest population in the world can only sell as much of its products abroad as other nations will buy. To 2,500,000 people it can only sell what that number wants, and can get no lower anywhere else. In like manner, no matter how large the market to which 2,500,000 have access, they can only sell what they produce, and must take their pay in commodities sold in the same market. It is goods, not men, that are exchanged in international commerce, and it is the quality and price, and not the source from which they emanate, that dealers concern themselves about.

If this treaty of commerce is based on the notion that a small and large nation cannot trade together advantageously without the aid of a treaty, the sooner it drops out of sight the better, because the explanation of it only makes us ridiculous. We are already a standing joke to the financiers of the Old World, owing to our vagaries about silver. Let us not incur any more ridicule of the same sort. Protection is something which people understand. It means keeping the home market for our own goods. But the notion that 10 men cannot trade equally with 100 is something they will not even try to understand. They will simply laugh over it.

WHAT IS A "BOURBON"?

THE *Sun* seems to be a good deal puzzled as to the meaning of the term "Bourbon," as now used, especially by Independents. It has, it says, been under the impression that it applied only to old Southerners, who passed their days regretting the abolition of slavery, drawing up claims against the Government for their lost "niggers," "planting buckshot in their Republican neighbors," and longing to abrogate the later Constitutional amendments, pay the Confederate debt, and pension the Confederate soldiers.

This, however, was a very narrow and restricted use of the term. A "Bourbon" in politics is anybody, of any party, who shares the characteristic ascribed to the later members of the House of Bourbon in France, such as Charles X. and Henri V., of "learning nothing and forgetting nothing." Any man, of any party, who, as the years roll on, "learns nothing and forgets nothing," is a Bourbon. The French Bourbons, for instance, never could forget the old régime, before the Revolution, and never learned that the Revolution had created a new France, in which privilege and divine right had no place. Consequently, they became incapable of reigning. In like manner, a Southerner who cannot forget the old slavery days, and cannot perceive the immense political and social changes which the war has wrought, or learn the exigencies and characteristics of a free and commercial as distinguished from a slave or semi-feudal society, is a Bourbon. So, also, a Republican who still believes that "the South" is exactly what it was before the war, and threatens the commonwealth with the same dangers, and has to be watched and guarded against in the same spirit, and cannot get into his head an adequate conception of the results of the war, or thinks it is still raging, is a Bourbon.

Any man also, whether Republican or Democrat, who cannot forget that all offices in the United States used to be regarded, as in Turkey and Greece and Spain and Morocco, as the plunder or spoil of the party or clique which got possession of the Administration, and not as public trusts, and thinks that the salaries of the incumbents are party money, which may be lawfully levied on to pay party expenses at the elections, and cannot perceive that any change of popular sentiment on this subject has occurred, and cannot bring himself to believe that the United States statute, called the Civil-Service Act, is a real statute, and not a toy statute, and has to be obeyed like any other law, is a Bourbon. In fact, the mark of a Bourbon is plain: it is simple inability to forget old things and learn new ones. The true Bourbon perceives the flight of time as well as anybody, and acknowledges its effects on his own frame, and on his private affairs, and on the physique of his family. But he does not acknowledge that it produces any effect outside his own house, on public affairs or public men. The people he fears in public life never grow old or die, and their sons never grow up and vote. The men he follows and believes in, also, never change or decay, or lose their influence. The voters, too, all remain the same. A younger generation never comes forward, and if it does, has just the same ideas and aspirations that its fathers had. He acknowledges the existence and need of improvement and change in art and science and literature. He is often, indeed, greatly delighted with improvements in machinery and in manufactures, but the need of or the possibility of improvement in politics he will never admit. That any attempts in that direction can be successful he always treats as chimerical—the dream either of extreme youth or senile fatuity. Stories of improvements in the politics of other countries he hears with a smile as travellers' tales, and loves to believe in great but hidden corruption in the administration of England, France, or Germany.

There is nothing about which he is so incredulous, however, as about civil-service examinations in his own country. These, he maintains, are always so framed that nobody but graduates of colleges can pass them. The subjects are chosen with special reference to their want of connection with the duties of the office to be filled. If an appraiser of dry goods is to be chosen, the examination, he believes, always runs on astronomy or physical geography; or, if a policeman, exclusively on ancient history and music. Nor will anything induce him to satisfy himself on these points by being present at one of these examinations; for, like the old Englishman who was pestered by an atheistic logician, the Bourbon, when bothered by a reformer, always "thanks God he is not open to conviction."

Correspondence.

"MARITIME CAPTURE."

TO THE EDITOR OF THE NATION:

SIR: When I wrote my article in the *Pall Mall Gazette*, advocating the suppression of maritime capture, I little expected that an American paper would criticise the opinions I then expressed, as I was merely enforcing a principle of international law which the United States have so continuously supported that it might, in point of fact, be called the "American" system of maritime law.

In reply to the very kindly criticisms of the *Nation*, I will quote, with the editor's permission, only American authorities on the subject. The United States, where Christian feeling had greater power than elsewhere, were the first to understand that capture is opposed to the true principles of humanity. In 1785, respect for private property by sea was inscribed in a treaty concluded with Prussia, under the auspices of Franklin and Frederic II. On the 19th of June, 1792, the French Minister for Foreign Affairs, M. de Chambonas, sent his diplomatic agents a circular inviting them to open up negotiations in conformity with the decree of the previous 30th of May. The United States alone, of all the Powers, consented to the proposals made by France. Jefferson, the Secretary of State of the Union called attention to the fact that his Government had just ratified the same principle in a treaty recently concluded with Prussia.

In 1824, seeing that the principle which the United States had always supported was being enforced in the Spanish expedition, James Monroe, the President of the Union, desirous that France's example in the war then just terminated should be of service to humanity, submitted to the Governments of England, France, and Russia

a project of international convention to regulate the principles of commercial and maritime neutrality. This project was admirably drawn up; it proposed, among other things, to exempt from capture and confiscation merchant vessels and cargo belonging to the subjects of belligerent Powers.

On the 28th of July, 1856, Mr. Marcy proposed, in the name of the United States Government, to add the following clause to the first article of the Paris declaration: "Private property belonging to subjects or citizens of belligerent Powers shall not be seized by the enemy's vessels unless the cargo be contraband of war." Mr. Marcy justified his proposal after this wise:

"The reasons which induced the Paris Congress to declare privateering abolished are not given, but they are presumably the same as those generally urged against this right of belligerents. The spread of Christianity and the progress of civilization have greatly mitigated the severity of the ancient mode of warfare. At the present day, war is Government business. Public authority declares war, individuals have nothing to do with it, unless authorized by their Governments. It is now universally admitted, at least in all land warfare, that there should be perfect immunity for the persons and property of non-combatants. Pillage, or seizure without compensation, of individual property by an invading army, even if that army be in possession of the enemy's territory, is contrary to the customs of modern times. Such a mode of procedure would now entail universal censure unless it could be justified by special circumstances. All the considerations which favor this humane sentiment so far as property on land is concerned, should favor in precisely the same degree the protection of persons and possessions of subjects of belligerent Powers on the ocean. It may be presumed that the anxious desire to ameliorate the cruel customs of war by exempting private property by sea from an enemy's seizure, precisely as it is exempt on land, was the great argument which induced the Paris Congress to declare privateering abolished. The undersigned is commissioned by the President to say that he most joyfully assents to a principle whose aim is to exempt private property by sea as on land."

I will not add more to these quotations, which appear to me conclusive. I maintain unhesitatingly that maritime capture essentially differs from requisitions. According to the principles laid down at the Brussels Conference of 1874, requisitions are limited to strict necessities. The object of capture, on the contrary, is to do the enemy the utmost possible harm, and thus make him sue for peace. If this system had been employed on land, the Prussians might have seized upon and carried off private property in 1870, and, among other things, immense quantities of champagne from Rheims, which they occupied during the war. They did nothing of the sort, because pillage and robbery are forbidden on land by our existing laws of warfare. Maritime capture is nothing better than pillage and robbery by sea, and it is not one of the least of the glories of the United States to have always most rigorously condemned it. It should be one of the first tasks of any President of the United States called into power solemnly to propose to all civilized nations the adoption of this humane principle of complete immunity for private property by sea as on land. This proposal made, he could leave to others the shame of rejecting it.

ÉMILE DE LAVELEYE.

LIÉGE, November 26, 1884.

[The above appears to us to be really a re statement of the views to which our article was intended as a reply (see the *Nation* No. 1010, November 6, 1884). Maritime capture seems to us to rest on the same ground that the right of blockade does—that is, the necessity of inflicting as much damage as possible on the enemy's commerce.—ED. NATION.]

THE BAD WEST.

TO THE EDITOR OF THE NATION:

SIR: Although an unrepentant Western man, I try not to be the bond slave of geographical prejudices. This fact, combined with my long-standing admiration for the *Nation's* political writing, made it easy for me to put myself in a purely receptive attitude while reading your recent editorial upon "The Solid South and the Solid West." There can be no doubt that a Solid West created by Republican Bourbonism would be a great calamity; and if, this calamity being upon us, it could be made to appear the high destiny of the East to break the power of such a Solid West, I for one should rejoice and bless the source from which the light came.

But is your case made out? You charge that Blaine was essentially a "Western candidate"; that he "answered the Western requirements of a public man" and "filled the Western imagination"; that it was Western influence which nominated him against the wishes of the East, and that it was Western votes which were "reckoned upon with a confidence disappointed only in the case of Indiana," to elect him. Finally, you claim for the East the credit of having defeated him. Now, there is some plausibility in all this, but there is at least another way of looking at the matter. Turning to the table of figures which the *Nation* of November 27 used with such effect for the purpose of exhibiting Blaine as a "Republican mistake," I find that the Western States, whose vote is there tabulated, gave Garfield an aggregate plurality of 346,098, and Blaine an aggregate plurality of 198,815. In the Eastern States taken together, Garfield's plurality was 161,893, Blaine's 158,460. That is to say, while the East gave to Blaine 97 per cent. of the plurality it gave to Garfield, the West gave to Blaine but 57 per cent. of the plurality it had given to Garfield. Now if these figures indicate, as the *Nation* thinks they do, an emphatic verdict of the country to the effect that Blaine was a "mistake," is it not pretty evident that the West pronounced this verdict with very much more emphasis than did the East?

But these figures, so far as they profess to indicate the extent of Republican dissatisfaction with Blaine, are more or less illusive, because the smallness of Blaine's plurality as compared with Garfield's in Michigan and Iowa is due only in a small degree to Republican disaffection. Let us turn, therefore, to another species of evidence. The *Nation* of November 27 very properly remarks: "Nothing reveals Blaine's weakness with his party more clearly than his [this] failure to poll the Republican share of the increased vote." Now, turning again to your table, it appears that Blaine's total gain upon Garfield was in the West 134,949, while Cleveland's gain upon Hancock was 288,632. In the East Blaine's total gain upon Garfield was 7,099, while Cleveland's gain upon Hancock was 16,208. That is to say, of the total increase upon the vote of 1880, so far as this was polled by either one of the two great parties, Cleveland drew 68 per cent. in the West and 69 per cent. in the East, or Blaine 32 per cent. in the West and 31 per cent. in the East.

This, to be sure, is slightly in favor of your position; but when we consider that nearly all of the increased vote came from the West, it is not to my mind a showing which justifies your picture of a Bad West to be saved by a Good East, if devotion to Blaine is the gauge of Badness.—Yours respectfully, C. T.

ANN ARBOR, MICH., December 8, 1884.

[When we asserted that Blaine satisfied the Western requirements, we had in mind not so much the individual as the class to which he belongs. In the sense that the West is a better soil for the windy genial demagogue than the East, our remark had no partisan application. Blaine's success in the Democratic party might have been just as great as in the Republican, and in that case we believe his most fervid supporters would have been found in the West. But we must insist again on the fact that when opinion was freest—*i. e.*, before the nomination—Blaine was generally condemned by Eastern standards and accepted and approved by Western, else had he lost his nomination. The Cabot Lodges, Longs, Roosevelts, Daweses, Hoars, and Hawleys of the East, who swallowed the dose after it had been officially prescribed, all shrank from it and tried to avert it. We recall no parallel cases of opposition from the West, or of humiliating recantation. No Western statesman stood conspicuously aloof, as did Mr. Edmunds, or descended into the Western arena against Mr. Blaine, as did Mr. Schurz—for we claim Mr. Schurz as an Eastern man on the same principle that we allow Mr. Blaine to be a Western man. Finally, we must repeat that the unbroken tenor of the Republican press at the West confirms the distinction we made. If it and the delegates to the Chicago Convention did not represent Western standards, we should not know where to look for them.

The lesson of the election is the same, so far as *predominating* public sentiment is concerned, though, of course, the better class of voters joined in the Eastern revolt against Blaine—partly from original repugnance, and partly, let us hope, from force of conviction under campaign discussion. As regards the calculations advanced by our correspondent, the tangled motives and intrigues of the late election detract a good deal from their trustworthiness. The exceptional plurality in Pennsylvania, for instance, for which it is easy to account, is largely responsible for the discrepancy between the Eastern and Western percentages. Moreover, the 57 per cent. of Garfield's plurality cast by the West for Blaine becomes 66 by the addition of States not included in our table, viz., California, Colorado, Nebraska, Nevada, and Oregon. Four of these increased their Republican pluralities of 1880, as did also Kansas and Minnesota. Of the Eastern States, Maine and Pennsylvania—Blaine's appanages, so to speak—alone increased their pluralities.—ED. NATION.]

REPUBLICAN PERSECUTION.

TO THE EDITOR OF THE NATION:

SIR: In the letter signed "W." in your No. 1014 are some statements in regard to Ohio which are incorrect and misleading.

The "preacher" who was attacked was a senior in the college, a St. John man; the "Republican mob," a party of students who, receiving telegraphic report of the election of Blaine, gave the benefit of it to their St. John classmate, with considerable tumult, no doubt, but with no worse intentions than those suggested by animal spirits and boyish enthusiasm. At least one person was wounded, though not seriously, by "the firing in the air," which surely justified an arrest. It will hardly do to claim Oberlin, where all factions are represented among the students and the Prohibition party in the faculty, for persecuting and vindictive Republicanism.

In No. 1013, would not your estimate of the popular strength of Cleveland and Blaine—class-

ing as it does the fusion votes of Butler men as Cleveland strength—deny popular strength to Butler which was distinctly given him by that vote?

The vote certainly helped Cleveland. It was intended for two purposes—to show Butler's popular strength, and perchance give him two or three electors, who could throw their vote for whom they pleased, probably for Blaine. It seems to me that this fusion vote, some 70,000, intended to help Blaine probably, and certainly to give a showing of Butler's popular strength in Michigan and Iowa, cannot consistently be classed as showing the strength of Cleveland in the Western States.—I remain sir, yours truly,

GEO. H. MEAD.

MINNEAPOLIS, MINN., December 8, 1884.

PARSONS AND POLITICS.

TO THE EDITOR OF THE NATION:

SIR: Under the above heading, one of your correspondents last week declared that "Blaine received a smaller vote from the ministry than any other Republican candidate since the war." Probably that statement is true. The *cause*, however, of this fact is not so readily yielded. Your correspondent would say that it was due to a general belief among the clergymen in the charges against Blaine. On the other hand, papers hostile to Blaine complained that ministers would not investigate those charges.

The true explanation of the Republican loss of support from the ministers is not that they read the Mulligan letters carefully and fairly, and then believed Mr. Blaine to be corrupt; but it is to be found in the Prohibition movement. The principle of prohibition had a strong Presidential ticket for the first time. What more natural than that those ministers who are ardent Prohibitionists should leave the old parties, and rally to the support of their national ticket? In Michigan, the Prohibition party advertised the names of 108 men who would speak in the campaign for St. John and Daniels; and of these, 81 are clergymen. These ministers undoubtedly declared Blaine guilty; but I cannot believe, from what personal knowledge I have of them, that they gave the charges and evidence more than a hasty glance. They are mostly Methodists of the "shouting" kind, enthusiastic in any cause they espouse, but inaccurate in thinking, careless in judgment, and uncharitable in the treatment of opponents. At a recent annual State Conference of the Michigan Methodists, but for the vigorous work of a few conservative members, the meeting would have been turned into a political convention in aid of the Prohibition cause. Indeed, so pronounced were the Methodist clergy of this State that the Prohibition candidate for Governor was selected largely on account of his prominence as a lay member in the Methodist Church. The primary cause, then, in this State at least, of the Republican loss of support from the ministry was the Prohibition party, and not the Mulligan letters.

My acquaintance with ministers who are quiet, but keen and observant, and who attended to the duties of their calling instead of becoming campaign workers and speakers for the Prohibition party, convinces me that among that class the Republican party lost no strength.

H.

MICHIGAN, December 8, 1884.

A SUBSIDIZED PRESS.

TO THE EDITOR OF THE NATION:

SIR: A great many Democrats are fearful there will be no offices to empty and fill if Mr Cleveland sticks to civil-service reform, and are, in consequence, much set against the modern idea. There is no occasion for worry. They must not overlook the fact that the Civil-Service Act does not apply to all offices, and that even if it did, it permits removal for cause. And there is cause enough for a host of removals. For the past eight years, at least, it has been the policy of the Republican Administration to distribute a large portion of the offices among the Republican newspapers. Here in Iowa, there are few papers without one. To say nothing about the personal abuse these papers have heaped on the President-elect, there is still sufficient reason why every office so held should immediately be put in other hands. The interest of popular government demands it. A subsidized press—and it is subsidizing a newspaper to give it an office—cannot and will not reflect the sentiments of the people, nor will it give that independent, unbiassed, unprejudiced opinion upon public and political events which it must give to entitle it to the claim it makes of being the educator of the people. Of course this idea will be very distasteful to the Democratic press. W. J. ROBERTS.

KEOKUK, IOWA.

THE ENGLISH DEPARTMENT IN SOUTHERN COLLEGES.

TO THE EDITOR OF THE NATION:

SIR: A regular reader of the *Nation* often feels that its editor is keenly alive to any token of better things in the South. One of the most recent signs is the kind and encouraging notice taken of two thoughtful letters which were written by Professor Shepherd for the Raleigh (N. C.) *Chronicle*. Such articles are not uncommon in Southern papers. The thin-skinned, mettlesome, intolerant South is gone with the main cause of all its woes. Professor Shepherd is right, we think, in stating that the South has in the last ten years made wonderful strides in educational progress. In such matters there was never before the Civil War one tithe of the interest that is now shown in almost every Southern State. But this interest has not yet reached the schools that prepare for college—the academies. During the war they were, as a rule, discontinued, and since then the common schools and the small so-called colleges have usurped their place. Those well acquainted with the South have to admit that Prof. Chas. F. Smith's article in the *Atlantic Monthly* (October, 1884) is only too true a statement of the facts. North Carolina has a Bingham's, Tennessee a Webb's, and Virginia a McCabe's, a Hanover Academy, a Pantop's, and perhaps one or two more. But I dare assert that *not one-third* of the students graduated from these academies can enter the Freshman Class of Harvard College. All the rest of the South cannot add five more such schools to this list. Hence we find "preparatory schools" connected with almost every Southern institution of learning.

But the following statement is especially misleading:

"There is not a college in the State [North Carolina] in which the study of English is not subservient to the wishes or the convenience of every other department, living by mere sufferance. The result is, as this writer points out, that students feel a sort of contempt for the study of English. This condition of affairs is not confined to North Carolina. In nearly all Southern colleges, teachers who, like Professor Shepherd himself, are earnestly engaged in the attempt to inspire students with a proper appreciation of their own speech, and to present to them the results of English philology, have to encounter the apathy of Regents and Trustees, and to overcome the distrust of pupils, who have been taught to regard purity of idiom as coming 'by nature'" (*Nation*, No. 1014, p. 482).

I have been associated with three Southern institutions—two colleges and one university—and the Trustees of all three have taken a warm interest in the study of English. Last June the Trustees of the University of ——, becoming ashamed of the bad English of its graduates, made provision for a professorship of English, but the measure was defeated by the Chancellor of that University. He even went so far in his opposition as to write against the proposed measure. But Regents and Trustees can take care of themselves.

About fifteen years ago a teacher of Greek in Randolph-Macon College, Virginia, conceived the happy thought of placing the study of English alongside of the study of Greek, Latin, and mathematics both in time and in importance. Ever since that time the study of English has been the most important study in that excellent college. Prof. Thomas R. Price, at present Professor of English in Columbia College, N. Y., was that teacher. Ten years later he gave his experience as a teacher of English to an audience of teachers in Virginia in these words:

"Thus, in my own experience, I have seen countless young men, that could not be either driven or led into giving faithful study to Latin or Greek, turn with eager desire and with persevering zeal to the study of English. I have seen the study of English spread like a contagion through all the grades of undergraduate life, till even the idlest and the feeblest were moved to labor for an object that even the dullest could appreciate as desirable."

For this statement I can vouch, for I was one of 237 students who caught the contagion. And this, I had thought, was the experience of every earnest teacher of English in Southern colleges.

Of these teachers there are many more than the above quotation would lead one to believe. Virginia can show four well-taught departments of English, one in each of the following institutions: the University of Virginia, Washington and Lee University, Randolph-Macon College, and Hampden-Sydney College. The University of South Carolina and Wofford College, S. C., have each an excellent teacher of English. Each of the following universities and colleges is trying to do thorough work in English: Bethel College, Centre College, and Kentucky Military Institute, in Kentucky; Emory College, Georgia; the University of Alabama; the University of Mississippi; Tulane University, Louisiana; the University of Texas, and Vanderbilt University, Tennessee. The Southwestern Baptist University, Tennessee, and the Southwestern University, Texas, have each recently called an energetic, scholarly young teacher to organize a thorough study of the mother tongue. With most of these teachers I am personally acquainted, and I know what kind of work they are trying to do.

In most of the above-mentioned institutions English is associated with some other study, but want of funds is almost invariably the cause. Four have separate and distinct departments of English—Vanderbilt University, the University of Mississippi, the University of Alabama, and the University of Virginia. Vanderbilt University is an example of what the new South will do for the study of English when it has a good opportunity. An entrance examination on English is required, just as on Greek, Latin, and mathematics. The course of study in English runs parallel with that in those three departments. The same number of men are at work in each of the four departments. No degree of the University is given without a thorough study of the English language and literature. This plan has been pursued three years and a half, and this year the department of English shows a larger number of students than the department of modern languages and English had four years ago. In that one department there were two teachers. In the two separate and distinct departments there are six.

In other respects, too, the South is not altogether behind. Ginn, Heath & Co. are now pub-

lishing, for the first time in America, a series of Anglo-Saxon texts. Of the seven editors of "The Library of Anglo-Saxon Poetry," the editor-in-chief and four others are Southerners. At present there are several young Southerners studying English philology in Germany, and I know several others who will go to Germany for that purpose as soon as they can make enough money to pay their way.

You will pardon the words South and Southerner necessarily used so often in this letter, for a constant reader of the *Nation* for eight years could not use those words in a sectional sense; but I do not wish to have the part of our common country in which I am now living misrepresented. W. M. BASKERVILL.

VANDERBILT UNIVERSITY, NASHVILLE, TENN.

SOUTHERN EFFORTS TO EDUCATE THE BLACKS.

TO THE EDITOR OF THE NATION:

SIR: The enclosed, taken from the *Southern Churchman*, may prove a salutary supplement to the letter of your correspondent in the last number of the *Nation*, and to the intelligent letter on Cleveland and the South printed in the *Evening Post* of December 12 (semi-weekly edition). This important act of incorporation for the foundation of a new school is but one of efforts innumerable to lift and educate the colored race—agencies emanating entirely from the South, and directed not only to the evangelization of the race in the church sense, but to the cultivation of their sense of secular responsibilities, the opening to them of avenues for the exercise of industrial pursuits, and the putting them in the way of the acquisition of practical arts and trades for self-help and self-support. This is one of the welcome ways in which the South is becoming, happily, more and more "solid," and the Man in the Tall Tower ought to know it.—Respectfully yours, JAMES A. HARRISON.

WASHINGTON AND LEE UNIVERSITY,
LEXINGTON, VA., December 14, 1884.

[The enclosure referred to is an act, approved November 22, 1884, to incorporate the Bishop Payne Divinity and Industrial School in Virginia, "for the purpose of educating colored persons for the ministry of the Protestant Episcopal Church, or for any secular business."—ED. NATION.]

THE RECIPROCITY TREATY WITH SPAIN.

TO THE EDITOR OF THE NATION:

SIR: The one-sided character of the proposed "reciprocity" treaty with Spain may be judged from the following estimate. I use round numbers:

Sugar consumed in the United States.....1,000,000 tons
Sugar produced in Cuba and Porto Rico..... 700,000 "
The present duty on the latter amount....$30,000,000
Value of total imports into Cuba.....$50,000,000

Since the products of the islands would not suffice for our consumption, the growers there could compel us to pay about the same as other markets offered us—that is, as much as we now pay to both the grower and the United States Custom-house; all the present duty—say, $30,000,000—would be their additional profit, while even if we should sell to Cuba all that she now buys (a manifest impossibility), and make the extraordinary commercial profit of 10 per cent., we should receive but $5,000,000. In other words, we are asked to pay the Cubans $30,000,000 for the privilege of making not over $5,000,000 out of them.

Really, Mr. Editor, is Mr. Foster a Yankee? Did he ever learn to *kalkerlate*?—Yours, etc.,
T. E. C.

BALTIMORE, December 11, 1884.

TO THE EDITOR OF THE NATION:

SIR: You seem to hold that the ratification of the Spanish treaty would not for a number of years affect the price of sugar "to the consumer," in this country; and that during the gradual decline of importations from non-Spanish ports, the price would be fully maintained. I find this position so difficult to understand, that I beg for some further elucidation of it.

1. Would not the Spanish ports immediately begin sending us more sugar, full 20 per cent. more the first year? Would they not import sugar to send us?

2. If the Spanish ports should send us more, would not one of two things necessarily happen, namely, either that the price would fall, or that the non-Spanish ports would send less?

3. But if the importation from non-Spanish ports were to be diminished by the effect of the treaty (as you seem to admit it would be), would not the sugar withdrawn be the product of those lands which among all those now raising sugar for this country are the worst fitted for this purpose? Would not the result be that the worst of the land then producing sugar for us would be better than the worst of the land now doing so? And would not this state of things, by the operation of competition, work a fall in the price?

C. S. PEIRCE.

WASHINGTON, December 15.

[It seems to us a very simple and easily understood proposition that all sellers of sugar in the New York market will ask and obtain the same price for the same grade of sugar, treaty or no treaty. The planter in Manila will receive the same rate per pound as the planter in Cuba. The Manila planter, however, must pay two cents per pound duty before he can reach the market at all, while the Cuban planter need not pay. Now, if Cuba and Porto Rico could at once supply us with all the sugar we consume and something more, then the law of competition among Cuban and Porto Rican planters would force down the price, and the American consumers would get the benefit. But so long as those islands produce something less than the whole amount, a portion of our supply must come from other parts of the world and enter the market loaded with the duty. As there cannot be two prices for the same article at the same place, the market price of sugar in New York under these conditions will be the cost of production in Manila, plus transportation, etc., plus duty. This price the Cuban planter will obtain equally with the planters of Manila, Jamaica, Brazil, and every other country, and of course the American consumer will pay it because the importer must be reimbursed for all his expenses. The situation of the Cuban planter under the operation of the treaty will be precisely the same as that of the Louisiana planter under the tariff. If Louisiana could supply the entire American demand and something more, the law of competition would force down the price more or less, and the consumer would get the benefit.

It has been stated that Cuba and Porto Rico are capable of producing all the sugar consumed in this country. It is possible that if all the land in those islands adapted to sugar-growing were utilized for that purpose, the product might be equal to our present demand. But our demand is not a fixed amount. It grows from year to year. The demand for hardly anything grows more rapidly. It is by no means certain that the annual producing capacity of Cuba and Porto Rico, whose areas are limited, would ever overtake our annual consumption, and if it should not, there would still be an importation of duty-paying sugar, which would, by virtue of the economic law already stated, be the sign and evidence that American consumers were deriving no benefit from the treaty. Since the treaty provides for the introduction free of duty only of sugar *grown* in Cuba and Porto Rico, it would be impossible for them to import sugar to send to us. It was charged at one time that Manila sugar had been imported into Honolulu to be reëxported to San Francisco under the treaty with the Hawaiian Islands, but the charge was not sustained upon investigation. Cuba would undoubtedly import sugar for her own consumption, and send us the corresponding amount of her own growth. This would add to her exporting capacity by whatever amount her present population now use, which is not probably equal to one year's increase of our consumption.

The third question propounded by Mr. Peirce would be relevant if we were the only country buying sugar from non-Spanish ports. The sugar which we now take from them would be diverted to England and other importing countries to whatever extent Cuba increased her supplies to us (our consumption remaining the same), or to whatever extent she increased her proportionate supply. Therefore the difference between best lands and worst lands would not necessarily enter into the problem at all.—ED. NATION.]

DOMESTICATION OF ORCHIDS.

TO THE EDITOR OF THE NATION:

SIR: Allow me to criticise the review of Miss or Mrs. Miner's work on orchids, which appeared in yesterday's *Nation*. The writer takes the lady to task for saying that our native showy Lady's Slipper (Cypripedium spectabile) is easily domesticated, whereas she was right, and might have said the same thing of several other species. The Pink Lady's Slipper (C. acaule) *does* baffle both professional and amateur florists, always disappearing the second or third year after it is transplanted. C. spectabile is not confined to the Mohawk Valley, but is met with very generally throughout the eastern United States, particularly in the upland regions of New England. C. candidum, a small white species, occurs most frequently in New York State, I believe, but is found further west and south. C. calceolus is a European species, much like to our large Yellow Lady's Slipper (C. pubescens).

HENRY BALDWIN.

HARTFORD, Ct., December 12, 1884.

[Another correspondent writes: "The review on p. 509 belies the fair fame of Cypripedium spectabile, evidently through a botanical mistake. The book on Orchids is right in its statement that 'it is easily domesticated.' It is freely cultivated by amateurs, both in this country and in England, and, if our memory serves, it was grown by 'the late Professor Jackson, of Union College.' The species which he 'used to say was untamable,' and the one which the reviewer must have had in mind, is not the blushing C. spectabile, but the stemless C. acaule." We did not, however, con-

found these two species; and at the (somewhat remote) time to which we referred, we are quite sure that Professor Jackson had not succeeded in growing C. spectabile.—Ed. Nation.]

"BOBOLITION."

To the Editor of The Nation:

Sir: In your issue of December 4th, noting the mention of *Abolitionist* by Mr. C. L. Norton in his "glossary of 'Political Americanisms,'" in the December number of the *Magazine of American History*, you add: "And why omit *Bobolitionist*, the derisive nickname in use as early as 1838?"

Bobolition, if not *Bobolitionist*, was in use much earlier. At least as early as 1824 I saw the word on a broadsheet containing what purported to be an account of a bobolition celebration at Boston, July 14th. At the top of the broadsheet was a grotesque procession of negroes. Among the toasts, or sentiments, were the following:

"Massa Wilberforce, de brack man bery good friend; may he nebber want a bolish to he boot.

"De Nited State; de land ob libity, 'cept he keep slave at de South. No cheer! Shake de head!

"Dis year, de fourth ob July come on de fifth; so, ob course, de fourteenth come on de fifteenth."

It is by this last that I fix the date. During my boyhood (*pueritia* in the limited application) there were but three years in which "the fourth of July came on the fifth." It was certainly not on the first of these; I was too young then. It may have been on the second; but it was probably on the last. E. J. Stearns.

Easton, Md., December 11, 1884.

THE ETYMOLOGY OF "JANUS."

To the Editor of The Nation:

Sir: A few years ago, while engaged in the study of old French, it dawned upon me that *Janus*, the old Italic sun-god, had, after all, no connection with *janua*, door, but was for *Dianus*. This was suggested by similar changes in such words as *jour*, O. Fr. *jorn*, Latin *diurn-um*; *jusque*, O. Fr. *diusque*, Latin *de usque*. It was confirmed, I thought, by Varro's use of *Iana* for *Diana*.

Not to claim a discovery, for I did not suppose this etymology unknown in philological circles, but to find out how far modern authority agreed with the conclusions reached, I wrote to a distinguished classical scholar and philologist. In his reply (1878) is this statement: "Your wresting of the Lat. *Janus* away from the root *ja* in *janua*, etc., to bring it into connection with *Diana*, *Jupiter*, etc., is, I think, unsound etymology." Some years after, in correspondence with an eminent Sanscrit scholar and university professor, I asked his opinion on this point. He writes: "Unless I am mistaken the 'Zusammengehörigkeit' of *Janus* with *Dianus* is pretty generally admitted." Not quite satisfied, I wrote to Professor James Darmesteter, of the Sorbonne, who was then publishing some articles on Aryan Mythology. In his reply, he writes: "Janus est très-probablement pour *Djanus*, et *janua* est sans doute un dérivé de *Janus*, c'est un *jour*."

Harper's New Latin Dictionary, based on Andrews's Freund's Latin-German Lexicon, and revised and enlarged by Drs. Lewis and Short, has been before the public several years, but it is only recently that a copy fell into my hands, my work for the last few years being in another department. Turning from the publishers' advertisement—in which it is rightly said that "the student of to-day may justly demand of his lexicon far more than the scholarship of thirty years ago could furnish"—to the word *Janus*, I was surprised to find the old etymology (as old as Cicero's 'De Natura Deorum') given, with no reference at all to *Dianus*, thus: "*Janus*, i. *m.* [root 1, ire, prop. a going, a going through, passage; *cf.* janua], *an old Italian deity.*" Under *Janua:* "[Janus, *i. e.*, ianus, from i, ire; *cf.* Sanscr. yâna, itio, incessus, from yâ, ire], *a door, house-door.* I. Lit.: principem in sacrificando Janum esse voluerunt, quod ab eundo nomen est ductum: ex quo transitiones perviæ, jani; foresque in liminibus profanarum ædium januæ nominantur, Cic. N. D., 2, 27, 67."

Philology being a new science, Cicero cannot be regarded as an authority in word-derivation. His attempt in this case should of itself have awakened suspicion. There can be no doubt that *Janus* is for *Dianus*, as *Jov-* is for *Diov-*, and is a name for the sun. From this everything else connected with *Janus* can be easily explained: the two opposite doors of his temple in the Forum, the one pointing to the coming-in of the sun, the other to his out-going; the representation of him with a face on the front, and another on the back of his head; the name *janus* given to an arcade, or arched passageway, suggested by the apparent course of the sun, etc.

A wrong etymology of *Janus* and its congeners draws after it a train of errors. It favors the false view of the origin of gods, a view yet current even among educated men. Not long ago a college president, in a published article, spoke of Jove as a contraction of Jehovah. Doctors of Divinity should study a little the origin of their title before pronouncing so positively about mythology. Those who quote as authority Dr. Adam Clark, a great scholar in his day, forget that if he were now living, he would be the first to deride those who go back fifty years for authority in philology. The radical syllable in *Jupiter* and *divinity* is the same. It is the study of Sanscrit that has discovered to us the new world of mythology also. But truth cannot be one thing on one side of the Atlantic, and another thing on the other, and though the sun sets several hours later on this side, there is no reason why American scholarship should be as many decades behind in applying the results of a science new but well known on the other side of the water.

Edward A. Allen.

Central College, Mo., Dec. 2, 1884.

Notes.

A book of travels in the Southwest, called 'With the Invader,' by Edwards Roberts, is in the press of Samuel Carson & Co., San Francisco.

R. Worthington is about to bring out a new edition of Mr. Robert Waters's 'Life of Cobbett.' The New York Board of Education, meantime, have placed Mr. Waters's edition of Cobbett's 'Grammar' on their list of text-books, and so have done something to make the study interesting.

Doctor Baird's 'History of the Huguenot Emigration to America' will be published by Dodd, Mead & Co. in the early part of next year.

A private chapter in the history of this emigration is given in a memoir of the late Dr. John Lawrence Le Conte, read to the National Academy of Science on April 17, by Samuel H. Scudder, and now reprinted from the Transactions of the American Entomological Society. With good reason, Mr. Scudder, in treating of the comparatively uneventful life of "the greatest entomologist this country has yet produced," enters at length into the ancestry and kindred of the deceased scientist, and makes a very interesting exhibit of hereditary genius. Hereditary physical characters are as plainly stamped upon the face of Doctor Le Conte. No one, from the portrait accompanying this pamphlet, could fail to recognize his French descent; and any one would be justified in supposing him a pure Frenchman, whereas, in fact, his grandfather was a Franco-American and his grandmother an American.

An unpretending volume, bearing the title 'Ezra Abbot,' and the fitting motto, "And ye shall know the truth, and the truth shall make you free," has been published for the Alumni of the Harvard Divinity School, Cambridge. It consists of sundry funeral and special memorial discourses, among which that of Doctor Abbot's colleague, Prof. J. H. Thayer, holds the chief place. Other memorial tributes and a bibliography of Doctor Abbot's writings complete the materials for a very satisfactory estimate of the character and achievements of that unrivalled American scholar. An admirable portrait of Doctor Abbot—the bust draped in his familiar cloak—serves as a frontispiece; and in the fine eyes, not more searching than sympathetic, one may discern that humor of which Doctor Peabody alone in this volume makes mention. Mrs. Abbot, we are told in the prefatory note, has given her husband's large and valuable library to the Divinity School.

Some pleasant papers entitled 'Friends in Council,' by Amelia Mott Gummere, which lately appeared in the *Pennsylvania Magazine of History and Biography*, have been gathered into a thin book, handsomely printed (Philadelphia: J. B. Lippincott & Co.). As we have had occasion to point out, John Woolman figures in these extracts from the Society's archives, and his admirers will find here something to repay them. The author should have added an index of names.

The Old Stone Mill at Newport is the subject of an article in *Science* for December 5, from the pen of Mr. Charles S. Peirce. The writer, on a recent occasion, made measurements of the building with only the bias of a metrologist. Fault might be found with his assumption that "the building could not have been erected without a drawing to scale," whence it is concluded that "a unit of length must have been employed." This unit he seems to identify with the Norse foot of 12.36 inches English. Mr. Peirce observes (for the first time, so far as we know, and very plausibly) that "the projections of the pillars beyond the upper part of the tower suggest that there might have been a ledge upon which a miller could climb to turn round the axis of the sails of the windmill." Further, all the rough-cast covering the walls was apparently a part of the original mortar; and the stones, which show no drill-marks or marks of an axe, "do show marks of the hammer."

The so-called 'Biblia Pauperum,' of which the limited American edition bears the imprint of A. C. Armstrong & Son, is not a reproduction of the classical example in the history of early printing. The plates, to begin with, are reduced facsimiles of prints made in 1877 from a set of blocks bought at Nuremberg some sixty years ago, and not known to have been used in any printed book. The illustrative text is taken from Wiclif's version of the New Testament, and is very effectively set in ornamental borders copied from a Book of Hours printed in Paris in 1525. The paper is imitative of the same antiquity, and the binding, in white parchment, with brass clasps, has been derived from a specimen in the British Museum—the whole forming a possible contemporaneous production. Finally, Dean Stanley's preface to the major 'Biblia Pauperum,' struck off from the blocks themselves in 1877, is repeated here. On the whole, the smaller edition may be thought the more desirable possession of the two, for the woodcuts themselves have no artistic value and very little interest.

When business advertisements take the shape

of books, *éditions de luxe* are a logical sequence. The Pratt Manufacturing Co., New York, which two years ago ventured to distribute a pretty anthology called 'A Paradise of Daintie Devices,' is now distributing a companion volume of selected verse, called 'An Antidote against Melancholy.' Locker, Calverley, Dobson, are found with Barham, Leigh Hunt, Keats, Herrick, Drayton, Congreve, etc., and the ever-present "Uncertain" and "Unknown"; the "Vicar of Bray" with "The Fine Old English Gentleman," "An Old Song of an Old Courtier and a New," "The Country-Lass," and the Drinking Song with the refrain, "Back and side go bare, go bare," and many another light piece. The copy before us is irreproachable in paper and typography, being from the press of T. L. DeVinne & Co.; but "for the select few who like fine editions, we have printed," say the publishers, "125 copies on larger Holland hand-made paper, with extra impressions of the covers," etc., and these copies are for sale, and not for gratuitous distribution. Each copy is numbered and signed.

"The Golden Text Calendar" is, as its name imports, charged with quotations of moral drift, which are edited by A. C. Morrow, the whole being designed by Mary A. Lathbury and published by D. Lothrop & Co., Boston.

The result of a seeking for novelty at a sacrifice is 'Sweet Girl Goldie,' a story of butterfly time, which is charmingly illustrated by Miss Humphrey, cut to the shape of a butterfly's wing, and bound up as a butterfly. If such fashions should prevail, we may arrive at holiday books which shall be provided with mechanical power, and be found to walk or fly alone. This butterfly is hatched by Spinney & Perkins, No. 7 Bible House.

We have received a 'Concise Bibliography of Spanish Grammars and Dictionaries, from the earliest period to the definitive edition of the Academy's Dictionary, 1490-1780,' by Prof. Wm. I. Knapp, of Yale College—a reprint from the October Bulletin of the Boston Public Library.

The first number of the New England Meteorological Society's Bulletin, containing observations for November, has just been issued. It presents the results of observations at about forty stations in New England, the greater number of observers being volunteers. From the outline map, on which the precipitation and range of temperature are represented graphically, one can see that the Society has still much to do in enlisting observers in districts from which no reports are now received. For example, the Berkshire valley in Western Massachusetts, although certainly not a region of retarded development, has as yet failed to contribute to the success of the Society's work; and with the exception of a single station, the same might be said of Connecticut, west of its central valley. Political lines form unsatisfactory boundaries for an undertaking such as the Society has in hand; and in future numbers of the Bulletin we shall hope to see, besides an increase in observers, also an extension of the field of observation northwestward to Quebec and Montreal on the St. Lawrence, westward to include the valley of the Hudson, and southward to take in Long Island. Copies of the Bulletin may be obtained by those who wish to assist in the work of observation by addressing Professor Winslow Upton, Providence, R. I.

Among the latest ventures in journalism is the *Critic* of Halifax, N. S. Its form is an unconventional one for a paper purporting to be critical, but the sample copy sent us contains some smart and wholesome paragraphs, chiefly of provincial interest, however. The very divergent views of its correspondents and contributors argue that it is thoroughly independent—a rare merit in Canadian journalism.

Mommsen's Berlin publishers announce the early appearance of the fifth volume of the 'History of Rome,' which will thus be issued before the fourth, the latter being not yet ready to be announced.

The eighth volume of the new Brockhaus' 'Conversations-Lexikon' was closed with Part 120, and ten parts have since been added (New York: L. W. Schmidt). In two double numbers (91–94) which have been delayed, will be found a valuable continuation of the articles on France, and an interesting disquisition on the woman question. From the historical point of view the latter is rather unsatisfactory, especially in what pertains to the origin and growth of the suffrage movement, to which the writer is not favorable. As respects private rights and employment, his liberality stops short only when it comes to the professions, where he takes the customary German view of the sphere of the sexes. The principal geographical articles are Great Britain, Hesse, Hamburg, Hanover; and there are beautifully executed colored maps of the British Isles and of Ireland, of Ancient Greece, of Hamburg and vicinity, etc., besides many in the text. Thoroughly characteristic are the correlated articles on Trade, Wood, and the Military Condition (*Heerwesen*) of Europe; and that on Small Arms is also noteworthy. The review of Homœopathy concludes against its fundamental soundness, and remarks that it has not yet been able to win a medical chair in Germany. Among the biographical notices, which involve many eminent names—Hegel, Herder, the Humboldts, V. Hugo, the late Karl Hillebrand, etc.—none is more curious than that on Caspar Hauser, about whom each generation is instructed (or misinstructed) anew, to judge from the appended bibliography. American names are infrequent. Ex-President Hayes is found wanting only in energy. By a serious slip, General Hancock's candidacy for the Presidency is referred to the year 1868, with Grant for his rival.

The Rev. Dr. M. Heidenheim, a theologian and Orientalist known since 1861 as editor of the *Deutsche Vierteljahrschrift für englisch-theologische Forschung und Kritik*, issued in Gotha, has undertaken the publication in numbers of a 'Bibliotheca Samaritana.' It is to contain a collection of the most interesting Samaritan religious and literary compositions, including psalms, litanies, prayers, and the famous version of the Pentateuch, all printed in the original in square Hebrew types, and accompanied by introductions, notes, critical examinations of the authenticity and age of the texts, and extracts from the Arabic Chronicle of the Samaritans.

M. Édouard Drumont points out, says the *Revue Critique*, that nihilist, supposed to be Turgenef's invention, is to be found long before in Mercier's 'Neology' (1801): "Nihiliste ou rienniste, qui ne croit à rien, qui ne s'intéresse à rien." It may still be that the Russian novelist was original in his use of the word, for it certainly was not common when he first employed it.

M. Zola, one of the wiliest of literary men, understands to perfection the art of self-advertisement—*l'art de la réclame*. His new novel, 'Germinal,' is about to be published shortly, so he sends out in advance M. W. Busnach's 'Trois Pièces,' taken from his (Zola's) novels, and preceded each by a combative preface. M. Busnach is the hack-dramatist who adapted 'L'Assommoir,' 'Nana,' and 'Pot-Bouille' to the stage—the first without, and the other two with, the aid of the novelist. The prefaces are noisy and insincere, but the book is a valuable document in the chronological history of the French drama.

—For its size, New York is somewhat lacking in objects of interest to the stranger who wishes to go below the surface of things. One of the most fascinating, and one of the least appreciated, is the National Military Museum on Governor's Island. We are glad to see that it has at last begun to be "put in evidence" by the Military Service Institution of the United States, which has charge of it. There lies before us, from the press of G. P. Putnam's Sons, a really beautiful illustrated catalogue of the museum, which is purchasable for a few days at No. 52 Broadway. To enumerate the wealth of articles exhibited would require more space than we can command, but here are the classes: Battle-flags and colors, Arms, armor, and ammunition, Arctic relics, Clothing and accoutrements, Horse equipments, Medals and money, North American Indians, Isolated relics, Old books and MSS., Maps and plans, Pictures and sculpture. The Indian department is, we believe, the finest in existence, surpassing that of the National Museum at Washington. Among the curiosities is Sheridan's famous charger, "Winchester." A Corean battle-flag finds a place among those of the civil war; a French field-gun of the American Revolution, among domestic ordnance. Many foreign examples occur, of course, amid the arms, armor, and ammunition, and amid the isolated relics. The autographs are numerous and valuable, and three of Lincoln's are facsimiled in this catalogue. In short, we have here the nucleus of a great collection, which New York will one day be proud of, and will (in spite of its present security from fire) insist on having transferred to the larger island of Manhattan. Meantime, we advise every one who can to visit the Museum and to contribute to it. Those who buy its sumptuous catalogue will do something to promote the object for which it was issued.

—Mr. George Haven Putnam has printed a pamphlet entitled 'Literary Property' (Chicago: A. H. Andrews & Co.), which consists of the article on the same subject in Lalor's 'Cyclopædia of Political Science,' contributed by him. It contains an admirable summary of recent discussions, and a valuable collection of facts not always readily accessible, as, for instance, with reference to the duration of copyright. In France, in Germany, in Italy, in Sweden, in Spain, and in Russia, the term of copyright is longer than in England and the United States—the Spanish period, the longest of all, being the life of the author and eighty years afterward. The tendency is against making it perpetual, but Mr. Putnam very pertinently asks why. The danger is said to be that an indefinitely long copyright might result in the accumulation of literary monopolies, under which extortionate prices would be demanded from posterity for the highest and most necessary productions of the national literature. Mr. Putnam evidently thinks this is somewhat like the argument in favor of piracy on the score of the interest of the public in "cheap books." He thinks it probable "that accumulations of literary property would, as in the case of other property, be so far regulated by the laws of supply and demand as not to become detrimental to the interests of the community. If a popular demand existed or could be created for an article, it would doubtless be produced and supplied at the lowest price that would secure the widest popular sale. If the article was suited but for a limited demand, the price, to remunerate the producer and owner, would be proportionately higher."

—A more serious objection is the possibility

"that the descendants of an author who have become by inheritance the owners of his copyrights, might, for one cause or another, desire to withdraw the works from circulation. A case could even occur in which parties desiring to suppress works might possess themselves of the copyrights for this purpose. The heirs of Calvin, if converted to Romanism, would very naturally have desired to suppress the circulation of the 'Institutes'; and the history of literature affords, of

course, hundreds of instances in which there would have been sufficient motive for the suppressing, by any means which the nature of copyrights might render possible, works that had been once given to the world. It will doubtless be admitted that, in this class of cases, the development of literature and freedom of thought would alike demand the exercise of the authority of the Government on behalf of the community, to insure the continued existence of works in which the community possessed any continued interest."

Property in lands and chattels may also be abused; but we do not on that account think it necessary to limit its enjoyment to the brief period of a couple of lives. It may also be worth while to point out that stage-right, or the property in unpublished plays, as now recognized in the courts, is really a species of both universal and perpetual copyright. That a man should be able to own a play by an absolute title, and a poem or essay for only a few years, is an anomaly that no one has ever attempted to defend.

—Alphonse de Candolle, after the lapse of a dozen years, has brought out a new and much-enlarged edition of his 'Histoire des Sciences et des Savants' (Geneva and Bâle: H. Georg. Pp. 594, 8vo). Interesting as this volume is, and various in its contents, it is, no more than was the original edition, a history either of the sciences or of their cultivators. The reader will find nothing answering to the first part of the title; and the history of the *savants* is limited to an account of their election as foreign members by the oldest and most notable scientific societies of Europe —prominently the Academy of Sciences of the French Institute—of which the author is one of the immortal eight, in succession to his father. This topic is statistically discussed with much particularity, through more than three hundred pages, and in reference to the influence of heredity, of country or race, of government, social institutions, religion, education, rank in life, etc., upon the development of the sciences, as exemplified or measured by the eminence of those who within the last two centuries have most contributed to the advancement of science. It is assumed that the selection of the fittest in this regard has been made by the Academy of Sciences at Paris, the Royal Society of London, and the Academy of Sciences of Berlin; and the author notes with some natural pride the fact that, upon this test of "scientific value"—that is, in the number of names upon this roll of honor compared with the population of the country—Switzerland stands first and foremost. For the rest of the volume, the greater part is occupied with a largely new disquisition upon the influence of heredity, variability, and selection in the development of the human species, ending with a chapter on the probable future of this species.

—The essay upon the advantages for science of a dominant language, and the prediction that English is to be that language in the twentieth century (to which we called attention when the first edition appeared), is reproduced without essential alteration. As this prediction is grounded on the principle of the survival of the fittest, as well as on other and perhaps more obvious reasons, it may be well to note that De Candolle finds the greatest drawback to the fulfilment of this high calling —and a greater than English-speaking people are sensible of—in the loose and vague pronunciation of our vowels. Much of this is now past remedy, except through changes in orthography which in our days will appear ridiculous. Yet much might be helped which has come about through mere laziness. The whole tendency in America is to degrade all vowel-sounds into a neutral *u*, which, being nearest to a grunt, is pronounced with least effort. A language with such a destiny as ours is worth taking care of. If the present generation can do little toward removing inherited difficulties, it need not add to them.

—M. Francisque Sarcey has for some months been publishing in the *Revue Critique* his memoirs, under the title, "Comment je suis devenu journaliste." It is a charming autobiography, a masterpiece in an art in which the French excel. Very striking is the instance which he gives in the last numbers of the prodigious, the almost incredible folly of the officials of the Empire in the department of education. "Quos di volunt perdere prius dementant." Every one knows that in military organization, in commissariat, in diplomacy, the last years of the Empire were a wretched failure; but we do not recollect a statement of its defects in the matter of education. The Ministers of Public Instruction can hardly have had any comprehension of or any care for the department over which they presided. Here are some specimens of their methods. Sarcey was a teacher in the college at Grenoble. Nisard, the rector, offered him the chair of philosophy. When he objected that he did not know anything of the subject, he was told that this was precisely what was wanted; there were plenty of men who could teach philosophy, who would not do the students any good; he would teach them, by his example, how to write well, which was much more important. At Grenoble he found professors of Latin literature, of philosophy, and of French literature who had no hearers whatever at their lectures. The professor of Greek literature, Gandar, was one of the first Hellenists in France; at the Sorbonne he might have done something, at Grenoble his audience consisted of the porter and Sarcey. His lecture-hour was changed to a time when Sarcey was engaged. Gandar asked the rector to alter it so that he might keep his single pupil. The rector, passing on, no doubt, rebuffs which he had received from the Minister, replied that the Faculty could not consult the convenience of the Lycée in such a way, and subordinate its programme to the exigencies of a professor of secondary instruction. Gandar thereafter delivered his lectures to the porter alone. Apparently not on that account, but from the accidental shuffling of places, he was ordered to Caen to lecture on foreign literature. He protested to the Minister, saying that he did not know a word of English or German, and received reply that to speak of foreign writers it was not at all necessary to understand the language in which they wrote; that a knowledge of Greek and Latin was amply sufficient. This incredible letter Sarcey affirms that he has read with his own eyes. No wonder that some of the best spirits in the University were one after another attracted to Paris to write for the Liberal press. The Government made no effort to retain them. J. J. Weiss, for instance, was offered a position on the *Débats;* with a strong *esprit de corps*, however, he offered to the Minister to decline the tempting offer if he were assured that in a year or two he should have a chair at the Sorbonne. "Sir," replied the Minister, "do you imagine that the Government of His Majesty the Emperor allows its functionaries to impose conditions upon it?" Probably it would have been much better if the Government had in this case accepted the not too onerous conditions. It would have had one brilliant opponent the less. Prévost-Paradol was let slip in the same way, and Sarcey himself soon followed suit.

—'The Early and Miscellaneous Letters of Goethe,' translated by Edward Bell, have been published by Geo. Bell & Sons, London (New York: Scribner & Welford). The volume will be acceptable, not merely to such as do not read German, but also to the German scholar who does not possess a full Goethe library. The editor has been at pains to put together from numerous scattered volumes all Goethe's letters (of importance) down to September, 1775. In the Appendix are also to be found all his letters to his mother, all to the mysterious "Kraft," and two (of 1783 and 1814) to Riese. The mere labor of collecting, it will thus be seen, was not inconsiderable. As to the translation, we need only say in general that it reads smooth and idiomatic. Occasionally a word or a phrase reminds us of its foreign source. Bibliographic references are sufficiently ample. The biography in the Preface will doubtless answer its purpose, namely, of enabling the reader to connect the letters with the successive periods and steps in the writer's life. But we must warn the editor against trusting 'Dichtung und Wahrheit' too implicitly. Although it may give a clear enough genesis of its author, it abounds in minor inaccuracies. Von Loeper's annotated edition is indispensable to every one who has to deal with Goethe professionally. We can scarcely agree with Mr. Bell's estimate of Lewes's 'Life,' viz., as "the best critical biography of Goethe." No biography can be critical that so *vulgarizes* its subject. It would be an ungracious task to pick out an occasional misstatement by Mr. Bell. No one of them will diminish the reader's profit from the letters themselves. Our fault-finding, so far as we have any, is directed rather to the scope of Mr. Bell's work than to its execution. Granted that the young Goethe is an exceedingly fascinating personage, is it wise, when we aim at interesting a lukewarm Anglo-American public in the poet, to restrict ourselves to his youthful days? Goethe in his prime is no less interesting and far more instructive, far more likely to command attention from non-Germans. Had Mr. Bell culled from the entire field of Goethe correspondence, late and early, the choicest and ripest fruits, would he not have offered a more nutritious banquet? We think so. We believe that an almost incalculable effect might be produced by a chrestomathy that should disregard chronology, and consult only intrinsic interest of theme.

—While Henry M. Stanley is receiving ovations in the leading capitals of Europe, from princes, diplomats, and learned societies, for his achievements as an African explorer, Colonel Przhevalski continues his arduous wanderings between the mountain ranges in the border lands of Thibet, China, and Mongolia. His repeated expeditions since 1870, which have led him to the mysterious lakes on both sides of the Altyn-Tag—the Kuku-Nor and Lob-Nor—through the Desert of Gobi, and across the head waters of both the Hoang-Ho and Yangtse-Kiang, almost entirely correspond in time, and not a little in manner, to Stanley's travels and protracted stay among the lakes and rivers of central Africa. Both plunge into trackless wilds, disappear, and emerge at widely distant points, after perilous and bloody encounters. Almost of the same age —Przhevalski, born in 1839, is the older by one year—they are equally remarkable for courage, self-reliance, and perseverance; but the Russian serves science and his Imperial master, whose Cossacks accompany him, in a spirit accustomed to mental and military discipline. The latest news received from him, which reached the Russian capital by the Mongolian and Siberian road leaves him in the vicinity of two great lakes near the upper course of the Yangtse-Kiang, which, by right of first discovery, he has named Russian Lake and Lake of the Expedition. Their altitude above the level of the ocean is 13,000 feet; the surrounding plateau is 1,000 feet higher. Before reaching that region he had made extensive marches through northeastern Thibet, and repelled attacks by large bands of predatory Tanguts.

HAWTHORNE IN HIS OWN FAMILY.

Nathaniel Hawthorne and His Wife. A Biography. By Julian Hawthorne. Two vols. Boston: James R. Osgood & Co. 1885.

THIS story of Hawthorne's home-life, his relations to mother, sister, wife, and child, varies and deepens our impression of his personality, while it does nothing to disturb the tradition of his solitary genius. That he was born among peculiar people, and bred under an eminently unsocial domestic régime, is well known; but in this his circumstances were not so exceptional as might be thought. Madam Hawthorne, self-immured in her mysterious chamber, like the Aunt Mary whom Emerson describes in one of his posthumous papers, was not merely idiosyncratic: she was a legacy from the New England past, and in her own day and generation was not out of place; and her son, at a time when children were believed to be as happy as was proper without aid from their elders, and no thought was had of making companions of growing lads, was left to himself and his playmates much as other boys were. The family, it is true, seem to have reached the highest point of uncommunicativeness consistent with dwelling under the same roof; and, especially after Hawthorne's return from college, where he had proved a companionable fellow enough in his own set, this hermit-life within doors must have been powerful to confirm the hereditary taint of solitariness in him, derived from his Puritan and sea-going ancestors. Thrown back on the resources of his own spirit, he let solitude have its way with him, and thus he became well acquainted with the gray rocks of the Marblehead promontory and the lovely reaches of the wooded Beverly shore, and, by the help of their silence, he made imagination the habit of his mind.

Meanwhile, in another New England household, also with a touch of peculiarity, was growing the woman who was to take Hawthorne out of this homelessness and found a family hearth of a very different character from that he had known. This woman was Sophia Peabody, a sister of the now venerable Elizabeth P. Peabody; and the touch of peculiarity that has been alluded to showed itself mainly in connection with transcendentalism—a species of intellectual measles which was then very contagious among the feminine minds of the neighborhood. Sophia's mother was a woman of great good sense, and her father a kindly and helpful man, both of them excellent parents of the softer New England type. She herself was an invalid, subject to an "acute nervous headache which lasted uninterruptedly from her twelfth to her thirty-first year." She was an amateur in painting, moreover, and she wrote a journal, and she read books: "I read Degerando, Fénelon, St. Luke and Isaiah, Young, the *Spectator*, and Shakspere's 'Comedy of Errors,' 'Taming of the Shrew,' 'All's Well that Ends Well,' and 'Love's Labor's Lost,' besides doing some sewing to-day." This, in the case of a girl of nineteen, who is said never to have been without pain for an hour, was a good stint. She was not without enjoyment, too, in an epistolary way: "I have written a long letter to Miss Loring this evening," she says at the same time, "with the moon all the while in my face. This is revelry!" As an example of "the growth and advancement of her mind" during the next eight years, her son prints further extracts from her confidential papers, of which these two, written when Hawthorne was falling in love with her, will suffice:

"Last night I was left in darkness—soft, grateful darkness—and my meditations turned upon my habit of viewing things through the 'couleur de rose' medium, and I was questioning what the idea of it was—for since it was *real* there must be some good explanation of it—when suddenly, like a night-blooming cereus, my mind opened, and I read in letters of paly golden-green words to this effect: The beautiful and good and true are the only real and abiding things—the only proper *use* of the soul and nature. Evil and ugliness and falsehood are *abuses*, monstrous and transient."

"I have read Carlyle's 'Miscellanies' with deep delight. The complete manner in which he presents a man is wonderful. He is the most impartial of critics, I think, except Mr. Emerson. Every subject interesting to the soul is touched in these essays. Such a reach of thought produced no slight stir within me. I am rejoiced that Carlyle is coming to America. But I cannot help feeling that Emerson is diviner than he: Mr. Emerson is Pure Tone."

While Sophia was engaged in such meditations, and the romancer, having discovered his occupation, was at hard labor handling coal and salt in the Boston Custom-house, their fate found them out and they confessed they had loved at first sight. It was impossible, however, that such an invalid as Sophia should be married, and it was agreed that their union must wait the cessation of the headache that had lasted without intermittance nearly a score of years. Love was good to his new devotees, it scarcely need be said; the cure was soon effected, and with the headache, apparently, disappeared also that peculiar Bostonian malady already mentioned. There is nothing more about "paly golden-green letters," or Mr. Emerson in his incarnation as "Pure Tone." Sophia became a faithful wife and a kind mother, the centre of a very charming home.

It is the history of this home that Julian Hawthorne has written. By the help of his father's very copious notes of the sayings and doings and looks of the children—Una, Julian, and Rose—and with his own recollections of boyhood to draw upon besides for the later period, he has taken us into the intimacy of the household, and confided the charm and dignity and wisdom of Hawthorne's fatherhood. And this he has done in a narrative so instinct with tender respect and unquestioning love, so full of a frank, boyish spirit, of the loyalty that has never contemplated the King's doing wrong, that the critic is constrained to take his point of view and accept this biography, not as a critical and complete life, but as a friendly confidence. It is, indeed, so far as the children are concerned, a lovely story, whether the thin tent of the family was pitched by the Concord River, or the Salem wharves, or among the Berkshire hills, or whatever the place of their sojourning—Liverpool, or Rome, or the Redcar Sands, or the Wayside, in which the last days were spent. Some passages, of Hawthorne's own writing, are masterly. There could be nothing more perfect, as mere literary description, than the minute narration of the play of Una and Julian while Madam Hawthorne lay dying; nothing more pathetic than the scene where Hawthorne himself kneels by his mother's dark bedside and takes her hand, and feels that last dead strain of the cords of birth across all the strangeness of their divided lives, while the childish laugh and prattle float up from the sunny yard below. And Julian, in contributing to the account of his own boyhood, has not injured its simplicity and health by the intrusion of any after self-consciousness. From the moment that he comes under cognizance as a lump of flesh to the last fine scene, when he runs over from Harvard to ask a favor and goes out with "light upon him from his father's eyes," not knowing it was the last glimpse, he is merely Hawthorne's boy who once wished that his father didn't write books. But, naturally, all this is contained in an account of small matters, little events, walks and swims, and books by the fireside and fairy stories on the sands, and not unfrequently the touch of nature is to be found in a mass of irrelevant trivialities; it is a pity that the work was not reduced to one-third of its size.

Yet this happy home of Hawthorne's maturity was not more exceptional, for the time and social state in which he found himself, than had been the case with the lonely isolation of his boyhood, with which it stands in such effective contrast. In each, although its peculiar quality of reserve or freedom was accented, there was only a divergence in degree from a New England type. Madam Hawthorne, and all that her name stands for in Hawthorne's life, belong to Puritanism; his own home was in the highest sense humane; and in view of this contrast it is easy to see why Julian, with his fresh and exclusive remembrance of the sunshiny interior of Hawthorne's latter years, should protest very loudly against the not uncommon opinion that his father was the victim of a certain morbidity. On the contrary, he says, never was there such health, sanity, vigor—all manly traits and qualities, capacities and energies. Certainly, by comparison with the life out of which Hawthorne came, and perhaps even more clearly by comparison with the Transcendentalists, the Brook-Farm reformers, the prophets and prophetesses among whom he was thrown, moral health and mental sanity and the vigor of an incorruptible common-sense seem to be peculiarly his possession—one is almost tempted to say, his alone. When a man of his spiritual insight and sensibility, so open to fine suggestions, so tenacious of impalpable meanings, could say of a friend like Emerson: "Mr. Emerson is a great searcher for facts, but they seem to melt away and become unsubstantial in his grasp," the criticism goes far to reveal his own balance, the continence and repose of his own mind. He saw clearer and deeper than the theorizers into the transcendent mystery there is in the soul's life, not only because he had more delicate impressions and simpler perceptions, but also because his relation therewith was vital and not merely intellectual, and, instead of being a subject of spasmodic reflection, shared in the inflexible reality of direct moral experience. He was not one of the Concord men, and that fact by itself helps a good deal his son's claim that he was not fairly open to any charge of crankiness. Yet that there was some morbidity in his blood, a tendency to certain subjects of investigation, a bent toward certain moods of sentiment, a preoccupation of his mind with death, evil, sin, and the fantasies of an overwrought spiritual sensibility, can hardly be seriously questioned.

In the same way, Julian does not make out that his father was essentially a social man. Even inside the family circle, companionable as he was with his children, it is to be remembered that they had scarcely reached the period of full, separate consciousness in their lives when he died. In his social relations with his friends he was, it is true, acceptable, but it is here that the biography is weakest; what is given is very meagre and commonplace, and there is an utter failure to show any *raison d'être* in these friendships—from what attraction they took their origin, or in what strength was their bond, or in what charm they had their sweetness. In his shyness with strangers there was something of pure rusticity: one notices that he is always thinking what he should say or what he might have replied, or by some other remark shows that he is always conscious of an effort in assuming the social relation with a stranger of his own rank. Toward some who are associated with his circle, it is plain he was far from being on open terms. Ellery Channing, for example, to judge by the discreditable letter of that poet's inditing, could not have been very near to him, and Margaret Fuller must have been grievously deceived by his silence. One would have thought that the denunciation launched at Froude for publishing Carlyle's 'Reminiscences' with as little regard to reputations as Carlyle himself had, might

have deterred others from doing likewise; but now it seems doubtful whether it may not be acknowledged as a literary canon that the laws of good breeding do not extend beyond the grave, or, to put it in a still more comprehensive form, that no courtesy is to be expected of a dead man. In this biography there are two characterizations of the kind that are usually sealed up until the year 1900. That of Tupper—the most comical and diverting thing in the work—we pass by; but that of Margaret Fuller (what is said of Count d'Ossoli is shamefully wrong) we give in part, perhaps under the same compulsion of candor that Julian presumably felt, but more to show how Hawthorne's humor, secreted in his own breast, helped to keep him free from the literary coteries, the shams and intellectual afflictions of his community:

"It was such an awful joke, that she should have resolved—in all sincerity, no doubt—to make herself the greatest, wisest, best woman of the age. And to that end she set to work on her strong, heavy, unplable, and, in many respects, defective and evil nature, and adorned it with a mosaic of admirable qualities, such as she chose to possess; putting in here a splendid talent and there a moral excellence, and polishing each separate piece, and the whole together, till it seemed to shine afar and dazzle all who saw it. She took credit to herself for having been her own Redeemer, if not her own Creator; and, indeed, she was far more a work of art than any of Mozier's statues. But she was not working in an inanimate substance, like marble or clay; there was something within her that she could not possibly come at, to recreate or refine it; and, by and by, this rude old potency bestirred itself, and undid all her labor in the twinkling of an eye. On the whole, I do not know but I like her the better for it, because she proved herself a very woman after all, and fell as the weakest of her sisters might."

No, not with Margaret Fuller, nor Ellery Channing, nor even with Emerson and the geniuses he was forever picking up in the highway or the potato-field, any more than with the politicians of the Custom-house, could Hawthorne enter into absolutely free social relations. One suspects that his college and his English friends were more accessible to him, because they were wholly unrelated to that part of his nature which fed the flame of his genius. That genius was solitary; and throughout the long narrative of his cheerful and intimate life with the children, one sees that he kept his privacy always, and the witness of it is that path beneath the pines on the brow of the hill, worn by his feet in his daily evening walk by himself as he watched the sunset flush and fade in the west.

This biography is like Mr. James's 'Hawthorne' in that it fails to give any history of that immortal part of the man in which the world takes interest. Julian's point of view is completely shown when he says of Hawthorne, "If he had never written a line, he would still have possessed, as a human being, scarcely less interest and importance than he does now"; and adds that his father's books struck him, when he came to read them, "as being but a somewhat imperfect reflection of certain regions of his father's mind with which he had become otherwise familiar." One is pleased, for the boy's sake, that to him the genius was lost in the father, but to the world it is just the contrary; and to many readers it may prove a disappointment to find only a delightful father (not wholly unique, be it added), where they had hoped for some inner glimpses of a fine genius. Hawthorne, the romancer, was as remote from his domestic life as from the provincial civilization on which Mr. James dwelt. Indeed, the latter's account of Hawthorne, not to speak it profanely, seemed as if he had made a very careful realistic study—a "portrait," he would probably have called it—of a certain little Judæan town we all know of, and exclaimed, "Lo! how parochial Nazareth was!" Mr. James will find much in these volumes to support his thesis; he may smile to read, for example, that Hawthorne owned no picture until he was in middle life, and then, when Sophia painted him one or two, which he thought very beautiful, he wrote that perhaps they had better be put into mahogany frames to match the furniture, probably (one half overhears Mr. Howells adding) of the black hair-cloth variety. But Hawthorne's genius was a thing apart from all that, just as it was apart from his children's lives. It was of the imagination, pure and simple, and had no root in culture whether meagre or rich; and except as his genius expressed itself through art, it seems to have been as reticent as Shakspere's. Unless Mr. Lowell succeeds in telling us something of its secret, we shall never learn more of the matter from those who knew Hawthorne than he has himself chosen to tell in his own way.

SUNDRY LAW BOOKS.

Mr. John Herbert Slater's 'The Law Relating to Copyright and Trade-marks' (London: Stevens & Sons) impresses us as the work of an intelligent and industrious barrister, who, paying special attention to trade-mark and copyright law, has accumulated a large body of valuable notes upon the statutes and decisions which he here attempts to combine into a treatise. The result is a serviceable hand-book as regards the law and practice of these subjects, but there is very little originality of thought or treatment, and the arrangement is defective. A greater number of chapters, grouping together all that relates to one topic, *e. g.*, Abridgment, Translation, etc., would have been an improvement. As it is, there is an irritating recurrence of the same statement, often with no, or a very slight, change of presentation; indeed, a proposition is sometimes repeated upon the same page—in one instance which we noted, occupying two paragraphs almost identical as to wording. The volume is mainly an interpretation of the law in force, as contained in the statutes and judicial decisions, but there is an introductory chapter upon the right of copy at common law, in which the author gives a glimpse of his own views as to the general question of property in intellectual labor in the following words: "There is no doubt that if the claim of an author were judged from a standpoint of natural right and upon principles of fairness, he would be entitled to a perpetual right of copy in his productions." Concerning the question, so interesting to American authors, of a temporary residence within the British dominions for the express purpose of obtaining copyright, Mr. Slater is of the opinion that if the foreign author is actually present *at* the time of publication it is sufficient, no matter whether he was there *before* or remained *after* such publication. He further remarks upon this matter:

"The reasons which prompt the executive to insist upon a first publication in this country are perfectly intelligible, yet it is not so easy to understand why the courts should, in addition, insist upon a foreigner being resident within certain circumscribed limits. If the object of the Copyright Act is 'to afford greater encouragement to the production of literary works of lasting benefit to the world' (5 and 6 Vict., c. 45, s. 1), and if this proposition should have an universal application, then it is not material where an author resides: but if, on the contrary, the application is only particular—that is to say, for the benefit and encouragement of authors first publishing in the United Kingdom—what can it matter to us where such author resides, provided we obtain the benefit of the first publication of his work? In all the Copyright Acts at present in force, there is nothing to restrict the term 'author' to British subjects, nor to make any distinction between them and foreigners."

The writer speaks of the American law authors as "undoubtedly the best exponents of the law on the subject of copyright," and frequently quotes from Mr. Drone. The American decisions, also, are repeatedly cited, but we should judge rather from a digest than at first-hand; and, though generally to the point, in one case at least Mr. Slater has erred both as to law and practice. He says: "In America, as in this country, provision is made for the delivery of copies of books to various public institutions, but the omission to do this merely involves a pecuniary penalty, and cannot be pleaded in bar." This is incorrect in both particulars. Section 4959 of the Revised Statutes requires that two copies of every copyrighted book shall be delivered at the office of, or mailed to, the Librarian of Congress, and they are the only copies required to be deposited; and although the next following section empowers the Librarian of Congress to enter suit for penalty for non-compliance with this requirement, the payment of such penalty will certainly not protect the copyright, which is void unless the requirement is fulfilled. The language of Judge Lorenzo Sawyer, in his opinion in the case of Parkinson v. Laselle (3 Sawyer, p. 333, 334), is most explicit. He says, speaking of the section of the law which declares that no person shall be entitled to a copyright unless, *inter alia*, he shall deliver or mail two copies as above:

"There is no possible room for construction here. The statute says no right shall attach until these acts have been performed; and the Court cannot say, in the face of this express negative provision, that a right shall attach unless they are performed. Until the performance as prescribed there is no right acquired under the statute that can be violated. . . . The complainant's claim can derive no argumentative support against the express negative provisions of the statute already cited and discussed, from section 4960, providing for a penalty to be recovered from the author on failure to perform all the conditions prescribed. This seems to be intended to furnish additional guarantees against attempts of parties to avail themselves of the benefits of a copyright without first performing all the conditions prescribed in order to confer the right."

So, also, Justice Shepley, in the case of Osgood v. Allen (1 Holmes, p. 192), says that:

"Although a printed copy of the title is required, before publication, to be sent to the Librarian of Congress, yet this is only as a designation of the book to be copyrighted, and the right is not perfected under the statute until the required copies of such copyright book are, after publication, also sent."

The questions decisive of a comparatively recent case in the Supreme Court of the United States were, first, whether the plaintiff was bound to prove that two copies had been deposited; and, second, whether the proof adduced was competent. Mr. Justice Bradley held that "It is very obvious that the deposit of two copies of the book, after its publication, either with the Librarian of Congress, or in the mail addressed to him, is an essential condition of the proprietor's right, and must in some way be proved in an action for infringement." The proof submitted not being deemed sufficient, the case was remanded. (Merrell v. Tice, 104 U. S., p. 560.) The appendix of forms to Mr. Slater's volume should be useful to the English practitioner, and the index is well done.

Thirty-five pages of Mr. Orlando F. Bump's useful work on 'The Law of Patents, Trademarks, Labels, and Copyrights' (Baltimore: Cushings & Bailey) are devoted to copyrights. The sections of the Revised Statutes are given, with references to the earlier laws, each section followed by a digest of the American decisions touching the subject-matter. This edition is carefully reëdited; the statutory amendments being noted, and all the recent copyright cases scrutinized and digested. It was probably the author's last literary labor.

Mr. Chas. F. Barnes, the new editor of Kent's 'Commentaries' (Boston; Little, Brown & Co.),

has confined himself, so far as the eighteen pages treating of copyright are concerned, to a few brief additional notes on Literary Property at Common-Law, Infringement, Coöwnership, etc., citing a half-dozen each of the more recent English and American decisions; and a statement that section 97 of the copyright law of 1870 has been "slightly amended" by statutes of June 18, 1874, and August 1, 1882. It would have been more satisfactory to have the amendments briefly explained, than to be referred to the Statutes at Large to discover for one's self the nature of them. One of these is unimportant, merely giving the copyright claimant the option of printing his claim in the words, "Entered according to the act of Congress," etc., or more simply, "Copyright, 1884, by A. B." But the amendment of 1882 is very important to publishers of designs, who are relieved by it from the perplexity of manœuvring to fix the claim of copyright unobtrusively upon the face of the design, and allowed to put it upon the back or in any position they please. A proper reverence for the text of the great commentator hardly seems to require the reprinting of his long quotations from the repealed Copyright Act of 1831.

The 'Outlines of Roman Law,' by Professor Morey, of Rochester (G. P. Putnam's Sons), is a careful, well-conceived, instructive treatise—a valuable addition to the elementary books already published on this head. It is particularly full in its historical portion; of the two parts into which the whole work of some four hundred small but closely-printed pages is divided, the first, entitled "The Historical Growth of the Roman Law," occupies something over one-half. This will be very useful. Hadley's little 'Introduction to Roman Law' has great merits; and Hunter's books, notwithstanding a serious distortion of the Roman system—in parts of his larger treatise, at any rate—in order to adjust it to English conceptions, are also very good. But we are disposed to think Professor Morey's book a better one than either for purposes of elementary study, and for the general reader. For him, also, who wishes to pursue the subject further, there are valuable references at the end of each chapter.

Such books are most welcome, not merely for purposes of general scholarship, but for the training of lawyers. They are an omen that the legal profession will yet be rid of the dull, provincial notion, derived from England, that a knowledge of the Roman law is unimportant, and that they can master their own law without it. The English, indeed, have now got beyond this. It is thirty years since the present Lord Justice Lindley wrote, in the preface to his translation of Thibaut's 'System des Pandekten Rechts':

> "The importance to students of English law of some acquaintance with the principles of Roman jurisprudence is no longer insisted upon by a few, but is recognized by the majority of the leading men of the day. . . . To an English barrister," he was careful to add, "knowledge of this kind is, no doubt, rather indirectly than directly useful, although its direct use is probably greater than is ordinarily supposed. Indeed, the greatest advantage to be derived from a study of the Roman law, and of the works of Continental jurists, appears to the writer to be the acquisition of a habit of classification, and consequently of duly appreciating points of resemblance and of difference."

It will soon be felt, let us hope, in our legal training schools, that a course of study which omits this great system—one of the two great systems of the world—is not worthy the name of a liberal course.

What does the author mean by saying, at page 412, that "The essential principles regarding the admission and weighing of evidence that prevail in modern courts were quite fully worked out in the laws of Justinian"? The remark is vague, but as addressed to English-speaking readers it seems likely to mislead. *They* are familiar with a system of evidence which was never worked out in Rome—a system in great part strange, unknown before, growing slowly up in quite modern days, to suit the purposes of trial by judge and jury—moulded, indeed, upon the modern jury as a hatter fits a hat upon a block. We may remark that the proof-reading of this volume has been careless.

It is a pleasure to come upon a piece of work so well thought out, and executed in so clean and neat a fashion, as 'The Transfer of Stock in Private Corporations,' by Abbott Lawrence Lowell and Francis C. Lowell (Boston: Little, Brown & Co.). The compact and intelligent exposition which it presents of the nature of stock, the passing of title, the effect of transfer on the books, and the effect of certificates, will help to clarify professional ideas upon these topics. This is the way in which legal writers can best serve their hard-working and long-suffering brethren who are buried in the details of practice—this method of choosing subjects of narrow range and endeavoring to treat them with first-rate care. No profession is more abused by legal writers and publishers than the lawyer's. Reference books, indexes, and ill-digested summaries, barren of thought, abound; few, indeed, are the treatises that show anything like mastery of their subject. Is the statement quite accurate, in Appendix C and in sec. 104, that the doctrine there referred to as to the title to a chattel sold but not delivered, is a "peculiar Massachusetts doctrine," or even a "peculiar doctrine in New England"? It exists, as we suppose, elsewhere; see, *e. g.*, Allen v. Carr, 85 Illinois, 388, and Morgan v. Taylor, 32 Texas, 363. And the origin of it seems not quite adequately explained, even in Massachusetts, by the reference to Lanfear v. Sumner. The hint which the authors themselves give as to an "underlying feeling" about fraud, points to a line of cases that need to be taken into the account; the notion of fraud is what has kept the doctrine afoot, if it be true that it did not, in every instance, start it.

In editing 'Seton on Decrees' from the fourth English edition (Boston: Little, Brown & Co.), Mr. F. F. Heard, "by excluding those portions which are not strictly applicable to American equity jurisprudence, . . . has been able to bring the work within the compass of a single volume." This reduction and the addition of the later English cases make the chief part of the present editor's work; we do not observe that any American cases have been added. What we have, therefore, is, in substance, an abridged reprint, with the English cases brought down. Our lawyers may reasonably regret this narrow scope of the editorial work. Yet it is a valuable service to offer so good and so expensive a book in a reasonably cheap form.

The last two volumes of 'Reed on the Statute of Frauds' (Philadelphia: Kay & Bro.) have now been published. These conclude a very extensive consideration of the seventeenth section of the statute, and deal with other important topics, like Fraud, Part-Performance, and Trusts, express and implied; the last volume has a valuable summary of statutes. The enormous field which Mr. Reed has had to traverse is shown by the index of cases, which covers a hundred and forty pages printed in double columns; it recalls the great collections in Kent and in 'Parsons on Contracts.' These later volumes, like the first one, show a constant endeavor to present to the reader all the material there is, and to assist him through the labyrinth by the mode of arrangement, by occasional discussion and comparison of differing views, and by compact summaries of points decided. We have already spoken, in connection with the first volume, of the general aims and character of the work. As a guide to the cases and to the interpretation of them, it will be found extremely helpful to the practitioner. In his interesting preface, Mr. Reed makes a striking remark as to the possible results of a little legislation, which we take to be entirely sound, and which we respectfully commend to the attention of all our State Legislatures: "The writer has no hesitation in saying that, if skill and care are employed, a statute can be drawn which would set at rest three-fourths of the questions of law connected with the statute of Frauds."

RECENT POETRY.

Is it because editors are so hard to find in America that it is now the custom to put out so many English poets, so to speak, at dry-nurse to their enemies? Of two rival volumes of selections from Browning, last year, the one was edited by Mr. R. G. White, who took pains to say in his preface that Browning had written scarcely anything truly lyrical; and the other contained a preface by Mr. Stedman, who made against the poet a very unjust charge of immorality in his choice of subjects. Now comes Mr. Stoddard with his volume of 'Selections' from Swinburne (New York: Crowell), and tells us in his introduction that this poet is "exceedingly narrow, obscure, and tedious"; that he "has written no line that lingers in the memory, and has uttered nothing that resembles a thought"; adding that "this could not have been the case if he had been gifted with unusual mental endowments (p. xvi)." Mr. Stoddard then goes on to admit that Swinburne is "a master of epithets," but adds that this is "one of his defects, perhaps his prime defect." After this, the editor ekes out his introduction, as is his wont, with a good deal of discursive criticism on English literature in general, and leaves it a mystery, after all, why—except as a book-maker's job—he did not leave Swinburne to be edited by somebody who liked him. Swinburne is no especial favorite of ours, though he is a wonderful master of melody, but for that very reason we wish to have justice done him: let us, above all things, be just to those whom we dislike, for it costs no effort to be just to others. If Mr. Stoddard has found no lines lingering in his memory from this poet, so much the worse for his memory. If ever there was a haunting strain, we should say it is to be found in that exquisite picture-poem, "Before the Mirror" (p. 476); if ever there was a stainless picture of pure womanhood, it is in his "Madonna Mia" (p. 518), and we can only feel renewed compassion for the editor who finds "nothing that resembles a thought" in the noble ending of this poem:

> "All saying but what God saith
> To her is as vain breath;
> She is more strong than death,
> Being strong as love."

And turning to Swinburne's more heroic strain, what note of modern days is so chivalrous as his "Song in Time of Order, 1852," where the beaten revolutionists push their boat at last across the yellow sand into the wild, mad ocean, and their defying chant returns again and again to the proud, unconquered burden:

> "Where three men hold together
> The kingdoms are less by three."
>
> (P. 478.)

All Swinburne's waywardness and weakness cannot impair the permanence of his fame; and, after all, we may thank the editor for his good choice among the poems, though it is a pity he did not omit his introduction.

A little volume called 'Melodies of Verse, by Bayard Taylor' (Houghton, Mifflin & Co.) prolongs that strain of pathos which most critics have recognized as affording the keynote to his recent memoirs. Here was a man who despised all the easily-won successes of a many-sided life,

asking but one thing on earth—to be a poet. This tiny volume of fifty pages contains the answer to his prayer—twenty-two little poems, and not one that the world has yet accepted, or is ever likely to accept, as a classic. Almost all of them are cold, imitative, and lifeless; only one or two of the Oriental poems have a little of that fire which touched, for a short time after his early travels, Taylor's hearty and rather commonplace nature. Of these the "Bedouin Song" (p. 19) is the best type; but the one poem by which he is likely to be remembered, the simple and touching "Song of the Camp," is not here. Perhaps the editor did not account it among his "melodies."

Is the disappointment that blighted Taylor's life to sadden also that of Mr. Fawcett? He has still his fate in his own hands, if temperament is not already too strong for him. He has jets and impulses of genius, beyond Taylor's; but the want of simplicity, the absence of fresh, strong, manly impulse, seems likely always to prove his bane. It is fatal to his poetry that we always ask, "Why, then, does it not move us?" Sometimes it is hard to tell why, and at other times it is easy enough. Nothing can come nearer bathos, for instance, than when, in his new volume ('Song and Story: Later Poems,' Boston: Osgood), we happen upon such a combination as the following. The poem is called "The Doubter," and the author thus states the scene: "A stretch of low shore, on which the ocean breaks with large noisy waves. A man and woman stand here. They clasp each other's hands. Both faces are filled with agony. The man speaks." And then the man utters seven pages of mouthing, polysyllabic stanzas, of which we take a sample at random:

"Wherefore I say if a man hath loved urgently,
Given all his heart for a woman's dear pleasurement
(Just as a wave with white worship insurgently
Rushes to mantle some crag's mighty measurement),
How shall he tamely see fate in her dominance
Tear from his keeping what kings could not buy from it?
See hope drop down, as in flame-shrouded prominence
Drops the doomed ship when the frighted throngs fly from it?" (P. 114.)

In curious contrast to the false note struck by Mr. Fawcett comes the note that jars us of the late Sidney Lanier. The wife of this man of genius has edited his poems, and Dr. Wm. Hayes Ward has supplied a preface (Scribner). It is a book of absorbing interest, and will, if we mistake not, raise the dead poet to a much higher position than has yet been conceded to him. Here, too, is a false note, as has been said, but here the error is solely intellectual.. The man is profoundly in earnest; his character is simple, and, if his strains are not so, it is because of youth and ill-health and an almost morbid conscientiousness in the direction of certain theories of sound and phrase. Given time, variety of experience, and a healthful life, the reader thinks, and the poet will outgrow all this and come to a noble maturity of strength—and then it comes sadly over us that he is gone. The proof of his real promise is that his latest poems are his best; whim is reduced to a minimum, and the wealth of observation and sensibility and music are greater than ever before. His poem entitled "Sunrise"—the first of the "Hymns of the Marshes"—is well called by Doctor Ward his last and greatest; we scarcely know where to look in American literature for its equal in its way. It is especially worth study by the young followers of Whitman, because it seems at first glance to be constructed on Whitman's methods; yet what a difference! In affluence, in breadth of handling it goes far beyond Whitman; while, instead of bald and formless iteration, it is everywhere suffused with music as with light; every stanza chants itself, instead of presenting a prosaic huddle of long lines. Take, for instance, this description of dawn on the marshes; he has just been describing a preliminary moment when there was not "a sound or a motion made":

"But no! it is made; list, somewhere—mystery, where?
In the leaves? In the air?
In my heart? Is a motion made:
'Tis a motion of dawn, like a flicker of shade on shade.
In the leaves 'tis palpable: low, multitudinous stirring
Upwards through the woods; the little ones, softly conferring,
Have settled my lord's to be looked for; so they are still;
But the air and my heart and the earth are a-thrill—
And look! where the wild duck sails round the bend of the river—
And look where a passionate shiver
Expectant is bending the blades
Of the marsh grass in aërial shimmers and shades—
And invisible wings, fast fleeting, fast fleeting,
Are beating
The dark overhead as my heart beats—and steady and free
Is the ebb-tide flowing from marsh to sea—
(Run home, little streams,
With your lap-fulls of stars and dreams)—
And a sailor unseen is hoisting a peak,
For, list, down the inshore curve of the creek
How merrily flutters the sail—
And lo, in the East! Will the East unveil?
The East is unveiled, the East hath confessed
A flush; 'tis dead; 'tis alive; 'tis dead, ere the West
Was aware of it; nay, 'tis abiding, 'tis unwithdrawn;
Have a care, sweet Heaven! 'Tis Dawn." (Pp. 6-7.)

How striking, too, are Lanier's criticisms on poets. He says of Whitman that there is something in him refreshing, "like harsh salt spray"; but adds that "Whitman is poetry's butcher," meaning that he supplies only the raw material of food. He says of Swinburne, "He invited me to eat; the service was of silver and gold, but no food therein save of pepper and salt"; and of William Morris, "He caught a crystal cupful of the yellow light of sunset, and, persuading himself to dream it wine, drank it with a sort of smile" (p. xxxviii). These sayings are admirable; no acuter criticism has been written in America. Indeed, it grows clearer and clearer how much we lost in Sidney Lanier.

Not the least interesting aspect of his works is that he was distinctively a Southern poet. This is what our literature has never yet seen; for Poe, it must be remembered, was born in Boston, and though Baltimore produced our best songwriter in William Pinkney, his songs may be numbered on your fingers. The one person who has unfolded in a degree the resources of Southern scenery is Mary A. Townsend, who is, if we mistake not, a Northerner by birth; and we look over the pile of new volumes before us in vain for a real breath from the South. The nearest we come to it is in a commonplace little volume called 'Estelle: an Idyll of Old Virginia, and Other Poems,' by Prof. Marcus Blakey Allmond, of the Male High School, Louisville, Ky. (Louisville: Morton). The following verse is a fair enough specimen:

"But oh! the teacher as she taught
Yet grew and grew more lovely still,
And far the noblest work she wrought
Was this—she schooled a perfect will.
And though she sometimes dreamed 'Perhaps,'
She smiled and said, 'God knoweth best.'
And while the children conned their maps
Her lily heart had perfect rest." (P. 32.)

Another Southern volume is 'Poems,' by Mary Hunt McCaleb, of Fort Chadbourne, Texas (Putnams); but it has scarcely a particle of local coloring, except perhaps in some verses on "General Hood's Last Charge."

The fault of Southern poetry is usually its tameness, but the besetting sin of Western poetry still lies in turgidness. We have had occasion ere now to point out the singular fact that a Western poet is apt to shrink from the every-day names that are to be found in the Chicago directory, and to insist on letting his imagination run riot in a high-sounding nomenclature. Thus Mr. Stokely S. Fisher, A.D.M.—whatever that may mean—who publishes in Columbus, O. (G. L. Manchester), at the age of eighteen, a volume of 'Poems,' dedicates his effusions to "Turie," and addresses them not alone to this lady, but also to Callie, Crete, Dahlea, Dione, Dora Dore, Eittah, Eillen, Ruby, and Trueline. It is the prerogative of every youthful bard to have an innocent seraglio of ideal loves; but why should Mr. Fisher, A.D.M., give such absurd names to them? Holmes, at his age, wrote for a great many young women, but called them by their own proper baptismal prefixes:

"Is thy name Mary, maiden fair?
Such should, methinks, its music be;
The sweetest name that mortals bear
Were best befitting thee."

What makes the matter worse, in Mr. Fisher's case, is that his verses are often much better than these fantastic dedications would indicate.

If this fault of turgidness has been justly imputed to Western poetry, it is all the pleasanter to turn to a poem from that quarter exquisitely simple in structure, sincere in execution, and plain almost to bareness in artistic structure. This is a thin volume called 'The Story of a Hunchback' (Chicago: Jansen, McClurg & Co.). It bears no author's name, but the Chicago newspapers attribute it to the daughter of a well-known citizen of that place; and it certainly points to a day when such wholesale criticisms as we have made shall altogether lose their significance. Another really valuable book, from still further West, 'A California Pilgrimage, by One of the Pilgrims' (San Francisco: Carson), is a well-versified narrative of a series of visits to the old Spanish missions on the Pacific coast. The long sweeping lines of the verse have a certain monotony, not inappropriate to the theme, yet perhaps a little fatiguing at last; but the book is a mine of interesting description and incident, and may well be read in connection with Mrs. Jackson's 'Ramona,' to show the wealth of material at the command of imaginative writers in that region. The author's name is not given, but is understood to be A. C. W. Truesdell. Another Western book, 'Mark Loan: a Tale of the Western Reserve Pioneers' (Cleveland, O.: Williams), has at least the merit of a vigorous monosyllabic name for its hero, though it cannot be called highly poetic. It is by the author of the 'Hunter of the Shagreen.'

Two English volumes contain a reissue of the poems of Aubrey de Vere. They consist respectively of 'The Search after Proserpine, etc.,' and 'The Legend of St. Patrick, etc.' (London: Kegan Paul). Aubrey de Vere, though not one of the eagles of song, is always sweet, serene, elevated, and hopeful; he is a Roman Catholic whose breadth and charity seem inexhaustible; and he has a peculiar skill in dealing with narrative poetry, especially that drawn from the rich stores of Irish legend. St. Patrick especially assumes in these lays an aspect so noble and generous that it really seems as if he might in time be again regarded seriously, a point of view long unfortunately lost. Of newer English poems, that which has attracted most attention is, doubtless, 'Callirrhoe: Fair Rosamund,' by Michael Field (London: Bell; New York: Holt). It gives, we are told, the ring of a new voice, and this unquestionably a voice of much power and of a certain freshness; but unfortunately that is not enough. There never was a newer or more ringing voice than was heard from Thomas Lovell Beddoes, thirty years ago, but how utterly is it now forgotten! The first of these plays suggests the "Bacchanals" of Euripides, and the other recalls the early plays of Browning; they are worth reading and re-reading, but are disfigured by a good deal of coarseness and violence, and leave a doubt in the mind whether their author can be relied upon for further good work.

Several smaller English volumes show more or less power; with more cultivation and less crudeness, on the whole, than the corresponding class of publications among ourselves. 'A Minor Poet and Other Poems,' by Amy Levy (London: Unwin), is the best of these, and includes a poem called "Magdalen," which has been a good dea

reprinted, and touches a far deeper chord than is usual in dealing with this old and melancholy theme. The proportion of commonplace and mere padding in this book is very small indeed. Another volume from the same publisher is 'Measured Steps,' by Ernest Radford, who has previously published a series of translations from Heine and others. There are many such translations in this volume, and they perhaps place the original verses at disadvantage. There are not many authors who can prudently place themselves on the very next page to Heine, even when their German rival is handicapped by a translation. 'Lays from Over-Sea,' by William H. Babcock (London: Stewart), is apparently by an American who imitates Mr. C. H. Miller, by publishing first in London. Mr. Babcock, too, selects an Indian theme for his chief poem, but narrates it more soberly than his predecessor, and with a good deal of feeling. Mr. Arthur Reed Ropes writes from Cambridge University in England, and his volume of 'Poems' (Macmillan) includes translations from Gautier and Baudelaire, and, as their natural adjunct, sonnets to the artist Burne-Jones. Without very marked originality, there is a good deal of finish and beauty in this little volume. The book called 'A Broken Silence: Some Stray Songs,' by Samuel K. Cowan, M.A., T.C.D. (London: Marcus Ward), consists of a series of lyrics, most of which, it appears, have been set to music, and probably reach the heart more nearly by the ear than through the eye.

Two of our best women poets, Lucy Larcom and Elizabeth Stuart Phelps, issue new volumes this autumn, though that of the former is a general collection of her 'Poetical Works' (Boston: Houghton, Mifflin & Co.). Both have strong and profoundly sincere natures; both have lived in earnest; and it is curious to feel the breath of the same salt waves—the waves of Cape Ann—pulsating through the verses of both. Miss Larcom named one of her poetical collections after the wild roses of that breezy promontory, and never appears quite so much at home as when she deals with the loves and fears, the tragedies of its fisher folk. It is interesting to trace how, in the first three poems of the book—"Hannah," "Skipper Ben," and "Hilary"—she touches precisely the same *motif*, but each time on a higher key. Every man, woman, and child within sight of Gloucester Harbor knows Hannah at her window; almost all would know Skipper Ben, but not so intimately; while the grief for Hilary, the profoundest strain of the three, would reach a still smaller circle of trained and thoughtful minds. Each poem is, in its own way, admirable; and so is much else in the book. How much of a woman's life goes into a sonnet like the following:

"They said of her, 'She never can have felt
The sorrows that our deeper natures feel.'
They said, 'Her placid lips have never spelt
Hard lessons taught by Pain; her eyes reveal
No passionate yearning, no perplexed appeal
To other eyes. Life and her heart have dealt
With her but lightly.' When the Pilgrims dwelt
First on these shores, lest savage bands should steal
To precious graves with desecrating tread,
The burial-field was with the ploughshare crossed,
And there the maize her silken tassels tossed.
With thanks those Pilgrims ate their bitter bread,
While peaceful harvests hid what they had lost:
What if her smiles concealed from you her dead?"

(P. 226.)

The breath of the sea blows also through Miss Phelps's 'Songs of the Silent World' (Boston: Houghton, Mifflin & Co.), but in its wilder and more mystical tones, suggesting to her that longing for the unseen which is the theme of so much of her prose. She has never touched it more delicately than in this poem on the death of Longfellow:

"WHOSE SHALL THE WELCOME BE?
"H. W. L.

"The wave goes down, the wind goes down;
The gray tide glimmers on the sea;
The moon seems praying in the sky.
Gates of the New Jerusalem
(A perfect pearl each gate of them),
Wide as all heaven, sing on high.
Whose shall the welcome be?

"The wave went down, the wind went down;
The tide of life turned out to sea:
Patience of pain and grace of deed,
The glories of the heart and brain,
Treasures that shall not come again;
The human singing that we need
Set to a heavenly key.

"The wave goes down, the wind goes down;
All tides at last turn to the sea:
We learn to take the thing we have.
Thou who hast taught us strength in grief,
As moon to shadow, high and chief,
Shine out, white soul, beyond the grave,
And light our loss of thee!"

(P. 128.)

Of religious poetry there is the usual harvest, the best part of it being the first volume of a really fine collection of Roman Catholic hymns from the Breviary and elsewhere, under the name of 'Annus Sanctus,' edited by Orby Shipley, M.A. (London and New York: Burns & Oates). Another similar book, admirably suited for a present, is 'Festival Poems, a Collection for Christmas, the New Year, Easter' (Boston: Roberts Bros.). It is of American editorship and very well made up; of course, predominantly devout, yet comprehensive enough to include Thackeray's "The Mahogany Tree." Another volume of somewhat similar intent, but not nearly so well printed or put together, is 'The Home in Poetry,' compiled by Laura C. Holloway (Funk & Wagnalls). Of religious poetry proper the most imposing is a book of nearly 400 pages, called 'The Life and Teaching of our Lord in Verse, being a complete harmonized Exposition of the Four Gospels, with original Notes, textual Index, etc.,' by Abraham Coles, M.D., LL.D. (Appleton). It is avowedly intended as a sort of counterpoise to Edwin Arnold's "Light of Asia"; and it strikes us as an uncommonly dreary production. Another poem, on a somewhat limited theme, 'The New Christiad,' by Jasper B. Cowdin (Brooklyn: Cowden), has at least the merit of being shorter and less pompous. Better than either, because fresher, is 'Luther: a Song-Tribute on the 400th Anniversary of his Birth,' by Rev. Matthias Sheeleigh, A.M. (Philadelphia: Lutheran Publication Society). It consists of a long series of hymns and translations, and is really a sincere and appropriate tribute.

There is this year the usual harvest of long poems. Every young poet wishes to begin with an extended work of this kind, just as he desires to make the tour of the world before entering on the small duties of his immediate home. Thus the unknown author of 'The Confessions of Hermes' (Philadelphia: McKay)—for the name of Paul Hermes is evidently a synonym—wrestles anew with the old problems and not without some good suggestions. Thus Mr. Elwood L. Kemp, professor in the "Keystone State Normal School," writes 'An Idyl of the War'; followed by 'The German Exiles' (Philadelphia: Potter). Each poem is a series of well-reasoned and tolerably smooth lines, not highly poetic, but altogether respectable. More laborious and still less poetic is Mr. Van Pelt's blank-verse translation of Hendrik Tollens's poem of 'The Hollanders in Nova Zembla' (Putnams). There is prefixed a narrative of the same events in plain prose; and we must confess that we rather prefer it to the verse, while the few graphic words in which Motley told the same story are better than either. The adventures actually occurred in 1597. Perhaps we should include among long poems—we certainly have found it too long, and the only question is whether it is a poem—'A Song of the Island of Cuba, as sung by the Estrangeiro to the tune of Hiawatha,' by Joseph A. Nunez (Philadelphia: Lippincott). The author, like the young Englishman described by William Black in his recent four-in-hand drive, "seems to regard himself as a jocose person." More truly jocose is the quarto volume, 'Wheel Songs: Poems of Bicycling,' by S. Conant Foster (White, Stokes & Allen). There is a good deal of excellent fooling in this book, and some good drawings.

CHILDREN'S BOOKS.—V.

A FEW seasonable works of this class remain to be noticed. The author of the 'Cruise of the *Snowbird*' carries the dramatis personæ of that story through a second series of haps and mishaps in 'Wild Adventures Round the Pole' (Armstrong & Son). Wild adventures there are in abundance, such as the capture of a pirate in the vicinity of Iceland, a descent into the crater of Beerenberg in a balloon, and others of an equally Jules Verne-ish nature. Doctor Stabler's boys of the *Snowbird* have become men, and as he is evidently more familiar with the latter species, his young men have more truth to nature, and are therefore more endurable than his boys. There is also a dash and spirit in the way parts of the story are told which indicate that the writer, with more literary training, might come to produce something really good. His experience among ice-fields, as surgeon to a whale-ship, stands him in good stead as he describes the embayed sealers. Were the other events of the story based on reality, and as faithfully depicted as these, the book might be heartily recommended.

The success of the reprint of Mr. Nordhoff's 'Man-of-War Life' last year has encouraged the publishers to revive the same author's 'The Merchant Vessel' (Dodd, Mead & Co.). It is a graphic, truthful, and most interesting account of his experiences as a sailor. Under the inspiration of it, it would not be surprising if the spirit of adventure among our youth should be aroused to revive the glories of our once famous merchant marine.

Dodd, Mead & Co. also issue, without date, a reprint of 'The Story of the Persian War from Herodotus,' by the Rev. Alfred J. Church. There is nothing to indicate that it was intended for any special class of readers, but it will probably prove most interesting and instructive to boys. It consists of a very free translation of such portions of Herodotus as relate to the two invasions of Greece by the Persians—the first under Darius, the second under Xerxes. There is an evident attempt throughout to imitate the language and phraseology of the English version of the Scriptures. We have only space to mention the exclusive use of the antiquated preterites of verbs, such as "spake" for spoke, "brake" for broke, "drave" for drove, and many others. There are fifteen full-page colored illustrations, "taken from various sculptures and vases. The artist has sought to reproduce in them the coloring of a certain small class of Greek pottery, examples of which may be seen in the British Museum." They contribute nothing to the elucidation of the text, but may, as pictures, attract the attention of young readers and be of some interest to students of ceramics.

The success of Kate Greenaway and her dolls has been one of the phenomena of English art publication. The simple, flat-tinted color arrangement and elementary treatment of landscape and accessories gave her work an appropriateness to the child audience which had no small part in determining its success. This has been, indeed, out of all proportion to its artistic quality. Her children had been clearly studied by the aid of dressed dolls, and were as patent *pose plastique* as anybody ever drew; but the elements of art involved in them were so entirely within the comprehension of every one who had the least feeling for art, that they have set a fashion as definitely as pre-Raphaelitism did a few years ago. Since then we are deluged with books for children *à la* Kate Greenaway, some better and some worse than hers. 'Play'

(Marcus Ward) is one of them, and, if not in respect of decorative feeling equal to Kate Greenaway's best work, it is better than some, and has decidedly less of the dressed-doll effect than her designs. The verses are needlessly silly and inappropriate for child-reading: children do not want grown people's sense, but they have a standard of nonsense which is as important for them as something more sensible for their elders.

Marcus Ward likewise publishes 'Nursery Numbers,' another of the tint-print books, and of a still more juvenile type, but better than 'Play' in one sense—viz., the fun is broad enough and put clearly enough to amuse little children.

Mr. Rideing's 'Boys Coastwise' (Appleton) is a graphic story of adventure in a New York pilot boat, with a large amount of information concerning ocean steamships, lighthouses, the life-saving service, wreckers, the coasts and waters adjoining this port. The story is neither imaginative nor realistic, but it will be read with interest and with profit. The illustrations are numerous and both new and old, but the former are not of a quality to seem incongruous with the latter.

Wine, Women, and Song: Mediæval Latin Students' Songs, now first translated into English Verse. With an Essay, by John Addington Symonds. Scribner & Welford. 1884.

THIS daintily printed little volume, which only professes to contain translations, has much independent poetical worth, and is, moreover, an important contribution to mediæval studies. Mr. Symonds, in his well-known work on the 'Italian Renaissance,' has examined that period in all its stages and aspects. It was no part of his plan to trace minutely the forerunners of the movement, and he was content to begin, as is usually done, with Petrarch and Boccaccio. Long before these great scholars, however, the charm of Pagan Rome had smitten men's minds and called forth a copious literature, one side of which has, until lately, been almost entirely overlooked. We refer to the secular Latin poetry of the XII. and XIII. centuries, which divides itself into two classes, one containing those savage attacks upon the Church of Rome which comforted so greatly the hearts of the early Reformers; the other devoted to themes which have prompted the title of the volume before us. Both classes were the production of wandering students who roamed from one famous university of Europe to another, singing, drinking, and lovemaking by the way, and, when in more serious mood, scourging the vices of prelate and priest. These vagabond scholars, with that tendency to corporate union so strong at the time, formed the guild or order of *Goliardi*, their head and patron being a mysterious Golias whose identity will probably never be ascertained. The order extended to all countries, and their songs resounded in every clime; but their home was France, and, of other lands, Germany and England alone have preserved their literature somewhat abundantly. Italy, strange as it may seem at first sight, has, until very recently, been deemed quite foreign to this intellectual movement; but the publication last year at Florence of F. Novati's 'Carmina Medii Aevi' shows that a few of the wandering students' songs, mostly of the satirical class, are still preserved in Italian libraries.

These songs, written in accentual rhyming Latin verse, often borrowed the form of favorite hymns, or rather sequences, and often parodied their contents. The favorite verse, however, of the *Goliardi* was the seven-syllable trochaic, followed by a similar six-syllable verse. These verses were combined in various ways, generally into strophes of eight lines; but sometimes into forms difficult to understand without a knowledge of the melody to which they were sung.

It is the object of Mr. Symonds's book to give his English readers some idea of this strange literature, which most of them will here encounter for the first time. The translator's interest is chiefly in the second class of these poems, which has been indicated above, or, to quote his own words: "I wish to keep in view the anticipation of the Renaissance, rather than to dwell upon those elements which indicate an early desire for ecclesiastical reform." Within the limits of the class he has chosen Mr. Symonds displays his thorough scholarship and poetic taste. An excellent historical introduction puts the reader in possession of all the facts needed to comprehend the translations which follow; and at the end a list of authorities will enable the student, if he choose, to embark upon researches of his own.

Sixty songs are translated, fully or in part, distributed into nine sections, dealing with the Order of Wandering Students in general, spring-songs, pastorals, descriptive poems touching upon love, erotic lyrics, songs of exile, anacreontics on the theme of wine, parodies, and finally a few serious compositions. These translations, it is hardly necessary to say, are made with singular grace and skill, in most cases reproducing exactly the form of the original. It is impossible, within the narrow limits of this review, to give any characteristic specimens of these poems. The general impression made by them is well stated by the translator: "The truth is, that there is very little that is elevated in the lyrics of the Goliardi. They are almost wholly destitute of domestic piety, of patriotism, of virtuous impulse, of heroic resolve." The section devoted to erotic lyrics presents a sensual and unromantic spirit infinitely removed from the chivalrous tone of the Arthurian romances or the chaste mysticism of Petrarch. The reason is correctly stated by Mr. Symonds: the Wandering Students were "a class debarred from domesticity, devoted in theory to celibacy, in practice incapable of marriage." These lyrics, however, possess in many cases great beauty of form, and are true "to vulgar human nature." They are still more important as throwing a new light upon a period which had seemed buried in the gloom of ecclesiastical tyranny. They are essential to a true understanding of the later Renaissance, because they show that the revolt against the ecclesiastical conception of life preceded and was independent of the revival of classical learning. The songs of the Wandering Students of the XII. and XIII. centuries are pagan and humanistic, the two qualities that characterize above all others the Renaissance which came two centuries later.

We can add but little to Mr. Symonds's careful study. He has, however, omitted to state that the great storehouse of these songs, the 'Carmina Burana' published in 1847 by the Stuttgart Literarischer Verein, and which had become excessively rare, was reprinted last year at Breslau, and is now within the reach of students. To the list of authorities should be added the valuable work by A. Straccali, 'I Goliardi, ovvero i clerici vagantes delle Università medievali' (Florence, 1880).

BOOKS OF THE WEEK.

Abbot, Ezra. Memorial volume. Published for the Alumni of the Harvard Divinity School.
About, E. Le Roi des Montagnes. W. R. Jenkins. 60 cents.
Allardyce, P. Stops; or, How to Punctuate. John Murphy & Co.
Ballard, H. H. Handbook of Blunders. 1,000 Common Blunders in Writing and Speaking. Boston: Lee & Shepard. 50 cents.
Pischler, Louisa. The Red Mantle. Philadelphia: Lutheran Publication Society. 50 cents.
Play: a Picture-Book of Boys, Girls, and Babies. Pictures by Edith Scannell; verses by S. K. Cowan. Marcus Ward & Co.
Poems of Sidney H. Lanier. Edited by his Wife. With a Memorial by Wm. Hayes Ward. Charles Scribner's Sons. $2.50.
Pollock, W. H. Alfred de Musset's On ne badine pas avec l'Amour. Thomas Nelson & Sons.
Porter, Admiral. Allen Dare and Robert le Diable. A Romance. Parts 5, 6. D. Appleton & Co. 25 cents.
Power, Cecil. Philistia. A Novel. Harper & Bros. 20 cents.
Prentiss, Elizabeth. Life and Letters. A. D. F. Randolph & Co. $2.25.
Radford, E. Measured Steps. London: T. Fisher Unwin.

Fine Arts.

THE WATTS EXHIBITION.—III.

THE criticism of work which, like that of Mr. Watts, is the outcome of the refined and disciplined powers of men whose artistic nature and thorough training are indisputable, should rather be in the nature of inquiry and study than what is commonly understood as criticism. When we are dealing with art which is little else than reproduction of nature, and in which the standard of success is a skilful and absolutely exact transcript, all those who have eyes to see and the habit of seeing truly (which is not so common as people seem to believe), are more or less competent to judge of the result. But in work of the class of Mr. Watts the qualities by which the critic must form a judgment are entirely other: there is no imitation of nature properly speaking—the art is not one of *impression*, either direct, as in the case of Meissonier, or indirect, as in the case of Millet and Rousseau, but of *expression*; and the only law that such art must or can recognize is that what it attempts to express must be directly, distinctly, and solidly told. Of course the public has the alternative of liking or disliking, as they have of reading or not reading Milton or Shelley; and Mr. Watts labors under the disadvantage (if it be one) of making

no appeal to the class of minds whose horizon is limited by nature and impressional art, and of being generally peremptorily put aside as "not like nature." And in speaking of "impressional" art we do not allude to the caricature of painting which assumes that epithet as its special belonging—the so-called impressionist school—and which is mainly based, not on any peculiar way of seeing, but on incorrigible laziness. Every artist who works from a reflected mental image, in contradistinction to those who study nature directly and face to face, is an impressionist, and such was Millet par excellence, his impressions having the permanence of real vision and the completeness of objective existence. All great art that is not subjective and expressional is of this class, and especially Greek art as far as it dealt with things known and seen; but the painting which specially vaunts itself as "impressionist" is like that education which prides itself on being self-taught—*i. e.*, incomplete, crude, and shallow: it is the frivolous assertion of accidental and changing phenomena, the record of fleeting experiences of nature which might justify a memorandum on the part of a great artist, but which can be the definite end of study only to small and superficial interests. Mr. Watts has given some illustrations in his landscapes of the more serious kind of impressional art—which landscape art is, at its highest. But the professed "impressionist" has a singular notion that the impression must be conveyed as it was received—in a single dash—and when a great painter attempts such a momentary record it is certainly very noble, yet never the worse for full and thoughtful working-out, such as Mr. Watts put in his landscapes; but the little impressionalism of silly and indolent painters makes much waste of good canvas and colors in attempting to convey "impressions" which can by no chance have an interest for any one but themselves. The mightiest work is always the most complete, and only small minds affect to be greater than their art. But the law of expressional art (and this holds as to music, the drama, poetry, as well as painting) makes the artist the sole judge of the fitness of the language of his art. Imagine a critic telling Wagner that he is an inferior artist because he puts too much string music in one passage and too much wind in another—that he has mistaken the time of his movement, etc., etc. The artist properly replies, if he notices the critic, that he chooses the form of language which will convey his meaning and ideas, with full knowledge of that meaning and those ideas, and of the force of his language and its vocabulary. If the critic doesn't like it, he has his liberty to fall back on Bellini, or Donizetti, or minstrel music. In Watts's case, the language employed is simply and purely classical—not the least effort is made to display *tours de force* or petty glosses. It would have undoubtedly advanced his present reputation if he had not been so severe in his manner; but such as he is, so we must take him, and the question of the pleasure we may receive from his work is simply one of our educating ourselves up to it as we would to a poem of Emerson's or of Browning's; we may be certain that the art is there if we will only climb to it. The method of execution of Mr. Watts's pictures is very intense in individuality. As we said in speaking of his portraits, the difference between him and the great Italian masters in point of execution is that they possessed a skill only to be got by an early training, which makes execution unconscious, as is the formation of words to express our thought. The painting of Titian is the perfection of pictorial language, and the distinction can readily be noted in comparing his work with that of Tintoret, who began later in life. That of Mr. Watts shows the same quality as that of Tintoret—a certain want of fluency, but none of expressiveness or force; concentrated purpose making itself felt by the most direct means of expression, but always more or less betraying effort. This Titian, Veronese, or Correggio never did, and we should be inclined to include Velasquez, Rembrandt, and Rubens in the same general description; but certainly none equalled Titian in the magical felicity of his brush. The appearance of comparative effort in Watts's work, measured by this standard, diminishes very much on close examination, and in such heads as that of Burne-Jones and Stephen quite disappears; but everywhere one sees that it is the pure language of art fitted exactly to the idea it was given to convey.

When we come to study closely the means, they seem, as they are, the simplest and most direct possible. A little dryness is the natural accompaniment of the severely ideal character of the painter's mind: what painters call fleshiness, *morbidezza*, would be entirely inappropriate to the sentiment and unity of the pictures; but the general method of painting, as he himself avows it, and as one can see it in his work, is the employment of pure color applied in successive paintings over a light and carefully modelled underpainting in monochrome. That this was Titian's method is not only testified to by Boschini, but is shown in his unfinished work, as in the sketch in the Uffizi, which is modelled in in white and red in its first stage. Except in the large horse picture, which we do not conceive to be a spontaneous and appropriate work for Mr. Watts, there is no turbid color to be found anywhere in these pictures. Be the tint what it may, it is not defiled in the process of painting; it is, as pigment, pure, and preserves its value in relation to the others. The old distinction of the qualities of color into pigmentary and prismatic is a sound one, the former denoting the quality of the tint as pure, transparent, living color when good, or dead and muddy when bad; the other, the quality which a tint has of intensifying, harmonizing with, or contrasting others, which results in color harmonies, and the development of synchromy (to coin a word which, compared with symphony, exactly expresses the analogy with music), which is one of the essential elements of great art—harmony being a general term which we have come to apply to all life or art where agreement is elemental. In both these qualities of color Mr. Watts is distinctly master of his art. Search through the whole collection, and you shall not find a muddy flesh tint, or a color which does not maintain its virtue in shadow. For the orchestral qualities take "The Rider on the Red Horse," No. 119, and compare it with its companion picture, No. 85 (they should be hung together), and note how the general scheme of the one contrasts with the other: one warm and glowing, the other silvery and dominated by cool grays. In No. 85 note, moreover, the value, in the gray harmony, of the bit of red in the saddle-cloth, which flares out, subdued though it is, like a trumpet-note. A blue riband in one of the female portraits has a similar power, only possible when the general relations of color are perfectly harmonious.

In the intellectual element of his art, Mr. Watts's work will, we are sure, find its audience, and needs no comment. We saw "Love and Death" when it was in a more nearly finished state than it is now, and certainly were of the opinion that of all modern art it deserves a position in the front rank. The idea is still as clear as when the art was more complete; and the pathetic Love, struggling against the awful invasion—the agony and terror of the face that looks up to the mystery of the inevitable—the desperate tenacity of the defence—the crushed wings—all the surroundings, are full of a pathos we do not remember in any modern work: different in kind from that in Millet and Israels, less simple in its elements of expression and intellectual sympathy than theirs, but, when once realized, further reaching and more profound—the expression of an ideal and immortal woe which may befall any of us from day to day, and borrows nothing from its picturesqueness of occasion.

GOODHOLME'S DOMESTIC CYCLOpædia for Housekeepers. $2.50.
HENRY HOLT & CO., New York.

Lady Brassey's Sumptuous New Book.

In the Trades, the Tropics, and the Roaring Forties.

Beautifully illustrated with nearly 300 Woodcuts from Drawings made by artists engaged especially for the last voyage of the "Sunbeam," and containing ten maps and charts. Price, $5.

HENRY HOLT & CO.,
Publishers.

The Gem of the Season

"A more lovely volume cannot be imagined."—*N. Y. Sun.*

ONE YEAR'S SKETCH BOOK.

"It would be hard to find a more beautiful or appropriate gift."—*Christian Intelligencer.*

ONE YEAR'S SKETCH BOOK.

"It is a good deal to have created a book with such charming characteristics."—*The Dial.*

For Sale by all Dealers.

44TH YEAR
OF THE CELEBRATED
Diamond Brand Hams.
"S. DAVIS, JR.," CINCINNATI.
For sale by PARK & TILFORD and ACKER, MERRALL & CONDIT.

Johnson's Universal Cyclopædia.

A Scientific and Popular Treasury of Useful Knowledge.

EDITORS-IN-CHIEF:

F. A. P. BARNARD, S.T.D., LL.D., L.H.D., M.N.A.S., Prest. Columbia College, N. Y.; ARNOLD GUYOT, Ph.D., LL.D., M.N.A.S., College of New Jersey.

"THE BEST." Planned by Horace Greeley, LL.D.

It has thirty-one departments, with an editor of the highest scholarly standing for each—viz.: Public Law, etc., by Pres. T. D. Woolsey, LL.D.; Civil Law, etc., by Prof. T. W. Dwight, LL.D.; American History, etc., by Hon. Horace Greeley, LL.D., and Hon. Alexander H. Stephens, LL.D.; Botany, etc., by Prof. Asa Gray, LL.D.; Medicine, etc., by Prof. Willard Parker, M.D., LL.D., etc., etc., etc. It is "The Best," and the only original American Cyclopædia. Illustrated with maps, plans, and engravings of the finest kind. More condensed than the Britannica, and more accurate than Appletons'. Contains more subjects, is later than Appletons', and costs about one-third the price. It is truly the busy man's Cyclopædia, the articles being divided and subdivided, so that any point may be turned to without being compelled to read the whole article, as in Appletons'.

CHOICE GIFTS.

MARMION. An entirely new and very sumptuous edition of Sir Walter Scott's great poem, with over 100 illustrations by the best artists. Very richly bound, with full gilt edges. In a neat box. Price, $6; tree calf, or morocco, $10; crushed Levant, silk linings, $25.

THE PRINCESS. A sumptuous octavo edition of Tennyson's famous poem, with 120 illustrations. Richly bound, gilt edges, in neat box. Price, $6; tree calf, or morocco, $10; crushed Levant, $25.

THE LADY OF THE LAKE. The choicest edition of Scott's epic, with 120 illustrations. Richly bound, gilt edges, in neat box. Price, $6; tree calf, or morocco, $10; crushed Levant, $25.

LUCILE. Owen Meredith's popular poem, with 160 pictures of Pyrenean and Rhineland scenes. Richly bound, in neat box. Price, $6; tree calf, or morocco, $10; crushed Levant, $25.

NATHANIEL HAWTHORNE AND HIS Wife. By Julian Hawthorne. 2 vols. With new portraits and etchings. Price, $5; half morocco, or half calf, $9.

"The most important and interesting biographical work since Boswell's Johnson."

THE GENIUS AND CHARACTER OF Emerson. Lectures given at the Concord School of Philosophy, by F. B. Sanborn, Julian Hawthorne, G. W. Cooke, E. D. Mead, Dr. Bartol, W. T. Harris, Miss E. P. Peabody, *et al.* $2.

THOMAS BEWICK AND HIS PUPILS. By Austin Dobson. An illustrated history of the rise of modern wood engraving. Price, $3.50.

OVER THE BORDER. Miss E. B. Chase's travels and sketches in Nova Scotia. $1.50.

A LITTLE TOUR IN FRANCE. Henry James's journeys in Touraine, Anjou, etc. $1.50.

THE LITERARY REMAINS OF THE Late Henry James. Edited by William James. With Portrait. 12mo, $2.

ABOUT PEOPLE. By Kate Gannett Wells. $1.25. "'Caste in American Society,' 'Who's Who,' 'Personal Influence,' 'The Transition of American Women,' 'Loyalty and Liberty.'"

FAVORITE AUTHORS. 1,000 pages of choice essays, stories, etc. Price, $3.50.

SHERIDAN'S COMEDIES: The Rivals, and The School for Scandal. Edited by Brander Matthews. With a Biography of Sheridan, and illustrations of famous actors, including Irving and Miss Terry. $3.

LEISURE HOURS AMONG THE GEMS. By A. C. Hamlin. $2.

"About the diamond, the emerald, the opal, and the sapphire, giving a great deal of curious information, scientific, historical, and anecdotal."—*Boston Gazette.*

ARTISTS OF THE NINETEENTH CEN- tury. $3. A revised encyclopædia.

THE EVIDENCE OF FAITH. By James S. Bush. A noble religious treatise. $2.

JAMES R. OSGOOD & CO., Boston.

Le Français.

Revue Mensuelle de Grammaire et de Litterature.

CONTENTS OF THE JANUARY, 1885, NUMBER: La duchesse Martin.—L'embuscade.—Le député, monologue.—Des renseignements? monologue.—Le général Brière de l'Isle.—Affaires de France.—Académie française.—Poésies.—Lettre corrigée et lettre à corriger.—Notes and Queries.—Coups de ciseaux.—Jeux de société.—Français de cuisine.—Questions de prononciation.—Salmigondis.

Subscription Terms:

$2.00 per year (nine months). Single copies, 25 cents.

Editor, JULES LÉVY,
Lock Box 3, Roxbury, Mass.

Subscriptions received by F. W. Christern, New York; C. Schoenhof, Boston; J. Wanamaker, Philadelphia; and by all first-class booksellers and newsdealers in the United States and Canada.

LE FRANÇAIS, which is now in its fifth year, is mostly patronized by literary people, professors, schools, public libraries, clubs, etc., etc. This French magazine is without a rival in its field. To give, in as few words as possible, a clear idea of the character of our publication, we have brought into one paragraph extracts from some of the many letters which we receive almost every day from our readers:

"Your paper has been of the greatest value to me in matters which neither Grammar nor Dictionary reach."—"I feel that you have succeeded in supplying a want long felt."—"The *Notes and Queries*, and rules upon pronunciation, are especially valuable and useful to me in my teaching."—"Your paper seems to me to combine instruction and entertainment in an admirable manner."—"I am using the journal with a class of young ladies, much to their pleasure and improvement."—"I have learned more and got clearer ideas of French politics from your articles than from any other and all other sources put together."

LE FRANÇAIS is published during nine months of the year only; no issue during the summer months.

Standard Theological Books.

GEIKIE'S HOURS WITH THE BIBLE. $1.50.
DRUMMOND'S NATURAL LAW. $1.50.
ROW'S JESUS OF THE EVANGELISTS. $1.75.
PRESSENSE'S STUDY OF ORIGINS. $1.50.
EDERSHEIM'S TEMPLE SERVICES. $1.25.
GEIKIE'S PRECIOUS PROMISES. 75 cents.
FOOTMAN'S REASSURING HINTS. $1.00.

The Nation.

NEW YORK, THURSDAY, DECEMBER 25, 1884.

The Week.

THE adverse action of the Chamber of Commerce on the Spanish treaty will probably be decisive of its fate, not because the voice of that body, or of the city of New York, is necessarily decisive upon great commercial questions, but because the state of public opinion upon the treaty is so unsettled that any distinctly pronounced judgment, having the voice of authority, would naturally carry doubtful minds with it. The report of the majority of the committee, although favorable to the treaty, furnished the very arguments which condemned it. It said that the treaty would cause the people of this country to pay a bonus of from $25,000,000 to $30,000,000 to the planters of Cuba and Porto Rico the first year, but that we might avoid this the second year and thereafter by making similar treaties with other countries—that is, by taking away from Cuba and Porto Rico the consideration which leads them to enter into the treaty at all. Of course Spain will not allow us to take back the *quid pro quo* without taking back the exclusive privileges granted to us. She will put England and Germany on the same footing with ourselves whenever we put the British islands and Brazil on the same footing with Cuba. The upshot of the treaty would then be that we should have paid a subsidy of $25,000,000 for one year to Cuba and Porto Rico for nothing, since it would require at least one year to turn the import trade of Cuba toward this country. This line of argument was sufficient to condemn the treaty in the minds of shrewd men of business, and it is not at all surprising that, after it had been read and fully comprehended, the Chamber voted almost unanimously against it.

Incidentally the Chamber passed an opinion upon the protectionist doctrine that the "home market" is the great thing to be cultivated by good Americans, and that "foreign markets are of doubtful advantage." A resolution setting forth this musty sophism was reported by Mr. Ammidown. It constituted a part of the report which the Chamber adopted, but, before adopting it, the Chamber struck out this particular clause, upon the suggestion of Mr. Jackson S. Schultz, who characterized it as "cranky." The statement that the home market is our best market signifies nothing, because we have the home market now and it does not satisfy us. Mr. Nimmo, Chief of the Bureau of Statistics, wasted his great energies upon this thesis a short time ago, showing that our domestic trade was seven times greater than our foreign trade. He had formerly estimated it as twenty-five times greater. But if this trade were one hundred times greater, it would make no difference, since the surplus left after supplying the home market is that which vexes everybody—merchants, farmers, and manufacturers alike. The Chamber of Commerce contemptuously set its foot upon the "cranky" protectionist doctrine.

We hope, apropos of the position taken by the Administration with regard to the Clayton-Bulwer treaty, some explanation will be shortly made of our participation in the Congo Conference through Messrs. Sandford and Kasson. The Conference is composed of the representatives of half a dozen European Powers who are engaged in dividing up and disposing of vast tracts of territory, some of them as big as Continental Europe, and all on the "good old rule, the simple plan," and without the smallest reference to the wishes or feelings of the existing population. We have not a word to say against the character of the work. We believe it will be productive of immense benefit to Africa and to civilization generally. But after having so completely cut this American continent off from Europe that we will not even allow a European Power to pledge itself on paper not to meddle with a canal across the Isthmus of Panama, what in the name of consistency is the meaning of our sending representatives to a European congress to help on the arbitrary division of the African Continent, on which we have no colony or foothold of any kind, and which is separated from us by the Atlantic Ocean? Will not this little matter bear some Congressional inquiry?

The "back-down" of the Senate on the Naval Appropriation Bill probably means that no action on the question of new cruisers or heavy guns will be taken until the new Administration comes into power. The bill which the Senate has consented to accept was sent to it by the House last summer, and merely provides money for the next six months' expenses on the basis of the original regular Appropriation Bill. Since its adoption by the House a great change has taken place in national affairs, and both houses are disposed to regard the new-cruiser and heavy-gun proposals in a different light. The Senate concedes that if the cruisers are to be built, the contracts for them ought not to be awarded by an Administration just going out of power, leaving the work to be completed by a new Administration which had no voice in planning it. The House takes the ground that an appropriation for six months is an infringement upon the freedom of the new Administration, which ought to be left to arrange the details of its naval bill in its own way. All this is reasonable and proper. There is no reason for haste in the matter of the guns and cruisers, and we apprehend that the new Secretary of the Navy will be full as likely to award the contracts wisely as Mr. Chandler is.

An organization of this city, calling itself the Young Men's Republican Club, has adopted a resolution by a vote of 58 to 1 in favor of Mr. Evarts for Senator. The reasons given in the discussion which preceded the vote were interesting and characteristic. One member said that what the "party wants is not only a faithful Republican, but one who has been constant in his fidelity and has stood like a rock. Mr. Evarts has sunk all individuality, and held that the principles of the party are paramount to everything else." We feel moved to say that this is true of Mr. Evarts's course in the last campaign. He made the duty of supporting Blaine "paramount to everything else," including his reputation for legal acumen and his own convictions, and stood like a rock for his party, first, last, and all the time. So did the Young Men's Republican Club. It was the most zealous Blaine organization in the field, but it was then, and is now, no more representative of the young Republicans of this city than the Johnnies, Jakes, and Mikes are of the old Republicans.

Mr. Evarts's letter announcing himself a candidate for the Senatorship has been printed, and consists of frequent expressions of devotion to the Republican party, its "principles" and its "policy," and of readiness to go to the Senate as one of its champions. The *Times* says he has taken its advice in making no mention of the tariff, but the *Evening Post* claims a share in causing this omission, as it gave him the very same advice. Moreover it urged him to rely on his "prolonged fidelity" to the Republican party and nothing else, and this also he has done, showing, we think, clearly enough that the influence of the *Evening Post* on the composition of the letter has been greater than that of any other journal, with all due respect to the *Times*. We think, also, that Mr. Evarts has been wise in avoiding all explanation of the "principles" and "policy" of the Republican party. We do not think it would have been judicious to communicate these to the world promiscuously through the columns of a newspaper. They are at present only known to very few people, and are in fact somewhat confidential in their nature, and Mr. Evarts is too old a lawyer and statesman to blab about such things indiscriminately. We do not think he ought to be expected to let mugwumps know them, after their conduct in the late canvass. He excuses himself for his secrecy by declaring that "the Republican party, in its declaration of its opinions and purposes, has never used language obscure, uncertain, or framed in a double sense." This habit of candor, of course, makes dead silence all the more necessary when, as just now, concealment is desirable.

A flood of light is thrown upon the Cabinet speculations by an account which Congressman Hurd gives of a talk which he had with Governor Cleveland recently. He went to Albany to urge upon the Governor the appointment of Mr. Thurman to the Interior Department and Senator Bayard to the Treasury Department. He says that he gave his reasons in favor of these men at considerable length, and that the new President "listened very attentively, but gave no indication of what his own views were." Mr. Cleveland has always been a good listener. When he first became Governor he listened attentively to all that the "old wheel-horses" of the Democratic party had to say about the kind of men whom he ought to appoint for offices, and when the time to appoint came he made

his own selections. There was great astonishment and considerable consternation among his volunteer advisers when the names were sent in, and we apprehend something of the kind will happen again when the new Cabinet is announced.

Great progress was made with President Cleveland's Cabinet on Sunday. Four members of it—so we are assured by a correspondent, who evidently sat up all night with the Governor on Saturday arranging his Administration—are now agreed upon. Senator Bayard is to be Secretary of the Treasury, Mr. W. C. Whitney is to be Secretary of the Interior, Senator Garland is to be Attorney-General, and Senator Lamar is to be Secretary of State. There is some doubt about the latter, as he has expressed a determination not to accept a Cabinet position, but he "may be prevailed upon" to reconsider. "It may safely be assumed," says the correspondent, in speaking of the other three men, "that they will all be members of the new Cabinet, unless there should be a change in the present drift of Governor Cleveland's mind." The news of this "drift" had not reached Washington on Sunday, for the Democratic members of Congress from Indiana held a meeting and decided unanimously that the "honor of a Cabinet position should be conferred upon" ex-Senator McDonald. Fear was also freely expressed in Washington that certain bad men who have been interested in Star-route contracts would succeed in "fooling" the Governor sufficiently to secure the selection of some one of their friends for Postmaster-General. We feel justified in saying, from what we have observed of the "drift" of the Governor's mind during his administration in this State, that there is no occasion for the slightest anxiety about his being fooled by thieves either great or small.

The Cincinnati *Enquirer*, which supported Cleveland secretly during the campaign and now supports him openly, has attracted considerable attention to itself lately by a series of double-leaded articles on "The Meaning of the Election" and kindred topics. We have read these articles with deep interest, expecting to find in them the whole gospel of Bourbonism, for if Bourbon Democracy exists anywhere it exists within the range of the *Enquirer's* circulation in Ohio and Kentucky. We are agreeably surprised to find nothing in the *Enquirer's* views of the meaning of the election more terrible than the statement that "the Democrats won, on the demand for administrative reform." This is a perfectly safe doctrine, and its vindication in the columns of the *Enquirer* assures us that Bourbonism is really a thing of the past.

Secretary Chandler hastens into print to deny the assertions of Chairman Jones, of the late National Republican Committee, concerning the lukewarmness of the President and his Cabinet toward Blaine's candidacy. Mr. Chandler says the President and every member of the Cabinet desired the election of Blaine, and did all that could be reasonably expected of them to secure it; that Mr. Jones was an "unknown man" when he was made Chairman, and that since he "conducted the party to defeat" he "should have hesitated before publicly undertaking to throw the blame upon some one else." He also gives notice that if the "warfare" against the President is continued, "there will certainly be quite as many blows given as taken, so far as I am concerned." We advise the President to "call off" the Secretary and all other of his friends who are threatening to give further "blows" of this kind in his behalf. They are defending him unnecessarily. His course in the campaign was in the main dignified and creditable. Its only defects were, first, in allowing Mr. Chandler to neglect his official duties and, in his old capacity of "Bill," to conduct the *Tallapoosa* negotiations with Butler in behalf of Blaine; and, second, in permitting Commissioner Dudley to use the whole power of the Pension Bureau in Blaine's interest. A third lapse will be added to these if Mr. Chandler is allowed to make further "defences" like that which he has published.

It is a curious illustration of what a prolonged course of Blaineism will do for men that none of these critics of the President realize the position they are taking on civil-service reform by thus censuring him. They are blaming him for not using the power of his office for partisan ends. They really complain because he did not "come out" for the ticket, force the members of his Cabinet to do the same, and set them and all the subordinates in the public service the example of making a good round contribution to the campaign fund. Their attitude now is complete justification for the Independent opposition to Mr. Blaine on civil-service-reform grounds. He was never a friend of the reform, and none of his friends and advisers had any idea that, if elected, he would become its defender. They are making partisan fidelity the highest test for office now, and are opposing the President's Senatorial candidacy because he obeyed the spirit and letter of the law in allowing the people to elect a President without Federal interference. Mr. Jones's opinion, that if the full power of the Administration had been used in favor of Blaine, he would have been elected, is a confession of Blaine's weakness as a candidate before the people. They were left to vote as they pleased, and they chose Mr. Cleveland.

The brilliant policy which the regular Republicans have adopted, of making a compact and harmonious party by excluding all Mugwumps, is having its inevitable effect. The Mugwumps are making their organizations, which were merely temporary for campaign service, permanent, and are inviting into them all Republicans who propose hereafter to vote as their convictions prompt without regard to party orders. The Boston Independents formally, a few days ago, decided to continue their Committee of One Hundred for the present. The Brooklyn Independents have resolved upon a similar course. The most apparent result of this will be that hereafter the Blaine Bourbons will be confronted by two parties instead of one when they go into an election. They will have a harmonious, obedient little party, in which there will be no "traitors" and no "kickers." They can nominate just as bad a man as they please, and can go to the polls as compact as an army and vote for him. He will be defeated every time, but what of that? Every defeat will make the party a little more compact and a little more select, until it becomes

"A nice little, tight little party,"

and can be photographed in a "group."

The pulpit as well as the press is being "disciplined" for mugwumpery. The Rev. Mr. Jones, a highly esteemed Baptist clergyman of Ithaca, was arrested on Wednesday week on a trumped-up charge of illegal voting, and summoned to appear before a United States Commissioner and defend himself. His accusers at first threatened to lock him up for the night, but finally allowed him to return to his family, on condition that his friends would be responsible for his appearance the next day. Nobody pretends to believe the charge to be true. Mr. Jones's offence is that he spoke at a Cleveland meeting during the campaign, and voted for Cleveland on election day. The Blaine men challenged his vote in order to throw suspicion upon it, and have now had him arrested in the hope of smirching his character. There is said to be great indignation in the town about the performance, and we should think there would be. The tendency of the Blaine infatuation appears to be toward acute insanity.

Dr. Ball, of Buffalo, seems to be following the fashion of nearly all persons nowadays who for any reason become notorious, by starting out as a lecturer. He lectured in Boston on Friday in Tremont Temple, one of the largest rooms in Boston, on "The Presidency and Presidents," but only about 150 people came to hear him. If Blaine had been elected, he would doubtless, in spite of the triteness of his theme, have done better. He indulged in no abuse or evil predictions about Cleveland, and made no statements about either Presidents or the Presidency by which the most nervous could be in the slightest degree startled, or which any but the thoroughly depraved or unscrupulous would deny. In fact, we look forward now to a blameless career for the doctor. He has been through the deep waters, and sees how much better it is for clergymen not to try to keep political campaigns "abreast with the religious sentiment of the country."

General Butler is credited with a decision to imitate his friend and ally Blaine and become an historian. The announcement is made that he has signed an agreement with a publishing house to write his political reminiscences in two volumes, for which he is to receive $50,000 in cash and a royalty besides. If he gives all his reminiscences, the price is much too low, and the space allotted far too small. No other living politician has been in so many different political parties as Butler has, or has behaved so badly in one as he has in all. The inside history of his connection with Blaine in the last campaign would of itself fill a volume, and be worth $50,000. It has been whispered about that he lost heavily in money by that canvass, and that he is in such financial straits now that he has been obliged to mortgage his house. The decision to turn historian is also

attributed to a desire to mend his private fortunes. We doubt the accuracy of all these rumors. Carelessness in the use of his own money for political purposes has never been among his characteristics. If anybody's bank account was depleted by his last campaign, it is much more likely to have been Blaine's than Butler's. We do not believe that his object in writing his reminiscences is a mercenary one. Historical composition has peculiar charms for retired statesmen who have no other way in which to keep themselves in the public mind.

We appeal to our esteemed contemporary, the *Tribune*, to pause till after the holidays in its task of harrowing the public mind on the subject of the diabolical purposes of the Solid South. No man can enjoy the festivities of the season with the gloomy spectre of a ruined country dangling before his eyes. The *Tribune* has now shown, in a series of articles of tremendous power and almost superhuman imagination, that if the count of votes in the late election had been made on the census statistics instead of on the ballots cast, Mr. Blaine would have had a plurality of precisely 1,200,000; that there were many negroes who would have voted for him if they had taken the trouble to go to the polls; that since the Solid South voted solidly to make Cleveland its solid President, he owes his election to men who before the war were in favor of paying labor no wages at all, and hence he will not only reduce our laboring classes to the level of the "pauper laborers of Europe," but will probably abolish all wages whatever, and make slaves of all workingmen who are not starved outright during the first month of his Administration; that Cleveland will be a pliant tool in the solid hands of the Solid South; that all our industries will be ruined by free trade and the Cobden Club, and the United States Treasury will be turned over to the Rebel brigadiers for the payment of Rebel claims. This is dismal holiday literature, and its publication can do no good. The country is safe anyway till after March 4. Let us laugh while we may.

A movement is on foot to change the election law of Illinois, prompted by the discovery of the recent frauds in Chicago. It has been proved that the preservation of the ballots after the election is no safeguard at all, and that it is rather an aid than a hindrance to rascality. The testimony taken in the Brand-Leman case shows that if the ballot-stuffers had had a little more time, or if they had had a little more foresight, they might have done their work in such a way that detection would have been impossible. Relying upon the preservation of the ballots as a means of preventing fraud not only puts facilities for perpetrating fraud in the hands of those who have the custody of them, but leads to dispensing with other obvious safeguards. The law of New York provides three things which the law (or at all events the practice) of Illinois overlooks. It gives each political party the absolute right to watch the vote and the count in its own way. It provides for the convenience and security of the voter by furnishing a sufficient number of voting places to avoid a crowd at the polls, and by keeping the swell mob away from the voting places. It prevents conspiracies to change the result of an election by requiring the destruction of the ballots at each precinct before the result of the vote in other precincts is known. If the Illinois law had been grounded upon these principles, the Brand-Leman trouble would never have occurred, and Mr. Joe Mackin would have been a happier man than he is to-day.

A recent number of *Bradstreet's* furnishes statistical tables of the number of men out of employment at the present time as compared with the number employed in the census year, 1880, when, it is believed, there were no persons unemployed who were able and willing to work. The returns, having been obtained by the officers and employees of the commercial agency, are presumed to be very nearly accurate. The whole number of manufacturing operatives out of work by reason of the shutting down of establishments, strikes, etc., is 316,000, or 13 per cent. of the whole number thus employed in 1880, which was 2,452,749. It is believed that the number may be swelled to 350,000 by taking account of the smaller industries which may have been overlooked. But on the other hand a certain portion, probably 10 per cent., are out of employment only temporarily, for the purpose of making repairs of machinery, taking account of stock, etc. The largest percentage of unemployed is found in the State of Minnesota, 40 per cent., and the smallest in Maryland, 7 per cent.; but the average of all the New England States is only 7 per cent. In New York the percentage is 18, in Pennsylvania 16, in New Jersey only 8. Of the cities, Detroit is by far the most unfortunate, 62 per cent. of her customary force being idle. In Baltimore only 3½ per cent. are out of work, in Boston 7½ per cent., in New York 24 per cent., in Philadelphia 21 per cent.

Of the leading industries the iron trade shows a loss in the number of operatives at work of 20 per cent., the clothing trade 27 per cent., cotton goods 12½ per cent., woollen good 16 per cent., boots and shoes 14 per cent., tobacco manufacturing 17 per cent., silk 16 per cent., glass 19 per cent. The Southern States show the smallest percentage of unemployed labor and the least reduction in wages. The exhibit as a whole is more favorable than might have been anticipated. It must be borne in mind that the reports of industrial depression in the daily press make no account of the number of persons remaining employed, but only of those thrown out of work. In this way the trouble, although serious enough, becomes much exaggerated in the popular imagination.

It is a good sign that the Irish Nationalist papers have begun to charge the Government with preparing and executing the dynamite explosions. This is tolerably absurd, but it is really their way of saying that these things inspire them with shame and horror. When a writer of this school says that a crime or outrage was concocted by "the Castle," it simply means that he thinks it peculiarly atrocious. The story of the Dublin *Irishman* that the British Government sent a woman over to Ireland to offer $2,500 toward the purchase of a steam launch, to be used in throwing bombs from the Thames into the Houses of Parliament, is simply its way of observing that the use of money to buy a launch for any such purpose would be a peculiarly asinine as well as criminal proceeding. In fact, the British Government has come to play in Nationalist rhetoric the part which Satan played in the old phraseology of the criminal law, when it used to be alleged in indictments that the accused was moved to commit his offence "by the instigation of the Devil."

The rumors that Mr. Gladstone will go out of public life on the passage of his Distribution and Franchise Bills are probably premature. He can hardly do so without settling his Egyptian business, which does not improve in appearance. The new plan for the reform of Egyptian finance which Lord Northbrook has long been maturing, and which in its main features consists of a loan from England, a reduction of interest on some branches of the debt, and some diminution of expenses, has not yet been accepted by the Powers, and there seems to be some doubt whether France will accept them, not so much because she objects to them as because she wishes to appear independent of England, if not hostile to her. In the meantime, too, Lord Wolseley's advance is slow, owing to the falling of the Nile, and March now begins to be talked of as the probable period of his arrival at Khartum. The colonization schemes of Germany, again, are raising much new trouble. She has taken possession of a large part of the island of New Guinea, to the great indignation of the Australians, who wished to annex it a year or two ago, but were prevented by the home Government, and a filibustering expedition to it stopped by force

According to a late report from Durban, Natal, the Hovas of Madagascar have succeeded in obtaining from the coast, in spite of the French cruisers, a large fresh supply of arms and ammunition. The determination of the young Queen and her people to resist the French invasion to the utmost is apparently unshaken, the army is numerous and not without courage, and a stronger bulwark for the capital is the natural difficulties in the way of the French—the pestilential fevers of the plains between the coast and the mountain slopes, and the total absence of roads to the highlands amid which Antananarivo is situated. In fact, the French have not even begun an advance from Tamatave, though this seaport has been in their hands for eighteen months. Not long ago the Hovas were still reported to be in force in front of their lines. Admiral Miot clamors for reinforcements, which are but scantily granted, the more urgent demands of the theatre of war in Tonquin and the China Sea diverting attention and resources from Madagascar. The French recently still insisted upon a protectorate over the whole island, but Ranavalona III. declared, on her accession to the throne, in July, 1883, that her ocean-bound domain must remain completely independent, and even the Sakalavas of the western parts, who formerly owned a kind of dependence upon France, are now in patriotic accord with the Hovas,

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 17, to TUESDAY, Dec. 23, 1884, inclusive.]

DOMESTIC.

THE London *Times* on Wednesday devoted a leader to the proposed treaty between the United States and Nicaragua, based on a cabled summary of the synopsis of the treaty printed in New York. The writer said: "The terms of the Nicaragua treaty will excite profound amazement in England and America. If the published version of its leading features is correct, it will undoubtedly elicit a distinct protest in both countries, as being in direct violation of the Clayton-Bulwer treaty. Indeed, it presents a more distinct violation of that instrument than Mr. Blaine ever contemplated. Americans must not suppose that Englishmen will deprecate the treaty owing to any alarm at the extension of the American dominions, or from any mistrust that the advantages gained will be abused to the injury of British trade; but they cannot approve the example afforded of one State purchasing the control of such a waterway for its personal advantage, and not as a trustee for the benefit of the world."

The full text of the Nicaragua treaty was printed on Thursday, with the President's message to the Senate, urging its ratification. The President said: "The political effect of the canal will be to unite closer the States now depending upon railway corporations for all commercial and personal intercourse; and it will not only cheapen the cost of transportation, but will free individuals from the possibility of unjust discriminations. It will bring European grain markets of demand within easy distance of our Pacific, and will give to the manufacturers on the Atlantic seaboard economical access to the cities of China, thus breaking down the barrier which separates the principal manufacturing centres of the United States from the markets of the vast population of Asia, and placing the Eastern States of the Union, for all purposes of trade, midway between Europe and Asia. In point of time the gain for sailing vessels would be great, amounting from New York to San Francisco to a saving of seventy-five days, to Hong-Kong of twenty-seven days, to Shanghai of thirty-four days, and to Callao of fifty-two days."

The treaty differs from the synopsis published last week. The United States does not acquire a tract three miles wide on each side of the canal in full sovereignty. But a strip 2½ miles wide, the centre of which shall be the centre of the canal, will be under the joint control of Nicaragua and the United States. The United States shall have exclusive control of the construction of the canal.

There is a growing opposition among Democratic Congressmen to the Nicaragua treaty, but neither Republicans nor Democrats have yet united upon a definite policy with respect to it.

The Chamber of Commerce in this city on Monday adopted a resolution "that the Spanish-American treaty is hostile to the interests of the people of the United States, and ought not to be confirmed."

In the Senate on Wednesday a letter was read from Secretary Chandler explaining that a surveying expedition had been sent to Nicaragua in order to make a survey of the proposed canal route; that it had been sent under the "general power of the Department" to issue such orders to all officers of the navy as may be deemed for the public good. The letter was laid on the table for future discussion. Secretary McCulloch was confirmed in executive session on Thursday, Senator Riddleberger being the only dissenter.

The House of Representatives on Wednesday continued the contest over the Inter-State Commerce Bill, the Southern Democrats endeavoring to prevent the adoption of any amendment which forbids a discrimination against colored men. The colored men—O'Hara and Smalls—made vigorous speeches. Mr. Smalls denounced the Democrats for attempting to legalize what he called a "Jim Crow car" in all the Southern States. On Friday Mr. Abram S. Hewitt offered an amendment permitting railroad pooling contracts when they were reasonable and just. He held that pooling, if honestly conducted, gave stability to the rates of freight, and equal terms to every customer. The amendment was defeated. The debate was continued on Saturday. The House and Senate came to a deadlock on that day on the Temporary Naval Appropriation Bill. The Senate refused to adjourn for the holidays in accordance with the House resolution and met on Monday.

The Senate on Monday passed the Blair bill to provide for the appointment of an alcoholic liquor commission. The vote was 24 yeas to 16 nays. The Senate Appropriations Committee on Monday afternoon reported another naval appropriation bill. It is the identical one which the House sent to the Senate last year and which the Senate refused to receive, with the exception that it is for a period of six months instead of a year. It contains no appropriation for cruisers or guns. The House, it is said, will probably not accept this bill, and the deadlock will continue. No quorum of the House is in Washington. The adjournment, on Saturday, of the House was limited (by the Constitution) to three days.

On Tuesday the Senate passed the Naval Appropriation Bill, and also a resolution for a holiday recess from December 24 to January 5.

The conferees of the two houses on the Electoral Count Bill met on Thursday, but again failed to agree. It is probable that this is the last attempt that will be made to reconcile the differences between the two houses on this bill.

Governor Cleveland gave a brilliant reception at the Executive Mansion in Albany on Tuesday evening. It was attended by about 200 ladies and gentlemen.

At an informal meeting of the Democratic members of Congress and citizens of Indiana, held in Washington, the sentiment was generally expressed that Indiana was entitled to recognition in the Cabinet of the President-elect, and the opinion was unanimous that the honor should be conferred upon ex-Senator McDonald.

The Committee of One Hundred of the Massachusetts Independents have voted, not to make their organization permanent, as was reported last week, but to continue the organization "for the present."

The Rev. R. T. Jones, of Ithaca, was arrested on Thursday for alleged illegal voting. He was a pronounced Cleveland man. In the evening an indignation meeting was held, attended by citizens of both parties, at which resolutions were adopted condemning Mr. Jones's arrest, sympathizing with him and his family, and asking that proceedings be instituted against the movers in this "dastardly outrage."

It is reported in Buffalo, on good authority, that Minister Morton has recently cabled Messrs. Warren and Draper, asking them about the Senatorial outlook, and requesting them to communicate with him by mail. It is believed that the desired letters are now on their way to Paris, and that they convey to him the necessity of his withdrawal from the race unless he desires to be regarded as distinctively the money candidate of the Senatorial canvass.

A letter from William M. Evarts was published in Albany on Monday, in which he said: "In response to many inquiries and requests made to me from all parts of the State, I take the liberty in this form of making public my readiness and desire to be considered among the candidates for election by the Legislature as a Senator from this State. In asking the favor and support of the Republican Senators and Assemblymen for this distinguished and responsible representation of this great State in the Senate of the United States, I have no occasion to qualify or restate the principles of the Republican party or my own hearty acceptance and undoubting maintenance of those principles. The Republican party, in its declaration of its opinions and its purposes, has never used language obscure, uncertain, or framed in double sense. In this last as in every earlier struggle to maintain the supremacy of the Republican policy in the Government of the country, I have given every aid in my power to the support of the policy, the doctrines, and the candidates of the Republican party."

The annual dinner of the New England Society was given at Delmonico's on Monday evening, with the President, General Stewart L. Woodford, in the chair. Speeches were made by Chauncey M. Depew and others.

The New York Academy of Medicine on Thursday evening, unanimously adopted a report vindicating Dr. Fordyce Barker, its President, from the charge that he falsely claimed to be a graduate of the Paris École de Médecine, and also of violating the laws of the State in practising without a diploma. The charges were preferred by Austin Flint, jr., and others, and had their origin in the disagreement in the Academy over the old and new codes of medical ethics.

At a meeting in Philadelphia on Friday of the railroad companies interested in the coal trade, resolutions were adopted that so much anthracite coal as may be produced or required during the coming year shall be furnished by the respective companies in proper yearly or monthly quotas; that a committee of three be appointed by the Chairman to present a sketch of such proper quotas, and that each interest be requested to present to said committee a statement of the proportion of business done by it, and what it expects to do during the ensuing year.

In a tax suit the Supreme Court of Wisconsin has decided that telephone lines come under the act authorizing the construction of telegraph lines.

The heaviest earthquake shock ever experienced in the neighborhood of Laconia, N. H., was felt on Wednesday morning about 2 o'clock. At Centre Harbor the shock lasted half a minute.

Harrigan and Hart's Theatre Comique in this city was burned to the ground on Tuesday morning. The loss claimed is $120,000, with no insurance. It was a new and handsome building, opened on August 29, 1881.

In a fire at St. John's Home, Brooklyn, a Roman Catholic Orphan Asylum, on Thursday afternoon, 23 children and one sister of charity lost their lives.

Chief-Justice Waite, of the Supreme Court of the United States, is seriously ill, but his friends hope that he is out of danger. It is not believed that he will be able to resume his place upon the bench until the March term.

Robert C. Winthrop, of Boston, is critically ill. He is seventy-five years of age.

William Henry Channing, a well-known Unitarian minister, and nephew of the late William Ellery Channing, died in England on Tuesday at the age of seventy-four. He was graduated at Harvard College in 1829, preached in a number of American cities, and then removed to Liverpool, England, succeeding the Rev. James Martineau in a Unitarian church there. Among his published works is a 'Memoir of William Ellery Channing' (3 vols. 1848). He was an eloquent preacher, and an earnest advocate of social reforms.

FOREIGN.

During the trial of Anarchists at Leipsic on Wednesday, Reinsdorf confessed that he was connected with the plot to assassinate the Emperor at Niederwald, and referred in a most vehement manner to the condition of the working classes. The judges were frequently compelled to interfere and rebuke the prisoner during his remarks. Reinsdorf continued, saying that the task of obtaining freedom devolved upon the workmen themselves, and that the contests at

the polls, so beloved by the Social Democrats, were absurd and irrational. The Anarchist programme of action would alone do any good. The end sanctified the means; there was no good in being sentimental, and he had done his duty as an Anarchist. He admitted that he had persuaded Rupsch and Kuechler to join him, and that he gave them the necessary instructions as to the handling and placing of the dynamite, adding boldly that if he had not been ill, he himself would probably have committed the assassination at Niederwald. Reinsdorf displayed a brave and manly spirit throughout the trial, in great contrast with the efforts of the other prisoners to shift responsibility on each other. He is described as a man of much force of character.

On Friday the Public Prosecutor demanded the sentence of death against Reinsdorf, Rupsch, and Kuechler on the charge of high treason. The prosecutor further demanded a sentence of ten years' penal servitude against Holzhauer and Bachmann, of five years against Soehngen and Rheinbach, and the acquittal of Toellner. This demand was complied with on Monday, except that the three last named were acquitted.

The Berlin police assert that they have found proofs of an extensive plot to enroll the soldiers in Socialist societies.

During the celebration at Milan, Italy, on Saturday, of the anniversary of the execution of Oberdank, the Austrian Anarchist, a young man named Gervasini was arrested in the act of placing a dynamite bomb under the Palais de Justice. He has confessed that he had been instructed to fire the fuse with a cigar, but refuses to disclose the names of his associates. Ten other men have been arrested with proclamations glorifying Oberdank in their possession.

Louise Michel, the French Anarchist now in prison, is dying.

Nihilists on December 7 attempted to wreck a train conveying the Czar to St. Petersburg.

Among the goods arriving at Dover, England, on Thursday, from the Continent, the police discovered a tin case filled with dynamite cartridges. The case was furnished with a false label.

Examination of the London Bridge piers by divers shows that the recent explosion was of great force, and did considerable damage to the stone-work, but did not affect the security of the bridge.

Germany and Russia refuse to negotiate any further with Nubar Pasha, the Egyptian Prime Minister, regarding their admission to representation in the Caisse de la Dette Publique. It is likely that Nubar will resign.

The St. Petersburg correspondent of the Brussels *Nord*, in a despatch referring to the demand of Russia and Germany for admittance to the Caisse de la Dette Publique of Egypt, says: "The solution of the Egyptian problem has become more urgent because the political movement of Europe now tends in the direction of colonial acquisition. Egypt is destined to become the key of a new policy. This may result in a settlement of the Egyptian question in a manner favorable to the Continental Powers by the formation of a mixed commission, charged with the task of studying on the spot whether the British proposals are well or ill founded." This despatch has created a sensation in Paris, where the belief is that it embodies the opinions of the Powers in regard to the creation of a mixed commission, and that such action is tantamount to a rejection of the English proposals, and a great blow at her prestige. The delay in the response of the Powers to Earl Granville's proposals in regard to Egyptian finances is attributed in London to Prince Bismarck's initiative, from his desire to embarrass the Gladstone Cabinet by obliging the Ministers to meet Parliament without arriving at an *entente*.

It is believed in Cairo that Germany and Russia intend to renew their demand upon the Egyptian Government for admission to the management of the Caisse de la Dette Publique. They will ask Egypt to give her consent to their admission, and likewise to procure a reply from the Powers which have not yet expressed their consent.

It was reported in the Paris *National* on Tuesday that France had finally rejected England's proposals with reference to the financial difficulties of Egypt. The statement is not, however, generally believed.

Mr. Henry M. Stanley has written a letter in reference to Congo matters, in which he points out the urgent necessity of settling the neutralization of the Congo country, of determining definitely its frontier, and of bringing about a general recognition of the African International Association, before the Conference now in session at Berlin shall have concluded its labors. If these problems shall not be settled, he thinks the Congo will only prove a tempting bait to France and Portugal.

England, Germany, Holland, and Italy are now in accord upon the proposition to neutralize the territory of the African International Association. The American neutrality scheme, however, fell through on Monday, owing to the opposition of Baron de Courcel, French Minister at Berlin.

England has formally recognized the African International Association on terms similar to those made by Germany. The agreement secures consular jurisdiction to England.

The session of the Congo Conference in Berlin on Thursday lasted four and a half hours. The statutes relating to navigation on the Congo and Niger Rivers were substantially adopted, with the exception of a few secondary points.

The Congo Committee on Friday, after a long discussion, decided to put on record a strongly expressed protocol to restrict as far as possible the liquor traffic in the Congo and Niger countries. Italy on Friday officially recognized the African International Association. It is said that Premier Ferry is proposing to Earl Granville terms of agreement on the Egyptian question, on the condition of England supporting France's Congo claims and Chinese policy.

There is reason to suspect that Portugal is making arrangements to cede to Germany the Portuguese possessions on Delagoa Bay, in southeast Africa. It is believed to be connected with some scheme of Prince Bismarck's relating to the Transvaal and Zululand.

The London *Times* on Tuesday said: "The annexation of a portion of New Guinea and other islands in that neighborhood by Germany will expose the Government to popular execration in Australia and to severe censure in England. The refusal of the Earl of Derby, Secretary of State for the Colonial Department, to recognize Australia's annexation of the same territory has opened the door to Germany. The colonists wanted to annex the whole of New Guinea, for, in the event of war, this island would form a base of operations against Australia."

Prince Bismarck has written a letter publicly thanking the people for the numerous addresses of devotion and support which he has received from various parts of the empire. These encourage him, he says, to persist in his struggle against the parties whose internal disunion and unanimity against all guidance of government are impeding the progress of the empire, and endangering the unity bought with many sacrifices and struggles.

The Berlin *North German Gazette* (Bismarck's organ) intimates that Prince Bismarck has finally decided to take a rest from his public duties. Preparations are being made throughout Germany to celebrate Bismarck's seventieth birthday and the fifteenth anniversary of his career as Chancellor of the Empire.

It was discovered on Thursday that Lucas Jauner, Director of the Securities Department of the Lower Austrian Discount Bank, in Vienna, was a defaulter to the amount of $1,000,000. He disappeared, but on Friday his dead body was found not far from Vienna. Heinrich Kuffler, a broker, was implicated in the transactions. He persuaded Jauner to advance money of the bank at usurious interest, both sharing in the profits. There was a run on the bank, which was promptly met.

In Vienna, on Monday, the very old firm of Emmanuel Biach & Co. suspended. It was obliged to take this step because of its dealings with Heinrich Kuffler, the broker implicated in Jauner's operations. Jean Lucas, the manager of the securities department of the Giro & Cassenverein Bank, committed suicide on Monday.

It was reported on Wednesday that Louis Kossuth, the Hungarian patriot, was dead, but later despatches showed that there was no foundation for the rumor. He is in excellent health.

The French Senate is unable to vote the Budget before the end of December. The Government will ask the Chamber of Deputies for a credit of 800,000,000 francs to meet the expenses of the first quarter of the year 1885.

It is stated that the Cuban loan of £1,000,000 has been definitively arranged with the Banque Transatlantique of Paris. The loan is to be for one year only, but may be extended to eighteen months at the option of the Government. The interest is to be 9 per cent., and the commission for negotiating the loan 1 per cent.

A French clique at Cairo is believed to keep El Mahdi posted in General Wolseley's movements, through Ollivier Pain, the French journalist, who is now in the False Prophet's camp. This has caused great indignation in England.

One of the recent despatches from Korti says that General Wolseley is undecided whether to continue his advance by the river route, or to make a camel dash directly across the Bayuda desert from Ambukol to Khartum, which would save hundreds of miles. Another despatch says that he will complete the concentration of his army at Korti in the first week in January, and will begin his march through the desert upon Shendy on the 7th of January. The distance from Korti to Shendy is 200 miles, and he calculates that the march will occupy sixteen days, unless he meets with opposition.

General Wolseley, in a telegram from Korti to the Marquis of Hartington, Secretary of State for War, says that the English boats have fulfilled his best expectations; that the work is hard, but the men are in good health and fit for any work.

General Wolseley reported on Tuesday that the delay in the concentration of the troops at Korti would retard the advance across the desert until the second week in February. The preparations for a demonstration from Suakim have been postponed. British military authorities fear that the relief of Khartum cannot be accomplished before the middle of March.

It is reported that El Mahdi has sent 14,000 reinforcements to Osman Digna, who is encamped near Berber.

Lord Rosebery has written to a number of the Peers with a view to the taking of concerted action in favor of the reform of the House of Lords.

The Rev. William Lindsay Alexander, D.D., of Edinburgh, a Scotch theological writer, is dead, at the age of 76.

There was a great demonstration in Bombay on Thursday in honor of the Marquis of Ripon, the retiring Governor-General of India.

The captain of an American bark, which left Rio de Janeiro on Nov. 12th, reported, on arriving in Baltimore, that when he sailed there were rumors of war between Brazil and the Argentine Republic. It was said that the Argentines had 120,000 men ready to throw across the border as soon as war was declared. There have been no such rumors by cable, and a despatch on Thursday explained that the disturbing reports originated in military and naval manœuvres.

THE ADMINISTRATION AND THE TREATIES.

THERE is one reason, apart from the merits of the treaties themselves, why the batch now before the Senate should be laid on the shelf for the present, and it is a reason which is applicable to all business as well as to treaty-making. We mean the rule which forbids a man retiring from an office to lay down lines of policy or create responsibilities unnecessarily for his successor. About the observance of this rule President Arthur ought to have been more than usually sensitive, seeing that he was not elected President, and that he never would, had the matter been submitted to the people, have been charged with the great powers which he is now exercising. Of course he is, in the eye of the law, as much President as if his had been the first name on the Republican ticket in 1880; but a President who takes office under the circumstances in which the Presidency devolved on Mr. Arthur, will ordinarily, as a matter of delicacy, consider himself as charged simply with the necessary duties of the office, and will avoid works of supererogation, and above all avoid cutting out new work for his successor.

The enterprise which the President and Mr. Frelinghuysen have shown is the more remarkable because they had, on taking office, some practical experience of the inconvenience of having to take up the "unfinished business" of their forerunners. Mr. James G. Blaine took office on the 4th of March, 1881, and by July 1st he had involved the Government in a quarrel with Chili in which the very next step was war, and in a dispute with England which promised at least serious diplomatic complications, besides a grand plan for a Pan-American Convention, for which Mr. Blaine had bound us to provide "a hall" free of expense. Mr. Arthur got rid of all these cares and responsibilities in the most summary way. He sent word to Chili and England that he wished no discussion with them whatever, and he declined to furnish the hall for the Convention. If things had gone a little further, he could not have escaped so easily. But the mere prospect of the work which Blaine had managed to create for him in four months, must have made him very thankful that the activities of that statesman had not lasted a few weeks longer. As it was, he felt not the slightest scruple in throwing the Blaine plans overboard, and the country thoroughly approved of his action.

If Blaine had been elected, there can be but little doubt that he and his followers would have complained bitterly of the action of the present Administration, in trying to commit its successor to such important changes and schemes as are contemplated by the new treaties of commerce and the canal treaty. They would have said that it was unfair even for one Republican President suddenly, at the very close of his term, to impose such weighty enterprises on another coming after him; that every statesman ought to do something, at all events, toward carrying out his own plans, and not leave their execution wholly to his successor.

If the Blaine Republicans could and would say this, with how much more force can the Cleveland Democrats say it? The country has in Cleveland's election pronounced in favor of new men in the Government, and new men means new measures and new policies. It has said that it wishes Presidential recommendations now to be made, treaties to be negotiated, our foreign policy shaped, and in fact all the responsibilities of the Executive to be borne, by Democrats. It most certainly has not elected Mr. Cleveland simply to carry out a batch of treaties creating very important changes in our revenue and in our foreign relations, and committing us to the construction of a vast public work thousands of miles away, framed by the Republican Administration in its very last days.

The great issue in the late campaign was the life and works of James G. Blaine. It was his character and doings which, more than aught else, determined the result. Some people were influenced by his Little Rock transactions, and the mendacity with which he sought to cover them up; but a large number, also, were influenced by his foreign policy when he was Secretary of State. In fact, we think there can be no doubt that his impetuosity, or "brilliancy," in getting up foreign complications without the knowledge or acquiescence of the public, had more weight with a large body of business men than his moral obliquity. President Arthur is not sinning in this respect to the same degree, but he is sinning on the same lines. He has been trying privately and almost secretly to create burdens which he will himself escape carrying, and initiate enterprises the labor and discredit of which in case of failure will fall on one not only his successor, but President of another party, and will have to be shared by a different Congress from that which is now asked to sanction the treaties. These treaties are so vast and so full of remote consequences that they ought to be the suggestions of a new Administration, if of any, and ought to be dealt with, if at all, not by an expiring Congress, but by one fresh from the people.

THE CANAL TREATY.

THE full text of the Nicaragua treaty has been published by the *Tribune*, and differs from the synopsis produced by the *Times* some days ago, on one very important point, namely, the cession of land to the United States. Under the treaty the United States does not acquire, as was stated, a tract three miles wide on each side of the canal, in full sovereignty. A strip two miles and a half wide altogether, the centre line being the centre of the canal, is appropriated to the uses of the canal, but it is to be jointly owned by the two Powers, and is to be under Nicaraguan jurisdiction in time of peace. This is important because the acquisition of full sovereignty over any patch of territory by the United States, in a region where governments are so unstable and the security offered by the public force so small, would inevitably lead, by a well-known law of political gravitation, to the rapid acquisition of more, and finally to the absorption of the whole State of Nicaragua and its neighbors as well. That no danger of this exists, even under the treaty as it stands, we do not affirm. But it is certainly far smaller than that which would arise were the United States Government present in overwhelming force along the whole line of the canal, and bound to repress all disorders within a reasonable distance of its banks.

Nothing could, under such circumstances, long prevent this Government from extending its jurisdiction in Central America, and extending it so rapidly that a movement, backed by a powerful body both of financial and political speculators, would soon show itself among us toward making the canal our southern frontier. That such a movement would succeed eventually there is little doubt. All that is corrupt and reckless, as well as all that is vainglorious in our politics, would go to hasten it, and we should soon find ourselves aggrandized by the addition of three or four new States, containing more "rum, Romanism, and rebellion" to the square mile than probably any other part of the world. All the countries now lying between us and the canal contain a population of about 15,000,000, whom it is no exaggeration to describe as slightly Catholicized savages, who are still ruled by chiefs and priests under a simulacrum of constitutional government, and whose favorite pastime is rebellion. In fact, rebellion in those regions occupies very much the place in the national life which is occupied by base-ball, trotting matches, and going to the circus in ours. The Nicaraguan, Gautemalan, or Honduran gentleman rebels for the pure love of amusement, and the Indians, to whom the Spaniards have given a slight Catholic varnish, follow him readily to a three or four days' war, which pleasantly varies the dulness of tropical life. American States made up of such material would play a part in our national politics which we may safely leave to the imagination of our readers. Fancy a close Presidential contest in which the Anglo-Saxon States were pretty equally divided, with the vote of Honduras, or Guatemala, or Nicaragua still uncounted, with plenty of "visiting statesmen," of the Chandler, Brady, and Dorsey type, on the ground, keeping watch against "fraud." Fancy, too, the delegations which the Latin portion of the Union would send to the nominating conventions, and the volume of stipendiary enthusiasm which they would bring to the support of the magnetic and big-hearted and grossly slandered candidates of both parties.

The treaty as it stands is probably as moderate and as little exacting as any treaty could be made which binds the United States to construct the canal, and own it in part, and control it virtually after it is made. The independence of Nicaragua is tenderly dealt with, and there is no attempt to make invidious discrimination against the commerce of any peaceful nation. But it would be absurd to shut our eyes to the fact that the chances that Nicaraguan protection will be sufficient for the canal, and that the United States will long be able to leave such a valuable piece of property unguarded by military force in a region so turbulent, are not great. In other words, though the seeds of future danger and complication in the new treaty are small, they are there, and will need, if it be ratified, careful watching.

One objection to it, the weightiest of all to those who think public faith and honor are of

more importance than any line of communication either by land or water, is that the treaty made with Nicaragua is in direct contravention of another now in existence—the Clayton-Bulwer treaty — with England. Our faith to the observance of that treaty is as solemnly pledged as to the observance of any treaty ever made. This fact, it is perfectly true, does not bind us to it in perpetuity. It may, like all human conventions, be abrogated—with the consent of both parties if possible; by the desire of one only if necessary. But are we really prepared to take the position that it may be abrogated whenever it happens to suit our convenience or our inclination—by us alone, secretly, suddenly, without notice or discussion, as if our plighted faith meant no more to us than a passing remark on the weather? And has anything more cynical and more disheartening been produced out of the Brady-Dorsey-Clayton alembic than the news from Washington that the complaints of the English press make some statesmen there only the more eager to show the world, by the ratification of the Nicaragua treaty, how little importance American politicians attach to the word of the American people? Is it possible that we are prepared to inject into our diplomacy the peculiar humor which makes the groans of his victim such a capital joke to the faro banker? We think not. We think the canal will not compensate the American sober second thought for the stain on the national reputation left by the manner in which the Clayton-Bulwer treaty is being got rid of. What makes this most pitiful is that there is not a particle of necessity for it. There is plenty of time for everything necessary to save our credit. The future belongs to us in a sense in which no European nation ever dreams of claiming it. Every revolution of the earth puts the Isthmus more and more in our power without our saying one word about it. Nobody has been threatening to construct a Nicaraguan Canal. We can make it this year or in five years, as best suits our convenience. We have ample leisure and opportunity to relieve ourselves of our Clayton-Bulwer obligations in the way in which men of honor in all positions get rid of contracts that are too onerous or unfair. It is only sharpers who in such matters are hasty or importunate.

PROGRESS IN THE DEMOCRATIC PARTY.

We have been looking with some anxiety, since the election, for signs and indications of the existence and continued activity of that element in American politics known as the Bourbon Democracy. We have found such signs in abundance in the columns of the Republican newspapers, in the letters of Petroleum V. Nasby, and in the editorials of the New York *Sun*. According to these authorities, Bourbon Democracy is lurking somewhere in convenient ambuscade, and is preparing to pounce upon Grover Cleveland and carry him off. The very silence of the Democratic press is held to be a suspicious circumstance: it must be the stillness which precedes the storm. The Bourbon Democracy, that old, blundering, toothless giant, who has been gnashing his gums against everything good these twenty years, cannot be dead. Nor, stupid as he is by nature and muddled with drink, can he fail to see that his time has come at last; that the opportunity for which he has waited so long and dreamed so many bad dreams, has fallen into his clutches when he had least reason to expect it.

That there is a Bourbon Democracy, or the remains of one, lurking in the remote districts where the mails and the schoolmaster are infrequent phenomena, no one will deny. But that it is a controlling or even an important element in the party which carried the recent election, may well be doubted. The fact that it has made no sign for itself since the election, that it has proposed no reactionary policy, that it has made no considerable raid upon the offices, that it has found no distinctive voice among party leaders either in or out of Congress, suggests that the scythe of Time has thinned its ranks. Nor would such a supposition be at all out of accord with the processes of nature. Bourbonism on this side of the Atlantic means identification with slavery and the political and social systems founded upon slavery. Ideas outlast for some space the institutions which gave them birth, but they cease to be formidable when the institutions disappear. The men who were of middle age when the axe of war descended upon the slave power, are, for the most part, in their graves, leaving no heirs to succeed to their experiences, their sensations, their environment. Those who were then young were at the stage of life when the experiences and sensations belonging to a new environment most readily become the formative influences of character. There was nothing to propagate slavery but slavery itself. And when slavery, the parent of Bourbonism, died a felon's death, it passed away with as little hope of posterity as of resurrection. Therefore if Bourbonism has shown small signs of life since the election of Cleveland, probably the reason is that there is little of it left. There were Tories among us after the Revolution, but as they sank into their graves Toryism dwindled away. It served awhile the purposes of a bugbear, but all-healing time took it out of the category of human affairs, as it is taking, if it has not altogether taken, Bourbonism out of the politics of the present day.

There has been no reason why the Democratic party should have lived at all during the past twenty years except that there must needs be a party of opposition in every free government. The Democratic party has served this purpose. It has operated as a check upon the Republican party, and has obtained majorities of the popular vote whenever the party in power has been guilty of any striking misdemeanor. This is what an opposition exists for. Its *raison d'être* is to hold the Government for the time being up to correct standards, and to punish it when it falls short of them. But this rôle has now passed to the Republican party. The Democrats are now, or soon will be, the Government for the time being. The responsibility for misdemeanors and shortcomings will be upon them. They must offer a new *raison d'être*. The change from opposition to responsibility will be extremely trying. A party which has been out of power a quarter of a century will discover some awkwardness in taking up the reins of national administration. It cannot afford to make mistakes in the presence of so vigilant and experienced an enemy as the Republican party. Nor can it afford to stand still. Mere inertia would be the greatest of all mistakes.

In order to vindicate its right to wield the destinies of the republic it must become the party of progress. This rôle it once filled acceptably in the then conditions of the country, but so long ago that few persons now living know except through books what those conditions were, or who were the chief actors. When it ceased to be the party of progress it went out of power and into the lowest pit of degradation. The Republicans became the party of progress, and they remained in power so long as they continued to vindicate their title to that distinction. They lost it some years ago. They were unable to accommodate themselves to new ideas befitting the changed conditions of the country, such as civil-service reform, revenue reform, or any sort of reform. Government had become to them a mere matter of bookkeeping, of debits and credits, wherein the profit-and-loss account of the leading politicians was the chief if not the only concern of caucuses and conventions. Mr. Blaine represented profit-and-loss more completely than anybody else in the party. Therefore he represented the most active force in the party, therefore he was nominated for the Presidency, and therefore he was beaten. Mr. Blaine might have been elected, in spite of his bad record, if his party had continued to stand for progressive ideas and to embody the spirit of the age. If the Democratic party would profit by the mistakes of its adversary, as well as by its own mistakes, it must make itself once more the party of progress, as it was in the olden time.

THE INTER-STATE COMMERCE BILL.

The Inter-State Commerce Bill, now engaging the attention of Congress, is occupying time which might more profitably be spent upon something else. Mr. Reagan's measure had its beginning at a time when the railroad problem was a very different thing from what it is now. Complaints of excessive charges and unjust discrimination were then frequent and, perhaps, well-founded. They were dealt with in an imperfect way by the States, and the resulting crop of Granger legislation was not satisfying. The legislatures had sought to deal in a summary manner with the most complex problem of modern times, a problem whose factors are to be sought not merely within the boundaries of a single State, not merely within the boundaries of the United States, but in every country with which we have commercial relations. As we write these lines, our attention is arrested by a statement that the ship-owners of Hamburg are perplexed by a regulation of the German Government which proposes to tax petroleum barrels as cooperage. As Russian petroleum enters Germany in railway tanks, it will escape the duty, and thus the German ship-owner as well as the American oil-producer will be placed at

a disadvantage in the market. One of the elements of the cost of petroleum in Hamburg is the charge of American railways for carrying it to the seaboard. Therefore, any legislation of ours which deals with railway transportation must take into account what is going on in Germany. Still more must it take account of what goes on in India, in Egypt, in Australia, and in every country that competes with us in the exportation of wheat or cotton.

The Granger legislation having yielded results only partly satisfactory, the subject was taken up by Congress with the object of applying the same principles to inter-State commerce that had been applied more or less rigidly to local traffic. The Reagan bill, which has dragged its slow length through so many sessions, is the product of this endeavor. But meanwhile the railway problem has undergone a change. Competition has accomplished most of the ends which Grangerism aimed to secure. It has reduced the rates of transportation for persons and property far below the dreams of the Grangers themselves. This result has not been confined to the so-called trunk-lines. It has extended to the Missouri River, to Colorado, Utah, Montana, and the whole Pacific Coast, to the South and Southwest, to New England and New York. It is working night and day in countless directions ceaselessly and irresistibly. It has brought railway kings to their knees, and made railway stockholders objects of commiseration as they were once objects of envy or of hate.

Now, any comprehensive or intelligent treatment of the railway problem ought to embrace the question of railroad construction as well as of railroads already constructed. If the law of competition is to be left in full force (and there is nothing of which railway men stand in so much terror), it is both unjust and inexpedient to put shackles upon the forces which are competing with each other. It has been proved that competition is more effectual than statute law to reduce rates. If we divide the whole people into two classes —railway owners and railway customers—and conceive that the interest of the latter is to get the lowest possible scale of charges, competition will surely give it to them. It will not stop at the point of giving the lowest rate consistent with a fair dividend on capital invested, which is the *ultima Thule* of Granger legislation. It has gone further in many instances. It has required railroads to be run for operating expenses only; it has reduced operating expenses to a minimum and even below the point of safety. So far as the Reagan bill has this end in view, it will be as superfluous as an attempt to supplement the ocean tides with a squirt gun.

But it is said that unjust discriminations must be attended to. Very well. What is a discrimination? and what is an unjust discrimination? These are questions to be determined by the weight of evidence. They cannot be determined by an act of Congress. Would it be an unjust discrimination to carry petroleum to the seaboard for shipment to Germany at a less rate than is charged for petroleum to be consumed in New York? Would it be wrong to carry wheat on through bills of lading from Chicago to Liverpool at less than the proportionate rate from Chicago to Boston? If yea, the farmers of Iowa and Dakota will feel the consequences more heavily than the railroads. Examples might be multiplied, without extending our range of vision across the water, to show that any procrustean rule on the subject of discriminations will cause more injustice than it will cure. What is wanted to deal with grievances of that class is a commission or board like that of Great Britain, clothed with such powers as experience has shown to be necessary. The power of public opinion would be sufficient to rectify nearly all the abuses complained of.

Considering the complexity of the railway problem, the gigantic interests involved, the tendency of special interests to get the better of general interests in all matters of law making and law administering, and considering especially the character of our institutions, our business habits, and mental hereditaments, we think that any arbitrary interference with the law of competition, or any attempt to force it prematurely into channels which it has not yet invaded, would be a grave mistake. But if such interference must be had, it should not stop with the regulation of existing railways. It should provide some tribunal to determine what new competition is admissible—that is, what new railways may be built. Justice requires no less. If the Legislature takes railway property out of the hands of the owners in whole or in part, thus interrupting the play of natural forces, it makes itself responsible to some extent for the earning power of the roads, and ought, therefore, to exercise discretion in allowing new roads to be built to the injury of old ones. In most of the States the building of new railways is strictly a matter of private judgment. The right of eminent domain practically belongs to any group of adventurers who can furnish or borrow the money to survey a new line. That this right has been much abused is certain. It has generally happened that those who have abused it have received sufficient punishment in the loss of their investments. It may be safe to trust to the deterring force of recent examples to prevent the paralleling of old lines, but it is worth asking whether, in the older States, at least, the power to determine the needs of the community for railway extension, involving as it does the rights of all landowners, should not be reserved by the Legislature itself, instead of being left to the caprice of individuals. At all events, the Government should either let competition work out its results without hindrance, or put definite limitations upon it.

TARIFF REFLECTIONS.

A NATIONAL convention of swine-breeders and pork-packers has been called to meet at Washington city on the 14th of January, to consider the restrictions imposed by Germany and France on the importation of pork from America. The call invites those interested to meet for the purpose of "considering what action should be taken by our Government for the purpose of removing the unjust restrictions and suspicions which now attach to American hog products abroad." Retaliatory measures are not suggested in the circular, although measures for removing unjust suspicions are mentioned. The call is temperate and judicious in tone, and it is to be hoped that the Convention will be fully attended, not only by the producers and dealers in pork, but by State Boards of Agriculture, who are also invited to take part in its deliberations. One of the things to be considered will undoubtedly be the protective policy upon which these restrictive measures are based. Disguise it as they may, the policy of France and Germany in excluding American pork has its origin and motive-power in the landed interest of those countries, exactly as our policy of restricting the importation of foreign goods has its mainspring in our own manufacturing interests. A distinction is sought to be drawn between exclusion and restriction, but it is a distinction without practical difference. It is said by some casuists that if Germany would merely impose a duty, no matter how high, on all foreign pork, we should have no cause to complain; but that a discrimination against American pork is insulting and intolerable. If Germany should become convinced of this and clap on a duty as high as that which we maintain against her linen, crockery, and glassware—as she would probably do if she did not apprehend trouble in explaining the matter to her own people—the position of the American swine-breeder and exporter would surely not be improved.

Apart from the consideration that each country has the right to regulate its own trade policy and its own sanitary policy, and that no other country has the right to question the one or the other, we have already exhausted the arsenal of retaliation, or so nearly that what remains would scarcely be felt on the other side of the water. Our tariff was intended to discourage trade with Germany and France as well as with England. It was not grounded upon conceptions of public health—such conceptions would have been rational if real and not feigned—but upon the conception that the producers of certain articles in this country are entitled to a higher price than the natural laws of trade would give them. This is exactly the conception which the advocates of retaliation believe that Germany has grounded her exclusion of American pork upon. If they are right in this belief, and we think they are, we have already retaliated upon Germany in a profuse and liberal manner. We impose a duty of 45 per cent., for instance, on the steel rods from which barb-wire fences are made, and which are produced in Germany at lower rates than in England. We tax the toys of children and the apparatus of philosophers impartially 35 per cent. ad valorem, and the books of both 25 per cent. We tax German and French sugar 70 per cent. We tax the work of German and French artists 30 per cent. We "got even" with both Germany and France long before they began.

But if we have nothing to retaliate with, we have a great deal to think about. And here the producers of iron ore come to our assistance by holding a conclave at Cleveland, Ohio, and adopting a memorial against the Spanish treaty, saying that although the island of Cuba does not now yield any appreciable quantity of iron ore, yet she is capable of producing a great deal,

and that to admit this ore free of duty will be rank injustice to the Lake Superior miners—who, by the way, are producing none at the present time, although protected by a duty of seventy-five cents per ton. The duty on iron ore is the last expression of absurdity, the very caricature and laughing-stock of a protective tariff. Iron ore lies at the foundation of all industries. All manufactures, without exception, begin with it. Agriculture begins with it. House-building, ship-building, railway-building, carriage-building, begin with it. Any system of protection constructed upon any theory which dare show itself in print and stand up for honest debate, spurns the idea of taxing the things which are produced by mere digging with spades and pickaxes, and which constitute the raw material and *sine qua non* of intelligent labor. Iron ore is the parasite and not the child of protection. It has got itself into the company of protected interests in spite of protection itself. It has fastened itself there so strongly that the parasite cannot be detached without bringing away some part of the original tree. It is not the only parasite that afflicts the parent stem: coal, copper, lead, wool, and lumber are its true counterparts.

A few years ago an attempt to put ice on the list of articles protected by the tariff was laughed out of Congress. It was said that ice makes itself, and that Jack Frost needs no assistance from the legislature to enable him to compete with the pauper labor of Europe. Quite true, but does not iron ore make itself also? The labor of digging the one is the correlative of the labor of cutting and storing the other. Ice does not constitute the basis of any other industry except that of soda water and sherry cobblers. If we are to have a duty on iron ore to protect the Lake Superior miners against the possible competition of Spain and Cuba, let us no longer make light of the ice-cutter when he laments the pauper labor of distant Norway.

THE REDISTRIBUTION BILL.

LONDON, December 5.

YOUR readers will remember that the angry contest over Parliamentary reform, which has occupied us here since the House of Lords refused in last July to pass the Franchise Bill, was suddenly suspended by the offer of Mr. Gladstone to discuss privately with the leaders of the Opposition the principles on which seats should be redistributed, and in fact to settle the draft of a bill with their concurrence. They accepted the offer, seeing in it a triumph for the House of Lords and themselves, expecting to secure terms which would safeguard their party interests, and fearing that a refusal would provoke the displeasure of their own more timid supporters. Accordingly a series of private conferences took place between Mr. Gladstone and two of his colleagues on one side, Lord Salisbury and Sir Stafford Northcote on the other, while the nation looked on in speechless surprise. A conclave of five political opponents who had just before been denouncing one another up and down the country, settling the biggest question of our generation over a table in a small room, is so unprecedented in our history that it needed all the authority of the chiefs to still the murmurs of their parties. Those murmurs would indeed have swelled into audible cries among the Radicals, suddenly reined back in the full career of invective, but for the assurances quietly passed round that all was going well, and that they would find they had got all they wanted.

Last Monday the cat was let out of the bag, and it proved a tiger. The bill goes further than anybody expected six months ago, or than could have been divined from Mr. Gladstone's earlier statements. It is not a reform but a revolution. It takes away 160 seats from the smaller boroughs, depriving some of separate representation (*i. e.*, merging their voters in the general mass of county voters), and taking away one member from others which till now have returned two members. The lower limit for separate borough representation is fixed at a population of 15,000, and of boroughs with two members at about 50,000. Of these 160 seats a few are given to new boroughs, a much larger number are added to the great cities with a population exceeding 165,000, and a still larger number to the counties, because these last are having their voters far more than doubled in number by the extension to them of the household suffrage which has hitherto been confined to the boroughs. The magnitude of the change may be measured by the fact that the great Reform Bill of 1832 reallotted only 143 seats, 17 less than this bill.

However, this change is not that which has excited the most interest. Something of the sort was foreseen, was indeed inevitable, though few people expected the disfranchisement to be so bold. A point on which far greater uncertainty existed was as to the arrangements for representing the big cities and the counties. Hitherto no city (except the ancient city of London, with its four members) has had more than three members, and those with three (Liverpool, Manchester, Birmingham, Leeds, Glasgow) have returned their members *en bloc*, not by districts, although each voter has been allowed to vote for two only, so as to give the inferior party, where it is considerable, one member and the dominant party two. Now these large cities receive several additional members. Liverpool is to have nine in all, Manchester six, Glasgow and Birmingham seven each, Leeds and Sheffield five each, and so forth, while the ten Parliamentary boroughs which now make up London, and which, taken together, return twenty-two members, are in future to be represented by fifty-five. The bill proposes to cut up these cities into equal electoral divisions, each of which is to return one member only, and the same treatment is meted out to the English counties and county divisions, which, from having had usually two, in some cases three members each, are now to be rearranged into divisions with one member each. These are sweeping changes, which disturb all our old ideas and habits and affect the large majority of members of the House of Commons, displacing some, altering the constituencies of others. The third notable feature of the scheme is the proposal to add eighteen members to the House of Commons, bringing its number up to 670. Six of these are to be allotted to England and twelve to Scotland, which has been much under-represented. The motive is the wish to avoid the resistance of the Irish and Welsh members to a reduction of the representation of each of those countries—greater in proportion to its population than that of England and Scotland.

These are the salient features of the bill and the provisions which now absorb the attention of the country. While the House of Commons is affirming its general principles by giving it a second reading, the House of Lords is passing, with scarcely a word of debate, the County Franchise Bill over which the battle was lately raging. It is now forgotten, and the discussions of the next few months will turn on the rearrangement of electoral areas. To discuss the merits of the scheme would weary your readers unfamiliar with the details of our English elections. What I will attempt is to describe how it has been received, and what anticipations are already being formed as to its effect.

As it comes stamped with the approval of the Ministry and the chiefs of the Opposition, neither party as a whole can object to it. But there are independent critics in both parties, and the edge of criticism is in many cases sharpened by resentment at the secrecy with which the negotiations of the chiefs were conducted, and the slight which they thereby passed on their followers. The Tory party seems still too startled and dazed to know what to think of the scheme. They were prepared for the extinction of small boroughs, and as these small boroughs returned more Liberals than Tories, they do not regret that extinction. They demanded a great increase in the representation of the counties, and they have got it. They think that the plan of dividing cities into equal electoral one-membered districts will favor them, by enabling them to win the residential quarters of the cities. Such at least is the notion that seems to have influenced Lord Salisbury and Sir S. Northcote in approving the district plan. They are still more hopeful of gains through the subdivision of counties into one-membered districts, reckoning that the influence of the landowners (mostly Tory) will be stronger in a small than in a large electoral area. These points give them some encouragement. Yet when they look at the bill as a whole, and see what an advantage it gives to the numerically stronger party, which their party is not and is not likely to be, their hearts fail them, and they can't help wishing for some further bulwark against the incoming wave of Democracy. Some have openly charged their leaders with fatal folly in going into council with Mr. Gladstone, who was sure to outwit them. Others doubt whether better terms could have been made, but regret that every device for postponing the change for some years more has not been employed. But the bulk have not yet formed any opinion, being indeed much puzzled to know how the newly enfranchised voters in the counties, and especially the agricultural laborers, will exercise their rights.

The Liberals are better prepared to estimate the schemes, because they have been calling out for redistribution for years past, and putting forward suggestions regarding it. Some of the moderates are alarmed. They think the bill too sweeping, deeming it nothing less than a complete transfer of such power as the upper and middle classes possessed to the poorer class. But the Radicals, who are far more powerful in the country than these moderate men, and more active, if not more numerous, in the House of Commons—the Radicals are well satisfied, for the principle of apportioning representation to population receives an application far fuller than in any previous measure. Some would have liked to see the disfranchisement of small boroughs carried rather further, but the immediate gain of strength for their party seems to them so great a boon that they are glad to accept a scheme less than perfect.

From this general approval of the bill one must except two points in it. One is the proposal to raise the total strength of the House of Commons from 652 members to 670. The addition seems small, but many people believe that a change ought to have been made the other way, and the House reduced to 450 or 500 members. The attendance of members, which seldom exceeded 200 before the Reform Act of 1832, has steadily risen to between 350 and 400, and will doubtless rise far above 500 under these new acts. There is therefore a danger that the House, which Mr. Bagehot well described as a public meeting, will become more and more difficult to manage, with an increasing number of persons

desiring to speak, and an increasing disposition to be swept away by those fits of excitement which are more sudden and potent when they act on a crowd. Thoughtful observers had therefore been hoping that this occasion, the best which we have enjoyed for a long time past or may obtain for a long time to come, would be seized for reducing the House to more manageable dimensions. Their disappointment is the greater because it was supposed that Mr. Gladstone, who has more than once spoken of the decline in the business aptitudes of Parliament, would have been particularly willing to try whether a reduction of quantity might not secure an improvement of quality.

This question is, however, one which does not much interest the run of politicians. The addition of eighteen members is, after all, not very large, and it furnishes a means of avoiding the troublesome problems which the over-representation of Ireland and Wales raises. Far more generally and warmly criticised is the other novelty, that of cutting up cities and counties into one-membered divisions. It is generally attributed to the influence of the Tory leaders, because in a draft scheme which had been prepared for the consideration of the Government two months ago, and which somehow leaked out and got into the newspapers, the divisions of cities and counties were as a rule to have returned two members each. As each party assumes that whatever the other suggests it suggests for some selfish party purpose, the idea that this change of plan is due to the Opposition, and a term of the compact between them and Mr. Gladstone, prejudices some Liberals against it. There is a strong feeling in the great cities against being cut up into electoral districts, for this seems to involve the loss of their historical traditions. And among thinking men of both parties there is a fear that these new divisions may return members of an inferior type, persons unknown beyond their own ward; persons whose influence will depend on their owning a manufactory or a brewery which employs a large number of voters or on the profuseness of their subscriptions to local charities. Putting these two grounds of aversion together, there will be found a good deal of hostility to this scheme. Mr. Gladstone defended it by referring to the example of the United States and the British colonies, as well as of most foreign countries, declaring that a system which had been so generally adopted in other countries could not work very badly. But a stronger argument is found in the difficulty of proposing any better plan. To give each electoral division two members would make little difference, for the large cities and all but a few of the smaller counties would, under this plan, also be cut up. To give each undivided city its full number of nine, or seven, or six members (as the case might be), and let all these members be voted for on one ticket, would, it is thought, throw far too much power into the hands of the majority in each city. Liverpool, for instance, might return nine Tories, although the Tories are usually only four-sevenths of the constituency. Leeds would return six Liberals, although the Liberals are only three-fifths. This result is deemed so unfair that a party has been formed of persons on both sides in politics to advocate some scheme for representing minorities, and amendments with this view are to be moved when the bill enters committee. Respectable as some members of this section are, they have little or no prospect of success. The country turns away from elaborate schemes which most people cannot, or think they cannot, understand; and grave as are the objections to the one-membered districts, they would be preferred to anything like what Mr. Bright used to call the "minority dodge." We shall, however, soon be able to judge better of the views of the mass of local politicians, for Parliament has adjourned for months, and the friends of proportional representation (as they call their scheme) are going to spend these months in trying to popularize it.

It remains that I should endeavor to forecast the political results of the bill if carried (as everybody expects it to be); but this is a matter which must be reserved for another letter. Y.

Correspondence.

THE EFFECT OF SUFFRAGE ON WOMEN.

To the Editor of The Nation:

Sir: In your paper of December 4, "An Independent Massachusetts Woman" writes that the attitude of the *Woman's Journal* during the late campaign betrayed "immaturity of judgment," and then asks if it is fair to expect women to be free from bias or to have a clear perception in matters of public interest, without the right of participation in them. The writer thus indicates her belief that the right to vote matures the judgment; but when, in the next sentence, she ascribes the "egregious folly" of the men who nominated Mr. Blaine to a "fatal lack of judgment on their part," she breaks the point of her own argument. For *their* lack of judgment certainly did not come from a lack of the right to participate; neither could it be laid to immaturity, since the men who found it hardest to clear their perceptions of right and wrong in the late campaign were notably among the oldest and most experienced in politics.

I agree with your correspondent's and the *Nation's* opinion of the tone of the *Woman's Journal* in this campaign, and I point further to its tone in other campaigns in which it has taken part as evidence that, neither by years of experience in public debate, nor by that education of the ballot of which many of its contributors have already had the benefit, have women been brought to clear and unprejudiced views of public matters, which are, it is true, rare among men. On the contrary, this journal has never furnished reason to believe that either by the average of their ballots or by the average of their campaign work women would improve the tone of politics.

Furthermore, the credulity of those people who believe that the women who would take part in politics if they had the right, would lead men into gentler ways and purer methods, and soften the barbarities of political contests, is surprising in view of the facts already at hand. The gallant men who avow this belief doubtless have in mind individual women whose help they would value; and their generous desire to endow women with all their rights, as with all their worldly goods, deserves acknowledgment from the sex. But they are yet far from persuading a large proportion of women that they had better take part in contests in which, with their keenly sensitive and excitable natures, they are likely to be led to greater heights and deeper depths of bitterness and vindictiveness even than men reach.

Ample illustration of this has been afforded in the columns of the *Woman's Journal;* and it is to be noted that the billingsgate one finds there does not come from fishwives, but from women who are doubtless models of many private virtues. Take this as one example out of many, from a letter in their paper of June 21—written, it must be said, in the soreness of a political defeat after hard campaign work—by a woman who has been proposed for Governor of her own Territory, and who is said to be typically excellent in her domestic character:

"These ward strikers kept themselves busy all the day in putting 'No' on all the tickets voted by all the ignorant, blear-eyed, red-nosed, beer-guzzling pauper hordes who flood our land from foreign climes, bringing with them the vices of their barbaric natures and the tyrannical spirit of oppression that they were subjected to themselves when existing under monarchical rule across the seas."

This is what the defeated woman in politics called our German fellow-citizen when he voted against woman suffrage; what she has been known to call women who disagreed with her, decency restrains me from quoting. Yet the minority of the Congressional Committee on Woman Suffrage, last year, in their report to the House of Representatives, said: "In political discussion, acrimony and hate are not essential and have of late years quite perceptibly diminished, and will more and more diminish when discussions by women and in the presence of women become more common." The last election has proved them to be over-sanguine in their statement of the fact, and the *Woman's Journal* ought to be able to satisfy them of the weakness of their assumption.

Another Massachusetts Woman.

Boston, December 13, 1884.

FILTH IN THE DAILY PRESS.

To the Editor of The Nation:

Sir: It is gratifying to read your item on page 513 of to-day's issue, where you denounce the filthy items of "elopement," "abduction," etc., etc., and stigmatize them as "filth, not news," as they really are.

Cannot there be a crusade against this way of filling our daily papers? Decry their being noticed *tout au long.* If named at all, the simple fact in two or three lines is sufficient, and often more than sufficient. Pruriency would hardly exist if it had not such feed to fatten on.

The other day an Australasian paper was handed me, and I could not but notice the contrast between that and our daily papers. There were quite as many items, in quite as great variety of incident and person—matters criminal, etc., but not a single instance of "filth."

I would like to see you devote at least one item in every issue of your paper to initiate a strong crusade against the growing offence.—Respectfully, R. C. Moffat, M.D.

Brooklyn, December 18, 1884.

THE WEST NOT ANTI-BLAINE.

To the Editor of The Nation:

Sir: In the article on "Blaine as a Republican Mistake," in your issue of November 27, you quietly assume that all of the falling off in Mr. Blaine's plurality from that of Garfield in 1880 is due to "Blaine's weakness as a candidate," with no recognition of any other element which has weakened the Republican party and diminished its vote.

This is not fair reasoning, and it certainly is no correct account of the state of things in Iowa. Mr. Blaine was from first to last by all odds the leading choice of the Republicans of Iowa, and no other man could have polled so large a vote as he did. Quite other reasons must be given for the relatively small majority of 1884. The Republican party had squarely endorsed prohibition since Garfield's election, and many of those who voted for him now voted for Cleveland on that ground.

In several of the other States referred to, other elements entered into the contest which should modify your estimate of Blaine's weakness and unpopularity. He was not my first choice for the nomination, but I desire to be just and fair toward him. M. K. Cross.

Waterloo, Iowa, December 10, 1884.

PSYCHIC RESEARCH.

To the Editor of The Nation:

Sir: I beg to send you, with request for publication, a letter recently addressed to the editor of *Science*, which has been declined on the ground that "it is made up entirely of assertions to which no evidence is attached, and which are at the same time contrary, as far as is generally known, to the accepted laws of matter."

The operations of the London Society for Psychic Research have already placed certain obscure phenomena in a novel light, and have excited widespread interest. The fact of telepathy has been established, in my judgment, and now engages public attention through the medium of the press. The *Nation* has published several articles upon the subject; and *Science* is printing a correspondence between Mr. Gurney, Honorary Secretary of the London society, and Professor Newcomb, the distinguished astronomer. The latter asks, "Can ghosts be investigated?" I reply, "Yes," stating how these objects can be and are being investigated, and offering my own investigations in evidence. *Science* declines my letter on the above-mentioned grounds. My inference is, that *Science* thus prejudices the whole question, virtually proceeding upon the very premise that I guarded against, viz.: a preconceived theory of what is naturally possible and what is naturally impossible. If *Science* only publishes that which "is generally known and accepted," what service can it render to the progress of science? To decline my letter is to set itself dead against even a statement of what is to be investigated by the Society for Psychic Research, whose object is to examine things *not* "generally known and accepted." I must, therefore, characterize the attitude of *Science* as one eminently unscientific, and, I will add, anachronistic. Under these circumstances, will the *Nation* do the subject justice?—Very truly yours,

Elliott Coues.

"CAN GHOSTS BE INVESTIGATED?"

To the Editor of Science:

Sir: The simplest, safest, and most complete reply to this question, asked by Professor Newcomb in *Science*, No. 97, is, that thousands of the things called "ghosts" have been and are being investigated annually, monthly, weekly, daily, and perhaps hourly, by thousands of persons of every grade of intelligence, from those who are most vulgar, ignorant, and credulous up to the most learned, intellectual, and sceptical of scientists. *What these things are*, is another question I do not here touch upon.

"Ghosts" can be, have been, and are being investigated by the several kinds of people indicated above, by the following methods:

(*a.*) By the natural exercise of the physical sense of smell. "Ghosts" frequently (not usually) emit a perceptible odor, sometimes very strong, sometimes fragrant, sometimes the reverse, nearly always peculiar to themselves.

(*b.*) By the natural exercise of the physical sense of sight, in the same way that the objectivity, reality, solidarity, size, shape, motion, etc., of other objects are perceived by the eye.

(*c.*) By the natural exercise of the physical sense of hearing. Sounds proceeding from "ghosts," whether those that cannot be distinguished from the sound of the human voice, or those that result from contact with other objects, can be heard; (*b*) seeing "ghosts," and (*c*) hearing them talk, being the usual methods of "investigation," especially suitable for beginners in this line of experimental research.

(*d.*) By the natural exercise of the physical sense of touch. "Ghosts" can frequently (not always, nor even usually) be felt of and handled in any way that would be reasonably decorous in the case of a living person.

To recapitulate: "Ghosts" can be "investigated" by smelling, hearing, seeing, and touching them. There are also other methods, as follows:

(*e.*) By weighing these objects on any suitable platform scales, in the same way that any other object, as the investigator himself, might be weighed.

(*f.*) By the physical, chemical, or microscopical examination of detached portions of them, as hair, nails, or pieces of any substance which may envelop them more or less completely.

All of which methods I myself, personally, have repeatedly and successfully employed in my own investigations, excepting (*e*), and I am ready to give the results of my experiments to any scientist, or to any other creditable person or body of persons who may wish to have them.

Among some of the "conditions" most essential to successful experiment in this difficult line of scientific research I will mention—

1. Freedom of the mind of the investigator from any preconceived theory of the "naturally possible" and the "naturally impossible."

2. The consent and coöperation of the object to be investigated.

Since Professor Newcomb has justly insisted upon the importance of mutual understanding in the use of words, let us see if we can agree upon a definition of that thing which each of us calls a "ghost" in our respective articles.

If, for example, Professor Newcomb and I should together see rise up out of the floor, immediately in front of us, a luminous vapor; if we should watch it intently and see it gradually condense and take the definite form of a human being, occupying say three minutes in the process; if then it should move about the room like a human being, and talk and act in all respects like one; and if we together touched and handled it; and if, during conversation with it and while our hands were upon it, the object should disintegrate itself, dissolve, and vanish; and if, upon comparing notes subsequently, we found that our observations tallied exactly—would Professor Newcomb agree with me to call that thing a "ghost"? That is what I mean by "ghost" in this letter; and I have investigated that kind of a thing, by the methods above stated, on many occasions, more or less satisfactorily and conclusively, sometimes with results in perfectly substantial accord with the hypothetical case I cite in illustration.

The term "ghost" is objectionable in this connection, for obvious reasons, one of which is that "ghost" ordinarily means an alleged apparition of a dead person; in short, "a spirit," in the concrete. To call the object I have described a "ghost" or "spirit," is to prejudge and pronounce upon *what kind of an entity it is;* this is unscientific. A better name is "veridical phantom," or "phantasm." Respecting such objects of investigation I will here say further:

(*a.*) A veridical phantom is a substantial (or material) *thing;* an objective reality, possessing size, shape, solidarity, gravity, and capacity for spontaneous motion and locomotion—qualities readily observed by the physical senses.

(*b.*) The process of its gradual integration and disintegration may be watched, and the phantom may be handled during the process.

(*c.*) The process of the gradual excretion or excrescence of a veridical phantom from the body of a living person, and its subsequent resorption into the body of the same person, is one which may be watched, and the phantom may be handled during the process.

(*d.*) Some persons, to my own most positive and unequivocal knowledge, have the power of causing a veridical phantom to issue from their own bodies, of their own conscious volition, and to measurably direct the movements and other actions of this phantom, producing visible and tangible effects at a distance from the place where their living physical bodies are at the time, and constituting a phenomenon known as "projection of the double"—one of the two principal kinds of what are called "phantasms of the living," the other kind being the issue of a similar phantom without the knowledge or volition of the individual.

The "investigation" of the above-described phenomena is as open to any one, of course, as it has been to me, during the several years that I have conducted my experiments with various persons both in Europe and in this country; the verification of my statements, or the proof that they have no foundation in fact, should be comparatively easy, by the methods I have indicated, or by others which a trained scientist like Professor Newcomb can readily devise.

Distinctly, I decline to commit myself now to any *explanation* of these phenomena. I decline at present to say even what I think, or believe, or suppose, their real nature to be. I simply assert and declare the objective reality of the things I have described, to answer the question, "Can ghosts be investigated?" Emphatically and without reserve, I say yes; veridical phantoms can be investigated.—Very truly yours,

Elliott Coues.

1726 N Street, Washington, D. C.

TELEPATHY.

To the Editor of The Nation:

Sir: In connection with the numerous well-authenticated circumstances which tend to prove that Telepathy deserves the serious attention of science, the following incident may not be out of place.

Several winters ago, there lived on the location a woodsman and his wife, persons possessed of perhaps rather more than the average intelligence and education of the ordinary mining classes. The sympathy between them was such that each seemed to thoroughly understand the thoughts of the other without the use of words, which they scarcely ever used except in the presence of others. When in separate rooms either could immediately tell what the other had written. At greater distances each was subject to the moods of the other, but any deeper understanding was reached at the expense of great mental effort.

In January, 1881, the man, who was chopping in the brush, severed an artery in his leg, and, there not being any assistance at hand, he bled to death. At about the time that the wound must have been inflicted, the woman rushed into a neighbor's house, declaring that her husband was dying; and, though ignorant of his whereabouts, led a small party directly to the scene of the accident. The woman has been insane ever since.

If any one is anxious to learn more of this remarkable case, I shall be most happy to answer their inquiries in detail.—Yours,

George Russell, M.D.

Calumet, Mich., December 17, 1884.

THE ETYMOLOGY OF JANUS.

To the Editor of The Nation:

Sir: It seems to me that the opinions of your correspondent in No. 1016, relative to the etymology of the above word, are sadly out of date, both in reference to the derivation which he favors and also to his strictures upon 'Harper's Latin Dictionary.' As to the derivation from di, div, let me quote Corssen, 'Krit. Beiträge,' p. 262:

"Pott's Zusammenstellung von J-anus für Di-anus, Div-anus mit Di-ana, Griech. Δι-ώνη, und die Ableitung dieser Namen von divo, Himmel, ist *nicht zu bezweifeln*." (E. F. I. 97).

The italics are mine. Corssen's work was published in 1863; so much for the novelty of this derivation.

On the other hand, Vaniček's 'Griech.-Latein. Etym. Wörterbuch,' published in 1877, p. 750, taking the root JA gehen, kommen, explains janua (Durchgang=) Thüre; Jānus = Pförtner. By Vaniček's notes on this explanation I find that Curtius (1873) and Schömann *essentially* agree with him; while Grassman, Kuhn (1852-77), and Legerholtz essentially agree with Pott.

In the light of this evidence, it seems hardly proper to claim novelty for the first derivation, or that a scholar is behind the times for accepting the second. W. A. M.

College Hill, O., December 20, 1884.

DARWINISM IN THE SOUTH.

To the Editor of The Nation:

Sir: On almost every point that the *Nation* touches, it is distinguished by the accuracy of its knowledge. But it cannot be expected to know everything, and the reference to the Woodrow trouble in Columbia Seminary shows that Southern Presbyterian seminaries are among the subjects upon which its knowledge is at fault. Columbia Seminary was the scene of the labors of the late James Henry Thornwell, D.D., the friend of Calhoun and Sir Wm. Hamilton, and in his day there could arise no subject of thought or speculation that did not immediately engage the attention of his acute and powerful intellect; and although he died before the evolution hypothesis had taken a prominent position in the thought of the world, the spirit of investigation and broad scholarship that he left behind him makes it safe to assert that Darwinism was a familiar topic of discussion in the halls of Columbia as soon as in Harvard or Yale.

Of Union Seminary, Va., I speak from experience. In 1875 the Rev. R. L. Dabney, D.D., published his 'Sensualistic Philosophy of the 19th Century,' being a course of lectures I heard him deliver in the autumn of 1874; and they were but the systematic embodiment of the instructions he had been giving his students from the first appearance of the present scientific speculations. The mistake of the *Nation* is a very common one: that of supposing that because men are not shaken in their old convictions by new speculations, they have, therefore, given them no attention, or, as you imply, are ignorant of them altogether. But there are those who have not only tasted, but drunk deeply of the prevalent theories of the day, and, turning away unsatisfied, have pronounced that "the old is better."

Very respectfully,

Peyton H. Hoge.

Richmond, Va., December 20.

MONSTER ASYLUMS.

To the Editor of The Nation:

Sir: The late fire in Brooklyn which destroyed the Children's Asylum, and, with the building, the valuable lives of two or three women and many little ones, points a moral which thus far has not been noted.

Why should seven hundred children and over, nearly a thousand souls in all, be shut up under one roof in this great America? Why should children be thus confined and pauperized, when they are wanted all over our vast continent? It is an abuse that might well be visited with the scourge of fire, which we understand has already before descended upon them. How petty the ends appear for which our governing bodies are spending or wasting their time, while such wholesale deterioration of life is allowed in the heart of one of our most enlightened cities! These children are future citizens; and what preparation can they have for the duties of public or private life, thus institutionized (as it has been proved they always become, in the brief space of one or two years)?

Such treatment of young persons is a conservative mistake, inherited from the middle ages of Europe by the Catholic Church; but the Government of America has a prior right to the equal education of her children, and our people are becoming, it is hoped, too wise in the problems of pauperism to support such reservoirs of criminal heredity as these monster depots for the maintenance of children. Annie Fields.

148 Charles Street, Boston, December 22, 1884.

THE OLD STONE MILL AT NEWPORT.

To the Editor of The Nation:

Sir: A person who lives quite a moderate number of years has occasion to see two or three generations struggling with the same problems, and falling successively into the same errors. It is a pity that there is not a point on the earth's surface where a gigantic tablet, marking "Errors finally corrected," could be mounted. There is no reason why Mr. Chas. S. Peirce or any other gentleman should discuss the measurements of the "Old Stone Mill." Its history and use were settled beyond appeal by a pamphlet published by the Rev. Charles T. Brooks at Newport in 1851, thirty-three years ago. If this has not gone to a second edition later, it is because of the limited interest necessarily felt in regard to such a subject, but it can be found in most public libraries.

The pamphlet in question has three engraved illustrations. It is well known that on the east coast of Ireland and the west coast of England there are several round stone mills resembling this at Newport. One engraving in the pamphlet represents such a mill five miles from Leamington, another the old Stone Mill itself, and a third the old mill or baptistery at Mellifont Abbey in Ireland, all of which are nearly identical in form and decoration.

At the time this pamphlet was printed there were aged persons living who could give hearsay evidence as to the designation of Newport Mill as far back as 1699. It had originally been a "powder mill," with a circular roof, and when the wind required that wings and roof should be turned round, it took a yoke of oxen to do it. The will of Benedict Arnold, first Charter Governor of Rhode Island, calls it, in 1677, "*my stone-built wind-mill*," and there are pretty good reasons for supposing that Arnold himself built it in place of a wooden mill which blew down in 1675. The great grandson of Arnold always spoke of the mill as built by the Governor, and of the field in which it stood as the "Mill Field." In view of its likeness to the old Leamington Mill, it is a little curious that he mentions in this will a farm called "Lemmington Farm," which he leaves to his daughter Freelove, and it was from the neighborhood of Leamington, England, that the Arnolds came to America. The chimney of Arnold's house was pulled down in 1780, and proved to be of stone and hard-shell cement identical with that used in building the mill. Arnold's granddaughter married Edward Pelham and inherited the old mill. In his will, dated 1740, Pelham speaks of it as "*an* old stone mill standing in Mill Field."

The architecture of the mill—if we may use so large a word in connection with so simple a matter—does not resemble that of any Norse buildings, if we may believe Professor Rafn, of Copenhagen, but resembles exactly the English stone mills of the twelfth century

As I have seen an allusion to Mr. Peirce's communication to *Science* in your columns, I have taken the trouble to write these few lines to prevent other scientific investigators from wasting time and brains on a delusive quest; and remain yours very truly,

Caroline H. Dall.

Washington, December 20, 1884.

Notes.

Charles Scribner's Sons will publish early next year 'Mining Camps: a Study in American Frontier Government,' by Charles Howard Shinn. Meantime, a portion of it appears as No. 12 of the second series of the Johns Hopkins University Studies, completing the series (Baltimore: N. Murray). It bears the title, 'Land Laws of Mining Districts,' and is one of the most attractive and readable of the number. The appendix contains numerous textual examples of the laws in question. This brochure also embraces an index to the series.

Macmillan & Co.'s announcements include 'The Nature of the Fine Arts,' by H. Parker, M.A., Fellow of Oriel College, Oxford; 'The Care of Infants: a Manual for Inexperienced Mothers,' by Sophia Jex Blake, M.D.; 'The Patriarchal Theory,' by the late John F. MacLennan, edited by his brother; 'Amiel's Journal Intime,' translated from the French by Mrs. T. H. Ward; a prose translation of the 'Æneid' by J. W. Mackail, M.A., Fellow of Balliol College, Oxford; 'The Scientific Obstacles to Christian Belief,' by G. H. Curteis, Canon of Lichfield.

The American agency of the *Portfolio*, having been given up by J. W. Bouton, has been assigned to Macmillan & Co.

A sketch of the Independent movement in Massachusetts, by R. L. Bridgman, is in the press of Cupples, Upham & Co., Boston.

Estes & Lauriat, Boston, announce that they have ceased to be the publishers of Prof. R. S. Rosenthal for his "Meisterschaft System" of acquiring the Continental languages. The Meisterschaft Publishing Company has been organized to carry on the business which they thus relinquish.

A California novel, 'The Squatter and the Don,' by C. Loyal, will shortly be brought out by Samuel Carson & Co., San Francisco.

The fifth volume of the revised edition of Bancroft's 'History of the United States' (Appletons) is to all intents and purposes a history of the Revolutionary War: it begins directly after the Declaration of Independence and ends with the Treaty of Peace, embracing, therefore, all the military operations of the war except about a year and a half at the beginning. It seems disproportionate to give only one volume to the events of these six and a half years of war, while the preceding volume was devoted entirely to two years; but the disproportion illustrates the historian's distinctive characteristics. He has no fondness nor special aptitude for military history; his strength lies in political, and especially diplomatic affairs. The principal division of the volume also illustrates this point of view. He makes his division of epochs at the beginning of 1781—the beginning of the Confederation—rather than in 1778, which would be regarded as the turning point in the purely military history of the war. The two epochs contained in this volume are epoch iv, "America in Alliance with France," and v, "The People of America Take their Equal Station among the Powers of the Earth." His divisions of "the American Revolution" are instructive, even if we cannot accept them as the best. Making the Revolution to begin with the French and Indian War, he has five

epochs, which we may characterize as: 1 (ending 1763), the overthrow of the French power upon this continent; 2 (to 1774), Aggressions by Parliament; 3 (to 1776), War; 4 (to 1780), Independence; 5 (to 1782), Union.

The date of the first appearance of the work called 'The Hundred Greatest Men [of History]' has escaped us, nor is it recalled by the title-page of the edition now issued by D. Appleton & Co. This arbitrary selection had no value as such, being, in fact, absurd in some particulars. It was floated by copies of more or less rare portraits (as if no portrait, no great man), and by introductions written by Emerson, Matthew Arnold, Taine, John Fiske, etc. The letter-press remains entire, we presume. The portraits have suffered not a little in reproduction.

Concerning the thirty-fourth volume of *Lippincott's Magazine* we have not much to say in addition to our monthly notices. The reminiscences of Charles Reade and of Emerson rank among the more important contents. The art department develops slowly, the best work being that which is non-imaginative, as landscape from photographs, etc.

The "Eversley Edition" of Charles Kingsley's Poems (Macmillan) is praiseworthy in all respects save, perhaps, the firmness of the binding. Wine-colored cloth forms the exterior, and within is very handsome typography. The first volume contains "The Saint's Tragedy"; the second, the miscellaneous verse, preceded by "Andromeda." The last state of at least one of these poems is inferior to the first.

Mr. James Parton's sensation-making little tracts, "Does It Pay to Smoke?" and "Will the Coming Man Drink Wine?" are launched anew between two covers in 'Smoking and Drinking' (Fowler & Wells Co.). Mr. Parton furnishes a preface to this new edition, in which he holds it certain that "Henry Clay could have been President, and Daniel Webster would have risen to the higher rank of not wishing to be President, if both had remained temperate men." This thesis deserved a book to itself, for it is "important if true."

A much more curious reprint is the thirty-fifth thousand of 'The Brotherhood of Thieves; or, A True Picture of the American Church and Clergy' *anno* 1843. This letter, by the late Stephen S. Foster, to Nathaniel Barney of Nantucket, was a famous weapon in the anti-slavery armory. The author's old associate, Mr. Parker Pillsbury, who has worthily celebrated Mr. Foster in his 'Acts of the Anti-Slavery Apostles,' is the publisher, at Concord, N. H., of the reprint before us, which is a close facsimile of the original in shape and general appearance. It is an historical and theological document of no little interest and value.

Professor Sumner's little work, 'Social Classes,' has been translated into French by J. G. Courcelle-Seneuil, under the title, 'Des Devoirs respectifs des classes de la société.' A very favorable review of it appears in *Polybiblion* for November.

The January *New Englander* contains the first of a series of articles on the recent change in the academic curriculum at Yale, and a notice of the late Professor Packard by Prof. Timothy Dwight.

Nothing that the interesting Gletscher-Garten in Lucerne has to show in the way of glacial pot-holes equals, we believe, in dimensions one delineated on p. 560 of *Science* for December 19. The curious circumstance in this case, however, is that the hole was found in a Pennsylvania coal mine, and was carved through the sandstone into the underlying bed of coal. It was then filled with round stones, gravel, and fine sand.

We learn from the *Granite Monthly* for November that a committee of the New Hampshire Historical Society is considering the question of making that periodical (now in its seventh volume) its official organ.

The annual reports of the Massachusetts State Board of Health, Lunacy, and Charity are always valuable documents, of nearly universal interest. The supplement to the fifth annual report, now before us, treats among general topics of driven wells and of arsenic as a domestic poison. It is shown that the former are subject to the same conditions of supply and of pollution as the open wells. Arsenic is found to enter into a very great variety of objects handled, eaten, or worn, or even burnt (as in the case of green candles for the Christmas tree); and special stress is laid upon the danger from glazed papers such as confectionery is often wrapped in, or as is used in kindergartens for weaving, and from wall papers. Color affords no means of detecting this insidious poison, which may even pervade maroon hatbands. A large number of samples of colored papers serve to illustrate the article on this subject by Prof. Edward S. Wood.

Another notable sanitary document is a report of the city engineer of Providence, R. I., proposing a plan for a sewerage system, including the disposal of the sewage. Mr. Gray and his assistant, Mr. Swan, were sent abroad early in the present year by the city authorities to inspect foreign methods of accomplishing the end in view. These methods are concisely described, with the aid of diagrams, in the pamphlet before us, and a vast amount of statistical information concerning them—much of it very fresh—is conveniently tabulated. The local problem, of course, involves a large number of maps of the city of Providence.

The fourteenth Professional Paper of the Signal Service is entitled 'Charts of Relative Storm Frequency for a Portion of the Northern Hemisphere,' by Lieutenant John P. Finley. It consists of one annual and twelve monthly maps, which represent by shades of color the frequency with which storms are experienced over North America, the North Atlantic, and Europe, and is the most elaborate memoir on this subject that has yet appeared. The annual chart shows the excessive storminess of the belt of country from the upper Mississippi across the lower lakes to Maine; no other part of the area studied having so great a storm frequency. From this peculiarity in the atmospheric circulation of our Northern States, we can understand the cause of the excessive variability of our climate; for the front of every storm has a higher temperature than the rear, and in consequence of the rapid passage of the storm centre from the dryer interior toward the moister coast and ocean, we are visited, especially in winter, by sudden changes from mild to freezing weather. Europe in the same latitude is much less variable in this respect, and the contrast between the Mediterranean and our lower lakes is very strongly marked, especially in winter.

The *Magazine of Art* for January contains a copiously illustrated article on the New Forest, interesting as literature, but of the art of which one can only say that the drawings are bad and the engravings labored and profitless. A pretty decorative page, with text and design mingled, "It is the Season," is well designed and engraved. An essay on Puvis de Chavannes, by Claude Phillips, overrates an original painter, certainly, but one whose greatest charm, perhaps, was his eccentricity. The illustrations, including a portrait by Bonnat, are good. The American department is exceedingly weak, both as illustration and literature. In the monthly record of American art is a needlessly complete demonstration of the editor's total incompetence to treat purely artistic questions, both in his notice of the Watts exhibition and in that of the Vedder drawings, in the one as in the other of which he has gone hunting for something to say to hit amiss. Neither Watts nor Vedder is game for criticism of this calibre, and what is worse than its blame is its praise.

F. Gutekunst, Philadelphia, publishes a portfolio of reproductions, by the form of phototype employed by him, of the pictures belonging to Mr. W. B. Bement. As photographic direct reproduction of oil painting, we have seen nothing done on this side of the water which equals these prints. They are twenty-five in number, and singularly uniform in excellence.

We receive from C. Klackner, New York, an impression of an etching by Mr. Lander. We have before had occasion to praise the honest, earnest work of this artist, and need here only say that the new candidate for favor, "When We Were Boys," is in most respects one of the best of his etchings. It is of the same size as, and matches well, the "Saturday Afternoon," published by Wunderlich, and represents the same pair of boys, possibly, who were spending their holiday in fishing, as now on their way home with their string. In one phase of nature Mr. Lander might, by a more careful attention, improve greatly the veracity of his work. The water reflections of his landscape are unpardonably conventional, and do not show study from nature He ought to know that sudden terminations to reflection, like those of the figures of the boys in "Saturday Afternoon," and the willows on the right in "When We Were Boys," are impossible. Either the reflection is a reduplication of the object reflected, or it melts away in "linked sweetness long drawn out" and is finally lost. Mr. Lander evidently has not studied the law of reflections. The foreground of the new work—especially the broken ground at the left—like the rocks in the "Saturday Afternoon" and the skies in both, are admirable, and this makes the unreality of the reflections jar the more on the eye.

The value of the collection of early works to illustrate the primitive history of printing, brought together by Heinrich Klemm, the Dresden publisher, can be appreciated by studying his 'Beschreibender Catalog des Bibliographischen Museums von H. Klemm,' lately published by him. It contains minute descriptions of the productions of the printing presses of the eighteen cities where the art was practised as early as 1471. No less than 1,000 examples, representing 385 different presses, are here shown as the work of the printers of these cities from 1471 down to the latter part of the sixteenth century. Mentz, the probable cradle of the invention, leads off with 160 publications, beginning with the Bible of forty-two lines, better known as the Mazarine Bible. The Klemm copy of this typographical treasure is the only one of the eight known vellum copies with illuminations, and is, as befits such a rarity, very handsomely bound, the covers having illustrations in the style of the early Renaissance. The other cities whose presses are represented are Augsburg, Bamberg, Basle, Beromünster, Cologne, Eltville, Foligno, Lübeck, Milan, Mentz, Marienthal, Nürnberg, Paris, Rome, Strasbourg, Subiaco, Ulm, and Venice.

The 'Psalmorum Codex' of Fust and Schöffer, A. D. 1459, was bid off on Friday, at the sale of the Syston Library in London, for £4,950.

The growing commerce of Chili is set forth in the bulky 'Estadistica Comercial' for the year 1883, just received from the Department of Commercial Statistics of that country. The United States is one of the nations whose exportations to Chili have augmented; it stands fourth on the list, being but slightly behind the Argentine Republic, France, and Germany. Great Britain heads the list of those which have fallen off. Germany, by the way, surpassed both the United

States and France in the export of refined sugar. American tools and machinery (particularly for railroads), flannels, white goods, bagging, etc., were more in demand than in 1882. In view of the approaching National Exposition, some retrospective tables are added from 1850 to 1883.

The English appeal for an American Society for Psychical Research has not gone unheeded. Boston has naturally taken the lead in the new organization, and promises to lend it the weightiest support among scientific men. The committee having the matter in charge consisted of Prof. G. Stanley Hall, Chairman, Prof. E. C. Pickering, Prof. William James, Prof. Alpheus Hyatt, Samuel H. Scudder, Prof. H. P. Bowditch, Charles Sedgwick Minot, William Watson, and N. D.C. Hodges, Secretary (19 Brattle Street, Cambridge). Our columns have lately borne witness to a certain interest in one branch of the Society's objects, and, we may add, to the range and kind of evidence which will be submitted to it for its discrimination.

The Second Annual Convention of the Modern Language Association of America will be held at Columbia College on December 29 and 30. Papers will be read by Profs. H. C. G. Brandt, A. M. Elliott, Francis B. Gummere, J. M. Hart, H. C. G. von Jagemann, E. S. Joynes, S. Primer, President Carter of Williams College, and others, and there will be seven educational subjects for discussion. The theme of Professor Hart's paper, "The College Course in English Literature—How it may be Improved," is one of the most "burning" on the list. The first two subjects for debate are also weighty: "Would it be desirable to allow the substitution of one modern in place of one ancient language for admission to college?" "What amount of modern-language study should be regarded as an equivalent for Greek?"

A slip of the pen last week led us to write (and the error got into print on p. 528) "William Pinkney" for "Edward C. Pinkney."

—Apropos of our notice, last week, of the late Sidney Lanier and his works, Mr. Lawrence Turnbull writes us from Baltimore:

"His marsh hymn entitled 'Sunrise,' of which your writer says, 'We scarcely know where to look in American literature for its equal in its way,' was returned by more than one of the principal American magazines. Taught by many such rebuffs, he was forced to resort to what he considered merely the hack-work of literature. . . . He left as a legacy to his widow and four almost infant boys only the memory of his pure and noble life, and the copyright in this volume of poems, having been forced to sell the property in all his other work during his lifetime. His countrymen will honor themselves in honoring the memory of this noble man and poet, and they should see to it that his posthumous work receives the practical recognition to which it is so fully entitled. Perhaps it may be acceptable to some who have learned to appreciate him only after he has gone from us, to know that a memorial fund for the support of his family was undertaken by his friends shortly after his death, which is permanently open to contributions."

—On the subject of snakes harboring their young we have received a number of communications, called out by expression of disbelief, in the review of 'Country Cousins.' After a considerable familiarity with snakes—in captivity or in their proper haunts—and a careful examination of the testimony in favor of the story that "a snake allows its young to run into its stomach for temporary refuge," the reviewer came to the conclusion not that it was impossible, but that because of its improbability it required much stronger evidence. The letters at hand do not supply the necessary proof. Not one has anything to say of return from the hiding place. Those claiming to have seen the little ones run in, relate youthful experiences of thirty to fifty years ago. Knowledge of the intensely realistic effects of the optical delusions of frightened observers, especially those of children, deprives this evidence of most of its weight. One says "they leaped down the old one's throat." The species mentioned, however, does not leap, and the æsophagus does not stand wide open. Another says they ran down so quickly one could hardly realize it before they were gone. Ordinarily exertion and time are required, and Macbeth's "Amen" is brought to mind at times by watching the operation of swallowing an object hardly larger than one of Ayer's pills. The assistance of the victim may not amount to much on such holding-ground as the inside of an æsophagus, and lubrication by the saliva is not instantaneous. A writer who found the young inside the old one does not say he saw them swallowed, or that they were in the stomach. It is not a very rare occurrence to find the young of the species he describes in the oviducts, hatched and ready for delivery. Half-digested remains in the stomach have proved various species to eat their young, or their fellows, or other species. A few weeks ago a scientist published observations on a mother striped snake in his possession which gave birth to a lot of young and ate them one by one, undigested fragments in her fæces leaving no doubt of their fate. The reviewer is waiting for some scientific observer (one without "a horror of snakes" preferred) to come forward and assert positively that he saw the young run into the stomach and come out again alive with the accord of its owner. In the meantime, he still considers "the snake story" improbable, and one he would advise none to "accept as proved."

—The *Atlantic* signalizes its entrance on the new year by making fiction the leading feature of the number. Three serial stories are begun and a fourth is promised. If this marks a new departure—if it signifies that the dust is at last to be allowed to settle on the secretaries into which the literary men of the last generation threw the refuse of their art, and that the time-honored reflective and critical articles on French memoirs, Italian views, and changes in the seasons are to suffer violation of their prescriptive right in favor of a brighter, more vital, and original literature—the readers of the magazine are to be congratulated. This issue, in fact, seems the most modern, the most contemporary, that has appeared for a long while; and for those who love the old paths, there are extracts from Thoreau's winter journal (it requires a very cold day to bring out their quality) and something about Madame Mohl, and a pathetic yet undimmed paper, which we would not willingly spare, by Doctor Holmes, introductory to his "New Portfolio." The meat of the number, however, is the fiction—a sketch by Stockton, in a quieter vein than usual with him, and the three serials. The place of honor is given to Craddock's "Prophet of the Great Smoky Mountains"; and, at proper intervals, Miss Jewett's "A Marsh Island" and Mrs. Oliphant's "A Country Gentleman" follow. All three open neatly, quietly, prettily, in a manner that shows that, however the tales shall turn out, they are to be well told. In the two American stories there is a marked effort for prettiness, effects of color, grouping, backgrounds: the Range and the low-lying sea-coast, we foresee, will never be out of sight or mind for Mr. Craddock and Miss Jewett. In Mrs. Oliphant's first chapters we have the preliminaries of a study of English life and human character—of the world, that is to say—that show a more virile taste, just as they exhibit the tact, movement, cleverness, the unflagging rapid interest, which distinguish the practised hand. Not to be beforehand with criticism, these specimen pages of what the *Atlantic* thinks the best fiction have some signs of tendency stamped upon them. They have, for example, a defined literary quality; and this is not a common virtue in the fiction of the hour Mr. Craddock occasionally lapses into rhetoric that shows either affectation or a corrupt taste, as in his very awkward opening sentence, and frequently in his laborious, we had almost said mechanical, fusion of the landscape with the humanity of his scene; but the faculty of expression in all is well freed. That this should still be a requisite in any magazine is a distinction. The pains bestowed to render the background—the Range and the low-lying sea-coast aforesaid—is also a striking indication of the still continuing increase in the value of nature to literature as an object of mere beauty, as well as of the predominance of the æsthetic influence in all contemporary literature that is best. In reading some scenes one involuntarily thinks that they were meant to be illustrated, so careful is the author of the artistic rather than the literary handling, so pleasant is it to pause and picture to the mind's eye the sensible effect. One finds himself reflecting more often on how it looked than on what it was. This is a necessary result of realism, which, as now understood, must appeal to the eye; and perhaps there is something more, could philosophy find it out, in the readiness with which the fiction of our day recalls the fine arts, or at least the minor branches of them. In these two serials we shall have, we may be sure, realism in water-colors. In Mrs. Oliphant's it will be a sort of vigorous freehand drawing, and when Mr. Henry James comes on with his promised "Princess Casamassima" we shall have the well-known photograph. With such novels the *Atlantic* easily leads the other magazines in this department.

—*Lippincott's*, on its first page, solicits attention to a novel of a very different sort—"On This Side," the experiences of a British baronet and his party in America, and particularly, it would seem, in the West. From the start, it is plain that the raciness of Western speech is to be a leading feature, and violent contrasts of broad humor the staple interest. The "international novel" has been tried on this side by its inventor, but even from that example and other sketches one sees that its capabilities are not so great as were those of its prototype; in fact, that they are very small. But humor of the guffaw sort can be had out of it, and that is prepared for and (to fall into the style of the author) "sampled" by this instalment, which presents the so-called "typical" Western host in the bosom of his family at Kalsing, Michigan. One or two rural Christmas stories, a Christmas walk in the Campagna, and a note on Christmas, suggest more cheerfulness than they in fact afford. The solid article is a very complete account of Sir John Macdonald, the Premier of Canada.

—In no previous Presidential campaign do we remember a resort to the expedient of founding illustrated partisan papers *ad hoc*. Nothing better marked the desperation of the Blaine cause than its publishing a pallid counterfeit of *Harper's Weekly* to offset Nast, and a silly *Jingo* to offset *Puck* and Keppler. The result was what might have been expected of the comic organ of a Star-router or a whiskey thief, had such a weapon been thought useful to the defence. Now that this ghastly grinning is over, it is pleasant to welcome to our shelves the bound volume of *Puck* (April-November), embracing its campaign humor, with many a happy prophecy and a generally keen sense of the incongruity between the "party of moral ideas" and its champions in 1884. We have found ourselves lingering over the cartoons showing the tattooed statesman being scrubbed and sand-papered by his lieutenants; or as Phryne unveiled; or as Narcissus by the fountain side; or as the "me" of "Me and Jack" in the companion ante-election and post-election parodies of a well-known German design; or as the bunco-steerer, with Butler for his

confederate ; or as a pedestrian who "can't beat his own record"—the "record" being the sum of Blaine's "shady" transactions in shape marvellously like himself, and lightly outstripping him on the race-course. This is perhaps the most thoroughly American conception of the series. Among the prophetic cartoons are to be noticed the descent of Blaine, in his tattooed mummy-case, into the Republican receiving-vault ; and "A Sacrifice to the Political Wolf"—Blaine lightening his sledge by throwing New York city to the devouring Tammany. It is noticeable that Cleveland does not appear in this series till toward the end of June. We need not allude to the miscellaneous cartoons bound up with the political. Artistically, one of the best of these is the "Wall Street Hell-gate."

—A late number of the *Revue des Deux Mondes* contains a well-written article on the Presidential election, by M. Moireau. The author attributes the defeat of the Republicans mainly to the Independent movement, the birth of which he dates from 1872. Blaine, the author says, was the incarnation of all the Independents had fought against for twelve years, and they were right to prefer their principles to mere party allegiance. M. Moireau pays a glowing tribute to the character of Governor Cleveland, and confidently expects that he will defend the principles of civil-service reform as far as lies in his power. But he evidently does not believe that the majority of the present political parties are deeply imbued with the principle of civil-service reform. The passing of the Pendleton bill, according to him, was a mere manœuvre by which each of the parties hoped to gain its political ends, and the Independents were the only sincere friends of the measure. Nor is he very sanguine as to the prospects of tariff reform, and he criticises with great acuteness the tariff plank in the Democratic platform.

—M. Ludovic Halévy, the author of a multitude of clever, amusing, witty, surpassingly French, not a little objectionable, and often exceedingly trivial vaudevilles, *opéras bouffes*, novelettes, sketches, etc., has been elected a member of the French Academy, as successor to M. d'Haussonville. He is the first Jew among the forty immortals. We do not believe that either the great institution or the Jews of France have any particular reason to be proud of the choice. The election of M. Eugène Manuel, the educator and writer—a man of eminent character, and public merit, and equally a Jew by descent—who at the decisive ballot received ten votes against M. Halévy's fifteen, would have been much more creditable, it appears to us. The affair, however, shows how actively the Jews of France—who a century ago were social outcasts, and altogether form only a seventh of one per cent. of the population—have entered into the literary and art life of their country. Ludovic Halévy (born in 1834) is the son of the dramatic and miscellaneous writer, Léon Halévy, (1802-1883), and nephew of the famous operatic composer Jacques Fromental Halévy (1799-1862). He has achieved his greatest successes as librettist of the Jewish composer Offenbach, for whom he wrote, jointly with others, "La Belle Hélène," "La Grande Duchesse de Gérolstein," and other plays. One of his principal co-laborers is Hector Crémieux, who, again, wrote his tragedy "Fiesque" jointly with Émile Crémieux—both relatives, we presume, of the late Republican Minister of Justice, Isaac-Adolphe Crémieux, the most prominent Jewish figure in the history of France. A literary celebrity in a different field is the Semitic archæologist Joseph Halévy. Part author of Eugène Manuel's 'La France' is his brother-in-law Levi-Alvarès. Remembering his race, the composer Halévy created his opera "La Juive," and his brother Léon wrote a 'Résumé de l'histoire des Juifs'; but nothing Jewish appears in the titles of Ludovic's almost countless productions. In spirit, tendency, and literary character the Jewish Academician is the very antipode of that really immortal mediæval Hallevi (Judah the Levite), the most glowingly and brilliantly Hebrew of all Hebrew poets, whose name Ludovic's grandfather borrowed when he prefixed to his name Lévy the Hebrew definite article, *ha*.

—Toward the close of last month, a solemn declaration, signed by more than two hundred officers of the Hungarian Honvéd army of 1849, was presented to General Arthur Görgey, and, in a séparate copy, deposited in the Hungarian Museum, completely exonerating that once famous and afterward much reviled commander from the charge of treason, based on his surrender at Világos. Among the signers were Count Andrássy, General Klapka, and other patriots of distinction. This act of historic justice comes rather late, the recipient of the testimonial having borne the brand of a betrayer of his country for thirty-five years. It is true that this has not been the general verdict of contemporary history, and that, when he was allowed to return to his fatherland in 1867, no less a patriot than Francis Deák was the first to show by friendly intercourse with him that he deemed him wronged. In fact, the circumstances under which Görgey, on August 13, 1849, surrendered his twenty-two thousand men to the generals of Czar Nicholas were such that no cool-headed military counsellor would have advised the continuance of the struggle. All the Hungarian armies, save his own and Klapka's in distant Comorn, had been beaten. Retreat before overwhelming Russian and Austrian forces was still possible, but victory could no longer be hoped for, and continued resistance — after Bem's defeat on July 31, and Dembinski's on August 9—would only have prolonged the nation's agony. But there were many points which aggravated the case in the eyes of the nation and the world : the suddenness of the collapse, the surrender of an army almost constantly victorious, the failure to extort terms of capitulation (which would have saved the lives of so many gallant generals), the remembrance of grievous mistakes formerly committed by Görgey, his frequent disobedience of the directions of Kossuth and contempt for his parliamentary leadership, the suspicion that he had intentionally turned the scales against Dembinski in the battle of Kápolna—a case perfectly analogous to that of Fitz-John Porter at Bull Run—his undergoing only internment (in Klagenfurt) while the Czar's "magnanimity" saved none of his fellow-commanders from Haynau's gallows, and, finally, Kossuth's denunciations of treason. The latter, impartial judges could see, were in part inspired—as they were, perhaps, in part justified—by bitter recollections of personal antagonism which was not without injury to the national cause ; and they were also a convenient means of shifting from the ex-Governor of Hungary all responsibility for a revolutionary and military course which ended in a catastrophe. Görgey's self-defence in 'My Life and Acts in Hungary in the years 1848 and 1849' (2 vols.; Eng. edition, London, 1852) was provokingly cool and aggressive, but his subsequent bearing in banishment and at home has been remarkably dignified and manly—as was also his reply to the deputation which brought him the rehabilitating document.

—The science of jurisprudence has suffered a severe loss by the death of Professor Fruin, of the University of Utrecht. For more than twenty-five years he explained to successive generations of students the principles of the Civil Code of Holland. The task is not a grateful one, for this Code is very imperfect and may be used as a strong argument by the opponents of codification. Many of its provisions are based on the French Civil Code, which it replaced, but an attempt is made in it to introduce into the body of the statute-law part of the old national law. At the time when the Code was prepared, in 1838, the most stupendous ignorance prevailed on this important subject, and, as a natural consequence, the provisions by which it was attempted to codify these laws and customs are entirely inadequate, and are often based on a total misconception. Fruin was one of the first to see that, in order to have a national codification, an exact knowledge of the origin and scope of this customary law was necessary, and that only by historical research was it possible to determine which of these old provisions still had vitality enough to be made use of in the making of a truly national code. If the royal commission recently named to revise the Code has sufficient material to work upon, and finds the ground cleared before it, it owes this to a great extent to the work of Fruin, and to the new spirit he infused into the study of Dutch law.

—We regret, also, to record the death of J. B. Fonssagrives, formerly Professor of Hygiene at Montpellier, a prolific and most sensible writer on the subject of his chair. "Vulgariser sans abaisser" was the motto of this excellent man. Two at least of his works have been translated and published in this country, though perhaps they have not been appreciated as they deserved: 'Le Livret Maternel' ('The Mother's Register,' New York: Putnams), and 'Le Rôle des Mères dans les Maladies des Enfants' ('The Mother's Work with Sick Children,' Putnams). Others treat of naval hygiene; the school-house, the home, the city; alimentary hygiene for the sick, convalescent, and valetudinarian; the physical education of boys and girls; vaccination; the regeneration of the human race through hygiene; the hygiene of the maternal functions, etc. Add a 'Health Dictionary,' a large double-column octavo work of 800 pages. These titles show the range and earnestness of the author, and every book on the list reveals a humane and cultivated spirit, imbued with a philanthropy rare even in the philanthropic profession which he adorned. Three years ago he had removed from the south to the north of France, making his home in the Château de Kergurionné near Auray, in the Department of Morbihan. It is a melancholy coincidence that he died of cholera, an unsanitary pestilence *par excellence;* but whether in Brittany, in Paris, or in the more afflicted southern districts of his country, and whether in the discharge of his duty as a physician, we are not, at this writing, informed.

—Two famous works constituted the programme of the third Brooklyn Philharmonic concert—Bach's Christmas Oratorio (Parts I. and II.), as adapted for performance by the indefatigable and conscientious Robert Franz, and Mozart's Requiem. The soloists were Misses Juch and Winant, Messrs. Winch and Whitney. As both the chorus and the orchestra appeared to be thoroughly familiar with their parts, and Mr. Thomas presided, the performance was as impressive as could have been desired, although to our taste the chorales in the oratorio should have been taken at a somewhat slower tempo. The mysterious circumstances attending the production of Mozart's "Requiem," and the fact that it was his swan song, completed on his death bed, would always invest it with a special interest, even if it did not contain some of his most inspired conceptions. It seems remarkable that a man in ill health should in his last year produce (besides the weak "Titus") two such great works as the "Magic Flute" and the "Re-

quiem"; and the world will never cease regretting that he died at the early age of thirty-five, and wondering what he would have achieved had he lived twenty years longer, as he might easily have done if his patriotism had not induced him to prefer starving in Vienna to the honorable position and three-thousand-thaler income offered him by Frederick William II. of Prussia. The Christmas Oratorio was a welcome substitute for the annual "Messiah," and it is to be hoped that hereafter Bach will more frequently share the honors with Handel. It is a significant sign of the times that the New York Chorus Society has the names of Bach and Schumann in the motto of its programmes instead of Haydn and Handel, or Mendelssohn. Hitherto Handel has been the composer of the people, to whose taste he adapted his style, while Bach has been the composer for musicians. But popular taste gradually, if slowly, approaches that of the leading musicians; and there is reason to hope that, before another decade has passed, Bach's music of the future will have become the music of the present, after waiting two centuries. In an article on "Begleitstimmen," Dr. Riemann remarks: "It is a fact that to-day, after passing through a period of pronounced homophony, characterized by the predominance of the melody over a more or less simple accompaniment, we are returning to an independent contrapuntal treatment of the accompaniment, in a manner resembling that of J. S. Bach." This does not mean at all that melody is disappearing, as conservatives are always telling us; but only that it is being distributed impartially among all the voices, instead of playing the rôle of a prima donna before whom everything else sinks into insignificance. In popular dance tunes and the typical music of the "classical" period the accompaniment is not melodious, but simply a sort of framework for the melody; whereas in Bach and the neo-German style the melody is to be found everywhere. Those who listen to music in a lazy and passive state of mind will continue to prefer the homophonic style; while those who listen in an active state will find a much greater source of enjoyment in the polyphonic or "many-voiced" style, in which "every part of the accompaniment becomes a melody." Now the hope for Bach's ultimate popularity lies in this, that modern composers are training people to listen to the whole composition instead of to the predominant melody alone; and all who have been thus trained find Bach full of melodious charm and a harmonic wealth that is inexhaustible.

KNOX'S UNITED STATES NOTES.

United States Notes. By John Jay Knox. Charles Scribner's Sons.

THIS book is not, as its short title might lead one to suppose, a mere history of the greenback. It is rather a sketch of the financial history of the United States, in which various issues of circulating notes make, so to say, the basis of the narrative. Two short chapters are devoted to the disastrous paper money of various "tenors" issued by the thirteen colonies, and the equally disastrous Continental currency of the Revolutionary period. A chapter is given to the proceedings of the Federal Convention in relation to bills of credit. Then follows an account, in chronological order, of the various issues of notes by the United States down to the present time, with an abstract, in each case, of the reasons leading to the issue, and the debates to which it gave rise.

Two things in this narrative must strike the reader as remarkable. It is, in the first place, a strange thing that all the bitter lessons of the previous experiments with paper money, and the high principles of the founders of the Constitution, should have been so speedily forgotten. At the outbreak of the war of 1812 (Mr. Madison, one of the leading members of the Federal Convention, being President) an act was passed, on the recommendation of Secretary Gallatin, authorizing an issue of Treasury notes. This first issue was of one-year notes, bearing interest at the rate of 5 2-5 per cent. They were made payable to some person named in the note, or his order; and were transferable only by endorsement, like ordinary commercial bills. No note was issued for less than $100. A sinking fund for their redemption was to be provided out of the revenues of the year. In this first issue only one departure was made from sound financial principles: the notes, with interest reckoned to date, might be used at any time within the year to pay all taxes and other Government dues. The first step toward treating Government promises as money was made when it was enacted that the Government should receive them as money in its own transactions. This beginning was rapidly improved upon. The last of the five issues authorized during the war of 1812 included notes for sums as low as $3, bearing no interest, transferable without endorsement, and running without limit of time. These were "redeemable" in 7 per cent. bonds, and could be reissued. Thus early, before the last wails of those who had been ruined by the Continental currency had died away, the United States began, under the Constitution, the folly of tampering with the currency in order to replenish an empty treasury. The example set at that time was not lost on later Congresses and Secretaries. At every pinch in our subsequent history, from whatever cause arising—in the financial collapse of 1837, in the Mexican war, in the business depressions of 1857 and 1860, and in the struggle for the preservation of the Union—the ever-ready device of circulating notes was resorted to as a remedy for low credit or deficient revenue. In every case it is afterward clear that the relief obtained in that way has been purchased at enormous cost; yet on each new occasion new excuses are found for perpetrating the old folly.

In all, between the outbreak of the war of 1812 and the beginning of the civil war, nineteen acts were passed authorizing the issue of Treasury notes. These acts were not all equally bad, but the evil in the least objectionable of them was aggravated by tricks of administration. It is curious to note that, down to the civil war, Congress was usually more conservative than the Treasury, and acted as a check on the vagaries of Secretaries; whereas in our day the relation has been usually the reverse. The act of 1837 authorized the issue of none but interest-bearing notes (interest not exceeding 6 per cent.), payable to some definite person or his order. Secretary Woodbury defeated these provisions by placing the interest at the rate of one-thousandth of 1 per cent., and by making the note, by endorsement, payable to bearer. This clever piece of sharp practice was freely copied by his successors.

In these ways the Treasury, before the outbreak of the Rebellion, had contracted the vicious habit of connecting Government loans with inroads on the currency. The one thing it had not been able to do was to compel private citizens to receive the Government notes in payment of private debts. That this final step should be taken on the first really great emergency was, in the nature of things, inevitable. The civil war, with its loss of credit and its enormous demands, supplied such an emergency. Instead of submitting, as other borrowers must do, to the condition of the loan market and the state of its credit, the United States adopted the expedient of issuing legal-tender notes, convertible into 6 per cent. bonds, and receivable for all public dues and taxes except duties on imports. The Supreme Court, when appealed to by those who had suffered "legalized robbery" through these notes, decided, by a bare and dubiously-obtained majority, that Congress had the power to issue such notes as a war measure. On a subsequent appeal, it has decided, in the present year, by a majority of eight to one, that Congress has the same power in time of peace. This progress, step by step, away from the sound principles of 1787, is the second of the two striking features observable in the history of paper currency in this country.

As to the character of Mr. Knox's presentation of the story, a few things have to be said. In the first place, one cannot avoid noticing a certain want of freedom in his treatment of men and measures. There is perceptible in it a sort of cautious reserve akin to official reticence, as if the Comptroller of the Currency rather than Mr. Knox were speaking. No hint, for example, is given of anything unusual in the change of judges in the Supreme Court between the first and the second legal-tender cases; nor of any impropriety in the reissue, by Secretary Richardson, in 1873, of the greenbacks retired and (in the eye of law) *cancelled* under the act of 1866. There is no suggestion of anything peculiar in the provisions made by the Resumption Act for securing a coin reserve against the day of resumption. A full account is given of the agreement between the Treasury and the banks in 1861, but the connection between that agreement and the suspension of specie payments is nowhere distinctly pointed out. There is, therefore, a lack of life and light in the narrative. There is also a carelessness or clumsiness of style, amounting at times to positive obscurity, and detracting considerably from the readableness of the book. Such sentences as the following are hard to excuse:

> "The denominations, except in the case of the small notes of 1815, were too large for purposes of circulation, and the inducements for funding these were so great that they could not be used for that purpose" (p. 39).
>
> "The first issues under the act of March 3 commenced on October 10, 1863, and ceased on February 15, 1876; and an act was passed on April 17, of the same year, directing the Secretary to replace this circulation by the issue of subsidiary silver coin" (p. 104).

Some loss of clearness results also from a way of sometimes confounding together interest-bearing notes, demand notes, and legal-tender notes under the common name of "Treasury notes," or, as in the short title of the book, "United States notes." Mr. Knox is perfectly aware that, since the passage of the first legal-tender act, the usage both of the statutes and of every-day speech has observed a clear distinction between Treasury notes and United States notes. The former, even when made legal tender, were primarily an investment for capital; the latter were never thought of as an investment, but always purely and solely as paper money. To one accustomed to regard this distinction there is something surprising in the statement, for example, that the civil war "was carried on mainly by the use of Treasury notes as a circulating medium."

There are in the book traces of imperfect revision. In saying (p. 19) that "no circulating notes were authorized to be issued which were payable on demand in coin, or which by the terms of the law were made a full legal tender, until the passage of the act of February 25, 1862," Mr. Knox must have forgotten for the moment the demand notes of 1861. Again, the original pledge of redemption in coin seems to be assigned as the reason why these demand notes commanded a premiun in 1862-3 about equal to that on gold (p. 92). The true reason, we believe, was that they were receivable equally

with gold for duties on imports, whereas the greenbacks were not. The date of the act authorizing subsidiary silver coins is given at page 100 as 1852; but in other places it is correctly given. In a summary (p. 85) of the national debt as it stood August 31, 1865, the amount of compound-interest notes outstanding is placed at 217 millions, and a few lines further on at 207 millions; while in another place (p. 110) the statement is made that "it is not probable that more than 200 millions of these notes were outstanding at any one time." At page 20, and again at page 85, the greenbacks and fractional currency are spoken of as if "payable on demand" from the beginning. At page 21, interest at the rate of 5 2-5 per cent. a year is said to be "equal to 1½ per cent. per day."

In spite of obvious defects, which we hope to see remedied in a future edition, the book has solid merits, and will be found highly serviceable by students of our financial history. It would be difficult to name any other work in which the currency operations of the Treasury and the proceedings of Congress in relation thereto are so minutely and impartially described. The present condition of the silver question, and the manner in which it has been reached, are described in a valuable chapter on "The Silver Dollar and the Silver Certificate." A very full account is given of the distribution of the surplus among the States in 1837, and later proceedings in regard to it. A careful résumé is given, from stage to stage, of the Congressional debates, legal arguments, and judicial opinions relating to the constitutionality of paper issues by the United States. There are facsimiles of the forms of notes used in the various issues. By way of appendix, the recent decision of the Supreme Court, together with Judge Field's able dissenting opinion, are given in full.

TRAILL'S COLERIDGE.

Coleridge. By H. D. Traill. [English Men of Letters Series.] Harper & Brothers. 1884.

In this biography Mr. Traill has done much better work than in his previous volume, in the same series, on Sterne. In flow of thought and command of the narrative, and in that individuality which is the idiom of style, the former book bears no comparison with this. But Coleridge's life and genius are so much more vast and complicated a subject that his biographer has need of skill and power different from any involved in the discussion of Sterne, and of a far higher reach. There was none of that sentimentality which the comedian-clergyman flaunted, in Coleridge's journey through life, though he has been the cause of sentimentality in other men; his career was one of those, too frequent among men of letters, that can never be told, so marred by disease and by moral feebleness, so full of shame and supineness and waste, that it must be kept out of sight. During the years of his maturity he was a broken man, and knew himself to be such; from the time that, in becoming the victim of opium, he lost what little will-power was originally his, he felt that the spirit of imagination had left his house of life, and in its place was henceforward

> "Sense of past youth, and manhood come in vain,
> And genius given, and knowledge won in vain";

and in this mood of pervading despondency he seems always in fancy to be haunting the grave of his dead self. This consciousness of his loss, though it had more of the stupor of despair than of the sharpness of penitence, lends some impressiveness to his story; but this pain was not searching enough to save him for himself, nor of a kind to make men oblivious of those violent contrasts in his life which offend our sense of rightness. It is a morally confusing spectacle to see genius professing the highest knowledge of the secret things of God, but itself wrecked; and it requires something more than the poet's sorrow at the withering of his wreath to reconcile such an antithesis.

Then, too, although Coleridge's poetic imagination undoubtedly was quenched at once, or gave out only brief and random flashes in his manhood, it may well be questioned whether the waste of his faculties was not due quite as much to mismanagement of the mind as to the palsying of his powers of effort, purpose, or orderly reduction of thought. He lived in the period of universal philosophers, and in his study of metaphysics and theology in Germany he must have fixed in his mind the habit of including the *omne scibile* in his system. This was the more easy for him, as he had in unusual proportion that false comprehensiveness which seizes on knowledge not by all its relations as it stands in the body of science, but by some particular relation which it may seem to bear, truly or untruly, to some preconceived idea that has been taken as the organizing principle of the new scheme. It is because of their common participation in this method that poetry and philosophy, in the old sense, approach so much nearer each other than either does to science. It is plain to any one who reads the topics of Coleridge's discourses that his mind ranged through a vast circuit of knowledge habitually, but also that it touched the facts only at single points and superficially; in other words, he displays compass rather than grasp. In dealing with the mass of his learning, he showed no lack of systematizing power, though it may easily be believed that in conversation with chance visitors the fine filaments of logical connection escaped their sight. The trouble was in the original mode of elaborating the system—the old Greek way of philosophizing by subtle manipulation of analogies, convenient facts, half-understood harmonies of this with that, arbitrary constructions, with now and then a dead plunge into the unfathomable. To borrow Coleridge's own distinction, this procedure is to logic what fancy is to the imagination—a freak of the mind wholly out of relation to the truth of things. It is the modern form of scholasticism.

Coleridge, however, whose speculative powers were thus employed, is believed to have been a great light to those who had eyes to see. What particular truth Maurice and others derived from him is, nevertheless, not evident. He shared the awakening power that idealists possess, generally in proportion to their consistency and the intensity of their personal conviction. Idealism, by the very fact that it is an enfranchisement from sense, is a tonic to the mind; it quickens the activity of thought and facilitates its processes because it assumes the mastery of the universe, and makes reality pliable to its hand. This may or may not be lawful, but it generates a feeling of command and of liberty highly favorable to spiritual development. To some men impressionable on that side of their nature Coleridge was the giver of this freedom, and this has been the case especially with members of the clergy who are closely attached to theological dogma. Such persons found in Coleridge's mind the rare and curious coexistence of fixed dogma with incessant speculation: he afforded the sense of untrammelled investigation without once disturbing the certainty of the prejudged cause. This phantom of liberalism was a very quieting tutelar genius to some educated men, who thus kept up a semblance of thinking; but influence of this sort is necessarily transitory. His Scriptural renderings of philosophy give place to those of other theologians, who rationalize on new grounds of scientific knowledge instead of German metaphysics, while the stimulation that was furnished by his idealism may be more simply and directly derived from less involved and abstruse thinkers. On this account it seems to us that Mr. Traill has mistaken Coleridge's permanent position, or at least has given a wrong impression of the relative value of his early and later work. His theology and metaphysics, in pursuit of which he wasted his powers, are already seen to be transient. On the other hand, his criticism, of which the account here given is very inferior, has articulated the works of minor authors who have themselves written in a formal style, nor has its influence been harmed by its frequent over-refinement and fancifulness; and his poetry, of the meaning and power of which Mr. Traill shows no perception beyond what might be fairly looked for from any average student, has remained untouched by time. It belongs to the period of his early enthusiasm, before he had become too dulled for the breath of inspiration to kindle him; and fortunately one can read nearly all the best of it without a thought of the dreary after-life of the poet, that has no vital interest to any one except as an illustration of prolonged failure due to many causes, but not less, we repeat, to a lack of mental than of moral self-government. He infiltrated a peculiar intellectual life into the clergy of his time, but in them it came to nothing more tangible and permanent than in himself. It cannot be long before Carlyle's picture of the Seer at Highgate will be the only supplement to "The Ancient Mariner," so far as the general knowledge of Coleridge is concerned, and all between will be the weariness of the opium-eater's hiding.

ILLUSTRATED BOOKS.

The Cruise of the Alice May in the Gulf of St. Lawrence and adjacent waters. With numerous illustrations. By S. G. W. Benjamin. D. Appleton & Co.

Out of Town. By F. E. Weatherly and Linnie Watt. London: Hildesheimer & Faulkner; New York: E. P. Dutton.

English Art in 1884. Illustrated by facsimile sketches by the artists, and fourteen full-page photo-engravings. Edited by Henry Blackburn. D. Appleton & Co.

The readers of the *Century*, or at least those of them with the least taste for the sea, will have become familiar with the name of the little improvised yacht of fifty-six tons in which a party of four, intent on pictures and adventures, made a voyage of discovery into the almost unknown land of the picturesque which lies about the mouth of the St. Lawrence. Even they will, however, be glad to have the papers in this neat volume, and the lovers of the picturesque who have not read them in the magazine will be glad to know, what few of us suspected, that there is a sea-coast of a picturesqueness not inferior to that of Brittany or the Cornice, with all the needful adjuncts and accessories of customs and costumes, semi-decay and semi-civilization, to help the painter or relieve the eye and taste wearied by the overgrown and specialized development of our American life and ways—the most antagonistic to the æsthetic sense, in all respects, of all forms of national existence.

The book of Mr. Benjamin is a frank, and, so far as one can judge from the internal evidence, carefully accurate record of what was seen and is still to be seen, of adventures bravely sought and naïvely enjoyed, and of all the little details of sea life in close quarters and not always in security, told simply and without any of the too common over-coloring of travellers who find the interest of these books more important than that of the scene they visit. Such a trip naturally could not be described adequately by the most capable pen, and the artists who formed a part of the company have sifted the land and sea for

abundant subjects which the school of wood-engraving developed by the *Century* has done its utmost to render in its language; and the whole is given in the volume before us—delightful to boys, and to men who have not forgotten their wanderings or longings to wander when they were boys.

The development of the various modes of reproducing works of art has made such progress in the past few years that there is apparently nothing in the range of facsimile achievement to be done, and some new variety of decorative book illustration comes out every year to feed our wonder with. 'Out of Town' is not a work of high-art aims—it consists of verses for children, with illustrations to suit; but the suiting is admirable, and the children who will enjoy the verses will be those who are still not too far from simple pictorial enjoyments to relish the pictures which go with them. The greatest abundance of modern copiousness is here: every page has its design (or two), and the "contents" has all the colored plates reproduced in tiny proportions, the ideal of an illustrated index. Each poem is printed on a page with decorative design in white and black—imitation of india-ink drawings—and on the opposite page a color print of the usual character of chromo-lithography. A daintier child's book this Christmas has not produced.

The numerous people who enjoy the illustrated catalogues of the annual exhibitions, with their, for the most part, misrepresentations of the pictures to be seen there, and who can derive any instruction from Mr. Blackburn's criticisms, will find the sumptuous volume entitled 'English Art in 1884,' the get-up of which is creditable to the publishers, an addition to their stock of art works. But the sketches by the artists of their own pictures, which, when chosen wisely and with true critical discrimination, are always valuable as the records of the art of the day, rarely worth more permanent reproduction, are not helped by the wishy-washy commentary of Mr. Blackburn, whom the American art public not long since found not to be an oracle of Æsthesia. The "photo-engravings," so called on the title-page, are simple collographic prints, and of very unequal excellence, as such prints almost invariably are. In the preface there is an intimation that there will be an exhibition of English water-color pictures here next year. If the examples are well selected from the work of the men best known for sound method and thorough art, it will do our artists much good. It would be a great pity, however, if the selections were made on the principle regulating those of Mr. Blackburn's illustrations, which are very far from giving an exalted idea of English art to earnest art students. But even such an exhibition might have a positive educational value which the illustrated catalogue has not; for the reflections of a man who has no kind of qualification for an art critic, on pictures which are not to be seen, and for which nothing but the most dreary commonplace could be said, even by a competent art student, are worthless.

Principles of Political Economy. By John Stuart Mill. Abridged, with critical, bibliographical, and explanatory notes, and a sketch of the history of Political Economy, by J. Lawrence Laughlin, Ph.D. D. Appleton & Co. 1884.

We have here an attempt on the part of Mr. Laughlin to work up Mill's well-known treatise into a college text-book. The original has for many years maintained its position as the standard English treatise on the subject, and, notwithstanding its bulk, is used for teaching and reference in many institutions of learning. Mr. Laughlin is undoubtedly correct in supposing that it could be abridged to great advantage for this purpose. Not only is the original too leisurely in its course, and too prolix for a text-book, but it discusses a variety of subjects which can hardly come within the scope of a college curriculum, in this country at least. Among these may be mentioned the various forms of landholding in Europe. The plan of abridgment is, where Mr. Mill's language is given at all, to give it verbatim, and, where the condensation of the original or the addition of new matter corresponding to the advance of the science is necessary, to print in smaller type. In this we cannot but think that Mr. Laughlin has sacrificed convenience to his sense of what was due to so eminent an author in reproducing his ideas. The distinction of small and large type serves only to let the reader see what matter is Mr. Mill's own. The natural tendency of the student will be to pass rapidly over the paragraphs which are not considered worthy of full-sized type. The frequent changes are also offensive to the eye of the reader, occurring as they do on perhaps one-half of the pages. A marked feature of the editor's additions, which perhaps form nearly half the body of the book, is that they include explanations and illustrations of the author's text. Though logical symmetry is thus sacrificed, it may be of great advantage to the student to have the one writer thus commenting on the other.

Into the general merits of Mr. Mill's treatise we cannot at present enter further than to say that, although characterized by great clearness, its arrangement does not seem to be that best adapted for a text-book. The work is arranged in an order of subjects rather than an order of development. Instead of beginning with the simplest elements and gradually advancing to the complex, we find in the chapter on capital, near the beginning of the book, extended discussions of some of the most difficult and complex questions of the science, requiring for their understanding a grasp of the subject which we could hardly expect in the beginner. It must, however, be added that Mr. Laughlin has greatly increased the usefulness of the book to the teacher and student by the introduction and appendices. These additions will be especially appreciated where the seminary method of instruction is adopted. The introduction comprises a brief sketch of economical history, including a presentation of the views of the two schools at the present time. This is followed by a list of books, general and special, for consultation. We miss from this list Professor Sumner's pungent 'Social Classes,' which even those who do not agree with must admit to be a very healthful stimulant, well fitted to give the student a relish for the subject. The appendix comprises bibliographies of some special subjects and an excellent collection of examination questions. The latter should now be recognized as necessary in all effective instruction, the only objection being the danger that the students' answers and discussions may partake too much of the characteristics of the village debating clubs.

Wonders and Curiosities of the Railway, or Stories of the Locomotive in Every Land. By William Sloane Kennedy. Chicago: S. C. Griggs & Co. 1884.

This is a little book of about two hundred and fifty pages, which reminds the reader of the schoolboy's definition of Philosophy, as "the knowledge of things existent and non-existent." It contains a mass of disconnected stories and descriptions, many of them evidently taken from the sensational daily press, arranged without system in an irregular order. It is not sufficiently well-written to be of much interest to the casual reader, and it is full of glaring inaccuracies, which render it worthless to any one who seeks real information. It contains an elaborate index of matter which is not worth indexing.

Sheridan's Comedies: "The Rivals" and "The School for Scandal." Edited, with an introduction and notes to each play and a biographical sketch of Sheridan, by Brander Matthews. With illustrations by E. A. Abbey, Fred Barnard, R. Blum, C. S. Reinhart, etc. Boston: J. R. Osgood & Co.

The fact that the actor and the orator take their works with them when they die and leave their fame to the memories of men, is usually remarked on as a piece of practical injustice on the part of old Time, and a misfortune for which the sufferers deserve to be condoled with. But if, happily, one chances to reflect how much better it would have been for many a once popular poet had he been burned on a funeral pile of his own books, one begins to find an advantage in limiting destructive criticism to a man's own life-time. The actor or orator who gains the favorable judgment of an audience under some fortunate combination of circumstances, as Sheridan at the trial of Hastings, need not enter the court of posterity; and, seeing what poor figures Waller and Cowley and Moore, for example, now make before that bar, one feels that they would be glad to shield themselves behind their great contemporary fame, if such refuge were open to their ghosts. Posterity, also, having much to attend to in settling the disputes of rival claimants in its own time, is glad to leave some reputations to be taken on trust. It is pleasant of an evening to look at the marble head of some poet with a beautiful name, like Alcæus, and remember what fine verses he wrote, without having to see for one's self whether his roses are as fresh as when they opened on the live Greek air. There are gentlemen of Venice and wits of Paris who are welcome to our studies because they do not come in with a book under their arms to read to us, but with merely a fine saying or a *mot* on their lips and only a little time to stay. The Englishman, however, is seldom to be found at once so agreeable and considerate; he brings his documents and insists on having them *viséd*.

Among men of recent times perhaps Sheridan might have been most reasonably expected to flourish on the tradition of his genius without disturbing the conscience of a critic nowadays. The anecdotes about him, the fragments of his wit, the renown of his oratory, the still visible scenes of the "School for Scandal," are all admirable things to let alone. We have, however, lately had a 'Life' and an elegant edition of his dramatic works, and now Mr. Brander Matthews gives us an exhaustively edited text of his two principal comedies, with a biographical sketch and full notes upon the plays. Readers will not lose more than can easily be afforded if they neglect the 'Life' and the *édition de luxe* aforesaid and confine their interest in the revival of Sheridan to the perusal of Mr. Matthews's volume, which contains all one need know of the author or read of his works. He was, at the time these two plays were written, a brilliant young fellow whose theatrical taste and literary facility were useful properties, and whose perception of the comic showed him how to supplant on the stage the sentimental inanities that were then the reigning mode. In purely literary power, in the turn of phrase, the ease and grace and finish of conversational dialogue, he was certainly Congreve's inferior; but he was Congreve's successor, and he made up in wit what he lacked in verbal perfection. Mr. Matthews deals somewhat minutely with the matter of his alleged plagiarisms, and succeeds in showing that though he

developed hints here and there, he was not one of the royal thieves like Molière. There is no elaborate criticism by the editor; indeed, in respect to this, he falls into what seems his besetting sin—a disposition to quote, whenever there is the slightest relativity in the matter, from any one of some hundreds of authors. There is a genius in quoting, as Emerson believed, but it is not the genius that a new writer had best be ambitious to exhibit; and if Mr. Matthews would occasionally drop an apt excerpt and replace it with a point of his own, it would be more entertaining, and the page would look less as if it had been besprinkled with Lord Timothy Dexter's pepper-box.

The Algonquin Legends of New England; or Myths and Folk Lore of the Micmac, Passamaquoddy, and Penobscot Tribes. By Charles G. Leland. Boston: Houghton, Mifflin & Co. 1884. 8vo, pp. 379.

In making this collection Mr. Leland has entered upon a comparatively unexplored field of literary research, and as he has evidently given much patient labor to the preparation of the volume, his opinions are entitled to careful consideration, even though they do not always carry conviction. Briefly summed up, his conclusions are as follows: 1st, that there is, in these myths, an affinity with those of the Eskimo, as well as with those of the Lapps, Finns, and Samoyedes of the Old World, which indicates the existence, at some time in the past, "of relations between the Aborigines of America and the Mongoloid races of Asia." In the second place he points out certain resemblances between these legends and those contained in the Sagas and the Eddas which, he thinks, could only have been brought about by transmission from the Norseman through the Eskimo; and in support of this proposition he refers to the colonization of Greenland in the tenth century by the Northmen, and indulges in certain unfounded assertions as to the "southern range of the Eskimo," and the introduction "of cattle of various descriptions into New England" before the time of Columbus.

Without stopping now to inquire into the truth of his facts, it will be sufficient to say that, to the first of his theories, we do not object: to the second, however, we do—not that it contains anything inherently impossible, but for the reason that these resemblances, admitting them to be as great as our author can desire, may be explained in a simpler and far more satisfactory way than in the one he has indicated. Thus, for instance, why may not both the New England Algonkins and the Norsemen have derived these legends from the same Mongoloid sources, the one directly, or through the Eskimo, and the other through their neighbors the Lapps and Finns; or, as is far more probable, why may not our Indians have received them from the early French emigrants, many of whom were unquestionably of Norman descent, and, therefore, presumably familiar with the folklore of their fathers? To us this seems the most reasonable explanation, and it is borne out by the fact that many of these stories, even those in which the resemblances are said to be most striking, are diametrically opposed to what we know of aboriginal character and methods of thought; and because they are, withal, so colored by modern ideas, and have such a decided Sunday-school flavor, as to justify the inference that they had their origin in a very different phase of civilization from that of which either the Indian or the Viking is a type.

Take, for example, the statement on page 39, and how, we may ask, could an Indian of the fifteenth or sixteenth century have described a female form being as "beautiful as sin and wild as the devil"; or what could he, possibly, have known of a race or journey "round the world"; and imagine, if you can, King Philip, or, to come down to modern times, Tecumseh (p. 101) saying: "I am a wicked man, and I have a bad temper. I am prone to wrath and reviling, yet I would fain be pious, meek, and holy"? Such ideas belong to the nineteenth century, not to the fifteenth, to the schoolhouse and not to the forest; and while they might not be out of place in the cabin of a Christianized Indian of to-day, they would have been impossible to his ancestors, such as they were when our forefathers first landed on these shores some 300 years ago. Not even the Porte croix, that singular people of whom Father Le Clerc tells such wonderful stories, could have conceived these ideas, or clothed them in a fitting garb. The brain and the tongue, the idea and the word were alike wanting.

The Snake-Dance of the Moquis of Arizona: being a narrative of a journey from Santa Fé, New Mexico, to the villages of the Moqui Indians of Arizona, with a description of the manners and customs of this peculiar people, etc., etc. By John G. Bourke, Captain Third Cavalry. Charles Scribner's Sons. 1884.

To bestow unmitigated praise upon any book would be to expose ourselves to the accusation of partiality toward its author. In the present case, we have almost to do violence to the feelings which the reading of the work has produced, to offer a few strictures; and in order to get at the pleasant part of our duty as soon as possible, we shall do the fault-finding and flaw-picking at once. In chapter iv, pp. 27 and 28, the two churches of the pueblo of Santo Domingo are discussed. We must inform Captain Bourke, (1) that neither of them is older than 1692; (2) that the two armorial bearings on the door of the old church are those of the Franciscan order (plate 3), and the other the arms of St. Dominic (Santo Domingo); (3) that the first "archbishop" who ever administered in New Mexico is the Most Rev. John B. Lamy of our day, long previous to whose administration the churches of S. Domingo were created. Don Domingo Gironza Petroz de Cruzate made his last foray into New Mexico in 1688, not 1690 (chap. v, p. 43). On page 44 of the same chapter, Captain Bourke corrupts the name "Cachina," of the sacred dances of the Pueblos, into "Cochino" (hog). There is no doubt that several of the Cachinas are particularly obscene, but the two *words* have nothing in common. The term "Cachina" was applied to those dances by Torquemada as early as 1612 ('Monarquia Indiana'), and written "Caçina." The origin of the word is still unknown. To translate "Baile de las Tablas" as "Dance of the Tablet" is hardly correct. "Tabla" is simply a board or plank, and the name is given to the dance by the Spanish inhabitants of New Mexico on account of the painted boards which the women carry on their heads on the occasion. The proper Indian name for the dance is quite different, and is no allusion to the "tablet" or "head-board." But Captain Bourke's supposition that the dance is one of the "Cachinas" is in so far right as the ornaments worn are also used in some of the latter.

Lastly, we must criticise General Crook's distinguished ex-adjutant for his long dissertation on snake-worship. It is out of place in his book for the simple reason that the Pueblo Indians nowhere "worship" the serpent under any form. The reptile, under certain circumstances, becomes "big medicine," and is handled as such; endearing epithets are then addressed to it, and, after certain performances of magic have been gone through with, the animal is released again. But, aside from these ceremonies, the snake is neither kept permanently, nor is it spared if met with in the field, unless under circumstances which do not permit its killing. The snake, like the turtle, the coyote, and other beasts, is only sacred at certain periods; at other times it is treated, if not always with hostility, at least with utter indifference. Had Captain Bourke taken this into account, he would have been spared the trouble of inflicting his long, tedious, and yet necessarily incomplete ophiolatric discussion upon the general reader, for whose benefit his book is largely written.

This ends our bit of censure, and, as we have before said, we have put it in less because the points are of importance than because we did not want to appear partial. For the great bulk of the work really deserves praise, and praise only, and it is more pleasant to dwell upon the good qualities of an author than to search after flaws and errors to which every writer is always exposed. English literature has certainly nothing—the monographs of Miss Alice C. Fletcher and some of Mr. Morgan's descriptions of the Iroquois dances excepted—comparable in faithful and vivid detail (the result of close and painstaking observation) with Capt. Bourke's description of the dances at Santo Domingo and at Gualpi. For one who has seen these performances, they are brought to mind almost like a living picture. The excellent illustrations of costumes still further heighten the effect, the more so since they are colored; the drawing representing the snake-dance proper is of remarkable fidelity. In the selection and arrangement of his illustrations Captain Bourke has evidently followed an excellent prototype, the late General Simpson.

Another merit of the book consists in the fact that it gives the scenes observed and described their proper landscape setting. There is a wide difference between the descriptions of Western nature by a comparative "freshman" and the descriptions of it by one who, like our author, has already lived in it and, so to say, become a part of it through force of habit and (often dire) experience. While the former gazes at the landscape—so strange, and often, at first sight, as repulsive as it is fascinating—with wonder, and easily drifts into misplaced comparison and expression, the latter takes it naturally, calling things by their proper names and describing them as they actually prove to be. Man, as depicted by Captain Bourke in the performance of some of his religious rites, appears to us therefore not simply on a stage profusely decorated with fanciful rocks under a crimson and blue sky, but as a part of that nature which, while it may not have created him, certainly was his educator and trainer, and largely the framer of his past history and present condition.

The value of this attractive book is, therefore, two-fold: it is an important contribution to North American ethnology, and it presents the facts of that science in such a manner as to make them interesting to the general reader, and the science itself attractive to the public. We heartily congratulate the author upon his meritorious effort in having produced a work equally fit for the study of a scientist and for the library of any intelligent household.

Synopsis of Chess-Openings, a Tabular Analysis. By William Cook. With American Inventions in the Chess-Openings, and Fresh Analysis since 1882, by J. W. Miller. Cincinnati: Robert Clarke & Co. 1884.

This unpretentious set of tables is the most compact and thorough manual of chess-openings which has been published in English. It is remarkably accurate; typographical errors being too few to note. The work contains two parts,

the first theoretical (of 140 pages), the second (of 130 more) confined to actual games by the best living players, classified according to openings. The chief blemish in the book is confessed in its appendix thus: "Upon reviewing the examples, on the completion of the printing of the tables, the compiler has discovered that the logical conclusions to be drawn from the analysis is, in some cases, of a misleading character. It is a source of regret that a better move is frequently pointed out in a foot-note." This means that the move in the table is not always the best one. But the apology might be supposed to mean a great deal more than it really does mean. The deficiencies thus frankly avowed are of a trivial nature.

À Travers l'Atlantique. Journal de bord de la *Nubienne* dans son voyage aux États-Unis. Par Paul Saunière. Paris: E. Dentu; New York: F. W. Christern.

THIS book is a very slight affair—only a journal of a trip across the Atlantic in a steam yacht, and a flying visit to Quebec, Montreal, Niagara, and New York—yet we have read it with unflagging interest from page 1 to 350. It is a graphic self-portraiture of a simple and vivacious Paris cockney in crisp and sparkling French. It seems as if nothing new could be said about an Atlantic passage, yet we think no one can read this account without imagining himself again at sea. That a Frenchman without special friends or introductions should fail to fall in love with New York in July is not surprising, but his disgust and eagerness to return to his *belle France* are thoroughly comic. For the amusement of a leisure hour the book is quite as good as the trash of current novels.

Tableaux de la Révolution Française. An Historical French Reader. Edited, with notes, by T. F. Crane, A.M., and S. J. Brun, B.S., Cornell University. With an introduction by President A. D. White. G. P. Putnam's Sons. 1884. Pp. 311.

THIS admirable little book is designed at once to serve as a French reading-book and to assist in that method of studying history at first hand which is so rapidly coming into use among us. The selections—made from President White's very large and complete collection of works upon the French Revolution—cover the period from the outbreak of the Revolution to the 9th Thermidor, and are from a large variety of sources, as well recent historians as contemporary writers. It strikes one at first sight that the proportion of the latter—the real historical authorities—is smaller than it should be; but we know the difficulty of finding in current literature selections of the right variety and length to present a tolerably complete and consecutive view. The notes are not numerous, but are made with excellent judgment.

BOOKS OF THE WEEK.

Allardyce, P. Stops; or, How to Punctuate. Philadelphia: George H. Buchanan & Co. 35 cents.
Bancroft, G. History of the United States. Author's Last Revision. Vol. V. D. Appleton & Co. $2.50.
Beehler, Lieutenant W. H. The Cruise of the *Brooklyn*. Philadelphia: J. B. Lippincott & Co. $3.
Benjamin, S. G. W. The Cruise of the *Alice May* in the Gulf of St. Lawrence and Adjacent Waters. Illustrated. D. Appleton & Co. $1.50.
Biblia Pauperum. Preface by Dean Stanley. A. C. Armstrong & Son. $3.75.
Brassey, Lady. In the Trades, the Tropics and the Roaring Forties. Henry Holt & Co. $5.
Browning, R. Ferishtah's Fancies. Boston: Houghton, Mifflin & Co. $1.
Bunyan, J. The Pilgrim's Progress from this World to that which is to Come. One hundred illustrations. A. D. F. Randolph & Co. $4.
Burns, J. J. The Eclectic School Geography. Van Antwerp, Bragg & Co.
Cathedral Churches of England and Wales. Illustrated. Cassell & Co. $5.
Chaney, G. L. Every-Day Life and Every-Day Morals. Boston: Roberts Brothers. $1.
Christmas at Greycastle. G. P. Putnam's Sons. 75 cents.
Cohen, E. Y. Sir Cupid, and Other Poems. Cambridge, Mass.: Moses King. $1.
Comforting Thoughts Spoken by Henry Ward Beecher in Sermons, Addresses, and Prayers. Arranged by Irene Ovington. Fords, Howard & Hulbert. 75 cents.
Consecration. "I am the Lord's." Boston: H. L. Hastings.
Conway, H. Bound Together. Tales. Henry Holt & Co. $1.
Cox, Annie F. The Guest-Book. In which may be Recorded the Coming and Going of Guests; with pages for Autographs, Incidents, etc. Illustrated. Boston: Lee & Shepard. $3.75.
De Amicis, Edmondo. Holland, and its People. Illustrated. G. P. Putnam's Sons. $15.
Deming, P. Tompkins and Other Folks' Stories of the Hudson and the Adirondacks. Boston: Houghton, Mifflin & Co. $1.
De Villargennes, A. J. D. Reminiscences of Army Life under Napoleon Bonaparte. Cincinnati: Robert Clarke & Co. $1.
Douglas, Amanda M. Out of the Wreck; or, Was It a Victory? Boston: Lee & Shepard. $1.50.
Dubois-Crancé, Gen. Analyse de la Révolution Française. Oeuvre posthume. Paris: Charpentier; New York: F. W. Christern.
Foote, Dr. E. B. Science in Story. Four Volumes. Sammy Tubbs; The Boy Doctor; Sponsie; The Troublesome Monkey. Murray Hill Publishing Co.
Giussano, J. P. The Life of St. Charles Borromeo, Cardinal Archbishop of Milan. Preface by Cardinal Manning. In two volumes. Catholic Publication Society.
Graham, Dr. D. A Practical Treatise on Massage, its History, Mode of Application, and Effects. William Wood & Co.
Greaves, Rev. J. A. A Vindication of the Right of the Anglican Churches to the Name Catholic. In Reply to Monsignor Capel. James Pott & Co.
Gunmere, Amelia M. Friends in Burlington. Philadelphia: J. B. Lippincott & Co.
Hamilton, Dr. E. Recollections of Fly Fishing for Salmon, Trout, and Grayling. Illustrated. Orange Judd Co. $1.75.
Hammond, W. A. Doctor Grattan. A Novel. D. Appleton & Co. $1.50.
Harrison, G. John Howard Payne, Dramatist, Poet, Actor, and author of "Home, Sweet Home." Illustrated. Revised ed. Philadelphia: J. B. Lippincott & Co.
Harwood, J. B. Within the Clasp. A Story of the Yorkshire Jet-hunters. Harper's Franklin Square Library. 20 cents.
Heber, Bishop. From Greenland's Icy Mountains. Illustrated. Boston: Lee & Shepard. $1.75.
Holmes, Dr. O. W. Ralph Waldo Emerson. Boston: Houghton, Mifflin & Co.
Jack in the Pulpit. Edited by J. G. Whittier. R. Worthington.
James, W. The Literary Remains of the Late Henry James. Boston: J. R. Osgood & Co. $2.
Jeanrenaud, E. Choice Selections of French Dialogues and Poetry for Recitation. W. R. Jenkins.
Jennings, L. J. The Correspondence and Diaries of the Late John Wilson Croker. In two vols. With portrait. Charles Scribner's Sons.
Jerome, Irene E. One Year's Sketch-Book. Boston: Lee & Shepard. $6.
Johnson, Helen Kendrick. The Nutshell Series. Six volumes. G. P. Putnam's Sons. $3.
Johnson, Rev. S. Oriental Religions: Persia. Houghton, Mifflin & Co. $5.
Jokai, M. A Modern Midas. A Romance. R. Worthington & Co. $1.25.
Kenyon, J. B. Songs in All Seasons. Boston: Cupples, Upham & Co. $1.
Lathrop, G. P. True, and Other Stories. Funk & Wagnalls. $1.
Lee, H. Her Title of Honor. E. P. Dutton & Co.
Leuville, Marquis de. Poems and Ælia. Frank Leslie's Publishing House.
Lippincott's Magazine. Vol. XXXIV. Philadelphia: J. B. Lippincott & Co. $2.
Lucretius's De Rerum Natura. Edited by F. W. Kelsey. Boston: John Allyn. $1.75.
Married Above Her: a Society Romance. Philadelphia: T. B. Peterson & Brothers. $1.25.
Martin, Mrs. Herbert. Guide, Philosopher, and Friend. E. P. Dutton & Co.
Masters, M. T. Plant Life on the Farm. Orange Judd Co. $1.
Mayhew, I. The Eclectic Complete Book-keeping. Van Antwerp, Bragg & Co.
McCook, Dr. H. C. Tenants of an Old Farm: Leaves from the Note-Book of a Naturalist. Illustrated. Fords, Howard & Hulbert. $2.
Melville, Chief Engineer G. W. In the Lena Delta. A Narrative of the Search for Lieutenant-Commander De Long and His Companions. Boston: Houghton, Mifflin & Co. $2.50.
Miner, Harriett. Orchids: the Royal Family of Plants. With illustrations from Nature. Boston: Lee & Shepard. $15.
Mitchell, S. W. In War Time. Boston: Houghton, Mifflin & Co. $1.25.
Morrison, Mary J. Songs and Rhymes for the Little Ones. G. P. Putnam's Sons. $1.75.
Morse, J. T. John Adams. [American Statesmen Series.] Boston: Houghton, Mifflin & Co. $1.25.
Mozley, Canon J. B. Letters. Edited by his Sister. E. P. Dutton & Co. $3.
Munger, Rev. T. T. Lamps and Paths. 2d ed. Boston: Houghton, Mifflin & Co. $1.
Nadaillac, Marquis de. Pre-Historic America. Edited by W. H. Dall. 219 Illustrations. G. P. Putnam's Sons. $5.
Nordhoff, C. The Merchant Vessel. New ed. Dodd, Mead & Co.
